## INTRODUCTION

This law and practice report has been prepared by the Office, following the decision by the Governing Body at its 283rd Session<sup>1</sup> (March 2002) to place on the agenda of the 92nd (June 2004) Session of the International Labour Conference an item concerning a comprehensive standard (a Convention supplemented by a Recommendation) on work in the fishing sector.

The report examines existing legislation and practice concerning labour conditions in the fishing sector in ILO member States. The term “legislation” is used in the broad sense and includes statutes, regulations, codes of practice and other similar instruments of a legislative character. An attempt is made to analyse the application of legislation wherever possible, based on available information. The content of the report is based on information provided by member States through a survey, information available in reports made by member States on measures taken to give effect to existing relevant ILO Conventions (e.g. the Medical Examination (Fishermen) Convention, 1959 (No. 113), the Fishermen’s Articles of Agreement Convention, 1959 (No. 114), the Accommodation of Crews (Fishermen) Convention, 1966 (No. 126)), the ILO’s legislative databases, recently completed studies on fishermen’s conditions of work in certain countries, and other sources of information available at the International Labour Office in Geneva.

In view of the limited time frame for the preparation of the report and the fact that a number of the replies to the survey from member States were late, the report was completed before some replies had been received. The report does not set out to review the relevant legislation in each member State of the ILO but rather to provide examples of national laws worldwide, in order to give the reader a representative sample of the pertinent issues in current law and practice concerning labour standards in the fishing sector.

This report is divided into eight chapters.

Chapter I provides a general overview of the world’s fishing sector, with an emphasis on issues particularly relevant to labour conditions.

Chapter II concerns, generally, the reasons for consideration of a new, comprehensive standard for the fishing sector. This work is placed in the context of the ILO’s Decent Work Agenda and the work of the Working Party on Policy regarding the Revision of Standards under the Committee on Legal Issues and International Labour Standards established by the Governing Body to examine the need for revision of all Conventions and Recommendations adopted before 1985 with a view to updating and strengthening the standards-setting system. Other relevant ILO work concerning the fishing sector is also described.

Chapter III provides information on laws and regulations related to what might be considered prerequisites for working in the fishing sector. This includes such issues as: minimum age (the issue of protection of young persons is also included in this section); medical examination; competency certificates; vocational training; recruit-

---

<sup>1</sup> Document GB.283/2/1, para 21 (b).

ment and placement (in particular as concerns work on foreign-registered vessels); and identity documents.

Chapter IV provides information on laws and regulations concerning employment on board fishing vessels. This includes such issues as articles of agreement and employment contracts (including share arrangements), minimum wages; personal injury, sickness and death insurance; hours of work; annual leave; and repatriation (including the issue of abandonment).

Chapter V provides information on occupational safety and health; provision of food and water; and accommodation and medical care on board vessels.

Chapter VI provides information on social security for fishermen and their families; shipowners' liability for sick and injured fishermen; and retraining of fishermen for other work.

Chapter VII provides information on administration and enforcement; coordination between relevant agencies; and consultations with social partners.

Chapter VIII contains a summary based on the information provided in the report, relevant to the preparation of a comprehensive new fishing standard.

A questionnaire based on the abovementioned assessment is enclosed with the report. The purpose is to request member States to provide the Office with their views concerning the scope and content of the proposed instrument, after consultation with the most representative organizations of employers and workers.

Due to the broad scope of the fishing sector, it would be advisable to consult with other relevant ministries and institutions dealing with fisheries – such as ministries of fisheries, agriculture (in some countries), health, environment and maritime safety – for the preparation of the replies.

## CHAPTER I

### GENERAL OVERVIEW

#### THE FISHERIES SECTOR

The marine fisheries sector employs a considerable workforce worldwide. Living aquatic resources, however, are not equally distributed. While some species are sedentary, such as oysters and clams, others are migratory and are found both within and outside the 200 exclusive economic zones (EEZs) set out in the United Nations Convention on the Law of the Sea (UNCLOS). As figure 1.1 indicates, the majority (roughly 83 per cent) are in Asia. Africa follows – with just over 9 per cent – and the remaining (less than 10 per cent) are in other regions. Marine fisheries do, however, have something in common; some 93 per cent of the world’s marine catch comes from within, or adjacent to, the EEZs.

#### WORLD FISHERMEN AND FISHING FLEET<sup>1</sup>

In 1998, an estimated 36 million people were engaged in capture fishing and aquaculture production worldwide, comprising 15 million full-time, 13 million part-time and 8 million occasional<sup>2</sup> workers. In 2000, an estimated 27 million persons were working solely in capture fishing worldwide (including full-time, part-time and occasional fishers<sup>3</sup>).<sup>4</sup>

---

<sup>1</sup> The ILO has, in its standards, used such terms as “fishermen” and “sea fishermen”, the Food and Agriculture Organization (FAO) has used “fisher”, and the International Maritime Organization (IMO) uses “fishing vessel personnel”. All these terms are used in this report. However, in developing a new ILO standard(s), consideration should be given to using gender-neutral terminology.

<sup>2</sup> FAO: *The state of the world fisheries and aquaculture* (Rome, 2000), p. 3.

<sup>3</sup> Those engaged in fishing from which they gain less than one-third of their income or spend less than one-third of their work time.

<sup>4</sup> The ILO has made this estimate using FAO data. The ILO publishes a number of relevant series on workers in its *Yearbook of Labour Statistics*. These relate to total employment (paid employment plus self-employment) and persons in paid employment. All these series are classified according to economic activity, using either the International Standard Industrial Classification of all Economic Activities (ISIC) Revision 2 or ISIC Revision 3. Where ISIC Rev.3 is used, separate data may be available for fishing; otherwise, fishing is incorporated in Major Division 1 of ISIC Rev.2 along with agriculture, hunting and forestry. The data on total employment are also classified by occupation, according to the International Standard Classification of Occupations (ISCO) – either the 1968 revision (ISCO-68) or the 1988 revision (ISCO-88), at the major group level. Consequently, fishermen are not identified separately.

**Figure 1.1. Distribution of fishermen in 2000**  
(as a percentage of world total)

At present roughly 45 per cent of the total catch is taken by the small-scale fisheries sector and the remainder, 55 per cent, is taken by industrial fisheries. As much as 90 per cent of the small-scale fisheries catch is used for human consumption; however, in the industrial fisheries sector, as much as 30 million tonnes may be converted into fishmeal and fish oil.

Labour productivity from capture fisheries varies considerably according to the type of fishing methods used. Table 1.1 gives a clear indication of this.

Although certain types of fishing are carried out manually close to shore in relatively shallow water, the bulk of the catches taken in capture fisheries are landed from vessels. However, an accurate assessment of the size and capacity of the world's fleets remains almost impossible partly due to doubtful reporting and partly due to the way in which statistical data are recorded nationally. In the case of statistical data collection, many countries maintain records by gross tonnage, but not all use the same methods of calculation. Furthermore, since the relationship between length and gross tonnage can vary greatly, the International Maritime Organization (IMO) has opted for a length measurement for the Torremolinos International Convention for the Safety of Fishing Vessels. The Food and Agriculture Organization (FAO) has also adopted the length measurement, as defined in the Torremolinos Convention, for its Compliance Agreement (see below).

In 1998 the FAO estimated that the global fishing fleet consisted of about 1.3 million decked vessels and 2.8 million undecked vessels. Of the latter, 65 per cent were not fitted with mechanical propulsion systems. Asia was credited at that time with 84.6 per cent of all decked vessels, 51 per cent of the undecked but motorized vessels and 83 per cent of the undecked vessels without engines. Out of the remaining

**Table 1.1. Labour productivity using various fishing methods<sup>1</sup>**

Fishing activity/gear types	Catch in tonnes per fisher per year
Traps, hooked lines and nets from craft without motors	1
Inshore longlines, entangling nets and trawls from small vessels	10
Net and line fishing from medium-sized vessels	24
Trawls from large vessels	100
Purse seines (super seiners)	200

<sup>1</sup> Recently modified from a table given in a paper to Pacem in Maribus, XVI, Halifax, 22-26 Aug. 1988. J. Fitzpatrick: "Fishing technology", in *Ocean Yearbook 8* (Chicago, University of Chicago Press, 1989).

15.4 per cent of the decked vessels, Europe accounted for 8.9 per cent, countries in North and Central America 4.5 per cent, Africa 1 per cent, South America 0.6 per cent and Oceania 0.2 per cent. Of the undecked vessels with engines, North and Central America accounted for 21 per cent, Africa 16 per cent, South America 6 per cent and Oceania 3 per cent; less detailed information was available for the non-motorized vessels. The fleet structure, as shown in table 1.2, reflects the best estimates from all sources for 1998. There were also more than 120,000 vessels associated with fishing operations but not registered as a fishing vessel.<sup>5</sup>

As the table indicates, of the 16.6 million fishermen regularly employed on fishing vessels, 15.2 (92.5 per cent) are working on the 4 million vessels under 100 grt. In other words, roughly 90 per cent of the fishermen work on vessels less than 24 metres in length.<sup>6</sup> Of these, the majority are in "small-scale" or "artisanal" fisheries.<sup>7</sup> Conversely, the fleet over 100 grt is comprised of approximately 45,600 vessels and 146,000 fishermen.

<sup>5</sup> This table contains estimates concerning those fishermen regularly working on fishing vessels. Those working from beaches using nets, traps, lines, etc., as well as occasional fishermen, are not included.

<sup>6</sup> FAO: "Number of fishers doubled since 1970", at [www.fao.org/fi/highligh/fisher/c929.asp](http://www.fao.org/fi/highligh/fisher/c929.asp) (visited in October 2002).

<sup>7</sup> There are no universally accepted definitions of "small-scale" or "artisanal" fisheries. However, in the report *Risks and dangers in small-scale fisheries: An overview*, prepared as a Sectoral Activities Programme Working Paper for the ILO by M. Ben-Yami and published in 2000, the term "small-scale fisheries" was defined in two ways: (1) by socio-economic criteria, and (2) by technical ones. According to socio-economic criteria, small-scale fishermen are people of both sexes who usually operate their own fishing craft and equipment, go to sea either alone or accompanied by a few crew members who are preferably their own friends or relatives. Technical criteria used in this report define small-scale fisheries as a sector in which fishermen fish and collect aquatic organisms from beaches and from under ice, either by swimming, diving or wading, or using small-scale fishing craft. Small-scale fishing craft are defined, for industrial countries, as boats of less than 10-12 metres in length overall, and less than 12-15 metric tonnes displacement, powered by engines not exceeding 200-300 hp (150-225 kW). For developed countries, this definition also covers canoes, pirogues and open-deck dhows up to 16 metres in length overall, powered by engines not exceeding 200 hp (150 kW).

**Table 1.2. Fishing fleets of the world <sup>1</sup>, 1998**

Vessel tonnage (grt)	Number of vessels	Estimated number of persons	Remarks
>1 000	2 500	150 000	Crews generally recruited at daily or monthly rates of pay although bonuses may be included.
500-999.9	2 800	112 000	As above.
100-499.9	40 300	1 200 000	Employment conditions vary but many are paid hands (with no bonus) while others may have a guaranteed minimum wage plus catch bonus. Time spent at sea can be from two or three days per trip up to months including trans-shipment and provisioning at sea.
<100 decked	1 212 600	5 500 000	Employment conditions include share fishermen, paid hands. Casual labour quite common.
Undecked (mechanically powered)	1 000 000	4 400 000	Mostly engaged on share of catch basis (less vessel expenses). Mostly community based and range from primitive build to highly powered fast craft. Conditions aboard, basic.
Undecked (not mechanically powered)	1 800 000	5 300 000	Craft vary from the catamaran of East India to the large Ghana canoe. Sail power is used but mostly where there has been a long tradition of sailing. A large proportion would be subsistence fishermen. Conditions aboard, often primitive.
Totals	4 058 200	16 662 000	

<sup>1</sup> Adapted and updated by J. Fitzpatrick on the basis of FAO: *Marine fisheries and law of the sea: A decade of change*, Fisheries Circular No. 853 (Rome, 1993).

#### WORLD'S PRODUCTION OF FISH

As a consequence of the increasing numbers of fishermen, fishing vessels, the amount of fishing gear in use and improvements in technology, the output from capture fisheries rose steadily from 1950 to 1999, as illustrated in figure 1.2. Except in a few localized instances, capture fisheries would appear to have peaked with little opportunity for expansion or the development of new fisheries.<sup>8</sup>

The 12 top producing countries from marine and inland capture fisheries are listed in figure 1.3, of which seven of the countries listed are Asian. China was top in 1998 with 17.2 million tonnes (and was still top producer in 2001). Peru, with 4.3 million tonnes in 1998, relied heavily on small pelagic species and since these are subject to biomass fluctuation, the anchoveta fleet is not always fully or even regularly em-

<sup>8</sup> Certain mesopelagic species currently remain underutilized.

**Figure 1.2. World fish production (in millions of tonnes)**

ployed. In the Philippines, at the opposite end of the scale from China, the inshore fisheries suffered in isolated areas from coral reef degradation.

#### CONTRIBUTION OF FISHING INDUSTRIES TO THE WORLD ECONOMY

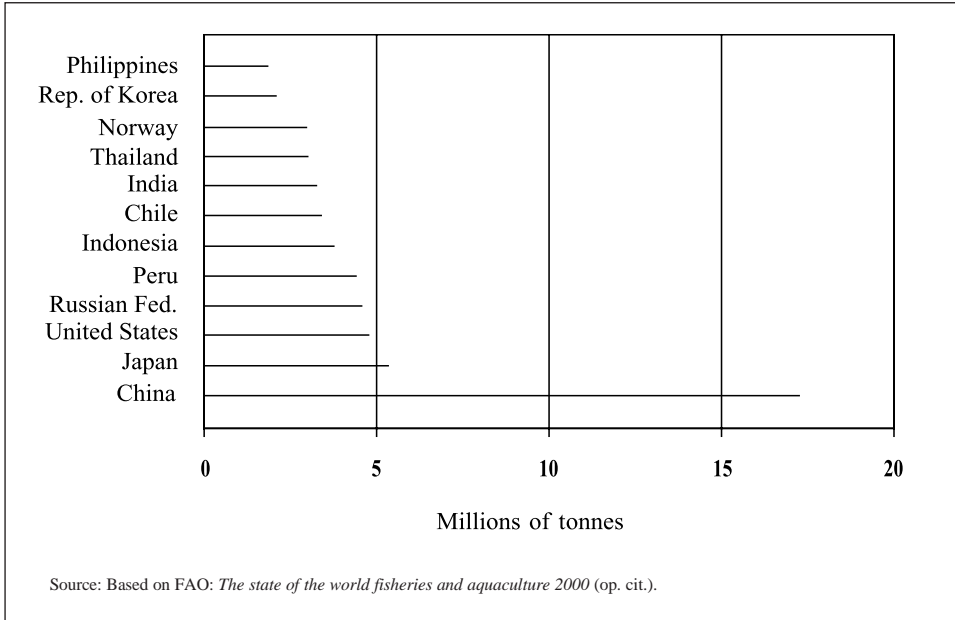

In 1992, FAO estimated that the gross revenue of the world's fleets amounted to US\$70 billion. Since then, the fleets have expanded in size, landings have increased and fish have become more expensive. In fact the global value of aquaculture production alone in 1999 was in the order of US\$56 billion per annum. Although lower than in 1996 and 1997, marine capture fisheries had an estimated first sale value of US\$76 billion by 1999. The value of inland water fisheries should be added to these amounts; however, this was difficult to estimate in view of the nature of these fisheries and given that landings were only accurately recorded in specific areas.

The volume of the international fish trade has also grown substantially over the last two decades reaching a peak in 1997 of US\$53.5 billion; it declined slightly in the following year to US\$53 billion. The share of this trade by developing countries also rose, accounting for 50 per cent of the total value.

The most recent data published by FAO for the year 2000 shows that the value of international trade in fish and fish products again increased that year as may be seen from a summary given in table 1.3.

Globalization and the interests of transnational corporations have greatly influenced international trade in products from capture fisheries as well as fish farming, including the promotion of "eco-labelling" fisheries products. Although there is general acceptance of product labelling, the matter has caused controversy in several international forums. General concerns about eco-labelling fishery products include its

**Figure 1.3. Marine and inland capture fisheries production – top 12 producer countries in 1998**

potential to act as a barrier to trade and its compliance – or lack of it – with rules of international trade. Other more specific concerns arise from the application of eco-labelling to products from marine capture fisheries since these have special characteristics. In particular, small-scale fisheries in developing countries also expressed concern that future employment might well be affected since there could be prohibitive costs in a qualifying process.

#### FISHERIES MANAGEMENT ISSUES

In the 1980s, there was a period of adjustment following the adoption, in 1982, of the United Nations Convention on the Law of the Sea (UNCLOS). Fishing capacity continued to increase and environmental issues gained prominence. This posed difficult challenges, particularly for small-scale fishing communities in the coastal zones. These issues were stressed at the FAO World Conference on Fisheries Management and Development in 1984, where the need to control high-seas fishing was also highlighted.

In the 1990s, coastal States with resources of interest to foreign countries generally made considerable gains in managing their resources and extracting benefits from foreign users.<sup>9</sup> They also succeeded in promoting the training of their own nationals by insisting on their participation in fishing operations aboard foreign vessels. There

<sup>9</sup> This has included increased use of fisheries observers, a growing new category of workers in the fishing sector. The conditions of work of such observers are often set out in the fisheries agreement.

**Table 1.3. Top12 importers and top 12 exporters for the year 2000**

Importing country	Value (US\$1 000)	Exporting country	Value (US\$1 000)
Japan	15 513 059	Thailand	4 367 332
United States	10 453 251	China	3 605 838
Spain	3 351 670	Norway	3 532 841

Source: FAO

were significant changes in the form of access agreements ensuring that the coastal State could obtain, for example, an acceptable proportion of the catch and, in some cases, compensation packages for affected artisanal and/or small-scale fishermen.

In general, the developments since UNCLOS and the FAO World Conference on Fisheries began to have an impact internationally in the early 1990s; pressure was building up with further reports of overexploitation and there were few opportunities left to expand the marine capture fisheries. In addition, some fisheries experienced serious collapses that led to job losses, and the very existence of whole fishing communities was threatened. The first reaction was to seek ways and means to manage fisheries and fishing activities in a more responsible manner and in 1992 the Government of Mexico hosted the International Conference on Responsible Fishing in Cancún. The Conference discussed, inter alia, action to deter reflagging vessels as a means of avoiding compliance with internationally agreed conservation and management rules for fishing activities on the high seas.

The main issues discussed in Cancún were again addressed at the United Nations Conference on Environment and Development held in Rio de Janeiro (often referred to as the Rio Summit) in the same year. Chapter 17 of Agenda 21<sup>10</sup> set out a programme of action that included the need for the United Nations to address the issues of straddling fish stocks and highly migratory fish stocks. It further stressed the need to improve and strengthen fisheries management and protection; however, it recognized that workers in the fishing industry should be protected. Chapter 17 also targeted human resource development at the national level concerning both the development and management of high-seas fishing techniques. States were called upon to provide support to local communities, in particular, those relying on fishing for subsistence, indigenous people and women. The support was to include, as appropriate, the techni-

<sup>10</sup> *Agenda 21: Programme of action for sustainable development*, adopted by the United Nations Conference on Environment and Development, Rio de Janeiro, June 1992.

cal and financial assistance to organize, maintain, exchange and improve traditional knowledge of marine living resources and fishing techniques and upgrade knowledge of marine ecosystems.

As a consequence of these deliberations, three major initiatives were taken:

- FAO embarked on the development of an instrument to deter reflagging;
- the United Nations set in place a conference to tackle the issues related to straddling fish stocks and highly migratory fish stocks; and
- FAO set out to develop a code of conduct for responsible fisheries.

In November 1993 the FAO Conference approved the Agreement to Promote Compliance with International Conservation and Management Measures by Fishing Vessels on the High Seas. The Agreement, commonly referred to as the “Compliance Agreement”, will enter into force when the 26th ratification is received by the Director-General of FAO.<sup>11</sup>

The United Nations Agreement for the Implementation of the Provisions of the United Nations Convention on the Law of the Sea of 10 December 1982 relating to the Conservation and Management of Straddling Fish Stocks and Highly Migratory Fish Stocks, commonly known as the “Fish Stocks Agreement” was adopted on 4 August 1995.<sup>12</sup> This was followed by the adoption of the Code of Conduct for Responsible Fisheries by the FAO Conference in November of the same year.

Unlike the United Nations Fish Stocks Agreement, which is a legal binding instrument, the Code of Conduct is voluntary. However, certain parts of it are based on relevant rules of international law, including those reflected in the UNCLOS. The Code contains provisions that may be or have already been given binding effect by means of other binding instruments amongst the parties, such as the Compliance Agreement which, according to FAO Conference resolution 15/93, paragraph 3, forms an integral part of the Code.

Many countries have been quick to implement, wholly or in part, the principles of the Code and are making use of a series of technical guidelines prepared by FAO for each of the thematic chapters. Countries report on progress being made to FAO’s Committee on Fisheries (COFI) at its biennial sessions. This process facilitates consultation and effective participation of industry, fishworkers, and environmental and other interested organizations in decision-making with respect to the development of laws and policies related to fisheries management and development.

The Committee on Fisheries of the FAO has adopted a series of international plans of action for: reducing the incidental catch of seabirds in long-line fisheries; conservation and management of sharks; and management of fishing capacity. Furthermore, it has developed a comprehensive plan of action to prevent, deter and eliminate illegal, unreported and unregulated (IUU) fishing. Both the plan of action on capacity and the plan of action on IUU fishing can be expected to have an impact on job opportunities aboard fishing vessels as and when greater control is exercised by flag States, port States and regional fisheries bodies.

---

<sup>11</sup> Ratified by 23 countries as of August 2002.

<sup>12</sup> Entered into force 11 December 2001.

The World Summit on Sustainable Development (Johannesburg, 26 August-4 September 2002) generally called, *inter alia*, for the implementation of these agreements, codes and plans, and agreed to aim to restore fish stocks, on an urgent basis and where possible, not later than 2015.

#### FACTORS AFFECTING LEVELS OF EMPLOYMENT OPPORTUNITIES

Since fish is a finite resource, every effort must be made by all stakeholders to adopt a responsible approach to fisheries management and harvesting. Despite the promotion of the Code of Conduct for Responsible Fisheries, illegal fishing continues to be a serious problem affecting the health of inshore and offshore resources. For example, under-reporting and so-called “black landings”<sup>13</sup> frustrate scientific staff with a duty to provide the best scientific advice to decision-makers.

Environmental factors, such as El Niño, have often led to significant reductions in fishing effort and loss of work opportunities – or at best to part-time engagements until stocks recover. Peru periodically suffers from the effects of El Niño and efforts to diversify the local fishing economy have only been partially effective.

The problems of employment are particularly acute in seasonal fisheries where vessels and gear have to be set aside for part of the year; in some cases, the lay-up time may be as much as six months. Fishermen in some countries have the protection of strong social services that help to offset loss of earnings, but others do not have such protection for themselves and their families

Following the Rio Summit, fisheries managers in general reassessed their approach to fisheries management and many of them now view the “open access” phenomena in a new light. Moreover, more attention has been directed at capacity in the capture sector and ways to align it with available living aquatic resources. Changes in management strategies are already under way through the adoption of a precautionary approach to fisheries management. These changes will have an effect on the structure of the fish capture industry in years to come since objectives will also have to be amended to include a change from maximum employment to sustainable employment.

#### TECHNOLOGY

Technological developments have had a significant impact on catch rates as well as revenues. With each new generation of fishing vessels, the fishing capacity tends to increase. Many crew members and processing workers are being displaced since the new, more efficient vessels can be safely operated by less crew and/or a reduced number of on-board processing workers. The effect of technological development is widespread. Even very small fishing craft have benefited from the point of view of safety and efficiency.

---

<sup>13</sup> Fish landing usually during darkness and when fisheries officers may be off duty, or at secluded spots along the coast.

FACTORS CONCERNING VESSEL CONSTRUCTION  
WHICH INFLUENCE CONDITIONS OF WORK

Vessel construction has an important impact on the on-board living and working conditions of fishermen. Many countries (see later in report) have legislation in place regulating construction and accommodation, at least for larger vessels. However, it would appear that poor conditions persist, at least as concerns decked vessels; this may be partly attributed to ineffective flag state implementation of the provisions of pertinent international – and even national – laws and regulations. In the case of the 2.8 million undecked vessels, it may be difficult to provide permanent sanitary facilities or rest areas. Even small decked vessels have limitations in design which make it difficult to improve accommodation. However, over time, particularly in developed countries, efforts are being made to improve conditions on board even these small craft.

VESSEL REGISTRATION AND OWNERSHIP

Although article 91 of Part VII, High Seas, of UNCLOS sets out a requirement in relation to the nationality of ships, it also allows a flag State to exclude ships because of their small size from the register of ships. Several ILO fishing standards provide, inter alia, that they apply to vessels “registered in a territory for which the Convention is in force”, or similar language.<sup>14</sup> However, if vessels are not registered they may fall outside the protection provided by the Conventions. In the case of small fishing vessels, details of the vessel and its ownership may simply be entered in a record of fishing vessels (although they are normally issued with a fishing licence which also contains details of the vessel and its ownership). In such cases, the authority for the maintenance of the record and issuing the licence is delegated to a fisheries administration in the flag State. Larger vessels, however, usually fall under a section of the national Merchant Shipping Act and they are required to be registered in accordance with maritime practice and to carry a certificate of registry.

CONDITIONS OF EMPLOYMENT

*The employment relationship*<sup>15</sup>

The employment relationship for most fishermen and fishing vessel owners differs from that of shoreside workers – and often from that of other maritime workers.

While there has been some success in shifting fishermen to stable and formal contractual arrangements approaching those of workers ashore, many do not have this

<sup>14</sup> The ILO Accommodation of Crews (Fishermen) Convention, 1966 (No. 126), provides, in Article 1, that it “applies to all sea-going mechanically propelled ships and boats, of any nature whatsoever, whether publicly or privately owned, which are engaged in maritime fishing in salt waters and are **registered** in a territory for which this Convention is in force” [emphasis added]. In Article 5, it calls for inspection of vessels, inter alia, “On every occasion when ... a vessel is **registered or re-registered**” [emphasis added].

<sup>15</sup> Taken, with updates, from ILO: *Safety and health in the fishing industry*, Report for discussion at the Tripartite Meeting on Safety and Health in the Fishing Industry (Geneva, 1999).

privilege. These include self-employed fishermen; the employees of very small fishing enterprises employing one or two fishermen on either a regular or casual basis; and fishermen who have no formal employment relationship<sup>16</sup> with their employer. Many fishermen are engaged only partly in fishing and derive the rest of their income from agricultural or other occupations.

Although there are substantial industrialized fishing activities in the coastal zones of developing countries, most fishermen work in the artisanal small-scale sector. A fisherman may be the owner of the vessel or a member of the same household as the owner; may have some other long-term traditional arrangement with the owner; or may be a casual labourer without any particularly strong links to the owner.

In developed countries, many fishermen are also employed in the small-scale fishing sector and may work under informal or casual employment arrangements. In countries where employer-worker relationships are normally recognized by legislation, fishermen may be excluded from such provisions because of the sharing arrangements peculiar to the fishing industry (see below). This exclusion can lead to difficulties in obtaining unemployment insurance, health care and other benefits enjoyed by many shoreside workers (see Chapter VI). Oral contracts may make it difficult to seek redress for pay-related problems.

In large-scale fishing enterprises, there are generally more formal employment relationships. Fishermen are still usually – or at least partly – paid according to the share system. However, the fishermen may be unionized and the arrangements may be within the context of collective agreements.

### *The share system*

The traditional system of remuneration in the fishing industry is the sharing of the catch. Crew and owner must together cover certain operating expenses which are deducted from the gross proceeds obtained from the sale of the catch. The net proceeds are then divided among the boat owner and the members of the crew according to an agreed formula. The risk is shared by the fishing vessel owners and the members of the crew.

Fishermen sometimes have a share of the catch but are also guaranteed a minimum wage. The fishermen's income continues to depend on the size of the catch and the proceeds from its sale, but the sharing is usually done before, rather than after, the deduction of operating costs.

In other operations, fishermen receive both a regular salary and a share of the catch. The members of the crew receive a fixed salary which is stipulated in the charter party, in the contract of engagement or in the relevant legislation or collective agreement. They also receive a share of the catch calculated on the basis of the gross proceeds from its sale.<sup>17</sup>

---

<sup>16</sup> At its 280th Session (March 2001), the Governing Body decided to place on the agenda of the 91st Session (2003) of the International Labour Conference an item concerning “the employment relationship (scope) (general discussion)” (GB.280/2, para. 11(12)). The outcome of this discussion may be relevant to the discussion of the employment relationship in the fishing sector, and thus relevant to the development of new standards for the sector.

<sup>17</sup> Based, with updates, on ILO: *Fishermen's conditions of work and life*, Committee on Conditions of Work in the Fishing Industry, Sectoral Activities Department (Geneva, 1988, doc. CFI/4/1988/1).

*Living and working conditions at sea*

Fishing brings with it a risk that does not normally exist in shore-based jobs – and that is that the working platform rarely stays still. The same type of activity ashore, such as hand gutting or filleting fish, can be dangerous if the operator loses control of the knife. At sea, it is doubly dangerous, more so under bad weather conditions. Furthermore, fishermen usually have no regular hours of work and once a vessel starts to fish, rest periods are infrequent until the skipper is satisfied that enough fish has been caught and stored. On the way back to harbour the same crew members have to clean the decks and stand watches. Once in the harbour, the catch has to be unloaded and the vessel made ready for the next trip; there may therefore be little time left for rest and recuperation.

Fishermen may stay at sea for extended periods; not only a few days but many months (particularly those working in distant-water fleets). The vessel, for that period, is not only their workplace but also their home. Accommodation on fishing vessels covers the full range of conditions, from staterooms, mess-rooms and recreational spaces that are modern, well-equipped and comfortable to those that are extremely cramped and unhealthy. Quality of food and water are important. The ability to communicate with home may be important on longer voyages.

Obviously the life of a fisherman working on a very basic craft is different from that of those who go to sea in large fishing vessels – or even of small-scale fishermen using decked vessels. Each sector has its special problems. The life of a fisherman also varies from that of the average merchant seaman; not only do they perform different duties but fishermen are more exposed physically to the sea itself – and, of course, to the hazards associated with working directly with marine life.

## SMALL-SCALE AND ARTISANAL FISHING

As noted earlier, a majority of the world's fishermen (perhaps 15-20 million of the total 27 million, and perhaps 10-12 million working on vessels) may be considered as artisanal and small-scale fishermen. Artisanal fishermen and their communities have traditionally depended on fishing for their existence and survival in a way somewhat similar to agriculture. In most developing countries, they live close to or below the subsistence level. Their problems may include poor handling of the catch (leading to wastage or poor price), as well as fluctuating catches and prices. In some places, there are conflicts with fishermen on large vessels and even vessels from developed countries. These fishermen are likely to identify more with community organizations and cooperatives rather than with trade unions. Basic health and stability of income may be priority issues.

The particular problems of small-scale fishermen and rural fishing communities were discussed by the ILO's Committee on Conditions of Work in the Fishing Industry in May 1988. This led to the adoption of conclusions relevant to the fishermen in this sector. The following are examples of special needs and problems cited in the conclusions.<sup>18</sup>

---

<sup>18</sup> ILO: *Committee on Conditions of Work in the Fishing Industry*, Report (Geneva, 1988, doc. CFI/4/12).

*Needs:*

- adequate communication between governments, fishermen and their communities to improve working and living conditions;
- collection and interpretation of statistics on social and economic conditions;
- national development strategy for the fishing industry as a whole, taking into account the expressed socio-economic conditions of fishermen and their communities;
- improvement of basic education and literacy and provision of training through fisheries extension services;
- setting of long-term training objectives in order to achieve national self-reliance through the development of all skills needed for the fisheries sector;
- rational exploitation and utilization of fishery resources and control measures to ensure sustained production from small-scale fisheries;
- measures to provide equipment to fishermen at reasonable cost;
- a lowering of the cost of ice and improvement of preservation of fish;
- facilitation of boat ownership by boatless fishermen and establishment of fishermen's organizations.

*Problems:*

- lack of credit and high interest rates in the fisheries of developing countries;
- exploitation by middlemen in the market chain between small-scale fishermen and consumers of fish.

All this does not imply that many of these fishermen do not share the concerns of fishermen on larger vessels (e.g. the need for proper agreements, safety and health measures, medical care at sea, social security); but they may have additional special concerns – and perhaps different priorities.

#### MIGRANT FISHERMEN AND THOSE ON FOREIGN-FLAG VESSELS

This category of fishermen is generally employed on distant-water fishing vessels and comprises a portion of the 262,000 fishermen working on vessels over 500 grt. Fishermen working on these vessels may have problems similar to seafarers on foreign merchant vessels (or at least some foreign vessels) – and many may also be working on vessels engaged in IUU fishing.

#### IMPORTANT LABOUR ISSUES IN THE FISHING SECTOR

The following are some of the important labour issues in the fishing sector:

- the vast majority of fishermen are engaged in small-scale and artisanal fishing;
- many fishermen work on vessels registered in States other than the fishermen's State of nationality or domicile;

- fishing is a hazardous occupation (see also later in this report);
- fishermen working in small-scale and artisanal fisheries have special problems which may require special measures;
- many fishermen live on board their vessels for extended periods of time (this obviously varies with the size of the vessel, the nature of the fishing operation concerned and the location of the fisheries);
- fishermen often work under an employment relationship involving many people (the system of payment based on the share of the catch); this may lead to exclusions from laws protecting most workers (see further in this report);
- many fishermen have only seasonable and occasional employment, at least in the fishing sector;
- efforts to reduce fishing effort capacity may lead to insufficient income or unemployment for many fishermen;
- the low rates of trade union membership or lack of fishermen's organizations may affect social protection and social dialogue in this sector.

## CHAPTER II

### WHY A NEW ILO INSTRUMENT FOR THE FISHING SECTOR?

The special nature of work in the fishing sector, as described in the previous chapter, calls for the adoption of more up-to-date provisions in international labour standards to address effectively the decent work deficit in this sector. The seven existing standards (five Conventions and two Recommendations), adopted in 1920, 1959 and 1966, require updating in order to: reflect changes in the sector which have occurred over the last 40 years; achieve more widespread ratification; and reach, where possible, a greater portion of the world's fishermen, particularly those on smaller vessels. Furthermore, these existing instruments do not address all issues that might be effectively dealt with in an international standard. The consideration of the revision of these existing standards and the possible extension of a new instrument to new issues and to greater numbers of fishermen should be seen in the context of the general mandate of the ILO, as set forth in its Constitution; it should also be seen in the light of the extension of fundamental principles and rights at work to all workers, as laid down in the ILO Declaration on Fundamental Principles and Rights at Work and its Follow-up. More recently, the Decent Work Agenda has provided that:

The primary goal of the ILO today is to promote opportunities for women and men to obtain decent and productive work, in conditions of freedom, equity, security and human dignity.<sup>1</sup>

This overall goal was endorsed by the International Labour Conference in 1999. In his Report to that session of the Conference, the Director-General, *inter alia*, called for “engaging in deeper analysis of existing standards, their synergy, lacunae, and impact on various groups” and “accelerating the revision of outdated instruments to build on progress already made and promoting priority standards as problem-solving tools”.<sup>2</sup> He also stressed the need for: reasserting the usefulness of international standards; reinvigorating efforts and experimenting with new approaches; encouraging closer consultation with constituents; analysing proposed standards in terms of their potential impact on economic and social policy and their complementarity with other international instruments; and reinvigorating promotional efforts to see that standards are ratified and applied.<sup>3</sup>

More recently, the ILO has moved towards an integrated approach towards standards-related activities, which provides an opportunity to take into account the different economic, social and political dimensions of public policy; indeed, the traditional compartmentalized approach, which deals with each of these dimensions separately

<sup>3</sup> *ibid.*, pp. 17-20.

and overlooks the strong interdependencies between them, has proved to be ineffective, especially in the current era of globalization.

CONSIDERATION OF ILO FISHING STANDARDS BY THE WORKING PARTY ON POLICY  
REGARDING THE REVISION OF STANDARDS

Following the discussion on standard-setting policy at the 81st Session of the International Labour Conference in 1994, the Governing Body, at its 262nd Session (March-April 1995), decided to set up a Working Party on Policy regarding the Revision of Standards (the Working Party) under the Committee on Legal Issues and International Labour Standards (LILS).<sup>4</sup> It was decided that the Working Party would examine the need for revision of all Conventions and Recommendations adopted before 1985 with a view to rejuvenating and strengthening the standard-setting system. Proposals were not to have the effect of reducing the protection already afforded to workers by ratified Conventions. The Working Party examined all of the Conventions and Recommendations falling under its remit and conducted a case-by-case examination of each of the instruments. The Governing Body approved the Working Party's proposals to: revise outdated instruments; promote ratification of up-to-date Conventions; invite member States to give up-to-date Recommendations due effect; and propose the shelving, abrogation or withdrawal of obsolete instruments as appropriate.

The Working Party examined the ILO's seven standards (five Conventions and two Recommendations) for the fishing sector, all of which were adopted before 1985. The Governing Body invited the Tripartite Meeting on Safety and Health in the Fishing Industry (Geneva, 13-17 December 1999) to examine these instruments.

The Tripartite Meeting set up its own working party on standards<sup>5</sup> for the purpose of making proposals, inter alia, as to which standards concerning fishermen should be proposed for revision or promotion of ratification (or, in the case of Recommendations, be given due effect); or as to which standards should be considered out of date. The proposals were subsequently submitted to and considered by the LILS Working Party; they were brought to the attention of the LILS and the Governing Body itself. The decisions by the Governing Body on the relevant instruments are detailed in table 2.1.

As may be seen from table 2.1, the Governing Body concluded that: three of the five Conventions (Nos. 113, 114 and 125) and one Recommendation (No. 126) were in need of revision or partial revision; further information was needed on one Convention (No. 126) to determine whether it might need to be revised; studies should be undertaken on the issues addressed by another Recommendation (No. 7); and consideration should be given to denunciation of another Convention (No. 112) following ratification of a more modern instrument. Furthermore, the ratification levels of these Conventions are very low.

<sup>4</sup> For the terms of reference of the Working Party, see GB.262/9/2, para. 52.

<sup>5</sup> *Safety and health in the fishing industry*, op. cit., included a chapter entitled "Review of certain ILO Conventions and Recommendations relevant to the fishing industry" and contained "points for discussion" on this and other issues. This served as a basis for discussion.

**Table 2.1. Status of instruments concerning fishermen**

Instruments	Number of ratifications (as at 20.01.02)	Status
<i>Instruments to be revised (this category comprises instruments which are no longer fully up to date but remain relevant in certain aspects and those that need to be revised)</i>		
Medical Examination (Fishermen) Convention, 1959 (No. 113)	29	The Governing Body has recommended that this instrument be revised to adapt to the existing needs of the fishing sector
Fishermen's Articles of Agreement Convention, 1959 (No. 114)	22	The Governing Body has recommended the partial revision of this instrument
Fishermen's Competency Certificates Convention, 1966 (No. 125)	10	The Governing Body has recommended the revision of this instrument in the light of the IMO International Convention on Standards of Training, Certification and Watchkeeping for Fishing Vessel Personnel (STCW-F)
Vocational Training (Fishermen) Recommendation, 1966 (No. 126)	–	The Governing Body has recommended that this instrument be revised in the light of advances in science and technology
<i>Requests for information</i>		
Accommodation of Crews (Fishermen) Convention, 1966 (No. 126)	22	The Governing Body has invited member States to inform the Office of the obstacles and difficulties encountered, if any, that might prevent or delay the ratification of this Convention or point to the need to revise it
<i>Other instruments (this category comprises instruments which are no longer fully up to date but remain relevant in certain aspects)</i>		
Hours of Work (Fishing) Recommendation, 1920 (No. 7)	–	The Governing Body has recommended that the status quo be maintained and that the Office undertake studies into the working-time arrangements and rest periods in the fishing industry
<i>Outdated instruments (instruments which are no longer up to date; this category includes the Conventions that member States are no longer invited to ratify and the Recommendations whose implementation is no longer encouraged)</i>		
Minimum Age (Fishermen) Convention, 1959 (No. 112)	29 (of which 20 have been denounced)	The Governing Body has invited States parties to this Convention to contemplate ratifying the Minimum Age Convention, 1973 (No. 138), the ratification of which would, <i>ipso jure</i> , involve the immediate denunciation of Convention No. 112 on the conditions stated in Article 10(4)(b) of Convention No. 138 and to possibly abrogate Convention No. 112 when the number of ratifications has substantially decreased

GOVERNING BODY DECISION TO PLACE ON THE AGENDA OF THE 92ND SESSION  
OF THE INTERNATIONAL LABOUR CONFERENCE AN ITEM  
CONCERNING A COMPREHENSIVE STANDARD (A CONVENTION SUPPLEMENTED  
BY A RECOMMENDATION) ON WORK IN THE FISHING SECTOR

At its 283rd Session, the Governing Body decided to place on the agenda of the 92nd Session (2004) of the International Labour Conference<sup>6</sup> an item concerning a comprehensive Convention supplemented by a Recommendation on work in the fishing sector. The document submitted by the Office to the Governing Body noted that a new standard would provide added value by:

- providing for a comprehensive revision of the seven existing fishing labour standards;
- addressing new issues where serious decent work deficits can be addressed with a normative response;
- providing for a comprehensive set of standards for the sector, covering all relevant issues; and
- complementing the work undertaken in other international organizations.

It proposed that “such new standards should be sufficiently broad and flexible to address a number of issues and to be effective for the majority of the world’s fishermen (both those on deep-sea vessels and those engaged in artisanal fishing). It should be based on principles which could be implemented in a manner which would accommodate the diversity of economic and social conditions of countries, and it could take account of the differences in fishing fleets and types of fishing”. It noted that the proposed Convention should not be “overly prescriptive”.

THE REVISION OF MARITIME LABOUR STANDARDS FOR SEAFARERS

Following decisions taken by the Governing Body at its 280th Session,<sup>7</sup> the ILO is undertaking the preparation of a single, coherent international maritime labour standard for seafarers. It has been proposed that the new instrument will incorporate, as far as possible, the substance of all the various international maritime labour standards that are sufficiently up to date. The existing “maritime labour standards” are primarily aimed at seafarers on seagoing ships engaged in transport. However, some include in their scope persons “employed as a master or member of the crew or otherwise in the service of a ship, on board any vessel, other than a ship of war, registered in a territory for which this Convention is in force and engaged in maritime navigation or sea-fishing”.<sup>8</sup> Another provides for exceptions for “coastwise fishing vessels” and “boats of less than twenty-five tons gross tonnage”, but does not exclude other large fishing vessels.<sup>9</sup> Those adopted in 1987 and 1996 generally provide that “[t]o the extent it

---

<sup>6</sup> See GB.283/2/1, paras. 37-75.

<sup>7</sup> For a more detailed discussion of this work, see ILO: *High-Level Tripartite Working Group on Maritime Labour Standards* (first meeting), doc. TWGMLS/2001/1 (Geneva, 2001).

<sup>8</sup> The Sickness Insurance (Sea) Convention, 1936 (No. 56).

<sup>9</sup> The Shipowners’ Liability (Sick and Injured Seamen) Convention, 1936 (No. 55).

deems practicable, after consultation with the representative organizations of fishing vessel owners and fishermen, the competent authority shall apply the provisions of this Convention to commercial maritime fishing”<sup>10</sup>

It is envisaged, however, that fishermen will be excluded from the scope of application of the new comprehensive Convention for seafarers (unless, of course, the member State ratifying it decides to apply it to some or all fishermen). It may therefore be necessary for the new ILO fishing instrument to provide fishermen – particularly those working on vessels engaged in international voyages – with the protection previously afforded by the ILO’s standards for seafarers. These older instruments for seafarers (those adopted before 1985) have also been considered by the Governing Body as being no longer up to date.<sup>11</sup>

#### OTHER ILO WORK CONCERNING THE FISHING SECTOR CONSIDERED IN THIS REPORT

The ILO’s Committee on Conditions of Work in the Fishing Industry has traditionally been the forum for the ILO’s first discussion of issues concerning this sector. The Committee met in 1954, 1962, 1978 and 1988. Where relevant and useful, information concerning its meetings has been reflected in this report.

The Tripartite Meeting on Safety and Health in the Fishing Industry (December 1999) was the most recent, major ILO meeting focusing on fishing issues. As its name indicates, the primary focus of its discussion was on safety and health issues. It adopted a number of conclusions on safety and health in the industry, as well as a resolution concerning future ILO activities in the fisheries sector and social dialogue.<sup>12</sup> The Office has attempted to reflect these conclusions and the resolution in this report, where appropriate. The Meeting also examined the seven existing fishing standards.

#### COVERAGE OF FISHERMEN IN NATIONAL LAWS AND REGULATIONS

There are a variety of ways in which labour conditions of fishermen are addressed in the laws and regulations of ILO member States.

The coverage of fishermen may vary depending on the issue. For example, in some countries laws and regulations concerning occupational safety and health apply to all workers, including fishermen, but the laws and regulations concerning employment contracts often do not apply to fishermen because they work under the share system and are not considered “employees”.

As will be shown later in this report, fishermen (generally those working on larger vessels or vessels serving overseas) are often covered by legislation concerning merchant shipping, while others (generally those on smaller vessels working close to the

<sup>10</sup> For example, the Repatriation of Seafarers Convention (Revised), 1987 (No. 166).

<sup>11</sup> For more information on the status of these standards, see D. Pentsov: “Seafarers”, in *International labour standards: A global approach* (Geneva, ILO, 2001), pp. 533-604.

<sup>12</sup> See ILO: *Safety and health in the fishing industry*, op. cit., and ILO: *Note on the Proceedings, Tripartite Meeting on Safety and Health in the Fishing Industry* (ILO, Geneva, 2000).

coast or in harbours or estuaries) may be covered, if at all, by general labour law – or, in some cases, by specific legislation for fishermen.

Where there are provisions relating to fishing, there are often different requirements or exclusions based on: vessel size (either by length or tonnage); type of vessels (e.g. recreational fishing vessels, fishery research or protection vessels, vessels engaged in whaling, etc.); operating area (e.g. vessels fishing in harbours or rivers, coastal or inshore fishing vessels, vessels operating outside prescribed limits, vessels fishing overseas); or time at sea (fishing vessels never at sea for more than, e.g. 36 hours). These distinctions vary with the issue being regulated.

The States frequently define the term “fishing vessel” with regard to their mode of utilization, i.e. as vessels used wholly or principally for fishing operations, such as catching, processing, storing or transporting fish. Some countries only include catching vessels and exclude vessels involved in processing or other operations; others include them.

In some countries, notably for the issue of articles of agreement, the term “fishermen” is mostly defined as workers on fishing vessels. Sometimes, specific categories are excluded from this term (e.g. masters, pilots, apprentices). There are also definitions of specific categories of fishermen (e.g. “skipper”, “officer”, “engineer”) for competency certificates or accommodation requirements.

The Office has not seen many examples of distinctions in legislation based on “small-scale” or “artisanal” fishing. However, it has observed that in some countries, for example India, the term “artisanal” is used in legislation. Generally, as noted above, distinctions are based on specific criteria – such as vessel size, operating area or time at sea – and not on general categories such as “small-scale” or “artisanal”.

#### THE WAY FORWARD

As indicated above, there is scope for the development of new standards in the fishing sector. Reasons for this include:

- a number of existing ILO standards aimed at fishermen require revision because their provisions are deemed, in most part, to be outdated;
- existing ILO standards for fishermen are poorly ratified and exclude large numbers of fishermen (particularly those in the small-scale and artisanal sector, i.e. those on smaller vessels) from their scope;
- only in very few countries do fishermen enjoy the protection of existing maritime labour standards for seafarers;
- fishermen may lose some of the protection provided by the existing maritime labour standards for seafarers (where they include fishermen in their scope or provide a mechanism for extending protection to fishermen), as the new framework Convention would exclude them from its scope;
- fishermen are – or may be – excluded from many laws and regulations, on a variety of issues, providing protection for workers in general;
- specific action is needed to improve the safety and health of all fishermen.

## CHAPTER III

### PREREQUISITES FOR GOING TO WORK ON FISHING VESSELS

#### MINIMUM AGE AND PROTECTION OF YOUNG PERSONS

##### *Minimum age*

Bearing in mind the hazardous nature of many fishing operations, the issue of the minimum age for work on board fishing vessels is particularly important. It can also be a difficult issue – not only in developing countries but also developed countries – as many fishermen have traditionally learned their profession by working alongside a parent at sea. Some worst forms of child labour have been observed in the fishing sector – a case in point being children working on fishing platforms in South-East Asia. The ILO has programmes in place, in cooperation with the countries concerned, to address this situation.

##### *International standards*

In 1959, the ILO adopted the Minimum Age (Fishermen) Convention, (No. 112), which stipulates that children under the age of 15 years shall not be employed or work on fishing vessels. The substantive provisions of the Convention are provided in Annex I to this report.

In 1973, the ILO adopted the Minimum Age Convention, (No. 138). This instrument sets the minimum age for all economic sectors at not less than the age of completion of compulsory schooling and, in any case, not less than 15 years.

ILO efforts to abolish child labour include the promotion of Convention No. 138 which, as at 15 October 2002, has been ratified by 120 member States.<sup>1</sup> The adoption of a modern, comprehensive standard in terms of a general minimum age led to the automatic denunciation of the more specific Convention No. 112 in accordance with the relevant provision of Convention No. 138. This instrument on a minimum age

---

<sup>1</sup> Albania, Algeria, Angola, Antigua and Barbuda, Argentina, Austria, Azerbaijan, Bahamas, Barbados, Belarus, Belgium, Belize, Benin, Bolivia, Bosnia and Herzegovina, Botswana, Brazil, Bulgaria, Burkina Faso, Burundi, Cambodia, Cameroon, Central African Republic, Chile, China, Colombia, Congo, Democratic Republic of the Congo, Costa Rica, Croatia, Cuba, Cyprus, Denmark, Dominica, Dominican Republic, Ecuador, Egypt, El Salvador, Equatorial Guinea, Eritrea, Ethiopia, Finland, France, Gambia, Georgia, Germany, Greece, Guatemala, Guyana, Honduras, Hungary, Iceland, Indonesia, Iraq, Ireland, Israel, Italy, Japan, Jordan, Kazakhstan, Kenya, Republic of Korea, Kuwait, Kyrgyzstan, Lesotho, Libyan Arab Jamahiriya, Lithuania, Luxembourg, Madagascar, Malawi, Malaysia, Mali, Malta, Mauritania, Mauritius, Republic of Moldova, Morocco, Namibia, Nepal, Netherlands, Nicaragua, Niger, Nigeria, Norway, Panama, Papua New Guinea, Peru, Philippines, Poland, Portugal, Romania, Russian Federation, Rwanda, San Marino, Senegal, Seychelles, Slovakia, Slovenia, South Africa, Spain, Sri Lanka, Swaziland, Sweden, Switzerland, Syrian Arab Republic, Tajikistan, The former Yugoslav Republic of Macedonia, United Republic of Tanzania, Togo, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, Uruguay, Venezuela, Yemen, Yugoslavia, Zambia, Zimbabwe.

solely for fishermen had been ratified by 29 member States,<sup>2</sup> and, as at 15 October 2002, has been denounced by 20 States.<sup>3</sup> Consequently, all the countries that have denounced Convention No. 112 have ratified Convention No. 138;<sup>4</sup> however, three countries that have ratified the Minimum Age Convention, 1973 (No. 138), have remained bound by the Minimum Age (Fishermen) Convention, 1959 (No. 112),<sup>5</sup> as the latter's minimum age was higher than that accepted by them under Convention No. 138.

As noted above, the Governing Body, at its 279th Session, decided to invite the States parties to the Minimum Age (Fishermen) Convention, 1959 (No. 112), to contemplate ratifying the Minimum Age Convention, 1973 (No. 138), and to take into consideration the conclusions of the Tripartite Meeting,<sup>6</sup> in consultation with the organizations of employers and workers concerned.

In another development relevant to the issue of minimum age in this sector, the International Labour Conference adopted in 1999 the Worst Forms of Child Labour Convention (No. 182), which has been ratified by 132 countries;<sup>7</sup> it is supplemented by Recommendation No. 190. These instruments apply the term "child" to all persons under the age of 18 and aim at the prohibition and elimination of the worst forms of child labour.

Furthermore, in addition to the conclusions concerning Convention No. 112 noted above, the ILO's Tripartite Meeting on Safety and Health in the Fishing Industry concluded, *inter alia*, that:

<sup>2</sup> Albania, Australia, Belgium, Bulgaria, Costa Rica, Cuba, Denmark, Ecuador, France, Germany, Guatemala, Guinea, Israel, Italy, Kenya, Liberia, Mauritania, Mexico, Netherlands, Norway, Panama, Peru, Poland, Russian Federation, Spain, Suriname, Tunisia, Ukraine, Uruguay.

<sup>3</sup> Albania, Belgium, Bulgaria, Costa Rica, Cuba, Denmark, France, Germany, Israel, Italy, Kenya, Netherlands, Norway, Panama, Poland, Russian Federation, Spain, Tunisia, Ukraine, Uruguay. Australia, Ecuador, Guatemala, Guinea, Liberia, Mauritania, Mexico, Peru and Suriname have ratified it but have not denounced it.

<sup>4</sup> Albania, Belgium, Bulgaria, Costa Rica, Cuba, Denmark, France, Germany, Israel, Italy, Kenya, Netherlands, Norway, Panama, Poland, Russian Federation, Spain, Tunisia, Ukraine, Uruguay.

<sup>5</sup> Ecuador, Guatemala, Mauritania.

<sup>6</sup> According to these conclusions, the minimum age for admission to employment and work in the maritime fishing industry should in no case be lower than 16 years, and this activity should be considered a hazardous occupation within the meaning of Article 3 of Convention No. 138.

<sup>7</sup> Albania, Algeria, Angola, Antigua and Barbuda, Argentina, Austria, Bahamas, Bahrain, Bangladesh, Barbados, Belarus, Belgium, Belize, Benin, Bosnia and Herzegovina, Botswana, Brazil, Bulgaria, Burkina Faso, Burundi, Cameroon, Canada, Cape Verde, Central African Republic, Chad, Chile, China, Congo, Democratic Republic of the Congo, Costa Rica, Croatia, Cyprus, Czech Republic, Denmark, Dominica, Dominican Republic, Ecuador, Egypt, El Salvador, Equatorial Guinea, Estonia, Fiji, Finland, France, Gabon, Gambia, Georgia, Germany, Ghana, Greece, Guatemala, Guyana, Honduras, Hungary, Iceland, Indonesia, Islamic Republic of Iran, Iraq, Ireland, Italy, Japan, Jordan, Kenya, Republic of Korea, Kuwait, Lebanon, Lesotho, Libyan Arab Jamahiriya, Luxembourg, Madagascar, Malawi, Malaysia, Mali, Malta, Mauritania, Mauritius, Mexico, Republic of Moldova, Mongolia, Morocco, Namibia, Nepal, Netherlands, New Zealand, Nicaragua, Niger, Nigeria, Norway, Oman, Pakistan, Panama, Papua New Guinea, Paraguay, Peru, Philippines, Poland, Portugal, Qatar, Romania, Rwanda, Saint Kitts and Nevis, Saint Lucia, Saint Vincent and the Grenadines, San Marino, Saudi Arabia, Senegal, Seychelles, Singapore, Slovakia, Slovenia, South Africa, Spain, Sri Lanka, Swaziland, Sweden, Switzerland, United Republic of Tanzania, Thailand, The former Yugoslav Republic of Macedonia, Togo, Tunisia, Turkey, Uganda, Ukraine, United Arab Emirates, United Kingdom, United States, Uruguay, Viet Nam, Yemen, Zambia, Zimbabwe.

Governments should take urgent steps to ratify and implement the Worst Forms of Child Labour Convention, 1999 (No. 182). Implementation should include removing children from all hazardous work in the fishing industry. National action programmes to eradicate the worst forms of child labour should include schemes to assist fishing communities.

### *National law and practice*

This section reflects information obtained by the Office concerning the law and practice of States as regards the minimum age applicable to work in the fishing sector. As with other aspects of fishermen's work, the provisions may be found in general labour legislation, or the Seamen's or Shipping Acts, which do not exclude the fishermen or fishing vessels; in rare instances, there may be specific requirements for the fishing sector which contain a reference to minimum age.

In a few countries, the minimum age applicable to work on fishing vessels is 18 years<sup>8</sup> or, respectively, 17 years.<sup>9</sup> A number of laws and regulations effectively prohibit employment in the fishing sector of a young person under the age of 16.<sup>10</sup> Even more member States set the minimum age applicable to the fishing sector at 15 years;<sup>11</sup> most notably, in Japan, no distinction is made between workers on vessels covered by the Mariners' Law (generally, seagoing fishing vessels of 30 gt and greater) and those covered by general labour standards (generally, on fishing vessels under 30 gt and not seagoing), as in both cases the minimum age is 15 years. Certain laws and regulations specify that the minimum working age applicable to the fishing sector shall be above the compulsory school age.<sup>12</sup>

Several countries provide for exclusions from the stipulated minimum age under certain conditions. In some member States children between 14 and 15 years of age may occasionally take part in activities on board fishing vessels during school holidays, provided that the activities in which they are engaged are not: harmful to their health or normal development; liable to prejudice their attendance at school; intended for commercial profit.<sup>13</sup> Other countries lay down that persons under the stipulated minimum age may be employed if members of a family are employed on board.<sup>14</sup> Beyond this, the national laws and regulations often exempt persons from the prescribed minimum age in the event of an authorization of the competent authority and/or the consent of the legal guardian.<sup>15</sup>

*Protection of young persons*

The hazardous nature of fishing activities imposes special protective measures for those young fishermen employed in accordance with the stipulated minimum age who are under 18 years of age. As the issue of protection of working minors has in the past been construed as a higher minimum age for hazardous work, it has often been regarded as being part of the issue of minimum age. However, structurally it seems more appropriate to separate these two issues.

*International standards*

Many ILO instruments have an impact on the safety and health protection of young workers on fishing vessels against hazardous work or tasks. These include: the Minimum Age (Fishermen) Convention, 1959 (No. 112), the Minimum Age Convention, 1973 (No. 138), the Worst Forms of Child Labour Convention, 1999 (No. 182), and its accompanying Recommendation (No. 190).

Convention No. 112 expressly refers to this specific issue by stipulating that young persons under the age of 18 years shall not be employed or work on coal-burning fishing vessels as trimmers or stokers.

Furthermore, Convention No. 138 provides that the minimum age for admission to any type of employment or work which, by its nature or the circumstances in which it is carried out, is likely to jeopardize the health, safety or morals of young persons, shall not be less than 18 years.

The issue of protection of young fishermen is also covered by the Worst Forms of Child Labour Convention, 1999 (No. 182), and its accompanying Recommendation (No. 190), which determines the types of work that can be construed as “worst forms of child labour”. The following may be of relevance to the fishing sector (Recommendation No. 190, Paragraph 3(a)-(e):

- (a) work which exposes children to physical abuse ...;
- (b) work ... in confined spaces;
- (c) work with dangerous machinery, equipment and tools, or which involves the manual handling or transport of heavy loads;
- (d) work in an unhealthy environment which may, for example, expose children to ... temperatures, noise levels, or vibrations damaging to their health;
- (e) work under particularly difficult conditions such as work for long hours or during the night ...

*National law and practice*

The laws and regulations of a number of member States provide that young persons under 18 years of age are not to be engaged as trimmers or stokers<sup>16</sup> (perhaps no longer relevant as coal-burning vessels have almost entirely disappeared); some exempt school or training ships from the prohibition.<sup>17</sup>

---

<sup>16</sup> Germany (ratified C. 138); Ecuador (ratified C. 138 and C. 112); Liberia (ratified C. 112); India.

<sup>17</sup> For example India.

Many countries stipulate that no person shall engage minors (under 18 years of age) in activities involving a risk to their life, health or moral integrity.<sup>18</sup> However, national laws and regulations often contain exclusions to this principle. For instance some countries indicate that hazardous employment or work as from the age of 16 years may be authorized on condition that special obligations are taken to ensure the safety and well-being of the young person.<sup>19</sup> Moreover, several countries exempt young persons between 16 and 18 years of age from the prohibition of hazardous work in the context of vocational training;<sup>20</sup> whereby a few European Union (EU) States additionally require, in accordance with Council Directive 94/33/EC of 22 June 1994 on the protection of young people at work, that the work be indispensable for vocational training and performed under the supervision of a competent person, and that the health and safety of the young person when performing that activity be ensured so far as is reasonably practicable.<sup>21</sup>

Some EU States, such as the United Kingdom, lay down, in accordance with Council Directive 94/33/EC, that no young person shall be permitted to begin work in a ship, unless an assessment has first been made of the risks to the health and safety of young persons, taking into account their inexperience, lack of risk awareness and immaturity, and paying particular attention to: the fitting out and layout of working areas; the form, range and use of work equipment and the way in which it is handled; the organization of processes and activities; and the extent of the health and safety training provided or to be provided to the young persons concerned.

The majority of the countries enumerate the hazardous activities, from which young workers under the age of 18 should be protected.<sup>22</sup> For the purpose of illustrating the provisions relevant to the fishing sector, some countries prohibit the engagement of minors in activities objectively beyond their physical capacity,<sup>23</sup> whereby others provide for a specific prohibition of work involving heavy weights (e.g. loading or unloading of vessels).<sup>24</sup> Minors are sometimes forbidden from carrying out activities involving the handling of dangerous mechanisms, or from working in the machine room.<sup>25</sup> A few EU States further stipulate, in accordance with Council Directive 94/33/EC, that minors shall not be engaged in work involving: the risk of accidents which it may be assumed cannot be recognized or avoided by young persons owing to their insufficient attention to safety or lack of experience or training; a risk to health from extreme cold or heat; and exposure to the harmful effects of noise, vibrations or radiations.<sup>26</sup> Moreover, certain member States

<sup>19</sup> For example Norway (ratified C. 138).

<sup>20</sup> Denmark, Germany, Norway, Poland, United Kingdom (ratified C. 138); Mauritania (ratified C. 138 and C. 112).

<sup>21</sup> For example Germany, United Kingdom (ratified C. 138).

<sup>22</sup> Chile, Germany, Republic of Korea, Netherlands, Philippines, Romania, United Kingdom (ratified C. 138); Ecuador (ratified C. 138 and C. 112); Guinea, Peru (ratified C. 112).

<sup>23</sup> Chile, Germany, United Kingdom (ratified C. 138).

<sup>24</sup> Ecuador (ratified C. 138 and C. 112); Peru (ratified C. 112).

<sup>25</sup> Germany (ratified C. 138); Ecuador (ratified C. 138 and C. 112).

<sup>26</sup> Germany, United Kingdom (ratified C. 138).

prescribe a working time for minors of not more than seven hours per day, i.e. 35 hours per week.<sup>27</sup> As to weekly and daily rest periods, the United Kingdom (ratified Convention No. 138) provides, for instance, that a young person engaged as a worker on a fishing vessel shall be provided with compensatory rest periods of at least two days, which shall be consecutive if possible, in every week, and that there shall be compensatory rest periods of at least 12 consecutive hours in every 24-hour period. Several countries forbid the assignment of minors to work during the night.<sup>28</sup>

### *Conclusions*

From the above information, it would appear that a substantial number of countries (at least 36) have laws and regulations in place which set a minimum age for fishermen, usually 15 or 16 years of age. However, this minimum age requirement generally applies to all workers. At least eight countries have some form of exclusion, e.g. for persons working on family-owned or operated vessels or for persons below the required minimum age in case of the consent of a legal guardian.

As concerns the protection of young persons, consideration should be given to the hazardous nature of fishing operations. The ILO's main instrument on minimum age for all workers, Convention No. 138, provides for the protection of young workers under the age of 18 from hazardous occupations. However, it is not clear to what extent States which have ratified that Convention have considered work involving certain types of fishing operations or certain jobs on fishing vessels as a "hazardous occupation". There may therefore be grounds for a mandatory – or perhaps recommendatory – text in the new fishing standard providing that fishing (or work involving certain fishing operations or certain jobs on fishing vessels) shall or should be considered hazardous and be limited to persons of 18 years of age or older.

### MEDICAL EXAMINATION/FITNESS STANDARDS

Most fishing vessels operate with only the minimum number of persons required. Thus, the incapacitation of even one fisherman may place a substantial additional burden on the rest of the crew. Skippers and officers generally receive basic first-aid and other medical training, and fishing vessels are usually equipped with basic medical supplies. However, it is difficult to transport sick or injured fishermen ashore where they can be treated by certified physicians.

Fishermen often work in extreme conditions. They live close to each other at sea, often for long periods. Contagious diseases may therefore be a serious threat, endangering not only the health of other fishermen, but also the safety of the ship and, where carried, passengers. It is particularly important that fishermen concerned with the preparation of food do not suffer from conditions which may be transmitted to others through their work.

---

<sup>27</sup> Ecuador (ratified C. 138 and C. 112); Guinea, Peru (ratified C. 112).

<sup>28</sup> Republic of Korea, Romania (ratified C. 138); Ecuador (ratified C. 138 and C. 112); Guinea (ratified C. 112).

Fishermen must be able to adjust to the often violent motions of the ship and to live and work in sometimes cramped spaces. They generally must be able to climb ladders; lift heavy weights; and be able to withstand exposure to the frequently harsh weather conditions on deck. Obviously, these conditions vary according to the type and location of fishing operations.

For these and other reasons, the medical fitness of fishermen is an important consideration, and one that the ILO has addressed in its standards.

### *International standards*

#### *ILO standards*

In 1959, the ILO adopted the Medical Examination (Fishermen) Convention (No. 113).<sup>29</sup> This instrument provides that no person shall be engaged for employment in any capacity on a fishing vessel unless he produces a certificate attesting to his fitness for the work for which he is to be employed at sea. The certificate is to be signed by a medical practitioner who shall be approved by the competent authority. The competent authority has to prescribe the nature of the medical examination and the particulars to be included in the medical certificate. There are special validity requirements for persons less than 21 years of age and provision for further examination by a medical referee in the event that a certificate is refused to a fisherman. As at 15 September 2002, Convention No. 113 had been ratified by 29 member States.<sup>30</sup> The substantive text of the Convention is provided in Annex I.

At the Tripartite Meeting on Safety and Health in the Fishing Industry, the Working Party on Policy regarding the Revision of Standards considered that the Medical Examination (Fishermen) Convention, 1959 (No. 113), was not adapted to the existing needs in the fishing sector and that it should therefore be revised.<sup>31</sup> It further indicated that one of the elements to be taken into account in the revision would be the ILO/WHO Guidelines for conducting pre-sea and periodic medical fitness examinations for seafarers.<sup>32</sup>

---

<sup>29</sup> Two similar Conventions cover seafarers – the Medical Examination of Young Persons (Sea) Convention, 1921 (No. 16), and the Medical Examination (Seafarers) Convention, 1946 (No. 73). Though these have been widely ratified, they have been found not to address the problem of widely varying fitness standards for seafarers. In order to remedy this situation, an ILO/WHO Consultation was held in 1997 that subsequently resulted in the ILO/WHO Guidelines for conducting pre-sea and periodic medical fitness examinations for seafarers.

<sup>30</sup> Azerbaijan, Belgium, Bosnia and Herzegovina, Brazil, Bulgaria, Costa Rica, Croatia, Cuba, Ecuador, France, Germany, Guatemala, Guinea, Kyrgyzstan, Liberia, Netherlands, Norway, Panama, Peru, Poland, Russian Federation, Slovenia, Spain, Tajikistan, The former Yugoslav Republic of Macedonia, Tunisia, Ukraine, Uruguay, Yugoslavia.

<sup>31</sup> ILO: *Note on the Proceedings*, Tripartite Meeting on Safety and Health in the Fishing Industry (Geneva, 2000), p. 39.

<sup>32</sup> The ILO and WHO subsequently authorized their publication. They have since been included by reference in the International Convention on Standards of Training, Certification and Watchkeeping (STCW Convention), 1978, as amended in 1995, in the STCW Code, Part B, under Guidance regarding medical standards – Issues and registration of certificates. The Guidelines are intended for use by competent authorities, medical examiners, shipowners, seafarers' representatives and others concerned

### *IMO standards*

As to other international instruments, the IMO's International Convention on Standards of Training, Certification and Watchkeeping for Fishing Vessel Personnel, 1995 (STCW-F), includes requirements concerning medical fitness for fishing vessel personnel. These provisions are linked to minimum requirements for certifications of skippers, officers, engineer officers and radio operators on vessels 24 metres in length or over (in both unlimited and limited waters) or, in the case of engineers, on vessels powered by main propulsion machinery of 750 kW propulsion power or more. Candidates for certification are required to satisfy the party (to the Convention) as to "medical fitness, particularly regarding eyesight and hearing". There are also provisions that skippers and officers (including engineer officers) be required, at regular intervals not exceeding five years, to satisfy the Administration as to medical fitness, particularly regarding eyesight and hearing. There are similar provisions for Global Maritime Distress and Safety System (GMDSS) radio personnel. There are apparently no requirements for the certification of the medical fitness of other members of the crew.<sup>33</sup>

### *National law and practice*

The following draws from reports submitted, in accordance with article 22 of the ILO Constitution, by member States that have ratified Convention No. 113 and other information provided to or obtained by the Office from both States which have ratified Convention No. 113 and other States.

### *Scope of application*

Certain countries have national laws and regulations concerning medical examinations, which apply exclusively to fishing vessels.<sup>34</sup> However, the pertinent provisions usually cover all merchant vessels or all seafarers, and do not exclude fishing vessels or, respectively, fishermen.<sup>35</sup> A few countries have issued general laws and regulations concerning every workplace, including fishing vessels.<sup>36</sup>

The fact remains that national laws and regulations on medical examinations frequently contain exclusions from the application:

*(continued from p. 29)*

with the conduct of medical fitness examinations of seafarer candidates and serving seafarers. They were developed to reduce wide differences in medical requirements and examination procedures and to ensure that medical certificates which are issued to seafarers are a valid indicator of their medical fitness for the work they will perform. The Guidelines are available on the Internet at: [www.ilo.org/public/english/dialogue/sector/techmeet/ilowho97/index.htm](http://www.ilo.org/public/english/dialogue/sector/techmeet/ilowho97/index.htm)

<sup>33</sup> IMO, STCW-F, Annex, Chapter I, Regulation 3, para. 1; Chapter II, Regulation 1, para. 2.1; Regulation 2, para. 2.2; Regulation 3, para. 2.1; Regulation 4, para. 2.2; Regulation 5, para. 2.2; Regulation 6, para. 3.2; Regulation 7, para. 1.1; Regulation 8, para. 1.1.

<sup>34</sup> Azerbaijan, Costa Rica, Ecuador, Guatemala, Guinea, Panama, Russian Federation, Tunisia, Ukraine (ratified C. 113).

<sup>35</sup> Azerbaijan, Belgium, Bulgaria, Germany, Liberia, Netherlands, Norway, Panama, Peru, Poland, Russian Federation, Spain, Uruguay (ratified C. 113); Australia, Chile, Denmark, Estonia, Greece, India, Indonesia, Japan, Republic of Korea, Lithuania, Mexico, New Zealand, Nigeria, United Kingdom.

<sup>36</sup> Brazil, Cuba (ratified C. 113); Indonesia, Romania.

- For instance, national laws and regulations sometimes do not apply to fishing vessels below a certain size: e.g. artisanal and mechanized fishing vessels as well as those other than deep-sea fishing vessels above 20 metres in length remaining at sea for 45 to 50 days;<sup>37</sup> fishing vessels of less than 100 grt;<sup>38</sup> fishing vessels under 30 grt;<sup>39</sup> or fishing vessels with a length of less than 12 metres.<sup>40</sup> Nonetheless, there are some examples of national laws and regulations that do not contain any exclusions.<sup>41</sup> Most notably, the legislation of Uruguay includes all maritime personnel on board private merchant or fishing vessels, including fishermen on board small vessels; it also covers the personnel of the National Merchant Marine, including the crews of the fishing vessels.
- In addition, some countries have excluded certain types of fishing vessels, e.g. vessels fishing for sport or recreation.<sup>42</sup>
- Other countries provide that certain navigation areas are outside the scope of laws and regulations on medical examinations, e.g. vessels fishing in ports and harbours or in estuaries of rivers;<sup>43</sup> fishing vessels not proceeding on an overseas voyage; or vessels not operating outside of restricted limits.<sup>44</sup>
- Sometimes vessels, which do not normally remain at sea for periods of more than three days, are exempted from the application of the pertinent laws and regulations.<sup>45</sup> The vast majority of countries, however, has not granted any exemption in respect of vessels being at sea for short periods.<sup>46</sup>

#### *Requirement for fishermen to produce a medical certificate*

In general, the national laws and regulations prescribe that any person accepted for service on fishing vessels shall, after a prior medical examination, produce a certificate of health issued by an approved doctor or medical office.<sup>47</sup> A few countries

<sup>37</sup> India.

<sup>38</sup> Norway (ratified C. 113).

<sup>39</sup> Japan, Republic of Korea.

<sup>40</sup> Azerbaijan, Russian Federation (ratified C. 113).

<sup>41</sup> Belgium, Bulgaria, Cuba, Ecuador, Germany, Spain, Uruguay (ratified C. 113); Denmark, United Kingdom.

<sup>42</sup> Azerbaijan, Brazil, Costa Rica, Guatemala, Guinea, Netherlands, Panama, Poland, Russian Federation, Tunisia (ratified C. 113); Australia, India.

<sup>43</sup> Brazil, Costa Rica, Guatemala, Guinea, Panama, Poland, Tunisia (ratified C. 113); Australia, Japan.

<sup>44</sup> Australia, New Zealand, Nigeria.

<sup>45</sup> Costa Rica, Guatemala, Norway, Tunisia (ratified C. 113); Australia, New Zealand, Nigeria.

<sup>46</sup> Azerbaijan, Belgium, Brazil, Bulgaria, Cuba, Ecuador, Germany, Guinea, Netherlands, Panama, Poland, Russian Federation, Spain, Uruguay (ratified C. 113); Denmark, United Kingdom.

<sup>47</sup> Belgium, Brazil, Bulgaria, Costa Rica, Cuba, Ecuador, Germany, Guatemala, Guinea, Liberia, Netherlands, Norway, Panama, Peru, Poland, Spain, Tunisia, Ukraine, Uruguay (ratified C. 113); Australia, Chile, Denmark, Estonia, Greece, India, Indonesia, Japan, Republic of Korea, Lithuania, Mauritius, Mexico, Romania.

require a medical certificate for the employment of all persons under 18 years of age, whereas this provision does not apply to fishermen above this age.<sup>48</sup>

The majority of countries has prescribed the nature of the medical examination applicable to the fishing sector.<sup>49</sup> Most notably, Poland indicates that since 1 January 2001 physicians authorized to conduct preventive examinations of fishermen apply the Guidelines for conducting pre-sea and periodic medical fitness examinations for seafarers. Certain member States set out that the medical examination shall be free of charge for the applicant.<sup>50</sup> The national laws and regulations dealing with the nature of the medical examination frequently take into account the age<sup>51</sup> or the duties of the applicant, respectively.<sup>52</sup> For example in Spain the examination is carried out by means of specific protocols relating to the psychological and physical requirements; the general hazards of work on board; and the fishing area to be visited. The medical examination often includes tests of eyesight and hearing.<sup>53</sup>

The particulars to be included in the certificate are prescribed in the vast majority of countries in model forms.<sup>54</sup> Most notably, Poland indicates that since 1 January 2001, the health certificates issued to fishermen have to be in accordance with the model presented in Annex E to the Guidelines for conducting pre-sea and periodic medical fitness examination for seafarers. In general, the medical certificate must attest that the person is not suffering from any illness or disease, which tends to aggravate or constitutes a risk for the other fishermen on board.<sup>55</sup> In addition, certain countries provide for a list of medical counter indications, which may prevent admission to work.<sup>56</sup>

### *Validity and appeal*

The vast majority of countries determine the period of validity of medical certificates applicable to the fishing sector for persons over 21 years of age, which usually

<sup>48</sup> New Zealand, United Kingdom.

<sup>49</sup> Azerbaijan, Belgium, Brazil, Bulgaria, Costa Rica, Cuba, Ecuador, Germany, Guatemala, Guinea, Liberia, Netherlands, Norway, Panama, Poland, Russian Federation, Spain, Tunisia, Uruguay (ratified C. 113); Australia, Chile, Denmark, Estonia, Greece, Indonesia, Japan, Republic of Korea, Lithuania, Mexico, New Zealand, United Kingdom.

<sup>50</sup> Belgium, Costa Rica, Ecuador, Guatemala, Poland, Spain, Tunisia (ratified C. 113); Australia, Denmark.

<sup>51</sup> Belgium, Costa Rica, Cuba, Germany, Guinea, Norway, Peru, Poland, Spain, Tunisia, Uruguay (ratified C. 113); Romania.

<sup>52</sup> Azerbaijan, Belgium, Brazil, Costa Rica, Cuba, Germany, Guatemala, Guinea, Norway, Peru, Poland, Russian Federation, Spain, Tunisia, Uruguay (ratified C. 113); Denmark, New Zealand, Romania.

<sup>53</sup> Costa Rica, Ecuador, Germany, Guinea, Liberia, Norway, Panama, Peru, Poland, Spain, Tunisia, Uruguay (ratified C. 113); Denmark, Republic of Korea, New Zealand.

<sup>54</sup> Azerbaijan, Belgium, Brazil, Bulgaria, Costa Rica, Cuba, Ecuador, Germany, Guatemala, Guinea, Liberia, Netherlands, Norway, Panama, Peru, Poland, Russian Federation, Spain, Tunisia, Uruguay (ratified C. 113); Australia, Chile, Denmark, Estonia, Greece, Japan, Republic of Korea, Lithuania, Mexico, New Zealand, Romania, United Kingdom.

<sup>55</sup> Azerbaijan, Belgium, Brazil, Costa Rica, Ecuador, Germany, Guatemala, Guinea, Liberia, Netherlands, Norway, Panama, Peru, Poland, Russian Federation, Spain, Tunisia, Uruguay (ratified C. 113); Denmark, Japan, Republic of Korea, New Zealand, Romania.

<sup>56</sup> Azerbaijan, Germany, Norway, Panama, Poland, Russian Federation (ratified C. 113); Denmark.

amounts to two years;<sup>57</sup> frequently, the medical certificate already expires after one year.<sup>58</sup> Most of the countries provide that the medical certificate has to be renewed at least annually in the case of persons of less than 21 years of age,<sup>59</sup> whereas a few countries prescribe that solely the medical certificates of persons under 18 years of age expire after up to one year.<sup>60</sup> Some member States lay down that, if a certificate expires during a trip, it remains valid until the return of the vessel.<sup>61</sup>

Most of the ratifying countries set out that a person who has been refused a medical certificate can contest the result of the examination by having recourse to the competent authority and requesting another medical examination. This is carried out by a special independent medical commission or an approved independent physician.<sup>62</sup>

### *Conclusions*

Information obtained by the Office indicates that the 29 countries that have ratified Convention No. 113 are not alone in having national laws and regulations on medical examinations for fishermen – or for seafarers in general, without excluding fishermen; a substantial number (at least 16) have legislation in this area. It would appear that some countries may not have ratified the Convention due to the requirement that examinations for persons under 21 years of age should take place annually (apparently, they consider a person as an adult at 18 years and not 21 years of age, and therefore do not require more frequent examinations unless the person is less than 18 years of age). While several States provide that medical examination should be free of charge, this is apparently not a widespread requirement.

The Office is also examining how the ILO/WHO Guidelines for conducting pre-sea and periodic medical fitness examinations for seafarers could be reflected in the new standard.

Though many countries require medical examinations – and medical certificates – for fishermen, it would appear that this requirement is more likely to be applied to those considered “employees” of a vessel owner; it is less likely to apply to those owning their own vessels, working as “co-adventurers”, or those engaged outside formal employment relationships. This category would include most small-scale and artisanal fishermen (groups which, it would appear, have at least as high rates of fatality, injury and illnesses as those working on larger vessels). Thus, it is not clear whether Convention No. 113 is contributing meaningfully to the improvement of the

<sup>58</sup> Azerbaijan, Guatemala, Netherlands, Panama, Russian Federation, Ukraine (ratified C. 113); Chile, Republic of Korea.

<sup>59</sup> Azerbaijan, Belgium, Costa Rica, Ecuador, Germany, Guatemala, Guinea, Netherlands, Norway, Panama, Russian Federation, Spain, Tunisia, Ukraine (ratified C. 113); Chile, Republic of Korea, Lithuania.

<sup>60</sup> Brazil, Cuba (ratified C. 113); Denmark, New Zealand, United Kingdom.

<sup>61</sup> Azerbaijan, Ecuador, Germany, Guatemala, Guinea, Norway, Peru, Poland, Russian Federation, Tunisia, Uruguay (ratified C. 113); New Zealand, United Kingdom.

<sup>62</sup> Azerbaijan, Belgium, Brazil, Costa Rica, Cuba, Germany, Guatemala, Guinea, Liberia, Netherlands, Norway, Panama, Poland, Russian Federation, Tunisia, Uruguay (ratified C. 113).

health and safety of the majority of the world's fishermen. A new standard, therefore, might seek to provide mandatory or recommendatory provisions aimed at reaching this currently unprotected group. There may also be grounds for linking the issue of medical examination to disability, unemployment and retraining benefits.

#### COMPETENCY CERTIFICATES AND VOCATIONAL TRAINING

As indicated elsewhere in the report, fishing can be a hazardous profession. It is also an increasingly technologically sophisticated profession, at least in many fisheries. Training is important to ensure that fishermen can perform their duties safely and efficiently. It also provides the necessary skills needed to improve income security and professional advancement. Training in responsible fishing may also contribute to the preservation of fish stocks and protection of the marine environment.

The ILO's Tripartite Meeting on Safety and Health in the Fishing Industry concluded, *inter alia*, that:

Training is an essential means of addressing occupational safety and health issues ... , and occupational safety and health issues should be an integral part of all training programmes for fishermen. Training, including refresher courses, should address different types of fishing gear, fishing operations and disaster preparedness, and should reflect the provisions of the STCW-F Convention, ILO's Vocational Training (Fishermen) Recommendation, 1966 (No. 126), and other relevant international codes and guidance.

Generally speaking, the smaller the vessel, the less likely it is that the skipper and other officers will be required to hold a competency certificate. However, partly because of the high accident rate in fishing – involving, for example, capsizing due to loss of stability – some countries are moving towards requiring competency certificates for key positions on smaller vessels. The same tendency applies to basic training of fishermen, with greater attempts to provide such training to all members of the crew.

#### *International standards on competency certificates*

##### *ILO standards*

The Fishermen's Competency Certificates Convention, 1966 (No. 125), provides for ratifying States to establish standards of qualification for certificates of competency entitling a person to perform the duties of a skipper, mate or engineer on board fishing vessels within the scope (above 25 grt). It also prescribes the minimum age for the issue of a certificate, minimum years of sea service and the subjects on which candidates are to be examined. It provides that an efficient system of inspection is to be ensured. Some of the principles contained in this Convention have also been included in the STCW-F Convention (see below). As at 15 September 2002, Convention No. 125 had been ratified by ten member States.<sup>63</sup> The substantive text of the Convention is provided in Annex I.

<sup>63</sup> Belgium, Brazil, Djibouti, France, Germany, Panama, Senegal, Sierra Leone, Syrian Arab Republic, Trinidad and Tobago.

The Governing Body requested the Tripartite Meeting on Safety and Health in the Fishing Industry (Geneva, December 1999) to provide views on this Convention. The Tripartite Meeting took the view that Convention No. 125 should be revised to take into account developments in the fishing industry, inter alia, to bring it up to date with the level of technology on present-day fishing vessels. With reference to the existing IMO STCW-F Convention, the question was raised as to whether one international instrument on issues of competency was not sufficient. The Tripartite Meeting agreed that, in the light of the different supervisory mechanisms applicable to IMO and ILO Conventions, the method of adoption of ILO instruments and the need for comprehensive coverage, a revision of Convention No. 125 was appropriate. Against this background, the Tripartite Meeting recommended to the LILS Committee's Working Party the revision of Convention No. 125<sup>64</sup> and the inclusion of this item in the portfolio of proposals for the agenda of the International Labour Conference.<sup>65</sup> These proposals were agreed by the LILS Committee and the Governing Body.<sup>66</sup>

### *IMO standards*

The STCW-F Convention was adopted in 1995 by an IMO Conference which included 74 representatives from governments, the ILO, the FAO, other United Nations system specialized agencies and a number of intergovernmental and non-governmental organizations. The Convention includes articles covering general obligations; definitions; application; communication of information; other treaties and interpretation; certification; national provisions; control (including port state control); and promotion of technical cooperation. The detailed requirements of the Convention are set out in an annex. Requirements concern skippers and watchkeepers on vessels of 24 metres in length and over, chief engineers and engineering officers on vessels of 750 kW propulsion power or more, and personnel in charge of radio communications. Chapter III of the Annex to the Convention includes requirements for basic safety training for all fishing vessel personnel. As at 30 September 2002, the STCW-F Convention had been ratified by four countries.<sup>67</sup>

### *Comparison of Convention No. 125 and STCW-F Convention*

Thus, there are now two international Conventions addressing competency certificates; an ILO Convention adopted in 1966 and an IMO instrument adopted in 1995.<sup>68</sup> In comparing these instruments (see table 3.1), the Office notes two particularly important differences (in addition to the greater level of detail found in the STCW-F Convention):

---

<sup>64</sup> ILO: *Note on the Proceedings*, op. cit., p. 40.

<sup>65</sup> GB.277/LILS/4.

<sup>66</sup> GB.277/11/2, para. 8; GB.277/205.

<sup>67</sup> Denmark, Iceland, Russian Federation, Ukraine.

<sup>68</sup> Another ILO instrument, the Officers' Competency Certificates Convention, 1936 (No. 53), which applies to vessels above 200 grt, does not exclude fishing vessels.

- the STCW-F Convention includes, through the provisions of Chapter III of its Annex, requirements for safety training of all fishing vessel personnel, while Convention No. 125 does not;
- the STCW-F Convention includes “port state control” provisions, while Convention No. 125 does not.

**Table 3.1. A comparison of provisions in Convention No. 125 and in the STCW-F Convention**

Issue	ILO Convention No. 125	STCW-F Convention
Scope and definitions	<p>“Fishing vessel” includes all ships or boats, of any nature whatsoever, whether publicly or privately owned, engaged in maritime fishing in salt waters and registered, <i>except</i>:</p> <ul style="list-style-type: none"> <li>– under 25 gt;</li> <li>– engaged in whaling or similar pursuits;</li> <li>– engaged in fishing for sport or recreation;</li> <li>– fishery research or protection vessels.</li> </ul> <p>The competent authority may, after consultation with fishing vessel owners’ and fishermen’s organizations, where such exist, exempt fishing vessels engaged in inshore fishing, as defined by national laws and regulations.</p> <p>The terms “skipper”, “mate” and “engineer” are defined.</p>	<p>“Fishing vessel” or “vessel” means any vessel used commercially for catching fish or other living resources of the sea. “Seagoing fishing vessel” means a fishing vessel other than those which navigate exclusively in inland waters or in waters within, or closely adjacent to, sheltered waters or areas where port regulations apply.</p> <p>The Annex, Regulation I/2, provides, inter alia, that “[t]he Administration of a Party, if it considers it unreasonable and practicable to apply the full requirements of certain Regulations in Chapter II (see below) to personnel on board a fishing vessel less than 45 metres in length operating exclusively from its ports and fishing within its limited waters, may determine which of these regulations should not apply, wholly or in part, to such personnel, without derogation from the principles of safety in the Convention”.</p> <p>The Convention “shall apply to personnel serving on board seagoing fishing vessels entitled to fly the flag of a Party”.</p> <p>Under the Annex, Regulation 1, Definitions, there are also definitions of “limited waters” and “unlimited waters”, as well as definitions of “skipper”, “officer”, “officer in charge of a navigational watch”, “engineer officer”, “chief engineer officer”, “second engineer officer”, and “radio operator”.</p>

Issue	ILO Convention No. 125	STCW-F Convention
Certification	<p>States shall establish standards of qualification for certificates for skippers, mates, engineers.</p> <p>All fishing vessels to which the Convention applies to carry a certified skipper.</p> <p>All fishing vessels over 100 grt engaged in operations and areas defined by national laws and regulations to carry a certified mate.</p> <p>All fishing vessels with an engine power above a level to be determined by the competent authority, after consultation with fishing vessel owners' and fishermen's organizations where they exist, shall be required to carry an engineer (some exceptions provided). Exceptions for individual cases.</p> <p>Certificates of skippers, mates or engineers may be full or limited, according to size, type and nature of area of operations of the fishing vessel, as determined by national laws and regulations.</p>	<p>Chapter II of the Convention sets out, in Regulations, mandatory minimum requirements for certification of:</p> <ul style="list-style-type: none"> <li>– skippers (Reg. 1) and officers (Reg. 2) in charge of a navigational watch, on fishing vessels of 24 metres in length and over operating in unlimited waters;</li> <li>– skippers (Reg. 3) and officers (Reg. 4) on fishing vessels 24 metres in length and over operating in limited waters;</li> <li>– chief engineers (Reg. 5) and second engineer officers (Reg. 5) of fishing vessels powered by main propulsion machinery of 750 kW propulsion or more;</li> <li>– personnel in charge of or performing radio-communication duties (Reg. 6) on board fishing vessels.</li> </ul> <p>It also sets out requirements to ensure continued proficiency of skippers, officers and engineer officers (Reg. 7) and GMDSS personnel (Reg. 8).</p>
Basic safety training	Requirements concern only skippers, mates and engineers.	Chapter III requires basic safety training (survival techniques; fire prevention and fire-fighting; emergency procedures; elementary first aid; prevention of marine pollution; prevention of ship-board accidents) for all fishing vessel personnel (the administration shall determine whether and, if so to what extent, these provisions shall apply to personnel of small fishing vessels or personnel already employed on fishing vessels).
Watchkeeping	Skippers and mates must show knowledge of collision regulations, navigation and related subjects.	Chapter IV sets out basic principles to be observed in keeping a navigational watch on board fishing vessels.

Issue	ILO Convention No. 125	STCW-F Convention
Minimum age and minimum professional experience for issue of certificates of competency	<p>Minimum age for certificates shall not be less than:</p> <ul style="list-style-type: none"> <li>– 20 years in the case of a skipper;</li> <li>– 19 years in the case of a mate;</li> <li>– 20 years in the case of an engineer.</li> </ul> <p>For skippers engaged in inshore fishing, and for engineers on vessels with engine power below a certain level, after consultation with vessel owners' and fishermen's organizations, minimum age may be fixed at 18.</p> <p>Minimum professional experience for issue of a mate's certificate of competency shall not be less than three years' sea service engaged in deck duties.</p> <p>Minimum professional experience for issue of a skipper's certificate of competency shall not be less than four years' sea service engaged in deck duties (some exceptions possible).</p> <p>Minimum professional experience for issue of an engineer's certificate of competency shall not be less than three years' sea service in the engine-room (exceptions possible).</p> <p>Reduced requirement for sea service possible if person has completed an approved training course – but in no case less than 12 months.</p>	<p>Candidates for certification of officers in charge of a navigational watch on fishing vessels of 24 metres in length and over operating in unlimited waters and in limited waters, and chief engineers and second engineer officers of fishing vessels powered by main propulsion machinery of 750 kW propulsion power or more, must be not less than 18 years of age.</p> <p>There are sea service requirements. It is also possible to substitute a part of seagoing service on fishing vessels with approved seagoing service as an officer in charge of a navigational watch on seagoing ships covered by the STCW Convention or by a period of special training.</p>
Examinations	<p>Candidates for certificates shall be required to show knowledge of a range of subjects listed (in Articles 11 and 12).</p>	<p>Candidates for certification shall "have passed an appropriate examination or examinations for assessment of competence to the satisfaction of the Party". The material to be covered is set out in detail in Chapter II. A candidate who holds a valid certificate for competency issued in accordance with the STCW Convention need not be re-examined in certain subjects.</p>

Issue	ILO Convention No. 125	STCW-F Convention
Enforcement measures	<p>States shall ensure enforcement of national laws or regulations by an efficient system of inspection.</p> <p>National laws or regulations giving effect to the provisions of the Convention shall provide for cases in which the State may detain vessels registered in its territory on account of a breach of laws or regulations.</p> <p>National laws and regulations shall prescribe penalties or disciplinary measures in cases where laws and regulations are not respected, including when a fishing vessel owner has engaged a person not certificated as required and when a person has obtained by fraud or forged documents an engagement to perform duties requiring certification without holding the requisite certificate.</p>	<p>Each Party shall establish processes and procedures for impartial investigation of any reported incompetency, act or omission, that may pose a direct threat to safety of life or property at sea or to the marine environment, by the holders of certificates.</p> <p>Each Party shall prescribe penalties or disciplinary measures.</p> <p>In particular, such penalties or disciplinary measures shall be prescribed and enforced in cases in which:</p> <ul style="list-style-type: none"> <li>– an owner, owner’s agent or skipper has engaged a person not holding a certificate;</li> <li>– a skipper has allowed any function or service in any capacity by a person not holding a certificate or dispensation;</li> <li>– a person has obtained by fraud or forged documents an engagement to perform any function.</li> </ul> <p>A Party within whose jurisdiction there is based an owner or owner’s agent or any person who is believed to have clear grounds to have been responsible for, or to have knowledge of, any apparent non-compliance shall extend all cooperation possible to any Party which advises it to initiate proceedings under its jurisdiction.</p>

### *International standards on vocational training*

#### *Recommendation No. 126*

The Vocational Training (Fishermen) Recommendation, 1966 (No. 126), as its name indicates, sets out guidance concerning the training of fishermen. It is divided into five main parts: Scope and definitions; National planning and administration; Training programmes; Methods of training; and International co-operation. As a Recommendation, the instrument is not subject to ratification and there are therefore no article 22 reports submitted by member States on its application. The Recommendation differs from Convention No. 125 and the STCW-F Convention in that it provides substantial guidance on – as the titles of its parts indicate – such matters as planning, coordination, financing and methods of training. The substantive text of the Recommendation is provided in Annex I of this report.

*FAO/ILO/IMO Document for Guidance on Training and Certification of Fishing Vessel Personnel*

The FAO/ILO/IMO Document for Guidance on Training and Certification of Fishing Vessel Personnel contains very detailed guidance on the training and certification of fishing vessel personnel on small and large fishing vessels and fishing on an industrial scale. It is intended to provide guidance for those developing, establishing or reviewing national training schemes for training and certification programmes for fishing vessel personnel.

The original “Document for Guidance on Fishermen’s Training and Certification” was prepared by a joint FAO/ILO/IMO Working Group in the early 1980s and published in 1985. It drew to a great degree upon Convention No. 125 and Recommendation No. 126. At that time, the IMO did not have a Convention concerning the training of fishermen. In 1997 the Maritime Safety Committee proposed the revision of the Document for Guidance – primarily to bring it into line with the provisions of the STCW-F Convention and the FAO Code of Conduct for Responsible Fisheries. This was agreed by the ILO Governing Body and the FAO. A Joint FAO/ILO/IMO Working Group was established and met twice, in 1998 and 1999, to carry out this work. Following consideration by the Governing Body,<sup>69</sup> the Maritime Safety Committee and the FAO, the revised version was published by the IMO in 2001.

The major proposed revisions to the now 312-page publication included: bringing it into line with the provisions of the STCW-F Convention, including a new chapter concerning the “functional skill training option”;<sup>70</sup> adding a new chapter and appendix concerning the FAO Code of Conduct for Responsible Fisheries; adding an appendix concerning fatigue; and adding an appendix concerning the principles to be observed in keeping an engineering watch. The revised Document for Guidance contains guidance on most of the issues covered by ILO Recommendation No. 126. It is also much more detailed than the Recommendation.

*Regional standards**European Union*

Council Directive 89/391/EEC of 12 June 1989 on the introduction of measures to encourage improvements in the safety and health of workers at work sets out general requirements on training of workers in all sectors. Council Directive 93/103/EC of 23 November 1993 concerning the minimum safety and health requirements for

---

<sup>69</sup> See GB.277/14, para. 71.

<sup>70</sup> The “functional skill training option” provides guidance to national administrations on the use of skills-based training and assessment arrangements in conjunction with the established systems for determining the competence of fishing vessel personnel. The skills-based training system involves different approaches to curricula, methods of teaching, assessment and certification to those traditionally used. It focuses on the ability of a person to perform skilled tasks and the practical application of knowledge in a range of variable operational situations. Competency is determined when the fisherman can prove his ability to perform a predetermined range of skills or functions to an agreed standard.

work on board fishing vessels includes provisions on training workers. Article 9 generally concerns training applicable to all workers on fishing vessels; article 10 concerns training of persons likely to command a vessel. Council Directive 92/29/EEC of 31 March 1992 on the minimum safety and health requirements for improved medical treatment on board vessels provides, inter alia, that each Member State shall take measures to ensure that “all persons receiving professional maritime training and intending to work on board ship have been given basic training in the medical and emergency measures to be taken immediately in the event of an accident or serious medical emergency” and that “the captain and any worker or workers to whom he delegates the use of the medical supplies ... have received special training updated periodically, at least every five years, taking into account the specific risks and needs connected with the different categories of vessel and in accordance with the general guidelines set out in Annex V” (which provides further detail on the medical training of the captain and designated workers).

### *Southern Africa*

In Southern Africa, the Southern African Development Community Protocol on Fisheries provides, in article 15, that “State Parties [to the Protocol] shall comply with the International Maritime Organization standards for certification of seamen, marine engineers, masters of vessels, and other seagoing personnel”.<sup>71</sup>

### *National law and practice concerning competency certificates*

This section is based on reports concerning the application of Convention No. 125, submitted to the ILO by ratifying States in accordance with article 22 of the ILO Constitution, and information on other countries provided to or obtained by the Office.

### *Scope of application*

Certain countries have national laws and regulations concerning competency certificates which exclusively apply to fishing vessels.<sup>72</sup> In other countries, the pertinent provisions usually cover all merchant vessels or all seafarers, without the exclusion of fishing vessels or fishermen, respectively.<sup>73</sup>

The national laws and regulations on articles of agreement very often contain exclusions from the application:

---

<sup>71</sup> Reported by J. Dahl and A. Masarakufa in: *Conditions of work in the fisheries sector – An overview of SADC member States*, an unpublished paper, commissioned by the ILO and prepared by the Namibian Economic Policy Research Unit (Aug. 2002).

<sup>72</sup> Belgium (ratified C. 125); Denmark, Lithuania, Netherlands, Norway, Spain, Tunisia, United Kingdom.

<sup>73</sup> Germany, Panama, Senegal, Syrian Arab Republic, Trinidad and Tobago (ratified C. 125); Australia, Denmark, Estonia, Greece, India, Indonesia, Japan, Republic of Korea, Lithuania, Mexico, Netherlands, New Zealand, Norway, Peru, Poland, Romania, Spain, United Kingdom, United States.

- National laws and regulations do not sometimes apply to fishing vessels below a certain size: e.g. less than 25 tonnes;<sup>74</sup> less than 30 grt;<sup>75</sup> less than 16.5 metres;<sup>76</sup> less than 200 gt.<sup>77</sup> Nonetheless, a few examples may be cited, where the national laws and regulations do not contain any exclusions.<sup>78</sup>
- In addition, some countries have excluded certain types of fishing vessels, e.g. vessels fishing for sport or recreation<sup>79</sup> and fishery research and protection vessels.<sup>80</sup>
- Other countries exclude certain navigation areas, e.g. fishing vessels not operating outside the prescribed limits;<sup>81</sup> fishing vessels proceeding on a voyage other than an overseas voyage;<sup>82</sup> fishing vessels not operating on the high seas;<sup>83</sup> and fishing vessels engaged in inshore fishing.<sup>84</sup>

Finally, national laws and regulations often provide that the competent authority may in individual cases permit a fishing vessel to put to sea without the full complement of certificated personnel,<sup>85</sup> e.g. if no suitable substitutes are available and it is safe to allow the vessel to put to sea, in cases of *force majeure*, etc.

#### *Requirements on competency certificates*

Table 3.2 summarizes the information from a number of member States – ratifying and non-ratifying – concerning the requirements on competency certificates as covered by Convention No. 125.

#### *National laws and regulations concerning vocational training programmes*

In Denmark, an Order provides that no person may perform work on board a fishing vessel, irrespective of its tonnage, without having completed the basic course for ship's assistants or a safety course for fishermen of three weeks' duration approved by the Danish Maritime Authority (DMA) and having obtained a certificate proving it. Older fishermen, having served on board fishing vessels during their lifetime, may continue their job at sea if they pass a special course of one weeks' duration. The DMA introduced in 1994 – in cooperation with the Danish Fishermen's

<sup>74</sup> Sierra Leone, Syrian Arab Republic (ratified C. 125); Norway.

<sup>75</sup> Japan.

Organization (shipowners) and the General Workers' Union in Denmark – a programme for training commercial fishermen. The training consists of a safety course for fishermen of three weeks' duration, followed by six months' sea service, 22 weeks' shore-based training and 12 months' sea service. The training is voluntary for young fishermen, but allows young people to start their training at the age of 16 years if there is an agreement, covering the complete education period, between the young fishermen and the Danish Fishermen's Organization. The training for commercial fishermen enjoys the same status as the basic course for ships' assistants, which gives the possibility to sign as Ordinary Ship's Assistant on board merchant vessels. Persons having passed the skipper examination also have the opportunity to pass similar examinations for merchant vessels below 3,000 tonnes. Persons leaving the industry have the possibility, through a general system for all industries, to receive necessary additional training to obtain competence ashore.

The traditional route to certificates of competency for fishermen in the United Kingdom has been by written examination and a final oral examination. The National Vocational Qualification (NVQ) operates in tandem with the written examination route. The NVQ route allows candidates to demonstrate their competency in tasks rather than by sitting a traditional examination. The candidates' underpinning knowledge is also tested by various means before they are found to be competent.

In Spain, the Marine Social Institute (ISM) has seven schools for specific nautical and fishing professional training; this training is divided into five cycles of medium and superior grade of the professional maritime fishing family. Training plans are developed in consultation with the fishing sector.

In Mauritius, the Ministry of Fisheries, with the collaboration of the Sea Training School, carries out a training course for banks fishermen. Each training session lasts for two weeks; after successful completion of the course, a Bank Fisherman Proficiency Certificate is awarded.

The Education Act in Norway regulates all education at primary and secondary level. The main model for vocational training involves two years of theoretical education in the upper secondary school (one-school-year foundation course and one-school-year advanced course I) and one year's apprenticeship training. For fishermen the relevant courses are: foundation course agriculture; fishing and forestry; advanced course I; and fishing and catching. After two years of apprenticeship training the apprentice can be examined for a certificate of apprenticeship as a fisherman. The necessary safety training is given during the apprenticeship.

In Namibia a training institution established at Walvis Bay provides training to the standards set out in the STCW-F Convention. It also trains fisheries inspectors and observers as well as technical assistants for fisheries inspectors.<sup>86</sup>

In Tunisia, a decree establishes the vocational training system for the specialized labour force working on board fishing vessels.

In other countries (e.g., Poland, Romania), training for the fishing sector appears to be conducted by nautical colleges or academies. A special act for the promotion of employment of seafarers applies to fishermen working on vessels covered by the Mariners' Law. In Panama, there is no special training centre for fishermen; however, the nautical school (for merchant seafarers) has established a special training programme with the assistance of Japan.

<sup>86</sup> Reported by J. Dahl and A. Masarakufa, *op. cit.*

### *Conclusions*

The hazardous nature of the fishing occupation (see later in this report), the increased technical sophistication of fishing, and the need to ensure that fishermen are trained or otherwise made aware of responsible fisheries issues, would seem to indicate that it is desirable to promote training in an international standard.

Of the two international Conventions concerning this subject – ILO Convention No. 125 and the STCW-F Convention – the latter appears to be the more modern and comprehensive instrument. As noted above, it goes beyond Convention No. 125 by requiring the safety training of *all* fishing vessel personnel and “port state control” (though such provisions would only be applicable to a relatively small percentage of the world fishing fleet). On the other hand, the STCW-F, despite having been adopted in 1995, has been ratified by fewer States than Convention No. 125. Furthermore, many provisions of Recommendation No. 126 continue to be relevant to many aspects of the vocational training of fishermen.

With this in mind, it would appear that the new ILO standard for the fishing sector might include mandatory – but general – provisions concerning training and perhaps recommendatory provisions providing greater detail, with links to the STCW-F Convention and to the FAO/ILO/IMO Document for Guidance on Training and Certification of Fishing Vessel Personnel.

### IDENTITY DOCUMENTS FOR FISHERMEN

Many fishermen, like other seafarers, enter into the territory of a State other than their State of nationality when: they are on shore leave; they are joining or transferring to another ship; or they are in transit to join a ship in another country or for repatriation. The value of providing certain fishermen with a document to facilitate shore leave or travel has therefore been raised at recent ILO meetings, particularly by representatives of fishermen’s organizations.

### *International standards*

The Seafarers’ Identity Documents Convention, 1958 (No. 108), establishes international standards concerning the form and content of national identity cards for seafarers, and provides for their reciprocal recognition in order to alleviate the difficulties and inconveniences which may arise when seafarers take leave in foreign ports, travel in transit or are in the course of repatriation.<sup>87</sup> The Convention provides, in Article 1(1) that it “applies to every seafarer who is engaged in any capacity on board a vessel, other than a ship of war, registered in a territory for which the Convention is in force and ordinarily engaged in maritime navigation”. Article 1(2) further provides that “[i]n the event of any doubt whether any categories of persons are to be regarded as seafarers for the purposes of this Convention, the question shall be determined by the competent authority in each country after consultation with the shipowners’ and seafarers’ organizations concerned”. As at 15 September 2002, the Convention has been ratified by 61 member States.

<sup>87</sup> D. Pentsov, *op. cit.*, pp. 533-603.

The Working Party on Standards of the ILO's Tripartite Meeting on Safety and Health in the Fishing Industry, did not specifically discuss Convention No. 108; however, it raised the issue of identity documents for fishermen during its discussion of the Fishermen's Articles of Agreement Convention, 1959 (No. 114). Inter alia, the Working Party:

... considered that this Convention [No. 114] was in need of partial revision in order to include new provisions for an identification document for fishermen based on that applicable to seafarers. It was felt that developments in the fishing industry which had now become globalized necessitated that fishermen be provided with such documents to facilitate matters like visas, shore and port leave as well as repatriation.

The Governing Body, when it considered the proposals concerning the revision of Convention No. 114, agreed with the recommendation for the partial revision of Convention No. 114 but did not specifically comment on the issue of an identity document for fishermen.<sup>88</sup>

In March 2002, the Governing Body at its 283rd Session placed an urgent item on the agenda of the 91st Session (June 2003) of the International Labour Conference, concerning improved security of seafarers' identity with a view to the adoption of a Protocol to Convention No. 108. The question will be examined according to the single-discussion procedure established under article 38 of the Standing Orders of the Conference, and the new instrument will be considered with a view to adoption by the Conference at its 91st Session in June 2003.<sup>89</sup> At the time this law and practice report was prepared, there had been no discussion of whether or not the Protocol to Convention No. 108 should apply to or exclude fishermen.

### *Regional requirements*

The Schengen Agreement and Council Regulation (EC) No. 539/2001 of 15 March 2001 is the framework setting uniform immigration regulations for 15 European States. It is a text of general application and does not contain special provisions concerning seafarers or fishermen.<sup>90</sup>

### *National laws and practice*

On the whole, information available to the Office indicates that fishermen working abroad are able to obtain a seafarers' identity document or seafarers' book. This appears to be the situation in several countries.<sup>91</sup> In the Netherlands, seamen's books are provided. All seafarers, including fishing vessel personnel, must be in possession of a passport. In Spain, workers at sea who are not Spanish must embark with a maritime identity document referred to under Convention No. 108, delivered by

<sup>88</sup> GB.277/11/2, para. 8, GB.277/LILS/4, para. 50, GB.277/LILS/WP/PRS/2, para. I.3.

<sup>89</sup> For a full discussion of this issue, see ILO: *Improved security of seafarers' identification*, Report VII(1), International Labour Conference, 91st Session (Geneva, 2003).

<sup>90</sup> A discussion of the Agreement and its impact on the movement of seafarers may be found in Report VII(1), *ibid*.

<sup>91</sup> Denmark, Japan (for those covered by the Mariners' Law, i.e. seagoing fishing vessels of 30 gt and greater), Mauritania, Mexico, Panama, Poland, Romania, Spain, Tunisia.

another country in accordance with the provisions of article 32 of the Order of 18 January 2000 – which approves the Regulation on the Despatch of Vessels.

In some countries – for example, the United States – fishermen are apparently not provided with such documents. Norway also does not issue identity documents to fishing vessel personnel, irrespective of trading area (the relevant regulations for seafarers, Regulations concerning Supervision of Maritime Service of 25 November 1988 (No. 940) section 5, exclude personnel on fishing or catching vessels if these vessels are employed for fishing or catching). In the United Kingdom, the Merchant Shipping (Seamen's Documents) Regulations, 1987, currently preclude the issue of United Kingdom seafarer identity documents (British Seamen's Cards) to United Kingdom seafarers employed on fishing vessels, though new regulations are being developed to resolve this.

In Canada, in British Columbia, the fishing industry is limited to Canadian west coast waters and identity documents are not necessary. However, in Newfoundland all commercial fishers are required to have registration cards showing they are registered with the Professional Fish Harvesters Certification Board (PFHCB) and authorized to fish in the Province. Identity documents for offshore trawlermen are matters covered by collective agreement. In India, there is no specific identity document for fishing vessel personnel working abroad except the passport and competency certificates (for those certified). State governments provide identity cards to fishermen.

In Malaysia, the Department of Fisheries Malaysia has issued identity cards to fishermen to ease their identification and control. Foreign fishermen must have special permission from the Director-General of Fisheries (Malaysia) to work on board a Malaysian fishing vessel. In Mauritius, fishermen are issued a Banks Fishermen Continuous Record Book.

### *Conclusions*

From the information obtained by the Office, it appears that access to identity documents is most important to fishermen working on foreign vessels or vessels on international foreign voyages. This issue could be dealt with by a mandatory or recommendatory provision in the new fishing standard calling for ratifying States to issue identity cards for fishermen employed on foreign vessels or vessels on international voyages.

### RECRUITMENT AND PLACEMENT/CONTINUITY OF EMPLOYMENT

There are a variety of ways in which fishermen obtain employment on fishing vessels. Some are recruited directly by the captain of the vessel; some by the owner; others find jobs through trade unions. Many fishermen start work in the industry by working for or alongside a parent on a family-owned vessel. In a number of countries or regions within countries, there have been attempts to “professionalize” fishing, linking together the issues of employment, training (particularly safety training) and registration. This may involve trying to increase safety, stabilize income and decrease fishing effort in order to prevent over fishing.

Some migrant fishermen may find employment through recruitment and placement agencies. In recent years, the ILO has received or become aware of reports of abusive practices among a number of these agencies. Problems include: payment for

jobs; false contracts; and the berthing of fishermen in floating hotels and barracks with very poor accommodation. While the governments of the countries concerned seem to have taken action to address these problems, the situation appears to be persistent. At one point, China went as far as to ban its nationals from working on Taiwan (China) vessels until conditions were improved.<sup>92</sup>

The issue of recruitment and placement may only be appropriate for some segments of the fishing sector, notably as concerns the employment of fishermen on foreign-flag vessels. These instruments, or at least the principles they reflect, may be particularly relevant to countries which supply large numbers of fishermen to foreign fleets.

### *Recruitment and placement*

#### *International standards*

There is no specific instrument on this subject specifically addressing fishermen. However, there are two applicable to seafarers: the Recruitment and Placement of Seafarers Convention, 1996 (No. 179), and its accompanying Recommendation (No. 186), which could be applied to international commercial fishing. Convention No. 179 revised an early ILO instrument, the Placing of Seamen Convention, 1920 (No. 9), which provided, inter alia, that “the business of finding employment for seamen shall not be carried on by any person, company, or other agency, as a commercial enterprise for pecuniary gain ...”. Convention No. 179 provides the possibility of private recruitment and placement agencies, but requires that these shall be operated in conformity with a system of licensing or certification or other form of regulation. It includes a number of provisions aimed at ensuring that seafarers: are properly qualified; have contracts which are in accordance with applicable laws, regulations and collective agreements; are informed about their rights and duties under their contracts prior to or in the process of engagement; and are able to examine contracts before they are signed and receive copies after they are signed. There are also provisions for complaint procedures. Convention No. 179 provides in particular that “member States shall ... ensure that no fees or other charges for recruitment or for providing employment to seafarers are borne directly or indirectly, in whole or in part, by the seafarer”. Article 3 provides that “[n]othing in this Convention shall in any manner prejudice the ability of a seafarer to exercise basic human rights, including trade union rights”. As at 15 September 2002, the Convention had been ratified by six States. As with the other Conventions adopted in 1996, Convention No. 179 provides, in Article 1(2) that “[t]o the extent it deems practicable, after consultation with the representative organizations of fishing-vessel owners and fishermen ... the competent authority may apply the Convention to fishermen ...”.

### *Continuity of employment*

#### *International standards*

At its November 1978 meeting, the ILO’s Committee on Conditions of Work in the Fishing Industry adopted, inter alia, a resolution on stabilization of employment

<sup>92</sup> Reported in: “China through a lens”, [www.china.org.cn/features/photos/index.htm](http://www.china.org.cn/features/photos/index.htm) (July 2002) (site visited 26 November 2002).

and earnings. Among other things, the resolution “urged [the Office] to carry out a study to determine to what extent the provisions of [the Continuity of Employment (Seafarers) Convention, 1976 (No. 145), and the Continuity of Employment (Seafarers) Recommendation, 1976 (No. 154)] might be applied to fishermen ...”. These standards specifically do not apply to crew members on board a seagoing ship “engaged in fishing ...”. They therefore will not be discussed at length here. However, the Office does recognize the need to obtain information on laws and regulations concerning continuity of employment and registration of fishermen. The Office has not been able to collect extensive information on this subject. However, it has obtained information concerning a few member States – or at least on a few regions within member States.

### *National law and practice*

The Office did not, in preparing this report, specifically request member States to provide information concerning the registration of fishermen. It has, however, observed that access to work as a commercial fisherman is often related to such issues as competency and training. For instance, in some countries fishermen cannot be employed on vessels, or at least vessels of a certain size, unless they hold certificates (for some positions) or have at least received basic safety training; this is also a requirement of the IMO’s STCW-F Convention (see section on competency certificates and vocational training). In many countries, access to the fisheries may be related to licences to fish. In turn, these licences may be linked to the vessel or to the individual.

In Canada, in Newfoundland, there has been an effort for several years now to “professionalize” commercial fishing. This has been done for several reasons, as set out in the Professional Harvesters Act. The Act establishes the Professional Fish Harvesters’ Certification Board (PFHCB), the objectives of which include “to operate and maintain a fish harvester registration system”.<sup>93</sup>

More information concerning the Board is found in Chapter VII.

### *Conclusions*

The issue of recruitment and placement of fishermen is most relevant to fishermen serving on foreign vessels. This issue might be dealt with in the new fishing standard by a mandatory or recommendatory provision calling upon “labour-supplying” States to apply the same regulations concerning recruitment and placement of fishermen that they apply to seafarers.

The issue of continuity of employment in the fishing sector appears to be vital to a very wide group of fishermen, in particular due to expected cutbacks in fishing fleets, and thus fishing jobs, to reduce fishing effort and the pressure on fish stocks. For these reasons, consideration might be given to including provisions on this issue in the new fishing standard.

## CHAPTER IV

### CONDITIONS OF EMPLOYMENT, MANNING AND WORKING TIME

#### ARTICLES OF AGREEMENT

Multinational companies operating with large factory trawlers and numerous other vessels, and employing thousands of workers on several oceans, usually have a formal employment relationship with the fisherman. Small wooden canoes and other small craft may not. Most fishing operations fall somewhere between these two extremes. A large number, perhaps most, work under the share system and are considered “self-employed”. Many countries require “articles of agreement”, i.e. a special maritime contract between the crew and the shipowner or ship captain. These “articles of agreement” involve mutual obligations and, as they are binding, enable the fishermen to enforce their rights by law.

#### *International standards*

In 1959, the ILO adopted the Fishermen’s Articles of Agreement Convention, 1959 (No. 114), which had been ratified, as at 30 September 2002, by 22 countries.<sup>1</sup> This instrument governs the procedure for determining conditions of work. It stipulates that the persons employed or engaged on board a fishing vessel must sign articles of agreement with the owner of the fishing vessel or his authorized representative. The agreement may be made for a definite period, or for a voyage or, if permitted by national law, for an indefinite period. It must state the respective rights and obligations of each of the parties and contain the prescribed particulars, such as: the voyage or voyages to be undertaken; the scale of provisions to be supplied to the fisherman; the amount of his wages or his share and the method of calculating such share; as well as the termination of the agreement and the conditions thereof. The substantive provisions of the Convention are provided in Annex I of this report.

#### *National law and practice*

This section is based on reports concerning the application of Convention No. 114, submitted to the ILO by ratifying States in accordance with article 22 of the ILO Constitution, and on information on other countries provided to or obtained by the Office.

---

<sup>1</sup> Belgium, Bosnia and Herzegovina, Costa Rica, Cyprus, Ecuador, France, Germany, Guatemala, Guinea, Italy, Liberia, Mauritania, Netherlands, Panama, Peru, Slovenia, Spain, The former Yugoslav Republic of Macedonia, Tunisia, United Kingdom, Uruguay, Yugoslavia.

### *Scope of application*

Certain countries have national laws and regulations concerning articles of agreement, which exclusively apply to fishing vessels or, respectively, fishermen.<sup>2</sup> However, the pertinent laws and regulations usually cover all merchant vessels or, respectively, all seafarers, without excluding fishing vessels or fishermen.<sup>3</sup> A few countries have issued general labour legislation on contracts of employment, wages, etc., which applies to every workplace, including fishing vessels.<sup>4</sup>

The national laws and regulations on articles of agreement very often contain exclusions from the application:

- National laws and regulations sometimes do not apply to fishing vessels below a certain size: e.g., less than 5 tonnes;<sup>5</sup> less than 20 tonnes;<sup>6</sup> less than 75 tonnes;<sup>7</sup> less than 20 cubic metres,<sup>8</sup> less than 20 metres<sup>9</sup> and less than 80 feet in length<sup>10</sup> and vessels with less than 20 crew members.<sup>11</sup> In Norway fishing vessels of less than 100 grt are only partly covered; and in Japan vessels less than 30 grt are only marginally covered by labour law. Nonetheless, several examples may be cited, where the national laws and regulations do not contain any exclusions.<sup>12</sup>
- In addition, some countries have excluded certain types of fishing vessels: e.g. vessels fishing for sport or recreation;<sup>13</sup> fishery research and protection vessels;<sup>14</sup> training ships<sup>15</sup> and vessels fishing certain species of fish.<sup>16</sup>
- Other member States exclude certain navigation areas: e.g., vessels fishing in ports and harbours or in estuaries of rivers;<sup>17</sup> fishing vessels proceeding on a voyage other than an overseas voyage;<sup>18</sup> and vessels operating “outside the Kingdom” continuously from one year upwards.<sup>19</sup>

<sup>2</sup> Costa Rica, Ecuador, Germany, Guatemala, Guinea, Netherlands, Peru, Tunisia, United Kingdom (ratified C. 114); Chile, Mauritius, Thailand.

<sup>3</sup> Belgium, Costa Rica, Cyprus, France, Germany, Italy, Liberia, Mauritania, Panama, Tunisia, United Kingdom, Uruguay (ratified C. 114); Australia, Chile, Denmark, Estonia, India, Indonesia, Japan, Republic of Korea, New Zealand, Norway, Poland, Romania.

<sup>4</sup> Ecuador, France, Netherlands, Spain, Uruguay (ratified C. 114); Japan, Lithuania, Mauritius, Mexico, Nigeria, Philippines, Romania, Thailand.

<sup>5</sup> Cyprus (ratified C. 114).

<sup>6</sup> United States.

<sup>7</sup> Liberia (ratified C. 114).

<sup>8</sup> Netherlands (ratified C. 114).

<sup>9</sup> India.

<sup>10</sup> United Kingdom (ratified C. 114).

<sup>11</sup> Thailand.

<sup>12</sup> Belgium, Costa Rica, Ecuador, France, Germany, Italy, Mauritania, Uruguay (ratified C. 114); Chile.

<sup>13</sup> Guinea, Tunisia (ratified C. 114); India, New Zealand.

<sup>14</sup> Tunisia (ratified C. 114).

<sup>15</sup> Tunisia (ratified C. 114).

<sup>16</sup> Peru, Tunisia (ratified C. 114).

<sup>17</sup> Guinea (ratified C. 114).

<sup>18</sup> Australia.

<sup>19</sup> Thailand.

A few countries exempt the owners and fishermen covered by collective agreements concluded between fishing boat owners' and fishermen's organizations on certain issues – such as working hours, holiday with pay, sick leave, wages and share of the catch – from the laws and regulations on articles of agreement.<sup>20</sup> The majority of the countries, however, do not provide that the competent authority may grant exemptions from the pertinent provisions concerning individual agreements in the event of a collective agreement being applicable in this area.<sup>21</sup> Even if there are many collective agreements, they rather seem to complete the national legislation on individual agreements and to be consistent with it – sometimes even permitting the reference to or incorporation of a collective agreement in the crew agreement.

### *Conclusion of agreement*

The member States usually provide that a written agreement between the employer (owner) or his representative (e.g. master) and the fisherman<sup>22</sup> has to be concluded and signed by both.<sup>23</sup> A number of countries require an agreement to be drawn up in a format approved by the competent authority.<sup>24</sup> The contracts in a few countries, however, may be in writing or oral.<sup>25</sup>

In a number of cases, the fisherman has to examine further the content of the agreement at the moment of its signature before the competent maritime authority;<sup>26</sup> in others, when the agreement is included in or appended to the crew list, at the time of his registration in the crew list at the maritime authority.<sup>27</sup> Frequently the agreements must be endorsed by the maritime authority who is not involved in the conclusion of these agreements and cannot change their provisions; however, the authority can refuse to endorse the contract in the case of violations of national law.<sup>28</sup> Similarly, certain countries stipulate that for the purpose of supervision, the agreements shall be delivered to the competent authority after their conclusion.<sup>29</sup>

---

<sup>20</sup> For example Germany (ratified C. 114).

<sup>21</sup> Belgium, Costa Rica, Cyprus, Ecuador, France, Guatemala, Guinea, Italy, Liberia, Mauritania, Netherlands, Peru, Tunisia, United Kingdom, Uruguay (ratified C. 114); Denmark, Estonia, Lithuania, Norway, Philippines, Romania.

<sup>22</sup> The Office has construed in respect of Convention No. 114 that the members of fishermen's cooperatives fall within its scope if they are entered on ship's articles. The master is only covered and thus required to enter into articles of agreement if he does not act as the representative of the owner in signing articles of agreement with the crew. See D. Pentsov, *op. cit.*, p. 612.

<sup>23</sup> Belgium, Costa Rica, Cyprus, Ecuador, France, Germany, Guatemala, Guinea, Italy, Liberia, Mauritania, Netherlands, Panama, Tunisia, United Kingdom, Uruguay (ratified C. 114); Australia, Denmark, Estonia, India, Indonesia, Japan, Republic of Korea, Lithuania, Mauritius, Mexico, New Zealand, Norway, Poland, Romania, United States.

<sup>24</sup> Costa Rica, Liberia, United Kingdom (ratified C. 114); Australia, Denmark, Estonia, New Zealand.

<sup>25</sup> Peru, Spain (ratified C. 114); Chile.

<sup>26</sup> Costa Rica, Guatemala, Italy, Tunisia, Uruguay (ratified C. 114); India.

<sup>27</sup> Belgium, France, Germany, Guinea, Mauritania (ratified C. 114).

<sup>28</sup> Belgium, France, Guinea, Mauritania, Tunisia, Uruguay (ratified C. 114); Australia, Indonesia, Japan.

<sup>29</sup> Netherlands, Spain, United Kingdom (ratified C. 114); Chile, Republic of Korea, Romania.

One of the major issues raised by the Committee of Experts concerning the application of Convention No. 114 deals with the understanding of the agreement. The Committee has stressed that, in the light of the employment of a large number of non-national fishermen, it becomes increasingly important to include adequate provisions to ensure that they have understood the agreement. In the event that they do not understand the language of the employer, it is necessary to have contracts written in a language they understand – and, if need be, for the representative of the competent authority or the master, in the presence of witnesses, to explain the contents of the contract.<sup>30</sup> In some member States the maritime authority ensures that the fisherman reads the conditions before the enrolment.<sup>31</sup> In other countries the competent authority even has to satisfy itself that the fisherman has understood the content of the agreement,<sup>32</sup> mostly by reading and explaining it to the fisherman. The legislation frequently lays down that the agreement has to be drafted in simple, clear and self-explanatory terms.<sup>33</sup> Most notably, the legislation in Estonia sets out that the copies of the agreement form and of the pertinent laws and regulations on the notice board shall be in Estonian and English.

### *Content of agreement*

Most member States ensure that the agreement does not contain anything contrary to the provisions of national law. For instance, they require that agreements be submitted to the supervising maritime authority for approval;<sup>34</sup> stipulate that clauses contrary to the national law are null and void;<sup>35</sup> or merely forbid such provisions.<sup>36</sup> Similarly, certain countries take measures to preclude stipulations purporting to oust the competent jurisdiction, again by insisting that the agreements be submitted to the supervising maritime authority for approval; stipulating that clauses derogating the prescribed national jurisdiction rules are null and void;<sup>37</sup> or forbidding such provisions.<sup>38</sup>

The vast majority of the countries provide that the agreement may be made either for an indefinite or definite period or for a voyage;<sup>39</sup> but in some cases, the agreement may only be made for a definite period or a voyage – in other words, agreements for an indefinite period are not authorized.<sup>40</sup>

<sup>30</sup> D. Pentsov: *International labour standards – A global approach*, op. cit., pp. 577 and 613.

<sup>31</sup> Belgium, France, Guinea, Mauritania, Tunisia (ratified C. 114); India.

<sup>32</sup> Costa Rica, Guatemala, Netherlands, Uruguay (ratified C. 114); India, Japan.

<sup>33</sup> Belgium, France, Germany, Guinea, Mauritania, Tunisia, United Kingdom (ratified C. 114); Republic of Korea.

<sup>34</sup> Belgium, France, Germany, Guinea, Mauritania, Tunisia, United Kingdom, Uruguay (ratified C. 114); Australia, Chile, Indonesia, Japan, Romania.

<sup>35</sup> Belgium, Costa Rica, Cyprus, Ecuador, France, Germany, Italy, Netherlands, Peru, Spain (ratified C. 114); Japan, Republic of Korea, Lithuania, Romania.

<sup>36</sup> Guatemala, Liberia (ratified C. 114); India.

<sup>37</sup> Costa Rica, Ecuador, France, Guatemala, Netherlands (ratified C. 114).

<sup>38</sup> Belgium, Italy, Netherlands, Peru.

<sup>39</sup> Belgium, Costa Rica, Cyprus, Ecuador, France, Germany, Guinea, Italy, Liberia, Mauritania, Netherlands, Panama, Peru, Spain, Tunisia (ratified C. 114); Estonia, Lithuania, Mexico, Norway, Poland, Romania.

<sup>40</sup> Guatemala, United Kingdom, Uruguay (ratified C. 114); Australia, India.

The rights and obligations of each of the parties are usually prescribed in the national laws and regulations<sup>41</sup> or have to be stated in the agreement.<sup>42</sup>

The majority of member States require that the agreement contain all the particulars stipulated in Convention No. 114 (Article 6).<sup>43</sup> In addition, many countries require supplementary particulars to be included in the agreement, such as: holiday and holiday pay;<sup>44</sup> working hours;<sup>45</sup> the place of discharge;<sup>46</sup> the identity of the owner;<sup>47</sup> overtime payment;<sup>48</sup> compensation for personal injury or death caused by accident arising out of and in the course of employment;<sup>49</sup> end-of-year bonus and fringe benefits granted by the employer;<sup>50</sup> probation period;<sup>51</sup> and allowance for expenses in case of international voyages.<sup>52</sup>

### *Methods of calculating wages*

The national laws and regulations on the methods of calculation of wages and/or of the share in the catch vary from country to country. For example, Germany which has ratified Convention No. 114 provides in a general collective agreement that wages are composed of various money allowances (trip forfeit, holiday pay, pay for supplementary hours) and of a percentage of the money received after selling the catch (depending on the grade: 0.1-1 per cent); furthermore, there is a guaranteed allowance, which must correspond to 1/30th of the monthly sum stipulated in the specific collective agreements multiplied by the days a fisherman has been on board. In the Republic of Korea, if the fisherman is paid wages in the form of a monthly fixed pay plus the share of the catch, the ordinary wages (daily/weekly/monthly wages) shall be 120-130 per cent of the monthly fixed pay; and on board ship average wages (amount calculated by dividing the total amount of wages paid to a seaman by the number of days on board) shall be 150-160 per cent. Malaysia indicates that fishermen are paid on a catch-sharing basis – i.e. the total value of the catch per trip is divided into two portions: one goes to the vessel owner, and the other is subdivided among the number of fishermen working on board the vessel, whereby the key personnel (skipper, engin-

---

<sup>41</sup> Belgium, Germany, Italy, Liberia, Netherlands, Peru, Tunisia, United Kingdom (ratified C. 114); Denmark, Estonia, Republic of Korea, Romania.

<sup>42</sup> Cyprus, France, Guatemala, Guinea, Liberia, Mauritania, Spain, Tunisia, Uruguay (ratified C. 114); Indonesia, Lithuania, Mexico, Romania.

<sup>43</sup> Belgium, Ecuador, France, Germany, Guatemala, Guinea, Italy, Mauritania, Netherlands, Panama, Peru, Spain, Tunisia, United Kingdom, Uruguay (ratified C. 114); Chile, Denmark, Estonia, India, Republic of Korea, Lithuania, Mauritius, Norway, Philippines, Poland, Romania.

<sup>44</sup> Germany, Panama, Spain, Tunisia (ratified C. 114); Denmark, Estonia, Mauritius, Mexico, Poland, Romania.

<sup>45</sup> Panama, Spain (ratified C. 114); Chile, Denmark, Estonia, Mauritius, Mexico, Philippines, Romania.

<sup>46</sup> Costa Rica (ratified C. 114); Australia, Chile, Denmark, Estonia, India, New Zealand.

<sup>47</sup> Denmark, Estonia, Poland.

<sup>48</sup> Spain (ratified C. 114); Norway, Poland.

<sup>49</sup> Panama (ratified C. 114); India, Poland.

<sup>50</sup> Mauritius, Romania.

<sup>51</sup> Spain (ratified C. 114); Norway.

<sup>52</sup> Poland, Romania.

eer) receives additional income from the owner as an incentive. In Mauritius, legislation provides that a dory of three fishermen shall be paid a certain price per kg for a catch, whereby the bigger the catch the higher the price per kg; furthermore, an employer must pay to a fisherman a certain daily sum while the fishing vessel travels from its port of departure to the banks and vice-versa, as well as for each day a vessel cannot go to sea on account of weather conditions – determined by the master. If the voyage is late or prolonged, the workers in a few countries have the right to a proportional increase in their salaries; in the opposite case, if the voyage is shortened, the salary may not be reduced.<sup>53</sup>

### *Termination of agreement*

Most countries provide for the due termination of the agreement in the event of mutual consent of the parties<sup>54</sup> or death of the fisherman.<sup>55</sup> The vast majority of States also mention the loss or total unseaworthiness of the fishing vessel as a reason for due termination of agreement.<sup>56</sup> Several countries stipulate that a contract of an indefinite period may be duly terminated if timely written notice is given.<sup>57</sup> In addition, provision is sometimes made for the due termination of a fixed-term agreement when the time period expires.<sup>58</sup> A few States set out that, unless otherwise agreed, the place of discharge shall be a national port of call.<sup>59</sup>

Member States often enumerate the following as grounds for dismissal: the quality of work in general, such as failure to muster on time;<sup>60</sup> unauthorized absence;<sup>61</sup> inaptitude, because of reasons existing before the employment – such as false testimonials;<sup>62</sup> state of health;<sup>63</sup> loss of qualification;<sup>64</sup> or lack of competence.<sup>65</sup> Many coun-

<sup>53</sup> Panama (ratified C. 114); Mexico.

<sup>65</sup> Costa Rica, Ecuador, Germany, Netherlands, Panama, Uruguay (ratified C. 114); Denmark, Japan, Republic of Korea, Lithuania, Norway, Romania.

tries further cite the failure of fishermen to comply with their obligations as a reason for immediate discharge. They may be dismissed for: neglect/breach of duties;<sup>66</sup> drunkenness;<sup>67</sup> disobedience;<sup>68</sup> maltreatment/insult;<sup>69</sup> or crime (e.g. theft, contraband).<sup>70</sup> National laws and regulations often allow dismissal if there is a serious reason concerning the safety of the ship or the good order and discipline on board.<sup>71</sup> In some cases, however, the fisherman may only be discharged with the authorization of the maritime authority.<sup>72</sup>

The fisherman is usually authorized to demand his immediate discharge in dangerous or unexpected circumstances, for instance in the case of: war or disease at the destination harbour;<sup>73</sup> the loss or change of flag;<sup>74</sup> a change in the fixed destination;<sup>75</sup> a ship being taken over by another shipowner.<sup>76</sup> The majority of States authorize the fisherman to demand his discharge for the purpose of the protection of his own rights, for example in the event of: non-observance of the employer's obligations;<sup>77</sup> non-payment;<sup>78</sup> maltreatment or insult;<sup>79</sup> lack of provisions;<sup>80</sup> contraband and incitement to crime;<sup>81</sup> bankruptcy;<sup>82</sup> or possibility to obtain a post carrying a higher rank, on condition that he makes arrangements to be replaced.<sup>83</sup> National laws and regulations sometimes even allow the fisherman to demand his discharge for any reason whatsoever, if he is authorized by the maritime authority.<sup>84</sup> In a few countries the fisherman has the right to demand his discharge, on condition that he submits timely notice.<sup>85</sup>

<sup>82</sup> Netherlands, Panama (ratified C. 114); Lithuania.

<sup>83</sup> Tunisia (ratified C. 114); Denmark.

<sup>84</sup> Belgium, France, Guatemala, Mauritania (ratified C. 114).

<sup>85</sup> Guinea, United Kingdom (ratified C. 114).

*Information process*

The vast majority of countries stipulate that each crew member shall have/receive a record of employment at/from the maritime authority containing a minimum of details: the name of the fisherman; his capacity; the date of employment; and the date of discharge.<sup>86</sup> In addition, certain countries provide for a service book on board.<sup>87</sup>

Many member States set out that the agreement shall either be recorded in or appended to the crew list.<sup>88</sup> In a few countries there seems to be no provision requiring a crew list on board.<sup>89</sup>

To ensure that fishermen have access to information on employment conditions, national legislation frequently requires that a copy of the agreement<sup>90</sup> or copies of the pertinent laws and regulations, collective agreements or the ship's regulations<sup>91</sup> be available on board. A number of countries specify that these documents must be displayed in a conspicuous place accessible to the crew. In other member States copies of the agreement are supplied to the fisherman.<sup>92</sup>

*Conclusions*

The information available to the Office indicates that a substantial number of member States (at least 39) have laws and regulations in place concerning articles of agreement applicable to work on fishing vessels (in some countries, legislation concerning all seafarers applies to, or at least does not exclude, workers on fishing vessels). This list includes not only the 22 member States which have ratified Convention No. 114 but also at least 17 others. Most require that agreements be signed by both the fisherman and the owner of the fishing vessel or his representative and contain provisions concerning termination of agreements. The majority also demand that agreements include the particulars provided for in the Convention. It would appear that a smaller number of member States require that an agreement: be signed in front of or be endorsed by the competent authority; contain provisions concerning the duration of the agreement; and require a record of employment. Surprisingly, only a few of the non-ratifying States have provisions requiring that the agreement be understood by the fisherman.

The Office notes that when this Convention was examined by the Tripartite Meeting on Safety and Health in the Fishing Industry, the need for partial revision was primarily due to an expressed need to provide fishermen with identity documents (see elsewhere in this report). Furthermore, the Office, noting the continued importance of the share system, believes that it may be useful to consider provisions, whether

<sup>92</sup> Germany (ratified C. 114); Denmark, Lithuania, Mauritius, Norway.

mandatory or recommendatory, calling for greater transparency in pay based on this system in order to protect fishermen from being underpaid. Finally, the Office feels that the vast majority of the world's small-scale and artisanal fishermen may not be enjoying the benefits of Convention No. 114. This matter might be addressed by providing, to the extent possible,<sup>93</sup> that all fishermen (except those who own the vessel) should have the protection of an agreement or contract.

#### MINIMUM WAGES/INCOME STABILITY

The nature of the share system, as described earlier in this chapter, often complicates the issue of ensuring that fishermen receive a minimum wage – or at least a minimum level of income over a period of time. This section places the issue of the minimum wage of fishermen in the context of the ILO's general standards concerning minimum wages of workers and its standards concerning minimum wages for seafarers. It then provides information on ways in which a number of member States have dealt with this issue.

#### *ILO standards*

The most modern ILO instrument concerning minimum wages of workers in general is the Minimum Wage Fixing Convention, 1970 (No. 131). The Convention lays down the obligation for ratifying States to establish a system of wages which covers all groups of wage earners whose terms of employment are such that coverage would be appropriate. Though the Convention allows ratifying States to determine the groups of wage earners to be covered, which implies that one or more categories of wage earners may be excluded from the protection of a minimum wage, this right is conditional upon the consent of or full consultation with the representative organizations of employers and workers concerned. Each ratifying State is under the obligation, *inter alia*, to list in its first report on the application of the Convention submitted under article 22 of the ILO Constitution any groups of wage earners which may not have been covered, giving their reasons for exclusion.<sup>94</sup> While the term “minimum wage” is not defined, the Committee of Experts noted in its 1992 General Survey that:

... ‘minimum wage’ may be understood to mean the minimum sum payable to a worker for work performed or services rendered, within a given period, whether calculated on the basis of time or output, which may not be reduced either by individual or collective agreement, which is guaranteed by law and which may be fixed in such a way as to cover the minimum needs of the worker and his or her family, in the light of national economic and social conditions.<sup>95</sup>

<sup>93</sup> The Office is aware that illiteracy is still a problem for many poor fishermen, and that in many communities strong traditions offer *de facto* protection that extends beyond that of a written contract. The principle that all fishermen should have an agreement will therefore require careful consideration and some adjustment.

<sup>94</sup> For example, Sri Lanka has excluded fishermen from the coverage of Convention No. 131.

<sup>95</sup> ILO: *Minimum wages*, Report III (Part 4B) (General Survey), International Labour Conference, 79th Session, Geneva, 1992, para. 42, p. 13, as cited by G.P. Politakis: “Wages” in *International labour standards*, *op. cit.*, p. 275.

The Seafarers' Wages, Hours of Work and the Manning of Ships Recommendation, 1996 (No. 187), applies to every seagoing ship, whether publicly or privately owned, which is registered in the territory of the Member and is ordinarily engaged in commercial maritime operations. As concerns fishermen, it provides, that "[t]o the extent it deems practicable, after consulting the representative organizations of fishing-vessel owners and fishermen, the competent authority should apply the provisions of this Recommendation to commercial maritime fishing". Part III, Minimum wages, provides, *inter alia*, that member States should, after consulting representative organizations of shipowners and seafarers, establish procedures for determining minimum wages for seafarers. It also provides guidance on the principles which should be considered in establishing such minimum wages. In Part IV, Minimum monthly basic pay or wage figure for able seamen, the instrument sets out a specific figure for the basic pay or wages for a calendar month of service for an able seaman, as well as a means of revising the figure.

#### *National law and practice*

In Canada and in the United States fishermen are excluded from the minimum wage provisions for workers in general. In the United Kingdom, share fishermen are excluded from the minimum wage. However, several countries<sup>96</sup> seem to apply this principle to the fishing sector.

In New Zealand there is a statutory minimum wage for all employees, which also applies to fishermen. Fishing crews working on foreign vessels, for which an application to be registered to fish in New Zealand's fisheries waters was made on or after 3 May 2001, and holding a work permit issued by the Immigration Service, are entitled to receive the equivalent of New Zealand's minimum wage. Nigeria indicates that a minimum wage must be paid. Panama provides for a minimum wage only in the case of fishing vessels at the national level: either a guaranteed salary of 1.03 balboa per hour plus 3 per cent of the fish catch from the voyage; or a percentage of the total fish catch, which is distributed to the crew, provided that its value is not inferior to the abovementioned guaranteed wage.

The Philippines has stipulated a minimum wage for all employees, the rates of which must be adjusted in a fair and equitable manner. As to Romania, the national basic gross minimum wage figure applies. In Spain, the established minimum wage generally prevails for the fishing sector.

On account of the decline in the catch-sharing wage system in France as a result of several crises (low fish resources, lack of labour force, etc.), a law was adopted in 1997 to modernize the social rules in the fishing sector. The impetus to improve the fishermen's wage was provided by the French High Court of Appeal in 1992, when it declared that the minimum wage (SMIC) was to be applied to all maritime sectors. Because the catch-sharing wage system is disconnected from the quantity of hours worked, the minimum-wage-per-hour system had to be adapted. France has dealt with this issue through a national collective agreement adopted on 28 March 2001. The collective agreement provides that the minimum wage should be based on an annual number of days at sea rather than hours of work (as total hours spent on the vessel are

---

<sup>96</sup> Australia (Queensland), Ecuador, Indonesia, Japan, Republic of Korea, Lithuania, Netherlands, New Zealand, Nigeria, Peru, Philippines, Romania, Spain, Tunisia.

not considered effective hours of work). A fisherman paid on the basis of the catch-sharing system has to receive a minimum wage in the year equivalent to the minimum wage received by shore workers (i.e. the SMIC) for 250 days at sea – a period for which an annual gross wage is set. Beyond the 250-per-year day limit, the days spent at sea are subjected to a pay increase: a 25 per cent increase from the first to the tenth day; a 50 per cent increase from the 11th to the 20th day; and a 100 per cent increase for work after the 20th day, with a limit of 275 days at sea per year. If the fisherman earns less than this minimum wage, the employer has to pay him a wage supplement so that the annual wage is equivalent to the minimum wage. The articles of agreement must define the wage of the fisherman as a part of the profit made on the catch and note the common charges to be deducted from the gross product to form the net product to be shared. The net product is then shared out among the crew and the shipowner according to a procedure provided by the articles of agreement. Common charges are taken into account in the calculation of the share wage. The following charges should not be included in the common charges: the contributions, subscription charges and taxes on the fisherman's wage; insurance premiums to cover the wage; fishing instruments, tools and machines; and the charges for the renting or the purchase of material. However, common charges can include food, fuel, national or regional fishing taxes.<sup>97</sup>

### *Conclusions*

The Office has obtained only limited information on this issue. However, it would appear that, at least in some member States, there are requirements concerning minimum wages that are applicable to fishermen. A few also have requirements specifically for the fishing sector. More information is needed to determine whether a mandatory or recommendatory provision would be desirable in the new fishing standard. In particular, more must be known about the relationship between share fishing and minimum wage requirements.

### PROTECTION OF WAGES

Fishermen, like any other workers, suffer when, for one reason or another, they are not paid, or not paid on time. They may, however, face particular problems due to the unique method of remuneration of many fishermen – the share system.

### *International standards*

The Protection of Wages Convention, 1949 (No. 95), was the first international labour instrument which dealt in a comprehensive manner with all practical aspects of labour remuneration and sought to grant the fullest possible protection to workers' earnings. The Convention applies to all persons to whom wages are paid or payable. However, the competent authority may, after consultation with the organizations of employers and employed persons directly concerned, if such exist, exclude from the

---

<sup>97</sup> P. Chaumette: *Une grande première à la pêche artisanale. L'accord collectif national du 6 juillet 2000 relatif à la rémunération minimale garantie, aux frais communs et à la réduction du temps de travail* (DMF, 2000), pp. 1093-1101.

application of all or any part of the provisions of the Convention categories of persons whose circumstances and conditions of employment are such that the application to them of all or any of the said provisions would be inappropriate and who are not employed in manual labour or are employed in domestic service or work similar thereto. In this regard, the Convention provides that each member State shall indicate in its first annual report upon the application of this Convention submitted under article 22 of the Constitution of the International Labour Organization any categories of persons which it proposes to exclude from the application of any of the provisions of the Convention. The Convention addresses such issues as: wage payment in legal tender; payment in kind; freedom of the worker to dispose of wages; wage deductions; attachment or assignment of wages; wage guarantees in the event of bankruptcy; periodicity, time and place of wage payments; notification of wage conditions; statement of earnings; and implementation. The Governing Body, when reviewing this Convention, found it to be up to date. It invited member States to contemplate ratifying it and drew their attention to Convention No. 173 (see below) which revised Article 11 (dealing with the protection of workers' claims in the event of the bankruptcy or judicial liquidation of an undertaking) of the Convention.<sup>98</sup>

The Protection of Workers' Claims (Employer's Insolvency) Convention, 1992 (No. 173), which had been ratified, as at 15 September 2002, by 15 member States, provides two approaches to the protection of workers: one provides for the protection of workers' claims by a privilege; the other for protection by wage guarantee institutions. The Convention applies in principle to all employees and to all branches of economic activity. However, it recognizes that the competent authority may, after consulting the social partners, exclude specific categories of workers from the application of the Convention.<sup>99, 100</sup>

The Seafarers' Wages, Hours of Work and the Manning of Ships Recommendation, 1996 (No. 187), applies to every seagoing ship, whether publicly or privately owned, which is registered in the territory of the Member and is ordinarily engaged in commercial maritime operations. As concerns fishermen, it provides, that "[t]o the extent it deems practicable, after consulting the representative organizations of fishing-vessel owners and fishermen, the competent authority should apply the provisions of this Recommendation to commercial maritime fishing". As concerns the protection of wages, the Recommendation provides, in Paragraph 6, that "National laws and regulations adopted after consulting the representative organizations of seafarers and shipowners or, as appropriate, collective agreements should take into account the following principles: ... (k) to the extent that the seafarers' claims for wages and other sums due in respect of their employment are not secured in accordance with the provisions of the International Convention on Maritime Liens and Mortgages, 1993, such claims should be protected in accordance with [Convention No. 173]".

<sup>98</sup> G.P. Politakis: "Wages" in *International labour standards*, op. cit.

<sup>99</sup> *ibid.*, p. 267.

<sup>100</sup> In Europe, Directive 2002/74/EC of the European Parliament and of the Council of 23 September 2002 amending Council Directive 80/987/EEC on the approximation of the laws of the Member States relating to the protection of employees in the event of the insolvency of their employer provides in article 1, paragraph 3, that "Where such provision already applies in their national legislation, Member States may continue to exclude from the scope of this Directive: (a) domestic servants employed by a natural person; (b) **share-fishermen**" [emphasis added].

The International Convention on Maritime Liens and Mortgages, 1993 (MLM), provides, in Article 13(1), that: “Unless otherwise provided in this Convention, its provisions shall apply to all seagoing vessels registered in a State Party or in a State which is not a State Party, provided that the latter’s vessels are subject to the jurisdiction of the State Party.” It would seem therefore to apply to fishing vessels, at least seagoing vessels.

The Office has not, in the limited time available to prepare this report, been able to determine the extent to which fishermen are protected by the maritime lien in the law of member States. However, it has observed, for example, that the Merchant Marine Code of 30 April 1999 of the Russian Federation does appear to provide that its Chapter XXII (Maritime lien on a vessel, mortgage on a vessel or a vessel under construction) does apply to fishing vessels. To grasp the extent to which this is the case in other States, and the extent to which laws and regulations concerning the maritime lien apply to coastal fishing vessels or small fishing vessels in other States, the Office will require additional information. This will include information on whether States consider whether the fishermen’s “share of the catch” constitutes wages as set out in the Convention.

Furthermore, a Joint IMO/ILO Ad Hoc Expert Working Group on Liability and Compensation regarding Claims for Death, Personal Injury and Abandonment of Seafarers has met four times to discuss the issue of abandonment, including the issue of non-payment of remuneration. This has resulted, *inter alia*, in the adoption of IMO Assembly Resolution A.930(22) concerning guidelines on provision of financial security in cases of abandonment of seafarers, which may also be relevant to fishermen.

### *Conclusions*

The Office has only a limited amount of information on this issue. In particular, it needs more information on whether fishermen who are owed remuneration under share-fishing arrangements are generally protected by the maritime lien, by other means or by both.

### WORKING TIME

The very nature of fishing operations make it difficult to control working time in the fishing sector. For instance, fishermen cannot control where and when the resource will appear and thus tend to fish as long as fish are being caught and capacity remains in the hold. This is coupled with the share system, which encourages minimal numbers of crew members so that they obtain maximum pay. Other factors also add to the complexity.

There are several aspects to working time. The first has to do with how many hours per day or week a person must work to obtain a basic wage, after which additional work is compensated by extra pay (perhaps at a higher rate) or compensatory leave. Another is whether a person can be required to work beyond a certain number of hours, even if extra pay is required. Finally, there is the issue, particularly relevant to fishing, of how long (hours per day, hours or days per week, days per year) a person can work before being entitled or required to rest. Thus, the first issue

concerns remuneration; the second a mixture of wages and the prevention of excessive work (perhaps also with a view to distributing work or balancing workload); the last is a matter of preventing fatigue, a condition which may undermine health and which has been clearly identified as a contributing factor to fishing sector accidents.

### *ILO standards*

The issue of fishermen's working hours was first addressed by the ILO over 80 years ago in the Hours of Work (Fishing) Recommendation, 1920 (No. 7). The Recommendation, *inter alia*, referred to the declaration in the Constitution of the International Labour Organization that all industrial committees should endeavour to adopt, so far as their special circumstances will permit, "an eight hours' day or a forty-eight hours' week as the standard to be aimed at where it has not already been attained". The Recommendation then provided that "each Member of the International Labour Organization enact legislation limiting in this direction the hours of work of all workers employed in the fishing industry, with such special provisions as may be necessary to meet the conditions peculiar to the fishing industry in each country; and that in framing such legislation each Government consult with the organizations of employers and the organizations of workers concerned".

Since that Conference, the issue has been raised periodically by the ILO's Committee on Conditions of Work in the Fishing Industry. Most recently, the 1978 session of the Committee adopted conclusions requesting the Office to conduct studies relating to hours of work and manning for the fishing industry and to include fishermen's hours of work and manning in the possible items for future sessions of the International Labour Conference.<sup>101</sup> However, as there have been no Conferences dealing with the fishing industry since that time, a specific standard concerning hours of work (or rest) in the fishing sector has not been discussed.

However, in 1996, the 84th (Maritime) Session of the International Labour Conference adopted the Seafarers' Hours of Work and the Manning of Ships Convention, 1996 (No. 180), aimed at limiting hours of work or providing minimum rest periods, and the Seafarers' Wages, Hours of Work and the Manning of Ships Recommendation, 1996 (No. 187). Both standards provided the possibility of extending their coverage to fishermen.

Convention No. 180, which entered into force on 8 August 2002,<sup>102</sup> aims to limit the maximum hours of work or to provide minimum rest periods for seafarers. States are to fix maximum limits for hours of work or minimum rest periods on ships flying their flags. Schedules of service at sea and in port (including maximum hours of work or minimum periods of rest per day and per week) are to be posted on board where all seafarers may see them. Records of hours of work or rest periods are to be maintained. The flag State is to examine these records. If the records or other evidence indicate infringement of provisions governing hours of work or rest, the competent authority is to require that measures, including if necessary the revision of the manning of the ship, are taken so as to avoid future infringement. Convention No. 180 has been

---

<sup>101</sup> ILO: Report of the Committee on Conditions of Work in the Fishing Industry (Geneva, doc. CCF/3/6, Nov. 1978), Annex II.

<sup>102</sup> As at 30 September 2002, it has been ratified by Finland, Greece, Ireland, Malta, Morocco, Romania, Saint Vincent and the Grenadines, Sweden and the United Kingdom.

included in Part A of the Supplementary Appendix of the Protocol of 1996 to the Merchant Shipping (Minimum Standards) Convention, 1976 (No. 147), and the provisions of Convention No. 180 are subject to “port state control”.<sup>103</sup> As with several other maritime Conventions adopted in 1987 and 1996, the Shipowner’ delegates at the Conference, who generally were representative of companies engaged in maritime transport, did not feel they could speak for owners of fishing vessels. Thus, the Convention provides, in Article 1(2), that “[t]o the extent it deems practicable, after consulting the representative organizations of fishing-vessel owners and fishermen, the competent authority shall apply the provisions of this Convention to commercial maritime fishing”.

As mentioned above, the Conference also adopted the Seafarers’ Wages, Hours of Work and the Manning of Ships Recommendation, 1996 (No. 187). As concerns hours of work, the Recommendation provides, inter alia, that “for the purpose of calculating wages, the normal hours of work at sea and in port should not exceed eight hours per day” and that “for the purpose of calculating overtime, the number of normal hours per week covered by the basic pay or wages should be prescribed by national laws or regulations, if not determined by collective agreements, but should not exceed 48 hours per week; collective agreements may provide for a different but not less favourable treatment”. There are also other provisions concerning rates of overtime pay, records of hours of work, consolidated wages, principles to be taken into account as concerns remuneration, and minimum wages (see also the section of this report concerning minimum wages). It, too, provides that “[t]o the extent it deems practicable, after consulting the representative organizations of fishing-vessel owners and fishermen, the competent authority shall apply the provisions of this Recommendation to commercial maritime fishing”.

*Discussions by the Tripartite Meeting on Safety and Health in the Fishing Industry and Governing Body*<sup>104</sup> concerning Recommendation No. 7

In the discussion on the Hours of Work (Fishing) Recommendation, 1920 (No. 7), at the ILO’s Tripartite Meeting on Safety and Health in the Fishing Industry in 2000, some members of the Working Party on Standards considered that the Recommendation should be revised taking into account the provisions of Convention No. 180. It was also noted that working hours and rest periods were directly linked to the question of fatigue which was one of the topical issues under discussion at this Tripartite Meeting. Other members underscored that such an extension might not be appropriate as Convention No. 180 had not been drafted to take into account the specific conditions in the fishing industry and consequently did not have the required flexibility regarding hours of work. It was also proposed to consider this Recommendation obsolete and to recommend its withdrawal. Following an exchange of views, a proposal was made to request the Office to undertake an examination of the question of working-time arrangements in the fishing sector. It was proposed that such a study

<sup>103</sup> The Protocol of 1996 to Convention No. 147 entered into force on 10 January 2003. As at 15 September 2002, it has been ratified by Finland, Greece, Ireland, Malta, Romania, Sweden and the United Kingdom.

<sup>104</sup> ILO: *Note on the Proceedings*, Tripartite Meeting on Safety and Health in the Fishing Industry (Geneva, 2000), p. 40, paras. 14-15.

could examine, inter alia, the applicability of Convention No. 180 to the fishing sector, taking into account the specific nature of working-time arrangements in this sector, including an examination of issues such as effective hours of work as against total hours; the relevance of the provision for an eight-hour working day; the question of manning of fishing vessels; the implications of the diversity of the fishing fleet; the ratification prospects of Convention No. 180; and the relevance of European Community developments in this context. The Working Party agreed that such a study of working-time arrangements in the fishing sector should be proposed, that pending the outcome of this study the status quo should be maintained with respect to this Recommendation and that it be re-examined at a later stage in the light of this study.

### *Regional standards*

In Europe, Directive 93/104/EC concerning certain aspects of the organization of working time, adopted on 23 November 1993, while addressing workers in general, contains many exclusions and derogations relating to specific sectors and activities, including: air, rail, road, sea, inland waterway and lake transport; sea fishing; other work at sea; and the activities of doctors in training. Two Directives concerning the working time of seafarers have been adopted in Europe: Council Directive 1999/63/EC implementing the maritime sector social partner agreement; and Directive 1999/95/EC of the European Parliament and of the Council concerning the enforcement of provisions in respect of seafarers' hours of work on board ships calling at Community ports. Both these Directives were based, to a large extent, on ILO Convention No. 180 and, in the case of Directive 1999/95/EC, also on the Protocol of 1996 to Convention No. 147.<sup>105</sup>

The fishing sector, notably fishing vessel owners, did not, however, find the abovementioned Directives appropriate for the fishing sector. This led to the inclusion of sea fishing in the scope of Directive 2000/34/EC of the European Parliament and of the Council of 22 June 2000 amending Council Directive 93/104/EC concerning certain aspects of the organization of working time to cover sectors and activities excluded from that Directive. The Directive provides, inter alia, that workers on board seagoing fishing vessels are not covered by the Directive's provisions on daily rest, rest breaks, weekly rest, maximum weekly working time and length of night work. However, Member States must take the necessary measures to ensure that these workers are entitled to "adequate rest" and that their working time is limited to an average of 48 hours a week calculated over a period not exceeding 12 months. In order to achieve this, Member States must choose one of two options:

- limiting working time to a maximum number of hours in a given period. This must not exceed 14 hours in any 24-hour period and 72 hours in any seven-day period; or
- providing a minimum number of hours of rest within a given period of time. These must be not less than ten hours in any 24-hour period and 77 hours in any

<sup>105</sup> *Extension of working time Directive agreed*, in European Industrial Relations Observatory online, [www.eiro.eurofound.ie/2000/05/Feature/EU0005249F.html](http://www.eiro.eurofound.ie/2000/05/Feature/EU0005249F.html) (28.05.2000) (visited 27 November 2002).

seven-day period. This rest may be divided into no more than two periods, one of which must be at least six hours. Further, the interval between consecutive periods of rest must not exceed 14 hours.

However, Member States may, for objective or technical reasons or reasons concerning the organization of work, and as long as general health and safety principles are adhered to, allow exceptions, including the establishment of reference periods, to the 48-hour week over a 12-month period, the limits on hours of work and rest breaks.<sup>106</sup>

### *National law and practice*

When the Office collected information concerning hours of work in the fishing sector, it attempted to organize this information into two general categories. The first category concerned general requirements on working hours – sometimes drawn from national requirements for all workers – setting out the length of the normal working day or week. The second concerned provisions, sometimes aimed at seagoing workers as a whole and sometimes specifically at fishermen, which attempt to limit excessive work, or at least to provide minimum rest to avoid fatigue. The Office has not been able to conduct a full study of working-time arrangements in the fishing industry. However, in this report it has attempted to provide information on relevant law and practice in a number of member States.

### *Laws, regulations and collective agreements concerning working time in general or normal working hours*

In some countries, both the general labour laws and specific requirements apply to fishing. This is the case in Lithuania and the Philippines, where the normal hours of work are set at eight hours per day. Extra hours are possible for operational reasons. In Panama, agreement must be reached on the working day on board in the employment contract. Working hours that exceed the daily limits prescribed in the contract must be considered extraordinary hours and the worker is entitled to compensation that is fixed by collective or individual contracts; in no case must it be inferior to the hourly pay of the basic salary increased by 25 per cent.

In Japan, a distinction is made between workers on vessels covered by the Mariners' Law (generally, seagoing fishing vessels of 30 gt and more) and those covered by general labour standards (generally, fishing vessels under 30 gt and not seagoing). Though the Mariners' Law generally covers all seafarers and fishermen, there are specific regulations<sup>107</sup> for workers on fishing vessels, as concerns working hours, holidays and leave. These provide for an eight-hour day and a 40-hour week. Those not covered by the Mariners' Law (those on vessels under 30 gt or non-seagoing vessels), and thus generally covered by the general law – the Labour Standards Law – are not covered by the provisions of the Mariners' Law concerning working hours, rest

---

<sup>106</sup> *ibid.*

<sup>107</sup> The Regulation concerning working hours and holidays of seamen who join a designated fishing vessel, No. 4, 1995, and the Regulation concerning leave with pay of the mariner who joins a designated fishing vessel, No. 49, 1968. Both are regulations of the Ministry of Transport.

periods and rest days. There are, however, provisions for increased wages for night work at a rate not less than 125 per cent of normal pay.

In Mauritius, the Banks Fisherman and Frigo-workers (Remuneration Order) Regulations provide that the contract of employment shall contain, inter alia, the hours of work to be mutually agreed by the employer and worker.

In Canada, in British Columbia, the Canadian Fishing Company-United Fishermen and Allied Workers' Union (CFC-UFAWU) collective agreement sets out: an eight-hour day; 1.5 times the regular wage rate for overtime for certain conditions and twice the rate for others; flexible start times; and ten consecutive hours of rest between shifts in every 24-hour period. Workers not covered by collective agreement are normally covered by the Employment Standards Act; however fishers are generally excluded from that part of the Act which governs hours of work and overtime.

#### *Maximum hours of work, minimum rest and manning (crewing)*

The Office has obtained information on a variety of laws, regulations and provisions in collective agreements aimed at limiting working hours or providing minimum periods of rest. Generally, EU Member States are implementing, or planning to implement, Directive 2000/34/EC. Portugal requires that fishermen receive not less than eight hours per day of rest during fishing periods. This may be divided into two periods (one of which must be at least eight hours in length). When at sea and not fishing, 12 hours of rest are generally provided for. There are special requirements for fishermen under 18 years of age. There are also provisions governing leave, with compensatory leave when work has been performed on the weekly day of rest or on holidays. Collective agreements also provide for higher standards. In Spain, an Order in Council for the fishing industry establishes a maximum day of 12 hours, including extraordinary hours, except in the case of *force majeure* or an emergency; in any event, it excludes any working time of 14 hours in a given 24-hour period, or a period of 72 hours for over seven days. The Order also establishes a minimum rest period of six hours between working days, permitting the regulation by collective agreement of the distribution of rest periods – as long as the interval between them does not exceed 14 hours. It further regulates weekly rest that is generally one day and a half, although there are particularities concerning accumulation and compensation. The United Kingdom has adopted regulations which include general requirements to ensure the health and safety of all workers, including a requirement for the adoption of working patterns which take account of the capacity of the individual and other factors. In France, a collective agreement deals with the related issues of hours of work and minimum wage (see box 4.1).

In Norway, there are currently (as at July 2002) no official requirements as regards hours of work and/or rest for fishing and catching vessels. In practice, these matters have been left to the social partners. The deep-sea fleet (larger vessels) has entered into agreements, setting normal working hours at 12 hours per day during fishing operations. The shipowner and the master are responsible for attending to the proper organization of the work on board and ensuring that the employees' life, health and safety are well and adequately taken care of. To avoid fatigue becoming a threat to health, environment and safety on board, employees have to be guaranteed adequate rest. In Iceland, on the other hand, the issues of working time in the fishing sector have been regulated for 80 years. In 1921, a law on the working time of crews

**Box 4.1**  
**Hours of work: The French approach**

A collective agreement in France regulates the working relation between employers and wage-earning fishermen working in an artisanal enterprise or a cooperative using the catch-sharing wage system on board a vessel registered in metropolitan France. This agreement can also apply to artisanal fishing enterprises registered in overseas departments and territories which opt for this scheme. It can also apply to non-artisanal fishing enterprises which choose to be regulated by this system, unless they are already regulated by a more favourable agreement.

The collective agreement provides that the working time for fishermen working on a catch-share basis should be based on a statutory one-year period and be counted in terms of “days at sea”. Working time expressed in “days at sea” should be equivalent to the legal working time onshore, that is to say 35 hours per week. For companies with fewer than 20 employees, the minimum of days at sea has been set at 225 days since 1 January 2002, with a ceiling at 250 days at sea – which represents the maximum legal time of work per year per fisherman.

In order to prevent fishermen from working too long in one day, the agreement provides a minimum period of rest: each 24 hours spent at sea must include a minimum period of rest of ten hours, of which six hours must be consecutive. Working hours are limited either to 14 hours in a 24-hour period and to 72 hours in a seven-day period, or the resting time is of at least ten hours in a 24-hour period and 77 hours in a seven-day period. The resting time cannot be split into more than two periods, one of which should last at least six hours. The interval between these two periods must not exceed 14 hours. This national agreement stresses the requirement of a minimum rather than a restriction on daily hours of work. Young people under the age of 18 must have a minimum of 12 hours of rest per 24 hours and this rest must not be interrupted. They have a weekly period of rest of at least 36 hours (Maritime Labour Code, section 114).

The collective agreement has taken Directive 2000/34/EC into account. The law specifies weekly rest conditions: a 24-hour rest period is granted to fishermen when their voyage exceeds six days. Sunday is reserved for weekly rest. The method of application of this provision is determined by the State Council (Conseil d’Etat) so that it might take the constraints of each maritime activity into account. It amends the Maritime Labour Code by providing that the payment of overtime may be substituted by a compensatory rest period as long as this overtime was not necessary in the case of an emergency.

Source: P. Chaumette, *op. cit.*, pp. 1093-1101.

on board trawlers, which is still in force, provided for rest and dining periods in every 24-hour period. There are no records of working time aboard Icelandic fishing vessels, since there is no connection between the time actually worked on board and the fishermen’s income. Pay is based on a share of the catch. According to collective

agreements between the fishermen and fishing vessel owners, the daily period of rest is at least six to eight hours, depending on the type of fishing vessel, the duration of the fishing trip and the type of fishing gear used.

In Estonia, the Seafarers' Act, which applies to fishermen, generally establishes that the working time of a crew member shall not exceed 12 hours in any 24-hour period and 60 hours in any period of seven days. For vessels where the working cycle of the seafarer does not exceed two weeks, working hours shall not exceed 14 hours in any 24-hour period and 72 hours in any period of seven days. Generally, rest periods can be divided into two parts, with one not being less than six hours in length, and the time between rest periods not exceeding 14 hours. In emergencies, these limits may be waived – but compensatory rest must be provided. In neighbouring Lithuania, there are limitations on the length of time a vessel can stay at sea. In the case of factory ships this is 175 days; large trawlers, 150 days; and small and medium vessels, 135 days. During a season, vessels can stay in certain regions for up to 200 days, including 60 days to travel to and from the fishing grounds. There are also minimum times for port visits.

In Poland, there are different standards for seagoing fishing vessels and for vessels operating only in the Baltic Sea. For seagoing fishing vessels, working time may not exceed 56 hours in a seven-day working week and 46 hours in a six-day working week, with separate requirements when the vessel is in port. For vessels which change crew every six weeks (or, if the seafarers agree, up to every three months), the seafarers can work up to 12 hours per day and 84 hours a week. In a period of fishing, the working time may be prolonged to 12 hours per day or 84 hours per week, with additional hours permitted only under certain circumstances (emergencies, drills – but not fishing and fish processing). For Baltic sea fishing, hours of work may depend on fishing conditions, but fishermen must receive at least one six-hour uninterrupted rest period each day.

There are no specific requirements concerning hours of work in the fishing sector in Romania. The provisions of the Labour Code concerning working hours and rest time would normally apply. For vessels in general, a decree regulates working time, including rest periods.

In Chile, there is a special scheme applying to working hours and hours of rest for fishermen. A decree adopted in 1995 stipulates that there must be an obligatory system of control of working hours within every period of 24 hours or every calendar day. The system operates on the basis of a planning document which must be filled out every day and contains, *inter alia*, information identifying the company, workers, vessel and working time. It must be signed by both the worker and the legal representative of the employer.

The Mexican Constitution provides that a worker is entitled to a day of rest for every six days worked. The Federal Labour Act which applies to fishing, provides that when a vessel is at sea and the nature of the work does not allow for a weekly period of rest, the employer must pay the worker double the salary for the service undertaken – irrespective of his wage corresponding to that period of time.

In Panama, a decree provides that for every day of weekly rest and national holiday during the voyage, the worker has the right, as compensation, to one day of rest on land. Furthermore, each member of the crew must be granted an additional day on land for every eight days spent on board to compensate for the total of extraordinary hours of service performed during the voyage.

Employees in British Columbia, Canada, are covered by the Employment Standards Act. However, fishers are excluded from the part of the Act which concerns hours of work and overtime, except for section 39, which provides that “[d]espite any provision of this Part, an employer must not require or directly or indirectly allow an employee to work excessive hours or hours detrimental to the employee’s health or safety”. The CFC-UFAWU collective agreement sets out ten consecutive hours of rest between shifts in every 24-hour period for those fishers covered by the agreement. In Newfoundland, most fishermen are paid by a share of the catch. Fishermen and fishing vessel owners do not come under the definition of employer and employee in the Labour Standards Act and therefore are not covered by the provisions in the Act concerning hours of work, rest, etc. For trawlermen, these matters are dealt with in their collective agreement. The agreement provides for watches of six hours on and six hours off, and stipulates that no crew member shall be required to remain on deck for more than his watch except during emergencies.

In Japan, a distinction is made between workers on vessels covered by the Mariners’ Law (generally, seagoing fishing vessels of 30 gt and greater) and those covered by general labour standards (usually, on fishing vessels under 30 gt and not seagoing). On the whole, the Mariners’ Law covers all seafarers and fishermen; but there are specific regulations<sup>108</sup> as concerns working hours, holidays and leave for workers on fishing vessels. Those working on ocean-going trawlers of not less than 1,000 gt that are also used as factory vessels are entitled to at least ten hours of rest per day – of which, at least six hours must be a continuous period of time. However, a master may, under extraordinary circumstances, temporarily require a seaman to work 18 hours over a two-day period, with two rest periods of four hours continuous rest – as long as additional compensatory rest is later provided. On other vessels, rest must amount to at least eight hours per day. Under certain circumstances, the master may provide for a 16-hour rest period over two days. For fishermen not covered by the Mariners’ Law, there are no maximum limits on working hours or required minimum rest periods.

India and Malaysia apparently do not have laws and regulations concerning working time in the fishing sector. New Zealand has no regulations limiting working hours of fishermen, although there are requirements for limiting the working hours of watchkeepers.

In Tunisia, the Fishermen’s Code stipulates that the skipper shall provide a minimum of ten hours of rest in a 24-hour period. This resting time can be granted for a shift or fragmented so that the work on board is not interrupted.

### *Conclusions*

Laws and regulations – and even collective agreements – concerning, for example, the eight-hour day or 40-hour week – do not appear to address the issue of excessive working hours (and therefore fatigue); but they draw a line between hours worked for regular pay and for overtime pay.<sup>109</sup> Such legislation would seem to be

---

<sup>108</sup> See note 107.

<sup>109</sup> It may be argued, however, that the increased cost of paying overtime rates might discourage excessive working hours.

effective only for fishing vessels that employ fishermen on an hourly wage basis – or partially on an hourly wage basis – and not to provide much protection for share fishermen.

Laws and regulations setting minimum hours, or perhaps minimum days of rest, appear to be utilized in several countries, despite the challenges presented by fishing operations. There may be grounds here for an international standard.

#### ANNUAL LEAVE, LEAVE WITH PAY

Many fisheries are seasonal, with fishermen working intensely for extended periods and then remaining ashore for periods. Others are year-round. Fishermen may pursue some species at one time of year and other species at another time; this is dependent upon nature or upon fisheries management regulations. For some fishermen, particularly those working on distant-water vessels operating under articles of agreement, annual leave may be provided for in a contract. In some countries, leave may be mandated in the general labour legislation. Share fishermen, however, may be excluded from some of these laws.

#### *ILO standards*

There are no ILO Conventions dealing specifically with the question of annual leave for fishermen. The Fishermen's Articles of Agreement Convention, 1959 (No. 114), makes no reference to this issue.

The Paid Vacations (Seafarers) Convention (Revised), 1949 (No. 91), provides, in Article 1(3)(b) that the Convention “does not apply to ... (b) vessels engaged in fishing or in operations directly connected therewith or in sealing or similar pursuits”. The Seafarers' Annual Leave with Pay Convention, 1976 (No. 146), “applies to all persons who are employed as seafarers” and defines seafarer as “a person who is employed in any capacity on board a sea-going ship registered in a territory for which the Convention is in force, other than ... (b) a ship engaged in fishing or in operations directly connected therewith or in whaling or similar pursuits”.

Convention No. 146, the more modern standard, generally provides that every seafarer to whom the Convention applies shall be entitled to annual leave with pay of a specified minimum length. The length shall be prescribed by each Member which ratifies the Convention in a declaration appended to its ratification. A seafarer whose length of service in any year is less than that required for the full entitlement shall be entitled in respect of that year to annual leave with pay proportionate to his length of service during that year. There are specific provisions concerning calculating length of service and when leave is to be taken. Under Article 7, the Convention provides, *inter alia*, that the seafarer shall receive in respect of the full period of that leave at least his normal remuneration and that this shall be paid in advance. The Convention has been ratified by 13 member States. The Governing Body, when recently reviewing this standard, considered it up to date and invited member States to contemplate ratifying it and to inform the Office of any obstacles or difficulties encountered that might prevent or delay ratification.<sup>110</sup>

---

<sup>110</sup> Pentsov, *op. cit.*, pp. 572, 580 and 581.

At its 1978 meeting, the Committee on Conditions of Work in the Fishing Industry adopted a resolution on holidays with pay for fishermen which, inter alia, “strongly [urged] the Governing Body of the International Labour Office to appeal to governments – (a) to ratify the Seafarers’ Annual Leave with Pay Convention, 1976 (No. 146); and (b) to extend the provisions of this Convention, in accordance with Article 2, paragraph 4, to persons employed on board ships engaged in fishing or in operations directly connected therewith”.

The Seafarers’ Wages, Hours of Work and the Manning of Ships Recommendation, 1996 (No. 187), which may apply to commercial maritime fishing, provides, as concerns annual leave with pay, that “[n]ational laws or regulations or collective agreements may provide for compensation for overtime or for work performed on the weekly day of rest and on public holidays by at least equivalent time off duty and off the ship or additional leave in lieu of remuneration or any other compensation so provided”.

#### *National law and practice*

In Canada, in British Columbia, fishers are excluded from the provisions on annual vacation of the Employment Standards Act. However, those covered by the Canadian Fishing Company-United Fishermen and Allied Workers’ Union (CFC-UFAWU) collective agreement are provided with annual vacation allotments which vary with seniority.

In Japan, a distinction is made between workers on vessels covered by the Mariners’ Law (generally, seagoing fishing vessels of 30 gt and greater) and those covered by general labour standards (generally, on fishing vessels under 30 gt and not seagoing). For the former, the number of days of leave with pay which must be granted to a mariner who has been continuously engaged on a vessel belonging to the same enterprise is covered by a special regulation which provides that it shall be 15 days per one year of continuous service and that three days shall be added for every additional three months of service. For those not covered by the Mariners Law (generally, vessels under 30 gt or non-seagoing vessels), and thus covered by the general law – the Labour Standards Law – there is a fixed number of working days per year depending on length of service.

In some countries, for example, the Netherlands and New Zealand, the laws on minimum holiday allowances applies to all employees, including employees in the fishing sector.

In Norway, personnel on board fishing and catching vessels are entitled under a special Act for fishermen to 25 working days of holiday each year. They also have the right to a minimum of 12 continuous days of holiday during the period of 16 May-30 September, unless particular operational reasons make it necessary to place the holiday outside this period. According to a decree in Panama, annual vacation periods must be provided to the crew.

In Poland, fishermen on seagoing vessels operating outside the Baltic Sea are entitled to paid holiday of 21 working days after two years of work and 30 days after three years. On Baltic Sea vessels, fishermen on vessels employed under a contract for a fishing season have the right to two working days’ leave for each month of work, as well as one working day off for each Sunday and holiday spent at sea.

### *Conclusion*

The Office has obtained only limited information on this issue. However, it would appear that the laws and regulations which do exist are usually derived from national standards covering all workers or from those applying generally to maritime workers.

### REPATRIATION

The issue of repatriation is most relevant to fishermen working on vessels which do not frequently return to their home port. It is also very relevant to migrant fishermen working on vessels which, though they may return to the home port, do not return to the country of the fishermen's residence. Repatriation may take place for several reasons: upon completion of a contract; periodic leave; medical or other emergencies; or, in some cases, when a vessel has been arrested or abandoned in a foreign port.

The responsibility of the vessel owner to repatriate the fishermen can be set out in national laws or regulations or collective agreement. These may set the conditions under which a fisherman is to be repatriated, as seen in the relevant ILO Convention for seafarers.

A serious problem for many fishermen has been repatriation following the arrest of a vessel or its abandonment by the owner. This often arises when a vessel is caught fishing illegally, and the vessel and crew are arrested. Some fishermen have remained imprisoned for many months, with the owner of the vessel unable or unwilling to pay the cost of their return home. The issue of financial responsibility in the case of abandonment of seafarers was discussed recently by the Joint ILO/IMO Ad Hoc Expert Working Group on Liability and Compensation regarding claims for Death, Personal Injury and Abandonment of Seafarers (see below). The outcome may be relevant to the development of the ILO's proposed standard concerning work in the fishing sector.

### *International standards*

The Repatriation of Seafarers Convention (Revised), 1987 (No. 166), applies to every seagoing ship whether publicly or privately owned which is registered in the territory of any Member for which the Convention is in force and which is ordinarily engaged in commercial maritime navigation and to the owners and seafarers of such ships. To the extent it deems practicable, after consultation with the representative organizations of fishing vessel owners and fishermen, the competent authority shall apply the provisions of this Convention to commercial fishing. The Convention provides the conditions under which a seafarer (defined as any person who is employed in any capacity on board a seagoing ship to which the Convention applies) is entitled to repatriation. It addresses such issues as: maximum duration of service periods giving entitlement to repatriation; repatriation destinations; the shipowner's responsibility to arrange repatriation; the responsibility of the flag State to arrange and meet the cost of repatriation should the shipowner fail to do so – and the flag State's right to recover from the shipowner such costs. It generally provides that unless the seafarer has been

found to be in serious default of his or her employment obligations as provided in national laws or regulations or collective agreement, the expenses of repatriation shall not be charged to the seafarer. As at 15 September 2002, the Convention has been ratified by eight States. It revises the earlier Repatriation of Seamen Convention, 1926 (No. 23), which had been ratified by 45 States. Convention No. 23, however, specifically provided that it did not apply to fishing vessels.

### *FAO*

The FAO Code of Conduct for Responsible Fisheries provides, in paragraph 8.2.9, that: “Flag States should ensure that crew members are entitled to repatriation, taking into account the principles laid down in the ‘Repatriation of Seafarers Convention (Revised), 1987 (No. 166)’.”

### *Joint IMO/ILO work on the issue of abandonment of seafarers*

Recently, a Joint IMO/ILO Ad Hoc Expert Working Group on Liability and Compensation regarding Claims for Death, Personal Injury and Abandonment of Seafarers discussed, inter alia, the issue of abandonment and produced a draft resolution concerning the provision of financial security in case of abandonment of seafarers (it also applies to fishermen on vessels engaged in international voyages) that was approved by the IMO Assembly and the ILO Governing Body. The Working Group also approved guidelines recommending measures to be implemented by ship-owners to ensure the provision of an adequate financial security system for seafarers in case of abandonment. The guidelines set out the main features and scope of coverage of the financial security system and also contain recommendations for certification of the financial security system.

### *National law and practice*

In Canada, in Newfoundland, there are no formal arrangements in place for the repatriation of fishing vessel personnel. Responsibility usually lies with the owner. Concerned citizens and service groups often help with the basic needs of abandoned crew members. For offshore trawlermen, the issue is dealt with in collective agreements.

The regulations on repatriation in the Seamen’s Act of Denmark also cover fishermen – but are not used on account of the special structure of the Danish fishing fleet. Danish fishing vessels operate in limited sea areas and return to the same port from which they first started. The costs connected with a trip from a foreign port to the fisherman’s domicile (for a weekend or after ending the agreement with the ship-owner) are covered by individual agreements. In the case of abandoned fishermen the Danish Employers Guarantee Fund (Lønmodtagernes Garantifond) covers outstanding questions concerning salary and transport to a fisherman’s domicile.

In Japan, a distinction is drawn between workers on vessels covered by the Mariners’ Law (generally, seagoing fishing vessels of 30 gt and greater) and those covered by general labour standards (generally, on fishing vessels under 30 gt and not seagoing). Those covered by the Mariners’ Law must be repatriated by the shipowner. There are penalties for masters who desert fishermen in foreign ports.

In Mauritius, the Banks Fisherman and Frigo-workers (Remuneration Order) Regulations, 1997, provide that “Where repatriation becomes necessary due to illness or injury of the worker, the employer shall bear the costs of the repatriation, cause the worker to be transported to a hospital or clinic, and advise his family of the date of his arrival in Mauritius”. Similarly, in Mauritania, repatriation is at the expense of the shipowner.

The Seamen’s Act in Norway contains sections on repatriation of seafarers which also apply to fishermen working on vessels of 100 grt and over. There are also implementing regulations.

In the Netherlands, coastal fishing vessel crews live and work in the Netherlands, so there is no need for repatriation. On deep-sea trawlers, all companies have a repatriation scheme on a voluntary basis (insurance).

In some countries,<sup>110</sup> the laws concerning the repatriation of seafarers also apply to fishermen. The United Kingdom has informed the Office that, although the repatriation regulations include fishing vessels, the obligation to repatriate lies with the employer. If the crew member is not technically employed, then it could be argued that there is no obligation to repatriate. Thus the issue of the status of “share fishermen” is relevant to the issue of repatriation.

### *Conclusion*

The Office has obtained only limited information on this issue. It would appear that this is an issue of concern primarily to fishermen working on board vessels engaged in overseas fishing. However several States apparently deal with the matter by applying the laws and regulations concerning repatriation applicable to seafarers to fishermen.

<sup>111</sup> Panama, Poland, Romania, Spain, Tunisia, United Kingdom.

## CHAPTER V

### WORKING AND LIVING CONDITIONS ON BOARD FISHING VESSELS

#### OCCUPATIONAL SAFETY AND HEALTH

The ILO's Tripartite Meeting on Safety and Health in the Fishing Industry (December 1999), concluded, *inter alia*, that:

Fishing is a hazardous occupation when compared to other occupations. Sustained efforts are needed at all levels and by all parties to improve the safety and health of fishermen. The issue of safety and health must be considered broadly in order to identify and mitigate – if not eliminate – the underlying causes of accidents and diseases in this sector. Consideration also needs to be given to the great diversity within the industry based on the size of the vessel, type of fishing and gear, area of operation, etc.

In Japan in 2000, of the 88 fatal injuries for all workers covered by the Mariners' Law, 55 concerned fishermen. According to a study by researchers at Oxford University, fishermen have by far the most dangerous jobs in the United Kingdom.<sup>1</sup> In the United States, the fatality rate in the fishing industry was 160 deaths per 100,000 workers in 1995; 181 per 100,000 in 1996; 134 per 100,000 in 1997; and 179 per 100,000 in 1998. In 1996 this rate was 16 times higher for fishermen than for other occupations such as fire-fighters, police and detectives and eight times higher than persons operating motor vehicles for a living.<sup>2</sup> In Nordic countries, fatality rates are reported at 150 per 100,000. In Guinea from 1991-94, the rate was estimated at 500 per 100,000. Recently in South Africa, an estimated rate of 585 per 100,000 was reported.<sup>3</sup> Injury rates are also high due to the nature of the marine working environment and the exposure by fishermen to weather and to equipment used to catch and process fish. In April 2001 the European Parliament adopted a resolution concerning safety and causes of accidents in fisheries which set out not only the high death and injury rate in this sector but also called for a number of specific actions, including regulatory action, to improve this record at both the European and the international level.<sup>4</sup> (Other

<sup>4</sup> *European Parliament resolution on fisheries: Safety and causes of accidents (2000/2028(INI))* (*Official Journal of the European Communities*, 24 Jan. 2002). The resolution specifically urged the IMO and the ILO to "adopt a general regulatory framework on vessels flying flags of convenience to combat non-compliance with safety at work requirements, *inter alia*".

chapters and sections of this report relevant to occupational safety and health include: medical examination, working time, accommodation, social security.)

### *International standards*

#### *ILO occupational safety and health Conventions and Recommendations*

The ILO has adopted about 70 Conventions and Recommendations which concern occupational safety and health.<sup>5</sup>

The Occupational Safety and Health Convention, 1981 (No. 155),<sup>6</sup> and its supplementary Recommendation (No. 164), prescribes the adoption of a coherent national policy on occupational safety, occupational health and the working environment. The Convention calls for measures to be taken to ensure tripartite participation in the formulation, implementation and review of policies and practical measures; it establishes the basic principles governing employers' responsibilities at the level of the undertaking (such as the provision of a safer workplace, adequate protective clothing and equipment, and measures to deal with emergencies and accidents, including adequate first-aid arrangements); and it provides that arrangements made at the level of the undertaking should ensure that workers take certain actions (such as reasonable care, compliance with instructions, use of safety devices and protective equipment, reporting hazards to supervisors and reporting accidents and injuries). Although Convention No. 155 applies to all branches of economic activity, member States may, after due consultation, exclude particular branches of activity, including fishing, from its application.<sup>7</sup> The ILO's Tripartite Meeting on Safety and Health in the Fishing Industry (December 1999) concluded, inter alia, that "Governments should ratify the ILO's Occupational Safety and Health Convention, 1981 (No. 155), and apply its provisions to the fishing industry".

Another group of standards highlights measures of protection, such as the guarding of machinery, medical examination, maximum weight of loads to be transported by a single worker; a case in point is the Guarding of Machinery Convention, 1963 (No. 119). There are also standards concerning: protection against specific risks, such as ionizing radiation, benzene, asbestos; prevention of occupational cancer; prevention of air pollution, noise and vibration in the working environment; and safety in the use of chemicals, including the prevention of major industrial accidents. The Asbestos Convention, 1986 (No. 162), is an example of this group of standards.

---

<sup>5</sup> At its 279th Session, the Governing Body decided to place on the agenda of the 91st Session (June 2003) of the International Labour Conference an agenda item concerning "ILO standards-related activities in the area of occupational safety and health: An in-depth study for discussion with a view to the adoption of a plan of action for such activities (general discussion)". See GB.280/2, para. 11.

<sup>6</sup> Ratified (as at 1 September 2002) by 38 States: Antigua and Barbuda, Belarus, Belize, Bosnia and Herzegovina, Brazil, Cape Verde, Croatia, Cuba, Cyprus, Czech Republic, Denmark, El Salvador, Ethiopia, Finland, Hungary, Iceland, Ireland, Kazakhstan, Latvia, Lesotho, Luxembourg, Mexico, Republic of Moldova, Mongolia, Netherlands, Nigeria, Norway, Portugal, Russian Federation, Slovakia, Slovenia, Spain, Sweden, The former Yugoslav Republic of Macedonia, Uruguay, Venezuela, Viet Nam, Yugoslavia.

<sup>7</sup> The member State has to justify this exclusion and report on progress towards the wider application of the Convention. Exclusions are rare. However, the United Republic of Tanzania, for example, has excluded fishing from the scope of application.

A number of ILO standards provide for protection in certain branches of economic activity (e.g. agriculture, mining, shipping, ports). These standards focus on the specific issues in those sectors, but they also draw upon, or repeat, general principles contained in standards applying to all workers. The most recent sectoral standard adopted concerning occupational safety and health is the Safety and Health in Agriculture Convention, 2001 (No. 184).<sup>8</sup>

The ILO does *not* have an occupational safety and health standard specific to fishing. However, the Prevention of Accidents (Seafarers) Convention, 1970 (No. 134), sets out requirements concerning *seafarers*. The Convention calls for the:

- reporting of and investigation into all occupational accidents;
- keeping and analysis of comprehensive statistics concerning numbers, nature, causes and effects of occupational accidents, and research into general trends and into such hazards as are brought out by statistics;
- laying down by laws, regulations, codes of practice or other appropriate means of provisions covering, inter alia, structural features of the ship; machinery; special safety measures on and below deck; loading and unloading equipment; fire prevention and fire-fighting; anchors, chains and lines; dangerous cargo and ballast; and personal protective equipment for seafarers;
- enforcement of provisions by means of adequate inspection or otherwise;
- appointment, from amongst the crew of a ship, of a suitable person or suitable persons or of a suitable committee responsible, under the master, for accident prevention;
- establishment of programmes for the prevention of occupational accidents, in cooperation with shipowners' and seafarers' organizations;
- training of seafarers in occupational safety and health matters;
- international cooperation on the prevention of occupational accidents.

As at 20 September 2002, the Convention had been ratified by 27 States.<sup>9</sup> It provides, in Article 1(1) that: the term "seafarer" covers "all persons who are employed in any capacity on board a ship, other than a ship of war, registered in the territory for which the Convention is in force and ordinarily engaged in maritime navigation". It further provides, in Article 1(2) that: "[i]n the event of any doubt whether any categories of persons are to be regarded as seafarers for the purpose of this Convention, the question shall be determined by the competent authority in each country after consultation with the shipowners' and seafarers' organizations concerned". The Convention

---

<sup>8</sup> At its 271st Session (March 1998), the ILO Governing Body decided to include an item on safety and health in agriculture on the agenda of the 88th Session (2000) of the International Labour Conference because: it is one of the most hazardous sectors worldwide; it is very complex and heterogeneous; it tends to be omitted from the occupational safety and health regulations of many countries, apart from a few which have a set of special provisions on occupational safety and health relating to agriculture; comprehensive legislation on occupational safety and health specific to this sector is almost non-existent; and agricultural workers are excluded from social security benefits.

<sup>9</sup> Azerbaijan, Brazil, Costa Rica, Denmark, Egypt, Finland, France, Germany, Greece, Guinea, Israel, Italy, Japan, Kenya, Kyrgyzstan, Mexico, New Zealand, Nigeria, Norway, Poland, Romania, Russian Federation, Spain, Sweden, Tajikistan, United Republic of Tanzania, Uruguay.

stresses the prevention of “occupational accidents”, defined as “accidents to seafarers arising out of or in the course of their employment”. The Office is not clear on the degree to which this Convention is being applied to the fishing sector, particularly to small-scale and artisanal vessels.

The Prevention of Accidents (Seafarers) Recommendation, 1970 (No. 142), which accompanies Convention No. 134, provides guidance on the implementation of the Convention.

### *ILO codes of practice*

The ILO has also published a number of codes of practice concerning certain economic sectors and concerning certain types of equipment or agents. The following are examples of codes which may be relevant to the discussion of occupational safety and health in the fishing sector:

- guidelines on occupational safety and health management systems;
- recording and notification of occupational accidents and diseases;
- safety in the use of chemicals at work;
- management of alcohol- and drug-related issues in the workplace;
- accident prevention on board ship at sea and in port.<sup>10</sup>

### *Other international instruments addressing the safety and health of fishermen*

Among the United Nations system specialized agencies, the IMO has the primary responsibility for maritime safety and marine pollution prevention. The following describes the main Conventions and other instruments which may be of direct concern to the safety of fishing vessels and fishermen.

The most important IMO instrument concerning safety at sea, the International Convention on the Safety of Life at Sea (SOLAS) 1974, provides general safety requirements for all vessels in Chapter V.

The Torremolinos International Convention for the Safety of Fishing Vessels (Torremolinos Convention), adopted in 1977, establishes a safety regime for fishing vessels of 24 metres in length and over. The Convention did not receive sufficient ratifications to enter into force, as many States claimed it was too stringent. Subsequently a Protocol to the 1977 Torremolinos Convention was adopted in 1993. The Torremolinos Protocol includes provisions concerning construction, watertight integrity and equipment; stability and associated seaworthiness; machinery and electrical installations and periodically unattended machinery spaces; fire protection, fire detection, fire extinction and fire-fighting; protection of the crew; life-saving appliances and arrangements; emergency procedures, musters and drills; radio communications; and shipborne navigational equipment and arrangements. The requirements for protection of the crew concern certain aspects of vessel construction which influence

<sup>10</sup> Recommendation No. 142 provides, inter alia, that “... Members should have due regard to relevant Model Codes of Safety Regulations or Codes of Practice published by the International Labour Office and the appropriate standards of international organizations for standardization”. In 1978, the ILO published a code of practice on accident prevention on board ship at sea and in port. A revised edition was published in 1996.

safety – lifelines, deck openings, bulwarks, rails, guards, stairways and ladders. The Protocol restricts the obligatory provisions of the Convention to vessels of 45 metres and above. For vessels of between 24 and 45 metres in length, the application of the safety requirements is left to regional decisions. It will enter into force one year after 15 States with at least an aggregate fleet of 14,000 vessels (roughly 50 per cent of the world fishing fleet of vessels 24 metres in length and over) have ratified it.<sup>11</sup>

A number of other IMO standards are also relevant, for example: Assembly resolution A.484(XII) entitled “Basic principles to be observed in keeping a navigational watch on board fishing vessels”; and Assembly resolution A.884(21) entitled “Amendments to the code for the investigation of marine casualties and incidents (including injuries sustained by a person in a casualty resulting in incapacitation for more than 72 hours commencing within seven days from the date of injury). There are several other IMO Conventions which are relevant to safety and health at sea in general. These include: the International Convention on Maritime Search and Rescue (SAR), 1979; the 1988 (GMDSS) amendments to SOLAS; and the Convention on the International Regulations for Preventing Collisions at Sea (COLREG), 1972 (as amended). The International Aeronautical and Maritime Search and Rescue Manual, the purpose of which is to assist States in meeting search and rescue needs, contributes significantly to improving the rescue of fishermen.

The United Nations Food and Agriculture Organization (FAO) works to improve safety in the fishing industry through the adoption of its own codes, through joint preparation with the ILO and the IMO of safety and health codes and guidelines and through its own technical cooperation programme. The Code of Conduct for Responsible Fisheries (see Chapter I), which is not binding, includes provisions which clearly link responsible fishing to the safety and health of fishermen.<sup>12</sup>

### *Joint FAO/ILO/IMO codes relevant to safety and health in the fishing sector*

The FAO, ILO and IMO have jointly produced four publications relevant to the safety and health of fishermen (i.e. fishing vessel personnel) and fishing vessels:

<sup>11</sup> As training is an essential element of safety, the STCW-F Convention is also relevant. For a discussion of this Convention, see the section of this report concerning competency certificates and vocational training.

<sup>12</sup> Article 6, General Principles, paragraph 6.17, provides that: “States should ensure that fishing facilities and equipment as well as all fisheries activities allow for safe, healthy and fair working and living conditions and meet internationally agreed standards adopted by relevant international organizations”; article 8, Fishing Operations, paragraph 8.1, Duties of all States, provides in subparagraph 8.1.5 that: “States should ensure that health and safety standards are adopted for everyone employed in fishing operations. Such standards should be not less than the minimum requirements of relevant international agreements on conditions of work and service”; article 8.2, Flag State Duties, subparagraph 8.2.5, provides that: “Flag States should ensure compliance with appropriate safety requirements for fishing vessels and fishers in accordance with international conventions, internationally agreed codes of practice and voluntary guidelines. States should adopt appropriate safety requirements for all small vessels not covered by such international conventions, codes of practice or voluntary guidelines”; and subparagraph 8.2.10 provides that: “In the event of an accident to a fishing vessel or persons on board a fishing vessel, the flag State of the fishing vessel concerned should provide details of the accident to the State of any foreign national on board the vessel involved in the accident. Such information should also, where practicable, be communicated to the International Maritime Organization”. For a full discussion of the FAO’s substantial work concerning the safety of fishing vessels and “fishers”, see: FAO: *Safety at sea as an integral part of fisheries management*, FAO Fisheries Circular No. 966 (Rome, 2001) at [www.fao.org/DOCREP/003/X9656E/X9656E00.htm](http://www.fao.org/DOCREP/003/X9656E/X9656E00.htm) (visited on 28 November 2002).

- *The FAO/ILO/IMO Document for Guidance on Training and Certification of Fishing Vessel Personnel*, as its name indicates, concerns training and certification and is discussed in the section of this report concerning that subject.
- *The FAO/ILO/IMO Code of safety for fishermen and fishing vessels* (Part B, Safety and health requirements for the construction and equipment of fishing vessels), and the *FAO/ILO/IMO Voluntary guidelines for the design, construction and equipment of small fishing vessels*, both concern the construction of vessels and the equipment they carry. These are undergoing revision and will be finalized and published by 2005.
- *The FAO/ILO/IMO Code of safety for fishermen and fishing vessels* (Part B, Safety and health practice for skippers and crews) is also being revised. The subject matter of this code is most relevant to occupational safety and health issues on board fishing vessels.

### *Regional standards*

#### *Safety of fishing vessels (construction and equipment)*

It is impossible to consider the occupational safety and health of fishermen without also considering the safety of the fishing vessel and its equipment. The following regional standards concern these issues.

In Asia, there are the “East and South-East Asia – Guidelines for the safety of fishing vessels of 24 metres and over but less than 45 metres in length operating in the East and South-East Asia region”.<sup>13</sup>

In Europe, Council Directive 97/70/EC of 11 December 1997 setting up a harmonized safety regime for fishing vessels of 24 metres in length and over,<sup>14</sup> which applies to fishing vessels flying the flag of an EU Member State or operating in the internal waters or territorial sea of a Member State or landing their catch in a port of a Member State, generally provides that fishing vessels should comply with the relevant provisions of the annex to the Torremolinos Protocol and that Member States should ensure that the requirements in certain chapters of the annex – which apply to vessels of 45 metres and over – are also applied to new fishing vessels of 24 metres in length and over, flying their flag, unless otherwise provided in Annex II of the directive. Annex IV specifically concerns safety requirements. As of early 2002, the European Commission was also considering action to improve safety and health on fishing vessels less than 24 metres in length.<sup>15</sup>

<sup>13</sup> Information in this section is based on IMO: *The report of the Conference on the Safety of Fishing Vessels Operating in the East and South-East Asia Region*, 68th Session of the Maritime Safety Committee (London, doc. MSC 68/INF.10, 28 Feb. 1997).

<sup>14</sup> In its report to the European Parliament, *Fisheries: Safety and causes of accidents*, of 12 March 2001, the Committee on Fisheries observed that this Directive affected only 3 per cent of vessels in the European fleet.

<sup>15</sup> *ibid.*

Though they may not fall exactly into the category of standards, arrangements have been made in other regions to improve safety at sea. These often focus on smaller vessels, and may include not only construction and equipment issues but other issues relevant to occupational safety and health. For example, the workplans of such regional bodies or organizations as the Organization of East Caribbean States (OECS), the Sub-Regional Fisheries Commission of North-West African States, the South Pacific Commission (SPC) and the Bay of Bengal Programme (BOBP) have undertaken considerable work in this area.<sup>16</sup>

### *Occupational safety and health in the fishing sector*

Council Directive 93/103/EC of 23 November 1993 concerning the minimum safety and health requirements for work on board fishing vessels applies to all existing fishing vessels of 18 metres in length and over, to new fishing vessels of 15 metres in length and over and to all persons working on board these vessels, including trainees and apprentices. New fishing vessels were to comply by 23 November 1995, and existing fishing vessels by 23 November 2002. Fishing vessels which underwent extensive repairs, conversions and alterations on or after 23 November 1995 were also to comply.<sup>17</sup>

Under the Directive, EU Member States are to take measures to see that owners ensure that their vessels are used “without endangering the safety and health of workers”. Occurrences at sea which affect or could affect the safety and health of the workers on board are to be described in a detailed report and be forwarded to the relevant competent authorities and recorded carefully and in detail in the ship’s log. Such a log, or other documentation, is to be required by national legislation or regulations. States are also to take the measures necessary to ensure that, as regards compliance with the Directive, vessels are subject to regular checks by authorities specifically empowered to carry out such checks.

EU Member States are to make sure that owners:

- ensure that vessels and their fittings and equipment are technically maintained and that defects found which are likely to affect the safety and health of workers are rectified as quickly as possible;
- take measures to ensure that all vessels and equipment are cleaned regularly in order to maintain an appropriate standard of hygiene;
- keep on board an adequate quantity of suitable emergency and survival equipment in good working order;
- take account of certain minimum safety and health requirements (listed in an annex to the Directive);
- take account of personal protective equipment specifications (listed in an annex to the Directive); and
- supply skippers with the means to fulfil the obligations imposed in the Directive.

<sup>16</sup> See FAO Fisheries Circular No. 966, op. cit., p. 12.

<sup>17</sup> In its report *Fisheries: Safety and causes of accidents*, of 12 March 2001 (op. cit.), the Committee of Fisheries pointed out that this Directive affected only 8 per cent of the European fishing fleet.

Workers and their representatives are to be informed of all measures taken regarding safety and health on board vessels, and the information provided is to be comprehensible to the workers concerned.

Workers are to be given suitable training, in particular in the form of precise, comprehensible instructions, on safety and health on board vessels and on accident prevention in particular. Training shall cover in particular fire-fighting, the use of life-saving and survival equipment, the use of fishing gear and hauling equipment and the use of various types of signs, including hand signals. Training is to be updated, where this is required, by changes in the activities on board. Persons likely to be in command of a vessel are to be given detailed training on: the prevention of occupational illness and accidents on board and the steps to be taken in the event of an accident; stability and maintenance of the vessel under all foreseeable conditions of loading and during fishing operations; and radio navigation and communication, including procedures.

The Directive calls for the consultation of workers and/or their representatives and their participation in discussions on the matters in the Directive in accordance with article 11 of Directive 89/391/EEC.<sup>18</sup>

Article 12 of the Directive, Adaptation of the Annexes,<sup>19</sup> provides for “purely technical” adaptations of the annexes to the Directive to take account of: the adoption of directives in the field of technical harmonization and standardization concerning certain aspects of safety and health on board vessels; and technical progress, changes in the international regulations or specifications and new findings in the field of safety and health on board vessels.

### *National law and practice*

In the remaining sections of this chapter, the Office has attempted to provide a general description of the main laws and regulations, and in some cases practices, concerning occupational safety and health of fishermen from several member States. This is followed by more detailed discussion on some of the major elements of legislation and practice.

---

<sup>18</sup> Directive 89/391/EEC of 12 June 1989 on the introduction of measures to encourage improvements in the safety and health of workers at work is a “framework” Directive which serves as a basis for individual directives. It aims to ensure a higher degree of protection of workers at work through the implementation of preventive measures to guard against accidents at work and occupational diseases, and through the informing, consultation, balanced participation and training of workers and their representatives. The following are examples of other Directives on specific issues: Council Directive 94/33/EEC on the protection of young people at work; Council Directive 90/269/EEC on the minimum health and safety requirements for the manual handling of loads where there is a risk particularly of back injury to workers; Council Directive 89/656/EEC on the minimum health and safety requirements for the use by workers of personal protective equipment at the workplace, and others.

<sup>19</sup> Annex I includes requirements covering seaworthiness and stability; mechanical and electrical installations; radio installation; emergency routes and exits; fire detection and fire-fighting; ventilation of enclosed workplaces; temperature of working areas; natural and artificial lighting of workplaces; decks, bulkheads and deckheads; doors; traffic routes – danger areas; layout of workstations; living quarters; sanitary facilities; first aid; accommodation ladders and gangways; and noise; Annex II includes requirements concerning the same subject areas (except for “noise”), though of a generally less rigorous standard; Annex III includes, inter alia, requirements covering equipment to be carried, how frequently it must be inspected and the frequency and nature of emergency drills; Annex IV requires workers to be provided with personal protective equipment and for it to be brightly coloured and to contrast with the marine environment.

## General

There are various ways in which ILO member States address the issue of safety and health of fishermen through national laws and regulations.

In several countries,<sup>20</sup> the general labour law (for all workers) concerning occupational safety and health is applied to the fishing sector. In some of these there are no specific requirements concerning fishing in the legislation, while in others there may be a few specific provisions concerning fishermen. In certain countries,<sup>21</sup> it appears that the Seafarers' Act or Mariners' Act applies to the fishing sector. Provisions concerning occupational safety and health of fishermen are sometimes found in the Fisheries Act<sup>22</sup> or in a specific "fishermen's code" (e.g. Tunisia).

In Japan, workers on seagoing fishing vessels of 30 gt and greater are covered by the Mariners' Law while those on vessels under 30 gt and not seagoing are covered by the general occupational safety and health laws and regulations. In Australia, workers on fishing vessels on overseas voyages are generally covered by the Navigation Act – which also applies to seafarers. Other vessels fall under the regulations of individual states. For example, in Queensland, workplace health and safety is regulated under the Workplace Health and Safety Act and associated regulations. In India, fishing vessels of 24 metres in length and over are regulated by the Merchant Shipping Act. However, occupational safety and health matters for vessels under 24 metres in length are dealt with by special programmes established by privately owned fishing cooperatives.

In Europe, there is a trend towards adopting specific laws and regulations concerning the occupational safety and health of fishermen. This is largely due to the adoption of Council Directive 93/103/EC (described above). EFTA States and potential EU Member States are also generally aligning themselves to the EU legislation. Other European Directives of a more general nature (also mentioned above) are also influencing national laws and regulations. Denmark, as part of its implementation of this Directive, has established the Fisheries Occupational Health Council (see Chapter VII). The United Kingdom has recently updated a number of its regulations to bring them in line with these Directives, including amending its Merchant Shipping and Fishing Vessels (Health and Safety at Work) Regulations to reflect provisions of EC Directive 89/391/EEC and Directives 91/383/EEC<sup>23</sup> and 92/85/EC.<sup>24</sup> As noted earlier, while Directive 93/103/EC is specifically concerned with the fishing sector, other Directives, often apply to all workplaces. The result has been that, while vessels under 15 metres may not be obliged to implement all of the requirements of the specific fishing sector Directive, they must meet, for example, the requirements to carry out a risk assessment as set out in Directive 89/391/EEC. While efforts have been made in many European States to meet their obligations, it is not clear whether such risk assessments are in fact being carried out.

<sup>20</sup> Indonesia, Mauritius, Mozambique, Nigeria, Philippines, Thailand and most of the Southern African Development Community (SADC) States.

<sup>21</sup> Estonia, Denmark, Norway, South Africa (an exception to the other SADC States) and Spain.

<sup>22</sup> Malaysia and Viet Nam.

<sup>23</sup> Concerning safety and health at work of workers with fixed-duration or temporary employment.

<sup>24</sup> Concerning safety and health at work of pregnant workers.

In Canada, in British Columbia, the Occupational Safety and Health Regulations, adopted under the authority of the Workers' Compensation Act, covers special fishing requirements, including requirements for specific fishing operations (e.g., gill-netting, longlining, seining, trawling, trolling).

*Promotional programmes and means of communicating with fishermen*

The high record of fatalities and injuries in the fishing sector have spurred the development of safety and health programmes in many countries. These programmes may aim to improve implementation of laws and regulations or seek to improve safety and health without resorting to legal requirements. Fishing industry organizations, including employers' organizations, frequently establish programmes on safety and health either to assist their members to implement requirements, because they feel that no action on their part will result in legal requirements – or simply because they find it to be economical or ethical to do so.

In Canada, in British Columbia, for example, promotion of safety is carried out by the Workers' Compensation Board. All laws and regulations are available on the Internet. In addition, there is a specific publication, *Gearing up for safety: Safe work practices for commercial fishing in British Columbia*, and hazard alerts and "Fatal" posters aimed at vessel owners and crews. In Newfoundland, the Professional Fish Harvesters' Certification Board plays a major role in communicating safety and health information to fishing vessel owners and fishermen. More recently, in the Atlantic region of Canada, a research programme called SafetyNet, funded by the Canadian Institutes of Health Research, has brought together the Canadian Coast Guard, trade unions, Canadian universities, the Workplace, Health, Safety and Compensation Commission, and other groups, in an effort to identify factors that have an influence on occupational safety and health. The study is drawing on several databases in both governmental and non-governmental organizations.<sup>25</sup>

The Danish Maritime Authority has published an action plan<sup>26</sup> which sets a new direction for health and safety in the Danish merchant fleet and on Danish fishing vessels. This plan was developed after many years of effort to improve occupational safety and health at sea, including: improvement of occupational health services; development of special safety education programmes aimed at the safety organizations of the fishing and shipping industries, respectively; new occupational health rules and regulations; treatment of illnesses on board; surveys of conditions related to occupational health, etc.

In Honduras, a programme for fishing is supported by an institute catering for fishermen's issues, which is funded by the Government. The programme focuses on occupational safety and health, with emphasis on preventive action. Several government agencies cooperate in its implementation.

The National Institute of Occupational Safety and Prevention (ISPESL) in Italy has launched an initiative to carry out internal research and a statistical study of injuries in the merchant shipping and fishing sectors through analysis of Radio Medical

Centre (CIRM) databases and other available information from the Social Security Institute for the Shipping Sector (IPSEMA), the Maritime Health Offices, the local health agencies, shipping and fishing companies, and to create information and training tools for seamen. Information is also provided by the National Institute of Insurance against Accidents at Work (INAIL). A series of comprehensive, well-illustrated publications on law and practice concerning occupational safety and health in the fishing sector has also been produced by the *Associazione Amatori da Pesca* (Association of Fishing Vessel Owners) in cooperation with the national and regional ministries of agriculture and fishing, and the European Commission. A series of publications has also been produced by the Molfetta Fishing Vessel Owners' Association in collaboration with the EU, the Ministry for Agricultural Policies, the General Directorate for Fishing and Aquaculture, and the Department of Aquaculture and Fishing in the Puglia Region. These publications cover: models for drafting safety programmes; safe work practices on board fishing vessels; a practical guide for medical assistance on board fishing vessels, and other issues.

In Chile, the *Asociación Chilena de Seguridad* (ACHS) has been implementing a safety programme in the industrial fleet for many years. Over the period 1992-98, there was a steady decline in accidents; this was attributed to training in such areas as risk prevention and an exchange of experiences at national level. The ACHS assists companies in a number of ways, arranging both general training courses (including first aid) and courses specifically aimed at fishing operations. It has also prepared a series of manuals, videos and posters covering such issues as maritime safety; trawling safety; survival at sea; safe navigation; safety in preparing and repairing nets; and other topics.

In New Zealand, an industry-led, Fishing Industry Safety and Health Advisory Group (coordinated by the Maritime Safety Authority of New Zealand) was established in 2001 to review safety and health in the commercial fishing industry. This group has an ongoing role in developing, implementing and promoting injury prevention programmes across the industry.

In the United States, the North Pacific Fishing Vessel Owners' Association (NPFVOA) operates a safety education and training programme. Funding is provided primarily through member contributions and also through tuition fees and sales of materials. Members are primarily fishing vessel owners and fishing-related companies, ranging from small salmon boats with single operators to large processing ships with crews of 150 and more. The Association also works together with insurance underwriters and brokers, maritime attorneys and fishing industry support businesses. It works closely with the United States Coast Guard, the Occupational Safety and Health Administration of the United States Department of Labor, and many state agencies. There are three primary components of the NPFVOA vessel safety programme – a comprehensive safety manual, a series of safety and survival at sea videotapes, and a crew training programme. The NPFVOA also publishes a quarterly newsletter covering its safety programme, other relevant safety information and reports of serious fishing vessel accidents.

#### *Duties of employers/fishing vessel owners, and rights and duties of fishermen*

Many countries specify duties of employers in their national and regional (i.e. provincial) labour legislation covering all workers (often reflecting the principles con-

tained in Convention No. 155 and other ILO standards). Generally, fishing vessel owners seem to be held to these requirements. In a number of countries,<sup>27</sup> such provisions are also contained in the Seamen's Act or Shipping Act. In a few countries these issues are addressed in regulations specific to the fishing sector.

For example, in New Zealand, the Maritime Transport Act, which covers fishing, provides that employers are to ensure the safety of seafarers. They shall take all practicable steps to: provide and maintain for seafarers a safe and seaworthy ship and a safe working environment on the ship; provide and maintain for seafarers on the ship facilities for their safety and health; ensure that while on the ship, the seafarers are not exposed to hazards arising out of the arrangement, disposal, manipulation, storage or use of things on the ship or near the ship; develop procedures for dealing with emergencies that may arise while seafarers are on the ship. The employers have moreover the duty to give information to the seafarers. Similarly, regulations in Norway provide that, unless otherwise specifically provided, the shipping company and the shipmaster are responsible for ensuring that work on board is planned, organized and carried out in accordance with the relevant regulations. The safety and health of workers shall be ensured in all matters associated with work or off-duty time on board. Workers shall under no circumstances incur expenses as a result of safety and health arrangements on board. Furthermore, the responsibility of the shipping company under the regulations is not affected by the duties and obligations incurred on workers and their representatives. In Canada, in British Columbia, the duties of employers are set out generally in the Workers' Compensation Act; however, the general responsibilities of fishing vessel owners and masters are laid down under the Occupational Safety and Health Regulations, under "Fishing operations: General requirements".

The same situation applies to laws and regulations concerning the rights of fishermen. These are set out in the general labour legislation or in the Seafarers' Act or Shipping Act. For example, in Canada, the rights and duties of workers are generally established in provincial law. For trawlermen in Newfoundland, these issues are set out in collective agreements. In Estonia, if more than one half of the crew members request the master to verify the seaworthiness of the ship or if the chief mate or chief mechanic makes such a request with regard to the part of the ship or the equipment for which they are responsible, the master must contact the agency exercising state supervision over ships registered in Estonia to verify the seaworthiness of the ship. In New Zealand, every employer of seafarers on New Zealand vessels (including fishing vessels) has to ensure that every seafarer is given all results of monitoring of the seafarer in relation to health or safety; and all seafarers who ask for them are given the results of monitoring of conditions in the seafarer's ship.

There also appears to be a trend towards extending, to the extent possible, provisions concerning safety and health committees to the fishing sector. Norway, for example, has extensive regulations concerning safety committees and safety advisers (election, protection, right to stop work, recording of meetings, etc). These appear to be largely taken from general labour law. In Spain, safety and health committees are compulsory if there are 50 or more workers in an enterprise. In Canada, in British Columbia, guidelines concerning the occupational safety and health regulations specific to the fishing sector provide for flexibility in the establishment of a formal safety

---

<sup>27</sup> Estonia, Mexico, New Zealand, Norway, Spain.

and health programme if the vessel is unlikely to have sufficient employees for such a programme.

Some countries set out not only the responsibilities of fishing vessel owners and/or masters but also of fishermen themselves. In Canada, in British Columbia: “[c]rew members must take all reasonable precautions necessary to ensure the health and safety of themselves and other persons on board the fishing vessel”. In Norway, regulations provide that every worker has a duty to comply with orders and instructions, including to accept assignments, show caution and otherwise in every way cooperate to safeguard life, health and welfare in accordance with regulations. Workers must also use the required protective equipment and cooperate to prevent accidents and health injuries. They are to notify the person responsible or protection supervisor of defects or deficiencies which may involve risks to life or health.

### *Actions at the workplace/enterprise level*

One of the major developments in the shipping sector in recent years has been the development of the International Safety Management (ISM) Code. This Code, which initially was voluntary and now is mandatory for many ships through inclusion in Chapter V of the SOLAS Convention (see above), requires vessels to have a safety management system on board.<sup>28</sup> In New Zealand, for example, the Maritime Rules concerning safe ship management systems apply to the fishing sector. The ILO has recently prepared Guidelines on occupational safety and health management systems, which may be more relevant to occupational safety and health matters on fishing vessels.<sup>29</sup>

Risk assessments are being carried out by many EU Member States (as well as EFTA States and prospective EU Members) due to the requirements of Directive 89/391/EEC (see above). Though the requirement for safety assessments applies to all vessels, it would appear that owners of small vessels may not abide by these. Interestingly, it appears that in some countries vessels are too small to come under the requirements of Directive 93/103/EC, which is specific to fishing, but must comply with Directive 89/391/EEC. In the United Kingdom, a risk assessment methodology is promoted by the Sea Fish Industry Authority (see box 5.1). In Italy, a decree obliges the shipowner and captain to carry out risk assessments for safety and health on board (modelled on the United Kingdom system). Norway and Spain also have such systems in place.

A regulation on prevention services in Spain provides for evaluation procedures for health risks for workers and the organization, functioning and control of prevention services. This order implements Directive 89/391/EC.

<sup>28</sup> The ILO’s Tripartite Meeting on Safety and Health in the Fishing Industry (December 1999) concluded, inter alia, that: “Safety and health improvements cannot be achieved solely through legislation. A safety culture should be promoted in the fishing industry, including the use of safety management systems appropriate to the enterprise and the dissemination of safety information. Governments, employers and workers’ organizations should be involved in the development and implementation of such systems.”

<sup>29</sup> The Guidelines provide a model, compatible with other management system standards and guides. They are not legally binding and are not intended to replace national laws, regulations and accepted standards. They reflect ILO values such as tripartism and relevant standards, for example Conventions Nos. 155 and 161. See ILO: *Guidelines on occupational safety and health management systems, ILO-OSH 2001* (Geneva, 2001).

### **Box 5.1**

#### **Risk assessment in the United Kingdom**

The Merchant Shipping and Fishing Vessels (Health and Safety at Work) Regulations 1997, which came into force in 1998, require vessel operators to prepare a written statement of their general policy with respect to health and safety and to revise this as often as may be appropriate, and also to carry out risk assessments to identify health and safety risks for workers in the normal course of their activities or duties.

The Sea Fish Industry Authority, together with United Kingdom fishing federations and the Maritime and Coastguard Agency (MCA), has developed a Fishing Vessel Safety Folder for use by fishing vessel owners. The folder includes a series of forms to be used to prepare the policy statement and risk assessments required by the regulations. The Fishing Vessel Safety Policy Statement Form provides spaces for information on the vessel, number of crew, names of the owner, skipper and the person responsible for health and safety, and various emergency procedures. In the form, the owner sets out how he intends to operate the vessel in compliance with the 1997 regulations and other health and safety regulations, to minimize the risk of accidents and ill health. The form covers safety equipment, emergency measures and risk assessments for activities and areas of the vessel which are to be reviewed every 12 months or sooner if significant changes have been made. Personal and protective equipment, information, training and the operating procedures necessary for the safety of the vessel and crew are to be provided as required by the regulations. The form also includes a section entitled "Crew list and statement" in which members of the crew must state that they possess current MCA-recognized certificates in sea survival, fire-fighting and first aid; that they have been given safety induction for working aboard the vessel; that the safety equipment and procedures have been explained; that they have been informed of the risk assessments which have been made; and that they will comply fully with all requirements for health and safety in connection with the vessel. A comprehensive safety equipment checklist is included. Advice and examples on how to perform the assessment are provided.

Source: *Fishing Vessel Safety Folder*, Sea Fish Industry Authority, United Kingdom.

#### *On-board safety training*

In a number of countries, national laws or regulations provide that employers have a duty to ensure that fishermen receive on-board safety training (for information on competency certificates and vocational training, see the section of this report concerning those topics). A few countries indicated specific requirements for seafarers; only a few appeared to have special requirements for fishermen. Such training may be particularly important to ensure that the crew is familiar with the specific vessel and its equipment, including the location of lifesaving and fire-fighting equipment.

In Canada, in British Columbia, under the Occupational Safety and Health Regulations, in the sections concerning "Fishing vessels: General requirements", the master

must ensure, before the start of each season, that each crew member is instructed in the operational characteristics of the vessel (specific areas are listed). New crew members joining the vessels are also to receive such training. The master must also establish procedures and assign responsibilities for emergency situations, and ensure that drills are conducted at the start of the fishing season and at periodic intervals. Employers of seafarers (including fishermen) in New Zealand must take all practicable steps to ensure that every seafarer who does work of any kind, or uses plant of any kind, or deals with a substance of any kind, on the ship: either has or is supervised by a person who has such a knowledge and experience of maritime matters that he is not likely to cause harm to the seafarer or to any other person; is adequately trained in the safe use of all plant, objects, substances, and protective clothing and equipment that the seafarer is or may be required to use or handle.

The EU, EFTA and prospective EU Member States are generally implementing the relevant requirements of Directive 93/103/EC on this subject. In Italy, a decree provides that shipowners are to ensure that every maritime worker receives sufficient and adequate training as regards health and safety, with particular reference to the type of ship involved and the duties performed on board. Training is to take place on embarkation, and when new working equipment, technologies, dangerous materials or substances are introduced. Norway requires that each individual is to receive the necessary training: to be able to carry out work in a safe and proper manner; before being given access to areas involving a serious or special risk; and when new technology is introduced. Furthermore, training must be repeated regularly and documented. In Romania, the ship's captain must be carefully instructed on: occupational accidents and disease; measures to be taken in the event of an accident; and measures to ensure the ship's stability in all circumstances. In Spain, the shipowner must guarantee that the workers and workers' representatives receive adequate training and information on safety and health matters on board. Specific measures for fishing are set out in a special order. Estonia requires that the training of crew members regarding occupational safety and health shall be organized by the shipowner (a general requirement for all vessels, not specific to fishing).

#### *Personal protective equipment, equipment safety and ergonomics, manual lifting*

In some member States, the provision of personal protective equipment is covered in the national law concerning all workers. For example, in Mexico, this is dealt with under the Federal Labour Act. In others, there are laws and/or regulations concerning personal protective equipment for seafarers generally. In a few countries there are specific requirements for fishing vessels. As in other areas, EU, EFTA and prospective EU Member States are implementing Directive 93/103/EC and other European requirements.

In Canada, in British Columbia, there is a requirement that fishing vessels must carry an immersion suit – essential in the cold waters of British Columbia – for each member of the crew under the Occupational Safety and Health Regulations, in the sections concerning “Fishing vessels: General requirements”. However, it is not stipulated who will provide the suits. Nevertheless, the master is held responsible for non-compliance. In Newfoundland, requirements concerning protective equipment are generally set out in the Occupational Health and Safety Act and its implementing Regulations. In Estonia, the Seafarers' Act requires that the shipowner shall, at the

shipowner's expense, provide crew members with working clothes and special clothing and protective equipment necessary for the performance of their work.

Norway's regulations provide that personal protective equipment shall be used when a risk cannot be eliminated or sufficiently limited by means of common protective measures of a technical nature or by means of measures, methods or procedures relating to the organization of work. There are specific requirements concerning personal protective equipment. There are also regulations concerning the use, procurement and training in the use of personal protective equipment. In Romania, the shipowner must ensure that the ship is properly equipped with the technical material necessary to: guarantee the safety of work on board; ensure that the crew is equipped with individual working and protective equipment (protection tools, materials and safety devices); and guarantee the working and living conditions on board. In the Republic of Korea, shipowners must comply with the provisions of a decree of the Ministry of Maritime Affairs and Fisheries stipulating that they: maintain working tools; provide medicines; dispense training on safety and health; and take all necessary steps to prevent danger on the job and ensure healthy conditions on board.

#### *Equipment safety and ergonomics*

Safety can of course be improved by ensuring that the vessel and its equipment are designed and built to a minimum standard. A considerable number of countries have carried out research to improve vessel design, to ensure that equipment is properly shielded and equipped with appropriate safety stops, and to improve the placing of equipment on board (e.g., to provide adequate room for the crew to work safely) and in other areas. Several countries have laws and regulations in place which place a responsibility on the vessel owners to ensure that the vessel and its equipment are safe (to the extent this is possible).

For example, in Canada, in British Columbia, the owner must ensure that all machinery and equipment on board the vessel is capable of safely performing the functions for which it is used. The owner also must ensure that the moving parts of power-operated machinery are, where practicable, fitted with effective guards if such parts constitute a danger to crew members. There are also requirements concerning slipping and tripping hazards; preparation of the vessel for the voyage (by the master); access and ingress; protection from falling; deck openings; equipment control devices; illumination and other equipment-related matters.

Norway has a number of requirements concerning the way in which the equipment is designed and arranged on board ship, the manner in which this equipment is used and inspected, and equipment for special hazards. Workers must also receive appropriate training, practice and instruction in the use of this equipment. In New Zealand, the law requires that every employer of seafarers shall take all practicable measures to ensure that plant (equipment, fittings, furniture, implements, machines, machinery, tools and vehicles) used by any seafarer on the ship is so arranged, designed, made and maintained that it is safe for the seafarer to use. In Romania, there is a specific law for shipping which provides that the shipowner must: ensure the technical maintenance of ships and repair, as soon as possible, all deteriorations likely to affect safety and health on board; take measures to ensure good standards of hygiene on ships and maintain the plant on board; and guarantee that the ship is equipped with the necessary rescue means. In Spain, an Order in Council implements the European Directives 89/655/EC

and 95/63 EC on minimum requirements on safety and health for all workers. Fishing vessels in Malaysia must be equipped with basic safety equipment, such as life-jackets and fire extinguishers.

In EU Member States, Council Directive 90/269/EEC on the minimum health and safety requirements for the manual handling of loads, where there is a risk particularly of back injury to workers, applies to fishing. In Canada, in British Columbia, the master must ensure that crew members are instructed in and use proper lifting techniques. In Newfoundland, these matters are generally covered in the Occupational Health and Safety Regulations. In Norway, the regulations concerning work on ship (including fishing vessels) also include a special section on the manual handling of objects (apparently drawing on such regulations for all workers). These requirements cover the organization of work and information for and training of workers.

### *Recording and reporting of fatalities, injuries, diseases*

The Tripartite Meeting on Safety and Health in the Fishing Industry concluded that:

Reliable data and statistics are needed to identify fishermen's safety and health problems and to focus response and resources effectively. Under-reporting of occupational accidents and diseases of fishermen is a very serious problem. Governments, employers' and workers' organizations should assist in developing or improving reporting systems. Governments should approach insurance providers to exchange information, where appropriate, on accidents, injuries and diseases.

Harmonization of data is important. The collection of data on occupational accidents and diseases in the fishing industry can be improved by the use of standardized forms. Statistics and lessons learned should be widely disseminated, especially to employers and fishermen. In order to prevent statistics on fishing from being lost in the general category of 'agriculture, hunting, forestry and fishing', governments should adopt classification schemes which are convertible to the International Standard Industrial Classification of all Economic Activities (ISIC), Revision 3, as recommended by the ILO.

There appears to be a serious problem in the under-reporting of fatalities, injuries and diseases of fishermen in many – but not all – countries. The Office has therefore sought to identify any laws and regulations requiring the recording and notification of this information. These requirements are often found in laws and regulations for all workers.<sup>30</sup> In many countries,<sup>31</sup> the requirements concerning the reporting and notification of accidents of fishermen are found in the legislation governing all seafarers. Canada has – at least in some provinces – specific laws or regulations for the fishing sector. In other countries (e.g., Malaysia) reporting of accidents appears to be encouraged but not necessarily required.

Many countries appear to require that the master or skipper keep a log of accidents and illnesses on board. In other cases, or in addition, it is a general requirement of the employer or fishing vessel owner. Although the criteria for reporting vary, they all require that fatalities be reported. In some countries,<sup>32</sup> not only accidents but also illnesses must be reported. In Italy, injuries must be reported. Some countries addition-

<sup>30</sup> Australia (Queensland), Romania.

<sup>31</sup> Italy, Mexico, New Zealand, Norway, Spain.

<sup>32</sup> Australia (Queensland), Spain.

ally require reports of “dangerous events” (New Zealand) or “incidents” (New Zealand). In the United Kingdom, an accident (to be reported) includes any contingency whereby a major injury or loss of life is suffered by any person on board.

An example of specific fishing regulations is found in Canada (British Columbia), where crew members are required to report all injuries to the master without delay. The master must then report to the owner injuries that require medical aid and record all injuries in the vessel logbook. In accordance with the Occupational Safety and Health Regulations, the employer must maintain a record of all injuries and diseases reported. These records must be kept for at least ten years. The record of an injured worker must be made available to that worker on request. In Newfoundland, it is the employer’s responsibility to report accidents to the Workplace Health, Safety and Compensation Commission of New Brunswick (WHSCC), to the provincial Department of Labour and to the Workplace Occupational Safety and Health Committee or the worker safety representative. The Occupational Health and Safety Act also requires physicians to notify the WHSCC and the Department of Labour of the diagnosis of occupational diseases. Throughout Canada, the National Work Injury Statistics Coding Manual is used to gather statistics on occupational accidents and diseases. A fine may be imposed if injuries are not reported within a set time period.

In Japan, for those workers on vessels covered by the Mariners’ Law, the shipowner is required to file a report on accidents and illnesses to the Ministry of Land, Infrastructure and Transport. The Minister prepares an annual report on occupational injuries and fatalities in the sector. For those workers on vessels not covered by the Mariners’ Law (generally smaller vessels), the employer is required to submit a report on accidents or workers’ death, injuries and sickness in compliance with an ordinance on industrial safety and health based on the Industrial Safety and Health Law.

Fishermen in Malaysia are encouraged to notify any accident involving fishermen and fishing vessels at sea or at a fishing port to the authority, i.e., the police and/or the Department of Fisheries. In other countries the requirements may be to report to the maritime authority, labour authority, workers’ compensation board or other authority.

In Mauritania, accidents at work (but not occupational illnesses) are registered at the inter-enterprise medical service. In Mexico, the Federal Labour Act includes specific provisions for recording and notification of accidents on board vessels. The employer must inform the corresponding port captain within 24 hours, of all work accidents that have occurred in a foreign port; the report is then given to the Mexican consul, or, failing this, to the captain of the first national port that the vessel enters. Accidents at work are to be communicated to the labour authority so that it can maintain and update the register of national statistics on work-related accidents and sicknesses.

The crew of a fishing vessel in the United States is required to report an injury, illness or other disability to the master of the vessel. The posting of a notice on fishing vessels of this requirement is mandated by statute. The United States Coast Guard keeps statistics for fishing vessel accidents, deaths and losses, in order to track the progress of the agency, vessel owners and fishermen in improving safety.

EU Member States, EFTA States and prospective EU Member States are implementing requirements set out in Directive 93/103/EC. In Spain, a general law on the prevention of labour hazards provides that the employer must keep information relevant to (among other areas) any work accidents or occupational illnesses that have caused a worker to become incapacitated for more than one day. Furthermore, Direc-

tive 93/103/EC requires the vessel owner to keep a detailed account (in the logbook or in a special document for this purpose) of occurrences at sea that have some effect on the health of workers on board. The account must be transmitted to the labour authority. In the United Kingdom, regulations require skippers to report accidents to the United Kingdom's Marine Accident Investigation Branch (MAIB).

Norway provides an example of a rather complete system of recording fatalities, injuries and diseases, compiling statistics, and providing information to regulators and to the fishermen themselves to help prevent further accidents or health problems. Employees covered by the Norwegian National Insurance Scheme report occupational injuries on a specific form. For employees not covered by the Norwegian National Insurance Scheme, occupational injuries are reported using the Norwegian Maritime Directorate's form. The Maritime Directorate uses the information reported: in its general preventive work; as a basis for safety reports; for statistical purposes; and as a basis for further investigation of serious accidents. This and other information are used to decide upon information "campaigns" directed at shipowners, seafarers and fishermen, and for articles in the Directorate's quarterly magazine, etc. Occupational illnesses are not reported to the Norwegian Maritime Directorate. Statistics are published in the Norwegian Maritime Directorate's magazine.

### *Investigation of accidents*

ILO's Tripartite Meeting on Safety and Health in the Fishing Industry concluded, inter alia, that: "All maritime casualties involving fishing vessels should be investigated and subject to inquiries in accordance with international Conventions."

Apparently, many States carry out investigations of accidents (or at least serious accidents) occurring on fishing vessels. The following are examples of systems in place regarding the investigation of occupational accidents leading to injuries. The Danish example is described at length because it provides an overview of the entire system.

In Denmark, investigation of accidents at sea and serious accidents at work are carried out by the Division for Investigation of Maritime Accidents – an independent division within the Danish Maritime Authority, whose investigations are separated from other activities of the Authority. The investigations are carried out in accordance with an order concerning investigation of accidents at sea. The Division can participate in – or be in charge of – investigations of accidents at sea on foreign ships when Danish interests are involved. If an accident on a Danish ship has taken place outside Danish territorial waters, a ship surveyor from the Division will travel to the place of the incident. According to Danish legislation the Division must be informed immediately when a Danish merchant or fishing vessel is involved in a collision, grounding, fire, explosion, leakage, list, capsizing, or when somebody dies or is seriously injured. The obligation to report the accident lies with the master of the ship. If the master is unable to do so, the obligation lies with the shipowner. When the Division has completed its investigations, a report on the accident is drawn up. The report must include a summary of the events leading to the accident and, to the extent possible, a conclusion. Furthermore, the report may include recommendations concerning initiatives which may prevent such – or similar – accidents from happening in the future. The report is sent to the persons directly involved and is then made public on the Internet. The report is also sent to different organizations, including Danish trade unions. The report does not estab-

lish legal or economic liabilities. It is sent to the Centre for Shipping Policy and Legal Services for the purpose of investigating whether maritime legislation has been violated. Finally the general Danish authorities under the Ministry of Justice responsible for the legal criminal proceedings look into the possibilities of imposing sanctions.

In the United Kingdom, the Marine Accident Investigation Branch (MAIB) may decide to investigate any accident. MAIB's investigation reports are published and widely circulated. Accident data arising from the initial reports and investigations are collated and occasionally examined by the MAIB to discover accident trends.

### Conclusions

The following general conclusions may be drawn from the above:

- in a number of countries, the general occupational safety and health laws and regulations are considered applicable to the fishing sector; however, it is not certain whether these provisions are, in all cases, appropriate to the sector or whether they are actually applied. This is particularly true with regard to small fishing vessels, as larger vessels may be covered by the laws and regulations for merchant ships;
- recording, reporting and notification of fatalities, injuries and diseases – and using this information to produce information (e.g. statistics, guidance, etc.) for use by fishermen and fishing vessel owners – is an important component in efforts to improve the safety and health record;
- regulation is an important means of improving conditions; often the threat of regulation may also be an effective means of improving safety and health;
- the smaller the vessel, the less likelihood that safety and health conditions will be regulated, particularly for vessels below 15 metres in length, even in developed countries;
- regulations, where they exist, may solely or primarily focus on the vessel and its lifesaving and fire-fighting equipment and not on other safety and health aspects;
- safety and health programmes are likely to be more effective if there is more discussion with and involvement of working fishermen; regulations may be more effective if adapted to the local fishery;
- raising awareness of risks is an important aspect of safety and health.

### ACCOMMODATION ON BOARD FISHING VESSELS

The amount of time a fishing vessel may remain at sea can vary from a few hours to many months at a time. For fishermen who must eat and sleep at sea, accommodation is an important issue. This is not only a matter of comfort but also a matter of health. While progress has been made in providing accommodation which is reasonably spacious, clean, properly ventilated, insulated from excessive noise or vibration, etc., there are a great many vessels operating with uncomfortable and unhealthy living quarters. Lack of comfort can be a significant contributor to fatigue. Though vessels usually operate in what may be considered by some to be wide open spaces, the *internal* space on board a fishing vessel can be extremely limited due to pressures to utilize

any available space for catching, processing and storing fish and other marine products. Without proper restrictions, this can lead to cramped and unhealthy living quarters which are breeding grounds for the spread of disease.

The issue of accommodation becomes even more important for vessels operating at sea for extended periods; however, it is also relevant to those vessels which frequently come in and out of port but which serve as the temporary home of the crew, in particular when the crew consists or includes migrant fishermen without a local home ashore. The ILO's existing instrument concerning accommodation touches on the issues of medical equipment and facilities on board, issues which are obviously of extreme importance due to the well-documented high levels of accident and injury rates.

### *International standards*

#### *ILO standards*

The Accommodation of Crews (Fishermen) Convention, 1966 (No. 126), sets out standards for the planning and control of crew accommodation (including plan approval, complaint procedures concerning non-compliance and inspections) and crew accommodation requirements; it also specifies how these requirements apply to existing ships and new fishing vessels. The requirements concerning crew accommodation are very detailed, covering, among other things: location; construction materials; drainage; ventilation; heating; lighting; sleeping room size; mess rooms; sanitary accommodation; sick bay; medicine chests; and galley.

The Convention does not apply to vessels of less than 75 grt unless the competent authority, after agreement with the representatives of fishing vessel owners and fishermen's organizations, agrees that it is reasonable and practicable to apply the provisions to vessels of between 25 and 75 grt. There are also provisions for stipulating that length instead of tonnage may be used as a parameter for the Convention, in which event the Convention does not apply to ships and boats of less than 80 feet (24.4 metres); however, they may after consultation and if reasonable and practicable, be applied to vessels between 45 and 80 feet (13.7 and 24.4 metres). Exceptions may be permitted, under certain conditions, for vessels which normally remain away from their home ports for periods of less than 36 hours and in which the crew does not live permanently.

As at 30 September 2002, the Convention had been ratified by 22 member States.<sup>33</sup>

#### *IMO standards*

As noted earlier in this chapter, the Torremolinos International Convention for the Safety of Fishing Vessels, 1977, and the Torremolinos Protocol of 1993 include some requirements concerning accommodation on vessels. However, the emphasis in these

---

<sup>33</sup> Azerbaijan, Belgium, Bosnia and Herzegovina, Brazil, Denmark, Djibouti, France, Germany, Greece, Kyrgyzstan, Netherlands, Norway, Panama, Russian Federation, Sierra Leone, Slovenia, Spain, Tajikistan, The former Yugoslav Republic of Macedonia, Ukraine, United Kingdom, Yugoslavia.

instruments is on such issues as vessel stability and fire-fighting, as opposed to the issue of comfort and health.

### *Regional instruments*

The EU has also dealt with the issue of crew accommodation in Directive 93/103/EC concerning the minimum safety and health requirements for work on board fishing vessels (see the section of this chapter concerning occupational safety and health issues). Articles 4 and 5 refer, respectively, to annexes setting out requirements for “new fishing vessels” (generally, 15 metres and over) and “existing fishing vessels” (generally, 18 metres or over and not a new fishing vessel). The standards for new vessels are somewhat higher than those for existing vessels. As concerns accommodation, the annexes contain provisions on ventilation, temperature, living quarters, mess rooms, galleys and sanitary accommodation – with somewhat higher standards for new fishing vessels. While the provisions in the Directive are not as detailed as those in Convention No. 126, they do cover a few areas not covered by the Convention. For instance, they require adequate protection against vibration and odours, and protection of non-smokers from the discomfort caused by tobacco smoke. They also stipulate that general lighting must be reduced in order to avoid disturbing workers who are resting. As concerns medical equipment and facilities, reference is made to Directive 92/29/EEC.

### *National law and practice*

This section is based on reports concerning the application of Convention No. 126, submitted to the ILO by ratifying States in accordance with article 22 of the ILO Constitution, and information on other countries provided to or obtained by the Office.

### *Scope of application*

Several countries have national laws and regulations concerning accommodation, which exclusively apply to fishing vessels or fishermen, respectively.<sup>34</sup> However, the pertinent laws and regulations usually cover all merchant vessels or all seafarers, respectively, without excluding fishing vessels or fishermen.<sup>35</sup> A few countries have issued general laws and regulations on the workplace which apply to fishing vessels.<sup>36</sup>

The national laws and regulations on accommodation often contain exclusions from the application:

- For instance, the national laws and regulations often do not apply to fishing vessels below a certain size: e.g. less than 12 metres;<sup>37</sup> less than 25 tonnes or

---

<sup>35</sup> Azerbaijan, Belgium, Brazil, France, Germany, Greece, Netherlands, Norway, Panama, Russian Federation, Slovenia, Spain, Ukraine, United Kingdom (ratified C. 126); Australia, Estonia, India, Indonesia, Japan, Republic of Korea, Lithuania, Mexico, Poland, Romania, Tunisia, United States.

<sup>36</sup> Netherlands (ratified C. 126); Australia, Canada (Newfoundland and Labrador), Indonesia, Mexico.

<sup>37</sup> Azerbaijan, France, Russian Federation, Ukraine (ratified C. 126).

13.7 metres;<sup>38</sup> new fishing vessels of less than 15 metres or existing fishing vessels of less than 18 metres (see EU Directive),<sup>39</sup> whereby fishing vessels less than 24.4 metres are sometimes excluded from the provisions going beyond the EU Directive;<sup>40</sup> less than 15 metres (see EU Directive), whereby for vessels less than 24 metres, deviations may be granted and less severe provisions are stipulated;<sup>41</sup> less than 30 grt;<sup>42</sup> less than 37 tonnes;<sup>43</sup> less than 45 metres in respect of the Torremolinos Protocol of 1993, and less than 24 metres in respect of the Protocol regarding the construction, stability and crew protection requirements;<sup>44</sup> less than 24.4 metres or 75 tonnes;<sup>45</sup> and less than 100 tonnes.<sup>46</sup> One example may be cited, where the national provisions do not contain any exclusions regarding length.<sup>47</sup>

- In addition, many countries have excluded certain types of fishing vessels: e.g. vessels fishing for sport or recreation;<sup>48</sup> fishery research and protection vessels;<sup>49</sup> vessels primarily propelled by sail but having auxiliary engines;<sup>50</sup> ships and boats engaged in whaling;<sup>51</sup> eel fishing boats;<sup>52</sup> and any vessel which embodies features of a novel kind, if the application of the legislation might seriously impede research into the development of such features and their incorporation in vessels.<sup>53</sup>
- Other member States provide that certain navigation areas are out of scope: e.g. fishing vessels proceeding on a voyage other than an overseas voyage;<sup>54</sup> or vessels engaged in coastal fishing, if application is unreasonable and impracticable in view of the operation area, the type of vessel and the absence of general navigational hazards.<sup>55</sup>
- Finally, countries often exclude vessels with short periods at sea: e.g. vessels never at sea for more than 36 hours with crew not living on board;<sup>56</sup> vessels never

at sea for more than 24 hours;<sup>57</sup> and vessels with crew not living on board.<sup>58</sup> Moreover, vessels under 500 tonnes engaged on trips of three days or less with a crew inferior to 15 members are excluded from the sick bay requirement.<sup>59</sup>

### *Crew accommodation requirements*

Table 5.1 summarizes the information from a number of countries, ratifying and non-ratifying, concerning standards of accommodation as covered by Convention No. 126. The Office has not been able to examine the information on every member State which has ratified the Convention; neither has it received information from all member States likely to have some laws and regulations on these issues. Nevertheless, the table does give a preliminary idea of the extent of laws and regulations of accommodation (for vessels within the scope of Convention No. 126) in several member States. As can be seen from the table, and as would be expected, nearly all the member States which have ratified Convention No. 126 (shown in bold) and from whom information has been received, have in place laws and regulations covering each of its provisions. As to the other member States listed (member States which have not ratified the Convention but have either provided the Office with information or for which the Office has been able to find information), many of the major areas – but perhaps not the details – are covered. For example, 19 States (14 having ratified the Convention; five having not) have requirements concerning protection against weather, noise, etc.; 22 States (14 having ratified the Convention; eight having not) have at least basic requirements concerning ventilation; 20 States (14 having ratified; six having not) have a requirement for a separate galley.

### *Conclusions*

The information available to the Office indicates that a substantial number (at least 38) member States have laws and regulations concerning accommodation on fishing vessels (though in some States these are laws and regulations for vessels in general which do not exclude fishing vessels), including the 22 States which have ratified Convention No. 126 and at least 16 other States. It appears that several of the States which have not ratified the Convention have requirements which are not as detailed as those in the Convention. In some States, whether or not they have ratified the Convention, there are requirements not found in the Convention (e.g. protection against noise and vibration).

Smaller vessels are often excluded from national laws and regulations concerning accommodation. On the one hand, such small vessels may spend less time at sea, making accommodation requirements less important than on vessels which remain at sea for weeks or months at a time; on the other hand, smaller vessels must now often stay at sea longer and fish at greater distances from shore for a variety of economic, fisheries management and operational reasons. It therefore appears both desirable and possible to provide either mandatory or recommendatory standards, at least in the form of promotional principles, for such vessels in an international instrument (in

The Office was unable to analyse all available information in time to meet the deadline for publication of this report. The absence of a mark in the appropriate column does not necessarily imply that legislation does not exist in this area.

Europe, such requirements have been extended to vessels of 15 metres or more in length). Furthermore, a link could be made to the non-binding provisions of the FAO/ILO/IMO Voluntary guidelines for the design, construction and equipment of small fishing vessels.

#### PROVISION OF FOOD AND WATER

As indicated in the previous section, Article 16 of Convention No. 126 sets out requirements concerning galley equipment and storage spaces for food. It does not, however, set out requirements concerning the quality and sufficiency of the food itself.

The Food and Catering (Ships' Crews) Convention, 1946 (No. 68), addresses these issues. Article 1 provides that:

1. Every Member of the International Labour Organization for which this Convention is in force is responsible for the promotion of a proper standard of food supply and catering service for the crews of its sea-going vessels, whether publicly or privately owned, which are engaged in the transport of cargo or passengers for the purpose of trade and registered in a territory for which this Convention is in force.
2. National laws or regulations or, in the absence of such laws or regulations, collective agreements between employers and workers, shall determine the vessels or classes of vessels which are to be regarded as sea-going vessels for the purpose of this Convention.

Convention No. 68 includes provisions concerning food supply and catering arrangements, inspection of supplies of food and water, spaces used for the storage and handling of food and water, galley equipment, qualifications of members of the catering department and other related issues. It is accompanied by the Bedding, Mess Utensils and Miscellaneous Provisions (Ships' Crews) Recommendation, 1946 (No. 78).

Another relevant Convention is the Certification of Ships' Cooks Convention, 1946 (No. 69), which has exactly the same scope as that provided under Article 1 of Convention No. 68.<sup>60</sup>

The Office has not been able to determine whether member States have enacted laws and regulations which cover not only seagoing vessels "engaged in the transport of cargo or passengers" but also fishing vessels.

However, the provision of at least adequate food and water to fishing vessel personnel is an obviously essential element in their living conditions at sea. The Office, though well aware that many fishing vessels are quite small compared to "vessels engaged in transport", and that the requirements for such vessels may vary considerably compared to larger vessels on long voyages, has endeavoured to collect at least some information on national law and practice in this area.

#### *National laws and regulations*

The following are examples of ways in which the issue of provision of adequate food and water on board has been dealt with in the legislation of certain countries.

---

<sup>60</sup> The Governing Body has decided that these two Conventions should be revised. Their revision is being taken up in the preparation of the consolidated framework instrument for seafarers.

Mauritius requires that employers of banks fishermen provide workers daily, and free of charge, with breakfast and a midday and evening meal – and at least three bottles of water. In Malaysia the vessels are normally equipped with cooking utensils and enough food for the whole duration of a fishing trip; in Canada (Newfoundland and Labrador) and Nigeria, when the crew is on board, free feeding facilities are provided, but it is not clear whether or not a galley is supplied. Mexico obliges the employers to provide the workers with food and water when boats navigate for six hours or more; they must also provide food for vessels navigating for less than six hours in uninhabited areas where it would be impossible for the workers to acquire any food. In Panama, food must be free of charge, varied, healthy and sufficient – and appropriate to the navigation or the route that the ship takes. In Peru, a decree sets out standards for food and drinking water, providing that each fisherman must receive equal to at least 3,600 calories per day. In Japan and Tunisia, fishermen on board are entitled to be fed for the whole duration of the journey, and the food must be healthy, of good quality, sufficient for the whole crew and subject to control by the competent authority. Norway even stipulates that: the diet should comply with the health and dietary standards issued by the National Nutrition Council; appropriate manuals, brochures, wall charts etc. regarding nutrition and the purchase, storage, preparation and serving of food should be available on board; and the preparation of the food should be carried out in hygienic conditions. In Australia, Indonesia and the United Kingdom, it is the duty of the employer and the master to ensure that there are provisions and water on board. These must comply with health standards, be of nutritive value, varied and adequate. In the United Kingdom and Romania, the master must inspect the provisions and water, to ensure that they fulfil these requirements (United Kingdom regulations are based on Convention No. 68 but only cover vessels 24 metres in length and over; the regulations of Romania are also based on Convention No. 68 and apparently concern oceanic fishing vessels). The Seafarers' Act of Estonia, which applies to fishermen, provides – in addition to other requirements concerning the provision of food and water on board – that crew members are to be compensated for any shortage of food and water if, for any reason, the master has to reduce food rations during the voyage.

### *Conclusions*

To date, the Office has only obtained limited information on laws and regulations concerning food and water on board fishing vessels. However, it appears that several countries, both developed and developing, have such requirements. Often it would seem that they are inspired by the provisions of ILO Convention No. 68. Bearing in mind the vital nature of food and drinking water, such requirements would seem appropriate for inclusion in the new ILO fishing standard.

### MEDICAL CARE AT SEA

As described in a previous section, fatality and injury rates are high in the fishing sector compared to other sectors. Furthermore, the fishing vessel, compared to other workplaces, is distant from hospital facilities ashore. First aid, and sometimes even more sophisticated medical care, must therefore be provided on the vessel, usually by the crew themselves. As will be noted below, the use of radio medical services, heli-

copter evacuation and hospital ships have improved the health care provided to many – but not all – fishermen.

### *International standards*

The Accommodation of Crews (Fishermen) Convention, 1966 (No. 126) (described in more detail in an earlier chapter) includes provisions concerning the sick bay and medicine chests. As at 30 September 2002, Convention No. 126 had been ratified by 22 countries.<sup>61</sup>

The Health Protection and Medical Care (Seafarers) Convention, 1987 (No. 164), provides somewhat higher standards concerning medical equipment and medical facilities on board. It also includes provisions concerning the provision of and availability of medical advice at sea and standard medical report forms for seafarers. The Convention, which, as at 30 September 2002, has been ratified by 11 countries,<sup>62</sup> provides, as with most of the other maritime standards adopted in 1987 and 1996, that “[t]o the extent it deems practicable, after consultation with the representative organizations of fishing-vessel owners and fishermen, the competent authority shall apply the provisions of this Convention to commercial maritime fishing”.

Finally, two Recommendations are relevant to medical care at sea. The Ships’ Medicine Chests Recommendation, 1958 (No. 105) (which includes long lists of medicaments and medical supplies and equipment), and the Medical Advice at Sea Recommendation, 1958 (No. 106), which has generally been overtaken by the provisions of Convention No. 164.

### *Regional requirements*

Council Directive 92/29/EEC of 31 March 1992 on the minimum safety and health requirements for improved medical treatment on board vessels, applies to seagoing or estuary fishing vessels, and covers all workers on board a vessel. The Directive sets out requirements concerning medicines and medical equipment (including sick bay and doctor); antidotes for dangerous substances; allocation of responsibilities for the provision, replenishment and management of medical supplies; information and training in medical and emergency measures; medical consultations by radio; inspection of medical supplies; and other issues. It distinguishes between three categories of vessels: (a) seagoing or sea fishing vessels with no limitation on length of trips; (b) seagoing or sea fishing vessels making trips of less than 150 nautical miles from the nearest port with adequate medical equipment; and (c) harbour vessels, boats and craft staying very close to shore or with no cabin accommodation other than a wheelhouse. Annexes provide a long but non-exhaustive list of medical supplies, equipment and antidotes to be carried; a framework of their inspection; and specific guidance on medical training of captains and designated workers.

<sup>61</sup> Azerbaijan, Belgium, Bosnia and Herzegovina, Brazil, Denmark, Djibouti, France, Germany, Greece, Kyrgyzstan, Netherlands, Norway, Panama, Russian Federation, Sierra Leone, Slovenia, Spain, Tajikistan, The former Yugoslav Republic of Macedonia, Ukraine, United Kingdom, Yugoslavia.

<sup>62</sup> Brazil, Czech Republic, Finland, Germany, Hungary, Italy, Mexico, Norway, Slovakia, Spain, Sweden.

### *National laws and regulations*

Table 5.1 on national laws and regulations concerning accommodation (rows concerning Article 13.1 (sick bay) and 13.2 (medicine chest with instructions)) indicates that the majority of States for which information has been available require a medicine chest with instructions but that less than one-half require a sick bay. The latter may be attributed to the fact that some fleets operate close to home ports or are small vessels.

Several countries have laws or regulations which specifically require the provision of medical care for a crew member who becomes sick or is injured during a journey at sea and the treatment of a crew member on the ship or on shore. In Estonia, the Seafarers' Act provides that if the illness or injury of a crew member cannot be treated on the ship or if the illness of a crew member is putting his or her life or the life or health of other persons on the ship in danger or if it is not possible to take measures to prevent the disease from spreading, the master must send the crew member to a health-care institution. Under the Occupational Safety and Health Regulations in Canada (British Columbia), a fishing boat must return to shore when the injury of a fisherman cannot be effectively treated by the person on board responsible for first aid.

In some countries (e.g. Italy, Spain) radio medical services are available, but it is not clear to the Office whether national laws or regulations require the use of such services when a fisherman has been injured or becomes ill. In Spain, an Order in Council concerns radio medical advice from ashore; article 16 establishes the Central Medical Radio of Spain. This service is funded by the Social Marine Institute and is free. The Institute guarantees that doctors working for the Radio Centre receive continued and specific training on the particular conditions that exist on board vessels. Advice provided is confidential. The Institute also operates a hospital ship, the *Esperanza Del Mar*, which provides medical care to the Spanish fishing fleet operating in distant waters. In Estonia, the Seafarers' Act provides that seafarers may receive 24-hour medical consultation by radio with a health-care institution. It is not specified which type of ship benefits from this opportunity.

### *Conclusions*

The following conclusions may be drawn from the above information and other information:

- the requirement for fishing vessels to be equipped with a medicine chest, with clear instructions, is widespread, even among countries which have not ratified the relevant ILO Conventions;
- the use of radio medical assistance is becoming more widely available due to improvements in technology and improved equipment on fishing vessels;
- evacuation by helicopter is an important means of providing medical assistance in some countries.

## CHAPTER VI

### **SOCIAL SECURITY, INCLUDING FISHING VESSEL OWNERS' LIABILITY FOR SICK AND INJURED FISHERMEN**

The Declaration of Philadelphia, which is contained in the Annex to the ILO Constitution, recognizes the ILO's obligation as regards "the extension of social security measures to provide a basic income to all in need of such protection and comprehensive medical care". However, many fishermen – perhaps most – have no social security protection, which may be attributed to several factors. Firstly, the majority of fishermen resemble the majority of the world population: they lack social security protection. Any attempts to provide social security in this sector must therefore be seen in the context of the general lack of protection for most workers. Second, fishermen may be considered self-employed under national laws and regulations, and, as with many self-employed workers, they may be excluded from certain forms of protection. Third, fishermen included in contributory social security systems may face problems making their contributions due to the irregular nature of their employment and income. Finally, migrant fishermen, including those working on foreign-registered vessels, may have special problems as they are earning their living outside their country of nationality or domicile.

However, there are several reasons why fishermen are particularly in need of social protection.

As noted earlier in this report, fishing is a particularly hazardous occupation, with a relatively high rate of injury and death. Fishermen and their dependants therefore need some form of protection in the event of injury, illness and death.

Furthermore, in recent years, there has been growing pressure to reduce fishing in order to preserve fish stocks. This has led to pressures in many regions to reduce the number of fishermen. Such efforts may not be successful – or may be extremely painful for fishermen, their families and their communities – unless the affected fishermen are protected by unemployment benefits and have access to retraining for other work. The importance of this issue has been recognized by the Organisation for Economic Cooperation and Development (OECD), which has studied the social implications of responsible fisheries, and the EU, which is seeking to better address social issues in the reform of the Common Fisheries Policy.<sup>1</sup> In 1999, the Tripartite Meeting on Safety and Health in the Fishing Industry adopted a resolution which called upon the International Labour Office, inter alia, to: "... examine how appropriate social adjustment strategies (such as retraining, job creation, early retirement and income support) can lead to the creation of alternative employment opportunities for those persons who have to leave the industry."

A future ILO standard aimed at improving the living and working conditions of workers in this sector may very well need to address such issues as manpower planning and retraining of fishermen for other work.

---

<sup>1</sup> F. Fischler: "The much-needed reform of the Common Fisheries Policy", in *Fishing in Europe*, Nos. 12-13 (Brussels, July 2002).

*General description of social security standards*

Since its founding, the ILO has adopted 31 Conventions and 16 Recommendations in the field of social security. In many of these instruments, fishermen may not be covered because: they are specifically excluded; they are excluded because they are not considered “employees”; or the State is not required to cover 100 per cent of all workers. The Social Security (Minimum Standards) Convention (No. 102), adopted in 1952, addresses and defines in a single instrument the nine principal branches of social security: medical care, sickness benefit, unemployment benefit, old-age benefit, employment injury benefit, family benefit, maternity benefit, invalidity benefit and survivors’ benefit.<sup>2</sup> However, the Convention provides that it does not apply to seamen or sea fishermen, as provision is made for the protection of seamen and sea fishermen under the Social Security (Seafarers) Convention, 1946 (No. 70),<sup>3</sup> and the Seafarers’ Pensions Convention, 1946 (No. 71).<sup>4</sup>

*Standards relevant to social security for seafarers (and sometimes sea fishermen)*

The Unemployment Indemnity (Shipwreck) Convention, 1920 (No. 8), provides, inter alia, that: “In every case of loss or foundering of any vessel, the owner or person with whom the seaman has contracted for service on board the vessel shall pay to each seaman employed thereon an indemnity against unemployment resulting from such loss or foundering”. “Seaman” is defined to include “all persons employed on any vessel engaged in maritime navigation”. A “vessel” is defined to include “all ships and boats, of any nature whatsoever, engaged in maritime navigation, whether publicly or privately owned” (it excludes ships of war). Bearing in mind the nature of many fishing employment arrangements (i.e., payment based on the share of the catch and not on a wage basis) this may, in fact, mean that this Convention does exclude some fishermen from its scope.

The Shipowners’ Liability (Sick and Injured Seamen) Convention, 1936 (No. 55), provides, inter alia, that, in the event of sickness or injury, the shipowner has to provide the seafarer with medical care, board and lodging until the sick or injured person is cured, or until the sickness or incapacity has been declared of a permanent character. The Convention applies “to all persons employed on board any vessel, other than a ship of war, registered in a territory for which [the] Convention is in force and ordinarily engaged in maritime navigation” (Article 1(1)). However, it also provides that “any Member of the International Labour Organisation may in its national laws or regulations make such exceptions as it deems necessary in respect of: (a) persons employed on board ... (ii) coastwise fishing boats ...” (Article 1(2)(a)(ii)). As at 20 Sep-

<sup>2</sup> Since 1952, the ILO has adopted several other instruments which set forth a higher level of protection than that envisaged in Convention No. 102. These include the Employment Injury Benefits Convention, 1964 (No. 121); the Invalidity, Old-Age and Survivors’ Benefits Convention, 1967 (No. 128); and the Medical Care and Sickness Benefits Convention, 1969 (No. 130).

<sup>3</sup> This Convention has been revised by Convention No. 165 (see below).

<sup>4</sup> However, this Convention, which provides that States shall establish or secure the establishment of a scheme for the payment of pensions to seafarers on retirement from sea service, also provides that the scheme may embody such exceptions as the Member deems necessary in respect of, inter alia, a person employed on board or in the service of fishing vessels.

tember 2002, the Convention had been ratified by 16 countries.<sup>5</sup> It has been revised by Convention No. 165 (see below).

The Sickness Insurance (Sea) Convention, 1936 (No. 56), provides, inter alia, that every person employed as a master or member of the crew or otherwise in the service of the ship, on board any vessel, other than a ship of war, registered in a territory for which the Convention is in force and engaged in maritime navigation or sea fishing, shall be insured under a compulsory sickness insurance scheme. As at 20 September 2002, this Convention has been ratified by 19 countries.<sup>6</sup>

*Discussion of social security for fishermen by the Committee on Conditions of Work in the Fishing Industry (November 1978)*<sup>7</sup>

The issue of social security for fishermen was discussed by the ILO in 1978 by the Committee on Conditions of Work in the Fishing Industry, which had on its agenda, inter alia, the item "Pensions and sickness insurance". The Committee used as the basis for its discussion a report analysing law and practice on this issue in member States.

The Committee noted that two social security Conventions – Nos. 128 and 130 – permitted governments to exclude their application to seafarers, including sea fishermen, only when such workers were covered by special schemes providing an equivalent level of protection. It observed that the existing ILO instruments concerning social security protection for seafarers contained provisions permitting the exclusion of fishermen without any specified condition. As regards the rather limited social security coverage of fishermen in general, it noted the technical, administrative and financial difficulties involved in the extension of the scope of protection in the case of sickness, invalidity, old age and death, and emphasized that the ultimate goal was the full coverage of all categories of persons working in the fishing industry.

After further discussion, the Committee adopted conclusions on social security protection of fishermen in the case of sickness, invalidity, old age and death which provided, inter alia, that:

In regard to national law and practice concerning social security protection of fishermen and their dependants in the case of sickness, invalidity, old age and death:

- (a) it is necessary to extend as far as possible the range of persons protected by the national social security scheme so as to cover all fishermen, including self-employed and their dependants, with a view to ensuring greater social justice which should be expressed in the form of equal conditions for all;
- (b) continuous efforts should be made to improve both quantity and quality of benefits to be provided to workers in the fishing industry, which should be supported by sound financial arrangements relative to the level of development of each country;
- (c) where employment of fishermen is intermittent, or seasonal, and where entitlement to social security benefits is related to the length of employment, it is advisable to adapt the qualifying conditions to the particular circumstances in which fishermen are employed;

<sup>5</sup> Belgium, Bulgaria, Djibouti, Egypt, France, Greece, Italy, Liberia, Luxembourg, Mexico, Morocco, Panama, Peru, Spain, Tunisia, United States.

<sup>6</sup> Algeria, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Djibouti, Egypt, France, Germany, Luxembourg, Mexico, Norway, Panama, Peru, Slovenia, Spain, The former Yugoslav Republic of Macedonia, United Kingdom, Yugoslavia.

<sup>7</sup> ILO: Report of the Committee on Conditions of Work in the Fishing Industry, 1978, op. cit.

(d) where fishermen are remunerated by a share of profit or are self-employed, due account should be taken of the fluctuation in the levels and regularity of their income in the computation of contributions and the calculation of benefits under contributory social security schemes;

(e) for self-employed fishermen operating as a family unit or on an extremely small scale, efforts should be made to improve the existing benefit structures so as to ensure comprehensive medical care, to provide suitable compensation in the case of incapacity for work due to sickness, involving suspension or substantial reduction in income, to guarantee adequate level of invalidity, old-age and survivors' pensions under conditions for entitlement which are compatible with those required for fishermen working for an employer, and to extend effective protection against invalidity through the provision of rehabilitation measures;

(f) in view of the hazardous nature of work and exceptional stress involved in the fishing industry, due consideration should be given to the possibility of lowering the age at which fishermen who have been engaged in the industry for a considerable number of years are entitled to old-age retirement pensions.

*Discussion in the late 1980s of social security for fishermen in the context of the preparation of the Social Security (Seafarers) Convention (Revised), 1987 (No. 165)*

The issue of social security standards for fishermen was again raised in the late 1980s in the context of a discussion of a new social security standard for seafarers. In 1987, during the 74th (Maritime) Session of the Conference, an amendment, which was accepted, called for the addition to the draft instrument of a paragraph stipulating that "to the extent it deems practicable, after consultation with representative organizations of fishing vessel owners and fishermen, the competent authority shall apply the provisions of this Convention to commercial maritime fishing". The resulting Convention, the Social Security (Seafarers) Convention (Revised), 1987 (No. 165), groups together in a single instrument all the contingencies to which seafarers may be exposed in relation to social security. States which ratify the Convention therefore undertake to comply with the obligations for at least three of the nine branches of social security set out in Article 3 (these nine branches correspond to the nine branches covered by the Social Security (Minimum Standards) Convention, 1952 (No. 102), namely: medical care, sickness benefit, unemployment benefit, old-age benefit, employment injury benefit, family benefit, maternity benefit, invalidity benefit and survivors' benefit). Convention No. 165 came into force on 2 July 1992 and has only been ratified by two countries.<sup>8</sup>

*Committee on Conditions of Work in the Fishing Industry (1988)*

At its 1988 meeting, the Committee on Conditions of Work in the Fishing Industry did not discuss the social security issue in any depth. However, it did adopt a resolution on working and living conditions in the fishing industry which stated, inter alia, that "[c]onsidering that fishermen should not be excluded from provisions regarding social security ... the [Committee] requests the Governing Body of the International Labour Office to urge the governments and employers' and workers' organizations concerned to establish appropriate machinery at the national level to study the provisions of the

<sup>8</sup> Hungary, Spain.

aforesaid Conventions [which included Convention No. 165] with a view to applying them where possible to the fishing industry”.<sup>9</sup>

*Tripartite Meeting on Safety and Health in the Fishing Industry (1999)*

The Tripartite Meeting did not deal with the issue of social security of fishermen in detail. However, one of its conclusions<sup>10</sup> was:

Like workers in other sectors, fishermen should have access to social security protection; this should cover issues such as sickness, disability, occupational injuries, illness compensation, loss of life and pension schemes.

When flag-state legislation does not provide for insurance, fishing vessel owners, regardless of the size of the vessels, should carry insurance or other appropriate social security coverage for occupational injuries to fishermen. Insurance should cover medical treatment and compensation as well as survivor benefits.

The Tripartite Meeting also adopted a resolution concerning future ILO activities in the fisheries sector and social dialogue (noted at the beginning of this chapter).

*General discussion on social security – issues, challenges and prospects – at the 89th Session (2001) of the International Labour Conference*

The issue of social security for fishermen should be considered in the context of the broader issue of social security coverage for all people. There have been very recent developments in this regard in the ILO which are particularly relevant to the provision of social security to artisanal or small-scale fishermen.

At the 89th Session of the International Labour Conference, a general discussion was held on social security.<sup>11</sup> Furthermore, the Conference adopted a resolution and conclusions concerning social security. The conclusions stated that:

Of highest priority are policies and initiatives which can bring social security to those who are not covered by existing systems. In many countries, these include employees in small workplaces, the self-employed, migrant workers, and people – many of them women – active in the informal economy. When coverage cannot be immediately provided to these groups, insurance – where appropriate on a voluntary basis – or other measures such as social assistance could be introduced and extended and integrated into the social security system at a later stage when the value of the benefits has been demonstrated and it is economically sustainable to do so. Certain groups have different needs and some have very low contributory capacity. The successful extension of social security requires that these differences be taken into account. The potential of microinsurance should also be rigorously explored; even if it cannot be the basis of a comprehensive social security system, it could be a useful first step, particularly responding to people’s urgent need for improved access to health care. Policies and initiatives on the extension of coverage should be taken within the context of an integrated national social security strategy.

<sup>9</sup> ILO: Report of the Committee on Conditions of Work in the Fishing Industry, 1988, op. cit.

<sup>10</sup> ILO: *Note on the Proceedings*, Tripartite Meeting on Safety and Health in the Fishing Industry, Geneva, 13-17 December 1999 (Geneva, 1999), p. 33.

<sup>11</sup> ILO: *Social security: Issues, challenges and prospects*, Report VI, International Labour Conference, 89th Session, Geneva, 2001.

The conclusions further provided that:

Social security covers health care and family benefits and provides income security in the event of such contingencies as sickness, unemployment, old age, invalidity, employment injury, maternity or loss of a breadwinner. It is not always necessary, nor even in some cases feasible, to have the same range of social security provisions for all categories of people. However, social security systems evolve over time and can become more comprehensive in regard to certain categories of people and range of provisions if national circumstances permit. While there is limited capacity to finance social security, either from general tax revenues or contributions – and particularly where there is no employer to pay a share of the contribution – priority should be given in the first instance to needs which are most pressing in the view of the groups concerned.

### *National law and practice*

This section has been drawn up on the basis of information provided to or obtained by the Office concerning social security and certain related insurance requirements. While the information is rather limited, it does give a sense of how these issues are being dealt with in the various member States.

#### *General*

In some member States,<sup>12</sup> fishermen as a whole are covered by the national social security system. Benefits apparently include all the categories covered by Convention No. 165 (see below for more specific information on some of these countries). In Nigeria, social security benefits include “gratuity, workmen’s compensation, group insurance, free medical treatments, maternity leave for women six weeks after delivery”. In the United Kingdom, persons working in the fishing sector are entitled to the same social security benefits as others providing that, where appropriate, they have met the necessary contribution requirements. Indonesia has no specific laws and regulations on social security benefits for fishermen. However, fishermen are encouraged to take group insurance or join the Social Security Organization (SOCSO). In South Africa, the Compensation for Occupational Injuries and Diseases Act, 1993, as amended, applies to fishermen.<sup>13</sup>

Australian fishermen on overseas voyages are apparently covered by the Navigation Act which deals with such issues as shipowners’ liability for sickness and injury. Those on other fishing vessels appear to be covered by the laws and regulations of individual Australian states. Similarly, Japan makes a distinction between workers on vessels covered by the Mariners’ Law (generally, seagoing fishing vessels of 30 gt and above) and those covered by general labour standards (generally, on fishing vessels under 30 gt and not seagoing). Those working on vessels covered by the Mariners’ Law are protected with respect to medical service benefits, sickness and injury benefits, unemployment benefits, maternity benefits, invalidity benefits and survivors’ benefits. Those not covered by the Mariners’ Law are generally protected by the system for all workers.

---

<sup>12</sup> Denmark, Lithuania, Mauritania, Mexico, Netherlands, New Zealand.

<sup>13</sup> J. Dahl and A. Masarakufa, *op. cit.*

In Canada, in British Columbia, employment insurance benefits are available to eligible fishers under the Human Resources Development Canada (HRDC) Employment Insurance (Fishing) Regulations.<sup>14</sup> Unionized fishers receive pensions, medical benefits and death benefits as provided for under collective agreements. In Newfoundland and Labrador, fishers (and fish-processing workers) are covered for work-related injury by the Workplace Health, Safety and Compensation Act.<sup>15</sup> Under that Act, all workers are covered for loss of wages and provided with medical care in the event of injuries. Survivors' benefits are also payable in the case of fatal injuries.

In India, social security benefits for fishermen are addressed by the Government of India National Scheme of Welfare of Fishermen. This scheme covers aspects related to the development of model fishing villages and "savings-cum-relief" schemes (programmes where both fishermen and governments contribute to a fund which is then used to aid fishermen during lean periods). Information on social security programmes in the fisheries sector in Kerala State is provided in box 6.1.

Fishing personnel in Norway are insured under the Norwegian National Insurance Scheme. As fishermen's wages are based totally or partly on the share of the catch, they are considered "self-employed" – both for tax and social security purposes – even if they are a part of a crew and are regarded as employees in other circumstances. A person whose main occupation is fishing and who is registered in a special part of the fishermen's register is entitled to the same benefits as other workers. The source of the fishermen's contribution is "product fees". Through the National Insurance Scheme, fishermen have the right to receive payment during illness and absence from work caused by occupational illness or unemployment.

Spain has a special social security law covering all seafarers and fishermen. One of the advantages of such a system is that all, even artisanal, fishermen are registered in the social security system, and this makes it easier to target occupational safety and health programmes for the fishing sector.

Recently, the International Labour Office undertook a study to assess, *inter alia*, the extension of social security to fishermen in Tunisia, following a programme drawn up in agreement with the Tunisian Agriculture and Fisheries Union. As a result of this study, two approaches to social security for fishermen were considered. In one, a lump sum could be applied per boat on a model based on what is applicable in the case of insurance against industrial injury and occupational diseases. In the other, employers' contributions could be deducted – when seafood products were sold in the wholesale

---

<sup>14</sup> In the Regulations, "fisher" means a self-employed person engaged in fishing and includes a person engaged, other than under a contract of service or for their own or another person's sport: (a) in making a catch; (b) in any work incidental to making or handling a catch, whether the work consists of loading, unloading, transporting or curing the catch made by the crew of which the person is a member, or of preparing, repairing, dismantling or laying-up the fishing vessel or fishing gear used by that crew in making or handling the catch, where the person engaged in any such incidental work is also engaged in making the catch; or (c) in the construction of a fishing vessel for their own use or for the use of a crew of which the person is a member in making a catch.

<sup>15</sup> The Act provides, however, that "... by regulations in relation to: ... fishers working in or out of the province, or on or about the waters of the province, or living within the province ... the provisions of this Act may apply and to the extent that the regulations may provide", and that "[w]here it appears ... that this Act or a regulation is inappropriate or unworkable in relation to fishers, the fishing industry or commercial buyers or other commercial recipients of fish, the commission may, by regulation or otherwise, make rules and give decisions that it considers fair and appropriate having regard to the intent that fishers shall where possible receive the benefit of and be subject to this Act".

**Box 6.1**  
**Social security programmes in the fisheries sector**  
**of Kerala State, India**

The various schemes of the Kerala State Co-operative Federation for Fisheries Development (Matsyaboard) include insurance benefits, sickness insurance benefits, maternity benefits, health benefits, old-age benefits, etc., and they are of great relevance and significance for fisherfolk. The Group Insurance Scheme is a case in point. Fishing is one of the most risky occupations and personnel and equipment insurance is essential. Between 1986 and 1998, compensation was paid for 1,096 deaths. This implies that, in Kerala, one fisherman dies at sea every four days. No other occupation is as risky. Yet surprisingly, such a risky occupation received insurance coverage very late – and only after repeated demands by fisherfolk. The old-age pension is the most popular of the schemes of Matsyaboard, attracting the largest number of beneficiaries. Fishermen aged 60 and above can avail themselves of the pension under this scheme, on certain conditions. The schemes of Matsyaboard cover the various phases of a fisherman's life. Funding for the programmes is provided by the state government, fishermen, dealers, exporters and boat owners, though there have been difficulties collecting funds from exporters.

Source: Extract from J. Kurien and A. Paul: *Nets for social safety: An analysis of the growth and changing composition of social security programmes in the fisheries sector of Kerala State, India* (International Collective in Support of Fishworkers, Chennai, India, 2000).

markets – by means of a tax on the value of sales. The money collected would then be transferred to the National Social Security Fund. In both cases, the workers' contributions would be paid by the fishermen according to a simplified procedure (sticking stamps in a booklet, for example). The information collected at this level would be used to determine the fishermen's entitlement to benefits.<sup>16</sup>

*Non-domiciled or foreign fishermen*

In Denmark, non-Danish fishermen signed on board a Danish fishing vessel are considered to have domicile in Denmark and are generally covered by social security benefits. In New Zealand, however, access to social security benefits depends on a seafarer's residency status. Under New Zealand legislation, social security benefits are only available to people who are ordinarily resident in New Zealand. Migrant workers who are in New Zealand on a temporary basis are not eligible for social security benefits.

<sup>16</sup> ILO: M. Chaabane, *Towards the universalization of social security: The experience of Tunisia*, ESS (Extension of Social Security) Paper No. 4, Social Security Policy and Development Branch (Geneva, 2002), pp. 21-22.

*Examples of specific benefits for fishermen**Medical care benefits, sickness and injury benefits, invalidity benefits*

In Japan, workers covered by the Mariners' Law are covered by the Seaman's Health Insurance System provided under the Seamen's Health Insurance Law. Those not covered by the Mariners' Law are covered by the general law, the Health Insurance Law or, if self-employed, by the National Health Insurance Law. Under these two latter laws, benefits to workers include medical examinations, medicines and medical-care supplies, emergency treatment and medical care at home. Although the Workers' Compensation Insurance System generally covers all workers (excluding, inter alia, seamen – who are covered by the Mariners' Law), in fishing establishments under one owner hiring five workers on a vessel of less than 5 tonnes and in designated areas where there are low accident rates, the employer or majority of the workers can decide whether they should participate in the insurance scheme.

The Banks Fisherman and Frigo-workers (Remuneration Order) Regulations (1997) of Mauritius provide that “an employer shall subscribe to a non-contributory insurance policy in the sum of not less than Rs.50,000 for the benefit of a worker to cover death or injury by accident arising out of and in the course of employment”. It also provides that “where a worker is unable to work and has been certified to be sick by a medical officer who is on board or in his absence by the Shipmaster, the employer shall pay to the worker, in addition to his remuneration, an allowance of Rs.70 in respect of public holidays”.

In Norway, through the National Insurance Scheme, fishermen registered in the fishermen's register accordingly have the right to receive payment from the Insurance Scheme during illness, and absence from work caused by occupational illness or unemployment.

The Republic of Korea provides compensation for medical treatment for an occupational or non-occupational disease and for disability resulting from an occupational injury or disease. All fishing vessel personnel are provided with health insurance benefits including: medical care, sickness and injury benefits, preventive care, rehabilitation, health education and health promotion.

*Old-age benefits/pension benefits*

Fishermen in Norway also have a special retirement pension system outside the National Insurance Scheme. In order to be entitled to the “fishermen's pension”, there is a minimum work requirement of 750 weeks related to social security premiums; this pension is administered by the Guarantee Institute for Fishermen under the Ministry of Fisheries. Between 60 and 67 years of age, a fisherman's regular income is supplemented until the age of 67 when he enters the regular pension scheme for all employees. The fisherman must have paid a premium for at least 750 weeks (about 15 years). Maximum pension rights are achieved after 1,560 weeks (30 years). The size of the payment depends on the length of service.

Peru has a special Fishermen's Retirement Fund which allows fishermen to retire as early as 55 years of age if they have worked in the sector for 25 years and have made a minimum number of contributions. A lower benefit is provided if the conditions have not been fulfilled. Widows receive 50 per cent and children under 18 years are entitled

to 20 per cent of the pension if the conditions have been met. Other benefits are provided for up to three years for widows and children of deceased fishermen who have not met the conditions for a full pension but have made some contributions to the fund.

In Portugal, the minimum qualifying age for retirement benefits under the general scheme is 65 years. A decree provides special schemes for invalidity and old-age pensions, which may be granted to licensed professional fishers who meet certain eligibility requirements. Fisheries workers may exercise their rights to an old-age pension, beginning at the age of 55 years, if they have accrued 30 years of work (as opposed to 30 calendar years of registered contributions for workers covered under the general scheme) – at least 15 of which must have been on fishing vessels. A pension for physical disability related to fishing is also available to fisheries workers who attain the age of 50, as long as they have accrued 40 years of service. This legislation applies equally to wage earners, share workers, and those who are considered self-employed. Another decree allows retirement at the age of 50 if a worker has accrued 40 years of service.<sup>17</sup>

Fishing vessel personnel employed on vessels registered in the Republic of Korea are insured by their companies. Koreans employed on foreign-flag vessels are insured through their domicile province office. Thus, all fishing vessel personnel are entitled to receive pension benefits such as an old-age pension, a disability pension, a survivors' pension, etc., under the relevant provisions of the National Pension Act.

The artisanal fishing communities in some developing countries have special traditions for taking into account the needs of older fishermen. For example, in some communities special fishing grounds, closer to shore and less exposed to weather, have been set aside for older fishermen.

### *Unemployment benefits*

In Canada, federal laws provide unemployment insurance and old-age security programmes for fishermen. Provincial benefits for seniors are also available in some provinces. To qualify for benefits, a self-employed fisher would need minimum earnings from his fishing as opposed to the minimum hours requirement for regular workers. There are different benefit periods to accommodate the summer and winter fisheries, respectively.<sup>18</sup>

Fishermen in Ireland have the same access to insurance-related benefits as any other contributor when there is both an employer and an employee contribution to the social insurance scheme. However, share fishermen may contribute to a special scheme which entitles them to unemployment benefit payments. An Act adopted in 1999 provides a special scheme of unemployment assistance for low-income fishermen.<sup>19</sup>

In Norway, the *Garantikassen* pays out unemployment benefits for fishermen. A fisherman has a right to unemployment benefit from the fourth day of unemployment. Payment per day for 2002 is NOK315 if the fisherman is connected to a vessel. The shipowner or the skipper are responsible for applying for unemployment benefit when the vessel is not operating for the following reasons: breakdown of machinery; ship-

<sup>17</sup> OECD: *Transition to responsible fisheries: Economic and policy implications* (Paris, 2000), Annex 1, p. 71.

<sup>18</sup> *ibid.*, p. 73.

<sup>19</sup> *ibid.*, p. 70.

wreck; illness of the crew; extraordinary ice obstruction; lack of crew; when catches cannot be delivered shoreside because of strike or lockout; if repairs to the vessel take longer than foreseen; or if the Norwegian Maritime Directorate or the Fisheries Directorate unexpectedly prohibits the vessel from operating. For fishermen not connected to a vessel, the fisherman applies for unemployment benefit after: handing in his notice; his employment has been terminated because fishing has been stopped on account of regulations, the end of the season, delivery problems or if fishing is not profitable; unemployment after military service; unemployment after illness; or unemployment because of sale/condemnation of vessel.

### *Other forms of protection*

In some countries, protection against death, injury or illness is provided through a requirement that the vessel owner carry certain types of insurance; it can also be available under workers' compensation programmes or broader schemes.<sup>20</sup> Fishing vessel owners frequently establish marine mutual societies. These societies operate on the basis of cooperation between members in order to provide coverage at a reasonable cost. Contributions are initially assessed according to experience – but further assessments may be made later in the year to cover unanticipated costs (i.e. higher than expected claims). Such mutual societies tend to improve the safety performance of members (or to limit membership) in order to hold down costs.

### *Retraining of fishermen for other professions*

A number of countries have also established programmes to retrain fishermen for other work. In Japan, a special law for the fishing sector provides assistance to fishing vessel workers who have lost their jobs due to the conclusion of international agreements. The programme provides a training allowance to help transition to new employment. In Spain, an Order in Council has established specific programmes to retrain workers for other occupations. The Social Marine Institute, following job losses caused by the failure of the EU and Morocco to reach an agreement on fishing, conducted individual interviews with fishermen with the view to elaborating a training plan for the reinsertion of these workers into other areas of activity.

Fishermen often have skills (navigation, engineering, etc.) which may be adapted to employment in the merchant shipping or offshore support vessel sectors. In the United Kingdom, comparisons between the fishing and merchant navy training syllabuses have been undertaken – and routes mapped – so that a fisherman should not have to repeat training that is common to both industries. New “modular” approaches to training and certification may make it easier to transfer certification not only to the merchant navy but to other sectors.

---

<sup>20</sup> The FAO Code of Conduct for Responsible Fisheries provides, under article 8, para. 8.2.8, that “Flag States should promote access to insurance coverage by owners and charterers of fishing vessels. Owners or charterers of fishing vessels should carry sufficient insurance cover to protect the crew of such vessels and their interests, to indemnify third parties against loss or damage and to protect their own interests.”

*Conclusions*

From the information available to the Office, it would appear that:

- The majority of small-scale and artisanal fishermen may lack social protection because they are operating in countries which lack social protection for most workers.
- Fishermen, particularly share fishermen, may not, at least in many countries, have the same level of social protection provided to workers in general due to the nature of their employment relationship (“self-employed”).
- The hazardous nature of fishing means that death, sickness and injury benefits are particularly important for fishermen and their dependants.
- Projected reductions in fishing capacity may create a need for improved unemployment insurance and retraining programmes for fishermen.
- There are examples in several member States of social protection programmes designed specifically for the fishing sector, but these may not be widespread.

## CHAPTER VII

### ADMINISTRATION, ENFORCEMENT, CONSULTATION AND COORDINATION

#### FLAG STATE CONTROL

##### *International instruments*

The United Nations Convention on the Law of the Sea, provides that “Every State shall effectively exercise its jurisdiction and control in administrative, technical and social matters over ships flying its flag” (Part VII “High seas”, section 1 “General provisions”, article 94, “Duties of the flag State”, paragraph 1). Paragraph 3 further provides that: “Every State shall take such measures for ships flying its flag as are necessary to ensure safety at sea with regard, inter alia, to: (a) the construction, equipment and seaworthiness of ships; (b) the manning of ships, labour conditions and the training of crews, taking into account the applicable international instruments; (c) the use of signals, the maintenance of communications and the prevention of collisions.”

Two ILO instruments specifically concern labour inspection in the maritime sector, the Labour Inspection (Seafarers) Convention, 1996 (No. 178), and its accompanying Recommendation No. 185.<sup>1</sup> Convention No. 178 provides that “[e]ach Member for which the Convention is in force shall maintain a system of inspection of seafarers’ working and living conditions.<sup>2</sup> It also calls for States to have a “central coordinating authority” which “shall coordinate inspections wholly or partly concerned with seafarers’ living and working conditions and shall establish principles to be observed”. There are also provisions concerning frequency of inspections; inspections following complaints or substantial changes in construction or accommodation arrangements; qualifications of inspectors; procedures for detention of ships; penalties and other matters. The Convention is aimed at seagoing vessels. It does not apply to vessels less than 500 gt. It provides that “[t]o the extent the central coordinating authority deems it practicable, after consulting the representative organizations of fishing vessel owners and fishermen, the provisions of this Convention shall apply to commercial maritime fishing vessels”.

---

<sup>1</sup> The General Labour Inspection Convention, 1947 (No. 81), provides for a system of labour inspection to secure the enforcement of legal provisions relating to conditions of work and the protection of workers in industrial workplaces, as well as commercial workplaces, if the ratifying States accept this extension.

<sup>2</sup> In Convention No. 178, the term “seafarers’ working and living conditions” means “the conditions such as those relating to the standards of maintenance and cleanliness of shipboard living and working areas, minimum age, articles of agreement, food and catering, crew accommodation, recruitment, manning, qualifications, hours of work, medical examinations, prevention of occupational accidents, medical care, sickness and injury benefits, social welfare and related matters, repatriation, terms and conditions of employment which are subject to national laws and regulations, and freedom of association as defined in the Freedom of Association and Protection of the Right to Organise Convention, 1948, of the International Labour Organization”.

The administration and enforcement provisions vary in the five ILO Conventions specifically concerned with the fishing sector. The Minimum Age (Fishermen) Convention, 1959 (No. 112), the Medical Examination (Fishermen) Convention, 1959 (No. 113), and the Fishermen's Articles of Agreement Convention, 1959 (No. 114), do not contain a specific part on enforcement. However, the Fishermen's Competency Certificates Convention, 1966 (No. 125), includes dedicated provisions on enforcement measures (Articles 14 and 15); and in the Accommodation of Crews (Fishermen) Convention, 1966 (No. 126), enforcement is also dealt with under Articles 3, 4 and 5.

The Torremolinos Convention and Protocol of 1993 provide for surveys (Regulation 6) resulting in the issue or endorsement of certificates (Regulation 7) as a means of ensuring that vessels comply with its requirements.

The STCW-F Convention includes enforcement provisions under article 1, General obligations, and article 7, National provisions. The latter includes penalties and disciplinary measures.

The FAO Code of Conduct for Responsible Fisheries provides, in paragraph 8.2.5, that:

Flag States should ensure compliance with appropriate safety requirements for fishing vessels and fishers in accordance with international conventions, internationally agreed codes of practice and voluntary guidelines. States should adopt appropriate safety requirements for all small vessels not covered by such international conventions, codes of practice or voluntary guidelines.

### *Regional instruments*

Council Directive 93/103/EC of 23 November 1993 concerning the minimum safety and health requirements for work on board fishing vessels provides in article 3(1), *inter alia*, that "Member States shall take the measures necessary to see that: (a) owners ensure that their vessels are used without endangering the safety and health of workers, in particular in foreseeable meteorological conditions, without prejudice to the skipper's responsibility" and, in paragraph 2, that: "Member States shall take the measures necessary to ensure that, as regards compliance with this Directive, vessels are subject to regular checks by authorities specifically empowered to carry out such checks. Certain checks concerning compliance with this Directive may be carried out at sea." Article 7(2) provides that: "Member States shall take all necessary measures to ensure that, for the protection of the safety and health of workers, the owner supplies the skipper with the means needed to enable him to fulfil the obligations imposed upon him by this Directive." Article 13, Final provisions, provides that: "Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 23 November 1995."

### NATIONAL LAW AND PRACTICE

The effective enforcement of national laws or regulations is ensured by:

- setting out the competent authority responsible for the implementation of the pertinent provisions;
- providing for the maintenance of an efficient system of inspection;

- prescribing adequate penalties or disciplinary measures for cases in which these laws or regulations are not respected.

### *Competent authorities*

The implementation of national laws, regulations and programmes concerning living and working conditions in the fishing sector often involves – or should involve – the ministry of labour, the ministry responsible for maritime activities, the ministries responsible for fisheries, health authorities and others. Given that fishing is often regulated at the local level, there must be coordination at that level – but also with the federal authorities.

### *Issues addressed in the existing five ILO Conventions concerning the fishing sector*

As regards the protection of young fishermen, the competent authority for enforcement is mostly the labour authority, sometimes in cooperation with the tribunal of minors,<sup>3</sup> or with the maritime, naval, port or transport authorities.<sup>4</sup>

Concerning the medical examination of fishermen, the competent authority for the enforcement of the laws and regulations in some member States is the maritime, naval, port or transport authority.<sup>5</sup> Other countries,<sup>6</sup> however, specify that the health (including port health) and social security authorities are the competent authority for the enforcement of the pertinent provisions. A few member States (e.g. Germany) give the full responsibility for enforcement to insurance associations.

In a number of member States,<sup>7</sup> the single competent authority for the enforcement of the pertinent laws and regulations concerning the issue of articles of agreement for fishermen is the maritime, naval, port or transport authority. Some countries (e.g. Costa Rica) provide for cooperation between labour authorities and maritime, naval or port authorities. A few other countries (e.g. Ecuador, Tunisia) set out that the agriculture or fishery authority is the single competent authority for the enforcement of the pertinent laws and regulations.

Laws and regulations concerning competency certificates for fishermen are dealt with solely by the maritime, naval, port or transport authority in many member States.<sup>8</sup> Some countries (e.g. Poland) entrust the labour authorities with enforcement. A few (e.g. Mexico) provide for cooperation between the agriculture or fishery authorities and the maritime, naval or port authorities. One country (Germany) gives the full responsibility for enforcement to insurance associations.

As to the issue of crew accommodation, in several member States<sup>9</sup> the single competent authority for the enforcement of the pertinent laws and regulations is the

<sup>3</sup> Ecuador (ratified C. 138 and C. 112).

<sup>4</sup> Mexico (ratified C. 112).

<sup>5</sup> Australia, Denmark, Republic of Korea, New Zealand, Norway.

<sup>6</sup> Ecuador, Guatemala, Lithuania, Mauritius, Nigeria, Romania.

<sup>7</sup> Australia, Denmark, Republic of Korea, New Zealand, Norway, Panama, Romania, Spain.

<sup>8</sup> Belgium, Chile, Denmark, Lithuania, New Zealand, Norway, Panama, Romania, Senegal, Syrian Arab Republic.

<sup>9</sup> Belgium, Denmark, France, Greece, Japan, Mexico, Netherlands, Norway, Panama, United Kingdom.

maritime, naval, port or transport authority. In some others<sup>10</sup> this is carried out through cooperation between the labour authority and maritime, naval or port authority. Others<sup>11</sup> involve the agriculture or fishery authority and the maritime, naval or port authority. In one country (Sierra Leone), the agriculture and fishery authority is the single competent authority for the enforcement of the pertinent laws and regulations. A few States give the full responsibility for enforcement to insurance associations (Germany) or the partial responsibility to trade unions (Azerbaijan).

### *Occupational safety and health issues*

Laws and regulations concerning occupational safety and health issues are often the responsibility of maritime safety authorities,<sup>12</sup> workers' compensation boards (in Canada), labour authorities and fisheries ministries. In some cases, trade union officials play a role in ensuring compliance with provisions in collective agreements based on laws and regulations. In many cases, more than one government agency is involved. In Mexico, these matters are, in accordance with the law of navigation, dealt with by the ships' captains and the Foreign Mexican Consulate. The Naval Inspection Service is in charge of inspecting ships. In New Zealand, the Maritime Safety Authority is responsible for ensuring the occupational health and safety of seafarers; monitoring and reviewing safety in the maritime system; and promoting safety compliance. The Maritime and Coast Guard Agency (MCA) of the United Kingdom requires surveys of vessels and subjects them to random inspections. In Spain, it is the responsibility of the Labour and Social Security Inspectorate to ensure compliance with occupational safety and health regulations – although the National Institute of Occupational Safety and Health collaborates in this work. In Chile, the General Directorate of the Maritime Territory and the Merchant Marine (DIRECTEMAR), which comes under the Chilean navy, is responsible for enforcing laws and international agreements concerning maritime safety and marine pollution prevention; however, the employers' mutual insurance organizations are responsible for insurance covering injuries and occupational diseases; the Ministry of Health controls health conditions; and the Ministry of Labour inspects and controls standards concerning occupational safety and health. The Danish Maritime Authority is responsible for the regulation of the occupational safety and health of seafarers and fishermen in Denmark – with the assistance of the Danish occupational safety and health services (see box 7.2 later in the text concerning the Fisheries Occupational Health Council). In Italy, the Ministry of Transport and Shipping, local health agencies and maritime health offices are involved in the supervision of laws and regulations concerning safety and health on fishing vessels.

### *Coordination among ministries and agencies*

The involvement of several ministries and agencies in the enforcement of living and working conditions of fishermen, particularly safety and health issues, calls for careful coordination between these authorities. This issue was raised at the ILO's

<sup>10</sup> Azerbaijan, Brazil, Spain.

<sup>11</sup> Russian Federation, Slovenia, Ukraine.

<sup>12</sup> Denmark, Republic of Korea, Mexico, Mozambique, New Zealand, United Kingdom.

Tripartite Meeting on Safety and Health in the Fishing Industry, which concluded, *inter alia*, that:

Governments should ensure coordination of all ministries and agencies (national, regional and local) with an interest in the safety and health of fishermen and should avoid duplication of efforts. Officials responsible for fishing safety and health issues should have a thorough understanding of the fishing industry and its specific safety and health problems.

Coordination mechanisms have been established in several countries.

In the State of Queensland, in Australia, the Division of Workplace Health and Safety (DWHS) has a Memorandum of Understanding (MOU) with the Australian Maritime Safety Authority (AMSA). Signed by the heads of both agencies, the MOU clarifies jurisdictional requirements associated with ships (including fishing vessels) in Queensland ports.

In 2001, the Canadian Marine Advisory Council (CMAC) established a Standing Committee on Fishing Vessel Safety (previously, CMAC had dealt with fishing issues in the same forum as shipping and recreational boating issues). At the provincial level, in British Columbia, there is extensive and ongoing coordination between the Workers' Compensation Board, the Canadian Coast Guard and other agencies involved in regulating safety and health in the fishing industry. In Newfoundland, there is a provincial committee comprised of local stakeholders who make recommendations to CMAC. There is also a working group, which is comprised of the Department of Fisheries and Oceans, the Canadian Coast Guard, the Fisheries, Food and Allied Workers' Union (FFAW), Human Resource Development Canada, Transport Canada, and the Workplace Health, Safety and Compensation Commission of Newfoundland and Labrador (WHSCC). The Professional Fish Harvesters' Certification Board (PFHCB) works very closely with Transport Canada, the Coast Guard and the FFAW relating to health and safety conditions of fishing vessel personnel (see box 7.1 setting out the objectives and composition of this body). Protocols are in place with federal agencies, Transport Canada and the Department of Fisheries and Oceans, to cover the reporting of accidents, incidents and complaints regarding work areas.

In Mexico, the Ministry of Agriculture, Farming, Rural Development, Fishing and Nutrition (SAGARPA) organizes meetings to examine various problems of fishing personnel at which both fishing cooperatives and owners of fishing vessels participate. In the area of safety, each federal entity constitutes an advisory occupational safety and health committee which is entrusted with studying and proposing the adoption of all preventive measures to reduce risks in work centres included within its jurisdiction.

A Memorandum of Understanding between the Maritime and Coast Guard Agency and the Association of Port Health Authorities in the United Kingdom provides for coordinated action to maintain an effective system of health and hygiene standards aboard all vessels.

In the United States, the Occupational Safety and Health Administration (OSHA) has safety and health authority over working conditions on board commercial "uninspected" fishing vessels not otherwise covered by United States Coast Guard regulations. Laws and regulations, as well as a Memorandum of Understanding, address the responsibilities of these two agencies.

**Box 7.1**  
**Canadian consultation and coordination**

In Newfoundland, the Professional Fish Harvesters Certification Board was established by the Professional Fish Harvesters Act. The objectives of the Board are:

- to promote the interests of fish harvesters as a professional group;
- to be responsible for defining the standards for professionalization;
- to provide an advisory role to the federal and provincial governments in the formation of fisheries policies consistent with the common good of fish harvesters, namely in the areas of resource conservation, fish quality improvements, a reasonable return to participants, optimizing product value, and the safety of fish harvesters and the public;
- to operate and maintain a fish harvester registration system;
- to develop, evaluate and recommend courses under the professionalization programme;
- to issue certificates of accreditation to qualifying fishers;
- to develop, maintain and monitor compliance of a code of ethics for professional fish harvesters;
- to apply sanctions against fish harvesters who violate the Board's code of ethics; and
- to provide an independent appeals procedure for fish harvesters.

The Board is composed of 15 members appointed by the Newfoundland and Labrador Minister of Fisheries and Aquaculture, including: seven representatives of the organization that has been recognized by the Labour Relations Board as representing fish harvesting in collective bargaining; a representative from the Association of Newfoundland and Labrador Fisheries Co-operatives; a representative of the Department of Fisheries and Aquaculture; a representative of the Department of Education; two representatives of the Department of Fisheries and Oceans (Canada); a representative of Human Resources Development (Canada); a representative of a post-secondary education training institution; and a representative-at-large chosen by the Minister.

Source: <http://www.pfhcb.com> (20 September 2002).

In Viet Nam, in 1997 the Prime Minister ordered various ministries and institutions (the Ministry of Fishery; Ministry of Transport and Telecommunications; Ministry of Defence; Ministry of Finance; Ministry of Planning and Investment; the Central Flood and Storm Control Management Board; the Committee for Seeking Airlines and Marine Missing Persons; the General Directorate of Post and Telecommunications; and the People's Committees of Centrally Managed Cities and Provinces) to work together immediately to do the following tasks: review and amend regulations on safety and rescue; provide training and information on safety skills; provide protection

and rescue equipment; take steps to ensure climate and weather information and marine safety; make available financing; and provide first aid, etc. Regular meetings (twice a year) are held with the Fishing Industry Safety Group.

### *Inspection system*

#### *General*

The inspection of labour conditions of fishermen has been a challenging problem for many States which may not have in place laws and regulations concerning the inspection of vessels – in particular small vessels. Even where the law provides for such inspections, some States, or local authorities within States, may only have the resources to inspect a small percentage of the fishing fleet due to limited resources and the remote location of many fishing communities.

The ILO's Tripartite Meeting on Safety and Health in the Fishing Industry discussed this issue and concluded that:

Laws and regulations, essential for the promotion of safety and health in the fishing industry, are only of value if they are implemented. Government agencies responsible for enforcement must be given sufficient resources to monitor the implementation of safety and health requirements, ensuring, in particular, that vessel inspection services are adequate.

and that

Flag States should ensure compliance with national requirements and minimum international standards in respect of the social conditions, safety and health and environmental conditions on board fishing vessels flying their flag.

The inspection of labour conditions on fishing vessels sometimes falls under the general occupational safety and health legislation.

For example, in Australia, the Workplace Health and Safety Act (1995) provides for the appointment of persons as inspectors. In the Australian State of Queensland, inspectors are employed and deployed. They undertake workplace inspections under Commonwealth [federal] legislation on a contractual basis. Workplaces are inspected as a consequence of complaints/occurrences, random audit programmes, blitzes and targeted audit programmes. There are also special targeted programmes for high-risk industries. In Canada, in British Columbia, inspectors of the Workers' Compensation Board carry out inspections.

In Japan, a distinction is made between workers on vessels covered by the Mariners' Law and those covered by general labour standards. Inspections are carried out by mariners' labour inspectors, who work for the district transport bureaux, transport branch offices and maritime offices. Under the Mariners' Law, the mariners' labour inspectors may inspect any vessel or office at any time – when they draw up a report. Inspectors may give guidance or use the authority of the judicial police to enforce the law. Enforcement of the laws covering those fishermen not covered by the Mariners' Law – i.e. those covered by the Labour Standards Law, the Industrial Safety and Health Law and the Minimum Wage Law – is the responsibility of the Labour Standards Management Bureau, prefectural labour bureaux and labour standards

inspection offices. Labour standards inspectors are authorized to inspect workplaces and offices, question employers and workers, and to use the authority of the judicial police to enforce the law.

In some countries – for example, Mauritius – inspections are only carried out by the inspection and enforcement division of the Ministry of Labour after complaints have been lodged of failure to comply with the Banks Fisherman and Frigo-workers Regulations.

Poland has a fairly advanced system of inspection for fishing vessels. Inspections are carried out by the National Section of Maritime Economy at the District Labour Inspectorate in Gdańsk. This specialized group carries out inspections of all aspects of labour conditions, including occupational safety and health requirements. Inspections cover both deep-sea fishing vessels (at distant fishing grounds), including factory trawlers, and Baltic fishing vessels.

In some countries inspections of certain aspects of living and working conditions (often including inspections for noise levels) are checked during vessel surveys. In Norway, the maritime authority inspects vessels of 15 metres in length and over during the initial and renewal surveys. In Tunisia, the Code of the Administrative Police of Shipping subjects fishing vessels to periodic and exceptional visits to check safety equipment on board. In the United Kingdom, vessels are surveyed every four years and subject to random inspections that generally focus on safety issues. At the time this report was being written (15 October 2002) consultations with the fishing industry were taking place concerning the ratification and possible application of Convention No. 178 to fishing vessels.

*Inspection of issues covered by existing ILO Conventions  
concerning the fishing sector*

As regards the issue of protection of young fishermen, some countries<sup>13</sup> carry out inspections to monitor the ban on certain tasks for young persons under 18 years of age.

The most common means of controlling enforcement of requirements for competency certificates in several countries<sup>14</sup> is inspection.

Crew accommodation is controlled by inspection in many countries.<sup>15</sup> Some States<sup>16</sup> also approve and authorize classification societies to carry out inspections; a few<sup>17</sup> have further established a self-inspection system, whereby inspections are carried out by the master or an officer appointed by him. Most countries<sup>18</sup> provide for compulsory inspections of crew accommodation whenever a fishing vessel is regis-

<sup>13</sup> Ecuador (ratified C. 138 and C. 112); Mexico (ratified C. 112).

<sup>14</sup> Belgium, Germany, Panama, Senegal, Syrian Arab Republic (ratified C. 125); Denmark, New Zealand, Norway, Poland.

<sup>15</sup> Azerbaijan, Belgium, Brazil, Denmark, France, Germany, Greece, Netherlands, Norway, Panama, Russian Federation, Sierra Leone, Slovenia, Spain, Ukraine, United Kingdom (ratified C. 126); Australia, Japan, Mexico.

<sup>16</sup> Belgium, Brazil, Denmark, Russian Federation, Ukraine (ratified C. 126).

<sup>17</sup> Netherlands, United Kingdom (ratified C. 126).

<sup>18</sup> Belgium, Brazil, France, Germany, Greece (as to registration, only for ships above 500 tonnes), Netherlands, Norway, Panama, Russian Federation, Sierra Leone, Spain, Ukraine (ratified C. 126); Mexico.

tered or re-registered. Furthermore, compulsory inspections of crew accommodation are stipulated by many member States in the event of a vessel's reconstruction or substantial alteration.<sup>19</sup> National legislation also frequently<sup>20</sup> includes provisions on inspections upon receipt of a complaint by crew members or fishermen's organizations that the crew accommodation is not in compliance with the terms of the legislation. The majority of countries<sup>21</sup> provide for periodical inspections. Moreover, national laws and regulations in many countries<sup>22</sup> specify that, before work begins on the construction of a new fishing vessel or the crew accommodation of an existing vessel is substantially altered or reconstructed, detailed plans of, and information concerning, the crew accommodation have to be submitted to the competent authority for approval.

### *Occupational safety and health inspections*

As to the issue of occupational safety and health, the Office has sought to obtain information on whether and how occupational safety and health inspections in the fishing sector are carried out in member States (as opposed to maritime safety inspections focusing only on the vessel and on life-saving equipment). However, it is not always clear whether the competent authorities which have the legal authority to carry out inspections are actually doing so. Even when they are, it is unclear whether or not there are periodic (or even occasional) inspections of smaller vessels. For example, in Malaysia and Namibia, officers from the Department of Fisheries may carry out inspections. In Viet Nam, units of the Fisheries Ministry may inspect vessels and prepare reports according to guidance from the Ministry of Labour, War Invalids and Social Affairs. In Canada, in British Columbia, Workers' Compensation Board safety inspectors control working and living conditions on board vessels. In some countries there is also a requirement for self-inspection by the master. The United States Coast Guard seeks to enforce minimum safety equipment regulations by examining fishing vessels for compliance during sea boarding; however, the Occupational Safety and Health Administration inspects fishing vessels and installations upon receiving complaints, accident reports and referrals in addition to planned inspections, and conducts follow-up inspections when necessary. In Romania, there is a general control of all the equipment, the working place and the protection materials at least once a month. Collective agreements may also contain provisions concerning inspection. In Canada, in Newfoundland, health and safety committees established in ports are required to make quarterly inspections of trawlers and to file a written report with the company and the union.

---

<sup>19</sup> Belgium, Brazil, Germany, Greece (for ships above 500 tonnes), Netherlands, Norway, Panama, Sierra Leone, Slovenia, Spain, Ukraine (ratified C. 126); Mexico.

<sup>20</sup> Belgium, Brazil, France, Germany, Greece, Panama, Sierra Leone, Slovenia, Spain (ratified C. 126); Australia (in respect of provisions), Japan, Mexico.

<sup>21</sup> Belgium (annually), Brazil, France, Greece, Netherlands (every seven days), Norway, Panama, Sierra Leone, Slovenia (annually), Spain, Ukraine, United Kingdom (every seven days) (ratified C. 126); Australia, India (every ten days in respect of provisions and water), Japan.

<sup>22</sup> Azerbaijan, Belgium, Brazil, Germany, Greece, Netherlands, Norway, Panama, Russian Federation, Sierra Leone, Spain, Ukraine, United Kingdom (ratified C. 126).

*Penalties*

In many countries,<sup>23</sup> national legislation prescribes penalties (mostly fines) for violations of laws and regulations concerning the employment of young persons. Penalties are also imposed for the infringement of legislation on competency certificates – in many countries<sup>24</sup> and especially for cases in which a fishing vessel owner or his agent, or skipper, has engaged a person not certificated as required, or in which a person has obtained by fraud or forged documents an engagement to perform duties requiring certification without holding the requisite certificate. These penalties may take various forms: the detention of the vessel, fines or prison. As to crew accommodation, a number of countries<sup>25</sup> prescribe penalties for any violation of the pertinent provisions or obstruction of inspections. These include detention of the vessel, fines, corrective labour, prison or cancellation of the registry.

*Consultation with the fishing sector*

The ILO's Tripartite Meeting on Safety and Health in the Fishing Industry concluded, *inter alia*, that:

Social dialogue is essential to improving the safety and health of fishermen, and it should be promoted at the enterprise, local, national, regional and international level and in all forums where fishing issues are discussed. This should include measures to build the capacity of employers' and workers' organizations, and facilitate their emergence where none exists.

Employers' and workers' organizations should be consulted during the development, monitoring and revising of laws and regulations relevant to the safety and health of fishermen. The social partners should also be consulted on other non-legislative efforts to address these issues. Standing consultative bodies, drawing on a wide range of interests in the fishing industry, should be established for the purpose of discussing safety and health issues.

Apparently, many States have established mechanisms for consulting with the fishing sector on the development and implementation of laws, regulations and programmes aimed at improving living and working conditions; but these are not always devoid of problems. Classic tripartite consultation is often difficult on account of the rather limited percentage of trade union membership in the fishing sector. In the case of smaller vessels, the fishing vessel owner and fisherman may be one and the same person – both the employer and employee. In some countries there may be a large number of fishermen's organizations, including community organizations, with differing problems and competing interests. These organizations may not have one organization at the national level to represent their collective views, thus complicating the process of consultation. There are, however, examples of strong consultative bodies at the national level. On a purely practical basis, it may also be difficult to bring

<sup>23</sup> Chile (ratified C. 138), Ecuador (ratified C. 138 and C. 112); Australia, (Northern Territory) (ratified C. 112).

<sup>24</sup> Belgium, Germany, Panama, Senegal, Syrian Arab Republic, Trinidad and Tobago (ratified C. 125); Australia, Denmark, India, Norway, United Kingdom.

<sup>25</sup> Belgium, Denmark, France, Germany, Greece, Netherlands, Panama, Russian Federation, Sierra Leone, Ukraine, United Kingdom (ratified C. 126); Australia, India, Mexico.

together fishermen to meet on issues because of the long periods they spend at sea. In a few countries, strong organizations of fishermen's spouses have formed and provided continuous representation of fishermen's – and their families' – interests ashore. Fishermen's cooperatives and traditional community structures have also remained important to the consultation process.

In Japan, there is a Central Labour Commission for Seafarers for employers and workers on vessels covered by the Mariners' Law. This Commission includes maritime government, employers' and workers' representatives, including a representative of fishing vessel owners and a representative of fishermen. For those not covered by the Mariners' Law, consultation is through the Labour Condition Division of the Labour Policies Commission which comprises representatives of workers, employers and government; however it does not appear to have a special requirement to include fishing vessel owners and fishermen.

In Mauritius, meetings are held that involve all stakeholders. These include: the Ministry of Labour and Industrial Relations; the Ministry of Health and Quality of Life; the Ministry of Public Infrastructure, Land Transport and Shipping; the Mauritius Marine Authority; the National Coast Guard; the Ministry of Fisheries; the Merchant Navy and Fishing Vessel Employees' Union; the Federation of Progressive Unions; the Maritime Transport and Port Employees' Union; the Apostolat de la Mer; and the Distant Water Vessels, Seamen's and Fishermen's Association.

The Norwegian Maritime Directorate's Fishing Vessel Department has an Advisory Body on Fishing Vessels consisting of five members (in addition to the Norwegian Maritime Directorate), representing the trade unions and fishing vessel owners, specifically: the Norwegian Seamen's Union; the Norwegian Union of Marine Engineers; the Norwegian Maritime Officers' Association; and the Norwegian Fishermen's Association that organizes both fishing vessel owners and fishing vessel personnel. The latter is represented by two members, one representing larger vessels, the other smaller vessels. This advisory body meets once a year to discuss all aspects of fishing vessel safety and protection of the marine environment. All applications for deviations from the Working Hours on Ships Act must be submitted to the Advisory Body, as must other manning-related issues on which the Norwegian Maritime Directorate needs advice. On a trial basis, a regional committee has been established to address occupational safety and health issues involving small vessels of less than eight crew members. Organizations that promote fishing vessel safety include the Council for Labour Supervision on Norwegian Ships and the Council for Safety Training of Fishermen.

Through national legislation, Denmark has established a system of tripartite consultation which operates at both the national and local level (see box 7.2).

#### PORT STATE CONTROL

The ILO does not have an instrument calling for the port state control of fishing vessels. The Merchant Shipping (Minimum Standards) Convention, 1976 (No. 147),

**Box 7.2**  
**Denmark's Fisheries Occupational Health Council  
and Harbour Security Boards**

In Denmark, the Fisheries Occupational Health Council and the Harbour Security Boards provide a means for consultation on occupational safety and health issues. The Council consists of eight members: four from the fishermen's union or the employers' side and four from the Danish Fishermen's Association or the owners and the employees' side. It lays down the guidelines for the Fisheries Occupational Health Service, which is the secretariat of the Fishing Occupational Health Council and of the eight Harbour Security Boards. The Harbour Security Boards are regional boards which consist of six to ten members; the number of crewmembers and skippers or owners is the same, the fishermen choose their representatives among the organized fishermen in the area; the vessel owners, who are often the skippers in Denmark, choose their representatives among their members. A member must participate in a 32-hour course dealing with the working environment and occupational health and safety in general. One of the four persons employed in the Fisheries Occupational Health Service also participates in the Harbour Security Board meetings held four times a year – or if a serious accident occurs on board a fishing vessel in the area of the Harbour Security Board. Each meeting has two compulsory items on the agenda: information from the Occupational Health Council on what is going on at the moment and a general discussion of all accidents in the area reported since the last meeting. In Denmark, all accidents causing more than one day's absence from work must be reported to the Danish Maritime Authority; the Danish Maritime Authority then forwards all the reports to the Fisheries Occupational Health Service which sends them to the appropriate Harbour Security Board. In connection with each reported accident, the local Harbour Security Board recommends measures to prevent a similar accident in the future. When this has been done, the Fisheries Occupational Health Service contacts the skipper on board and explains steps to be taken to avoid accidents of the same kind in the future. If the solution is of general public interest an article is published in a fishing trade magazine. Since 1997, the Fisheries Occupational Health Service has registered all reported accidents in a database. The owner of a fishing vessel has to pay a fee each year for every fisherman engaged on board a fishing vessel to the Fisheries Occupational Health Service. The service provides free-of-charge noise measurements and individual risk assessments on board a vessel. It is also a prime mover in other activities intended to enhance the safety and improve the working environment on board Danish fishing vessels.

Source: Danish Maritime Authority.

provides for such control for seagoing ships<sup>26</sup> but does not apply to “ships engaged in fishing or in whaling or in similar pursuits”. However, the Torremolinos Convention and 1993 Protocol provide, in Article 4, for certification and port state control of fishing vessels. The STCW-F Convention includes port state control provisions under Article 8, “Control”.

The ILO did not specifically request States to provide information on port state control in its survey. However, it does understand that a number of countries carry out at least some limited form of port state control of foreign fishing vessels visiting their ports.

#### THE ROLE OF THE COASTAL STATE

The United Nations Convention on the Law of the Sea provides, in Part V, Article 62(4), that “Nationals of other States fishing in the exclusive economic zone shall comply with the conservation measures and with other terms and conditions established in the laws and regulations of the coastal State. These laws and regulations shall be consistent with this Convention and may relate, inter alia, to the following ...” and goes on to list a number of areas related to fisheries management, joint ventures and other issues. It does *not* provide for any kind of regulation of living and working conditions on board fishing vessels registered in other States when they fish in the exclusive economic zone of another State.

The ILO’s Tripartite Meeting on Safety and Health in the Fishing Industry, concluded, inter alia, that: “Coastal States should make provision of decent living and working conditions on board fishing vessels a condition which must be met in order to obtain and retain permission to fish in the coastal State’s exclusive economic zone.”

The Office has sought to obtain information from member States on whether they set requirements concerning living and working conditions on foreign vessels fishing in their exclusive economic zones. So far, it has found requirements of this nature only in fisheries agreements wherein nationals of the coastal States work on board foreign vessels authorized to fish in the exclusive economic zone.

#### Conclusions

- It goes without saying that laws and regulations are not effective if they cannot be enforced.

---

<sup>26</sup> Article 4 provides: “(1) If a Member which has ratified this Convention and in whose port a ship calls in the normal course of its business or for operational reasons receives a complaint or obtains evidence that the ship does not conform to the standards of this Convention, after it has come into force, it may prepare a report addressed to the government of the country in which the ship is registered, with a copy to the Director-General of the International Labour Office, and may take measures necessary to rectify any conditions on board which are clearly hazardous to safety or health. (2) In taking such measures, the Member shall forthwith notify the nearest maritime, consular or diplomatic representative of the flag State and shall, if possible, have such representative present. It shall not unreasonably detain or delay the ship. (3) For the purpose of this Article, complaint means information submitted by a member of the crew, a professional body, an association, a trade union or, generally, any person with an interest in the safety of the ship, including an interest in safety or health hazards to its crew.”

- Adequate resources for enforcement are essential. It would appear that in many countries, insufficient resources are applied to enforcement of labour standards in the fishing sector.
- In view of the difficulty in obtaining sufficient resources to inspect all fishing vessels, it may be necessary to provide for alternative means of inspection, or of ensuring compliance, rather than having every vessel, particularly small vessels, inspected.
- Consultation with not only traditional tripartite constituents but also other representative fishermen's organizations should be promoted.
- Coordination between all government ministries and agencies, including at the national and local levels, is important and should be promoted.
- There are precedents for exercising port state control of fishing vessels. Consideration should be given to extending port state control to labour conditions of foreign fishing vessels.
- Coastal States may be in a position to call for improved labour conditions on vessels fishing in their exclusive economic zones; however, if this is done, it may be appropriate to establish an international minimum standard for such conditions.

## CHAPTER VIII

### SUMMARY

#### *General*

The special nature of fishing calls for the development of international labour standards for the fishing sector. While laws and regulations covering all workers – or, more particularly, maritime workers – often apply to fishermen, they do not appear to take into account the nature of fishing operations, employment relationships and other concerns. This does not imply that a new ILO standard for the fishing sector should repeat the provisions of other standards; it should rather ensure that fishermen, by virtue of their work, do not «fall through the cracks» of social protection provided to other workers.

As concerns the scope and application of national laws and regulations, and therefore of a new ILO standard, it appears that:

- as regards vessels covered, most States prefer to use length rather than tonnage as a basis for determining which vessels should be covered by laws or regulations or deciding which regulations apply to which vessels (i.e., larger or smaller vessels);
- most States exclude recreational fishing from their laws and regulations concerning labour issues in the fishing sector;
- the smaller the vessel, the less likely it is that the fishermen working on such a vessel are protected by labour legislation.

#### *Revision of ILO's seven standards specifically concerning the fishing sector*

##### *Minimum age and protection of young fishermen*

The Governing Body has invited States parties to the Minimum Age (Fishermen) Convention, 1959 (No. 112), to contemplate ratifying the Minimum Age Convention, 1973 (No. 138). The ratification would, *ipso jure*, involve the immediate denunciation of Convention No. 112. The trend is therefore towards a minimum age requirement applicable to all workers – as opposed to sectoral standards. The majority of member States having ratified Convention No. 112 appear to be moving in this direction. Furthermore, an increase in the ratifications of the Worst Forms of Child Labour Convention, 1999 (No. 182), has led to greater efforts to remove children from hazardous work.

The new ILO fishing standard may add value to these efforts by providing guidance to States on how they should treat the issue of young persons in the fishing sector in their national laws and regulations and programmes. It could provide, for example, criteria which might distinguish whether all work on a fishing vessel, or whether specific types of fishing operations and specific tasks on board vessels, should be considered hazardous and thus be considered off-limits to young persons.

### *Medical examination*

The Governing Body has recommended that the Medical Examination (Fishermen) Convention 1959 (No. 113), be revised to adapt to the existing needs of the fishing sector, inter alia, by taking into account the ILO/WHO Guidelines for conducting pre-sea and periodic medical fitness examinations for seafarers. In addition to the 29 States that have ratified the Convention, a number of others apparently have requirements for medical certificates – despite the fact that they have not ratified the Convention. It would seem that some States may not have ratified this Convention on account of certain details (e.g. duration of period of the validity). Thus, wider ratification might be possible by providing greater flexibility and less detail in the new fishing standard.

However, many small-scale and artisanal fishermen are not required to undergo a medical examination. The new standard might, therefore, seek to promote the extension of health care and occupational safety and health monitoring to this sector, as a way to reach such workers.

### *Articles of agreement/contracts of employment*

The Governing Body has recommended a partial revision of the Fishermen's Articles of Agreement Convention, 1959 (No. 114). The Office has reviewed laws and regulations of States which have and have not ratified the Convention; generally speaking, the requirement that all fishermen should have a written agreement is widespread, but this protection may not be reaching many of the world's small-scale and artisanal fishermen; the reasons for this are not yet clear. There may, however, be a basis for a provision in the new standard that all fishermen should have a written agreement when working on vessels owned by others and that there should be a means of settling disputes related to the agreement. Furthermore, there may be grounds for a provision concerning greater transparency in share-arrangement systems, as a means of protecting fishermen from underpayment.

The main reason cited by the Governing Body for the revision of Convention No. 114 was the need to address the issue of an identity document for fishermen. From the information available to the Office, it would appear that there are grounds for a provision calling upon member States to provide fishermen working on international voyages with a seafarer's identity card. However, this issue will require re-examination following the discussion on the improved security of seafarers' identification at the 91st Session of the International Labour Conference in 2003.

### *Accommodation*

The Governing Body has invited member States to inform the Office of the obstacles and difficulties encountered, if any, that might prevent or delay the ratification of the Accommodation of Crews (Fishermen) Convention, 1966 (No. 126) – or to point to the need to revise it. The information so far available to the Office indicates that a substantial number of States have laws and regulations concerning accommodation on fishing vessels. Many States which have such laws and regulations but have not ratified the Convention appear to have requirements that are not at the level provided in this instrument. A number of important issues (e.g., vibration) have apparently not been adequately addressed in Convention No. 126.

Bearing this in mind, it would appear that there is scope for including broader but less detailed provisions on accommodation in the new fishing standard in order to ensure wider ratification and to reach a greater percentage of the world's fishing fleet (and thus fishermen). This would include basic provisions concerning fishing vessels smaller than those currently provided for under Convention No. 126. It may call for a link to the existing FAO/ILO/IMO codes and guidelines referring to accommodation issues. Furthermore, the new standard should place greater emphasis on the issue of medical equipment and medical care at sea.

### *Competency certificates and vocational training*

The Governing Body has taken the view that the Fishermen's Competency Certificates Convention, 1966 (No. 125), should be revised and brought up to date to take into account developments in the fishing industry. Referring to the IMO's STCW-F Convention, it also agreed that, in the light of the different supervisory mechanisms applicable to the IMO and ILO Conventions, the method of adoption of ILO instruments and the need for comprehensive coverage, the revision of Convention No. 125 was appropriate.

An examination of the provisions of Convention No. 125 and the STCW-F Convention indicates that, generally, the STCW-F Convention covers not only all the issues covered by Convention No. 125 – and in more detail – but also provides mandatory requirements for basic safety training of all fishermen, which Convention No. 125 does not. Therefore, while the new ILO fishing standard might contain general principles on competency certificates, it would not seem advisable that it should repeat – or duplicate – the IMO standard. In fact, it may serve to promote and reinforce that Convention.

The Governing Body agreed that the Vocational Training (Fishermen) Recommendation 1966 (No. 126), should be revised to adapt it to new technologies and advances in navigational and fishing equipment; it should also take account of the fact that other international instruments failed to adequately address vocational training. The Office will seek to obtain a better understanding of what changes need to be made to achieve this.

### *Hours of work/rest*

The Governing Body agreed to maintain the status quo with respect to the Hours of Work (Fishing) Recommendation, 1920 (No. 7), until after the Office had undertaken a study of working-time arrangements and rest periods in the fishing sector. The Office has therefore provided a substantial amount of information on law and practice on this issue. From this information, it would appear that there is a basis for including a provision in the new fishing standard concerning minimum rest periods.

### *New issues to be addressed in the fishing standard*

#### *Occupational safety and health*

In the light of the well-documented hazardous nature of fishing, the Office has sought to provide substantial information on how this issue is dealt with in member

States to determine whether there is a basis for addressing this issue in the new fishing standard. From the information collected, it would appear that such provisions would be useful and desirable, in particular if they assisted States in setting and achieving the objective of lowering the fatality, injury and illness rates of fishermen. The new standard could seek to ensure that laws and regulations concerning occupational safety and health apply to the fishing sector and are adapted to the special nature of fishing operations. It could also help to improve coordination among the many ministries and agencies with jurisdiction or influence over these issues. It should also seek to improve the collection and dissemination of statistics and other information relevant to safety and health. Perhaps most importantly, it could promote an approach which truly involves fishermen, their representative organizations, fishing vessel owners and other relevant parties in the development and implementation of occupational safety and health laws, regulations and promotional programmes. The new standard should in particular aim at the many small-scale and artisanal fishermen not protected, in law or in fact, by existing occupational safety and health legislation.

### *Social security*

From the information available to the Office, it would appear that fishermen, particularly share fishermen, may not – at least in many countries – have the same level of social protection provided to workers in general due to the nature of their employment relationship (“self-employed”). However, the hazardous nature of fishing means that death, sickness and injury benefits are particularly important for fishermen and their families. Furthermore, projected reductions in fishing capacity may create a need for improved unemployment insurance and retraining programmes for fishermen.

Several member States have established social protection programmes specifically for the fishing sector. In other countries, fishermen have been integrated into the social security system for all workers. There are apparently clear grounds for a provision calling for extending social security protection to all fishermen.

### *Other issues*

#### *International commercial fishing*

Many fishermen working on vessels engaged on international voyages or on foreign vessels experience the same kinds of problems as seafarers: long sea voyages, abandonment, the need for welfare services, etc. The Office has attempted to provide some information on these issues in this report. The new standard should seek to ensure that such fishermen receive the same level of protection on these issues as that provided to seafarers.

#### *Small-scale and artisanal fishermen*

The existing ILO standards tend to focus on seagoing fishing vessels, in some cases excluding – or providing for the exclusion of – coastal vessels, vessels fishing in harbours and estuaries, etc. Given the distribution of fishermen according to the size of their vessels (see Chapter I), it would appear that this may lead to the exclusion of

the vast majority of fishermen from the protection offered in international labour standards.

In order to ensure that the provisions addressing the issues mentioned above extend to these fishermen, it is proposed that the focus should be on principles and not details. The provisions should be “objective-based” rather than “prescriptive”. In other words, they should set and hold States to achieving certain objectives but provide States with greater flexibility in the way they achieve these objectives.

The Office notes, however, that while the use of the terms “small-scale” and “artisanal” fishermen or fishing helps focus attention on those working on smaller vessels, most member States – often developing countries – do not use such terms in their legislation governing the fishing sector.

#### *Fisheries’ observers*

The Office will seek more information on the number of fisheries’ observers (a growing group) working on fishing vessels; it will try to ascertain whether such workers are protected by national laws and regulations and whether they should be covered in the new ILO fishing standard.

#### *Enforcement*

From the information available to the Office, it would appear that even where laws and regulations exist concerning labour conditions in the fishing sector, many States do not have adequate resources to enforce effectively these requirements. The new standard should address this issue, including the need for inspection services – or perhaps alternative means of ensuring enforcement.

## QUESTIONNAIRE

As noted in the introduction to the law and practice report, the Governing Body has placed on the agenda of the 92nd (June 2004) Session of the International Labour Conference an item concerning a comprehensive standard (a Convention supplemented by a Recommendation) on work in the fishing sector. It is proposed that this new standard (or standards) would revise the existing seven ILO instruments – five Conventions (concerning minimum age, medical examination, articles of agreement, accommodation and competency certificates) and two Recommendations (concerning vocational training and hours of work) of persons working on fishing vessels. As a comprehensive standard, it will address other issues, such as occupational safety and health and social security. It is also intended that it will provide protection for persons working on both large and small fishing vessels.

This questionnaire seeks to elicit views on the content of a comprehensive standard. The views expressed, and proposed conclusions on the structure and content of the Convention and Recommendation, will be provided in a second report. Both the law and practice report and the second report will be the basis for discussions for the item on the fishing sector standard by the International Labour Conference in 2004 (the first discussion). The second discussion would take place at the 93rd (June 2005) Session of the International Labour Conference with a view to the adoption of the revised standards.

The Office believes that the objectives of the new instruments should be to: extend coverage to reach as many persons working on board fishing vessels as possible; minimize obstacles to ratification; provide a better chance for wide ratification; enable the provisions to be implemented into practice; and minimize the risk of the Convention becoming outdated in a short period of time.

In order to develop a Convention covering as many persons as possible working on board fishing vessels, the approach being taken by the Office in the questionnaire is to pose questions concerning provisions of a general nature – and therefore applicable to all, or nearly all, persons working on fishing vessels – and then to ask questions on provisions of a more targeted nature for possible inclusion in a part of the Convention applying to only certain categories of vessels. Questions concerning detailed provisions are also included in the accompanying Recommendation. The questions reflect, to a certain extent, the Office's perception as to whether a particular provision should be included in the Convention (which would be binding for Members which ratify it) or in the Recommendation (which would not be binding but would provide guidance). However, if respondents believe that a provision does not belong in the Convention but rather belongs in the Recommendation, or vice versa, they should state this clearly.

In preparing this questionnaire, the Office has taken into account the provisions not only of existing ILO standards but also of standards adopted by other international organizations, such as the Food and Agriculture Organization of the United Nations (FAO) and the International Maritime Organization (IMO). For example, the Office has taken into account the provisions of the FAO Code of Conduct for Responsible

Fisheries.<sup>1</sup> The intent of this approach is to integrate, to the extent possible, the work of the ILO with that of other international organizations concerned with the fisheries and the operation of fishing vessels. It is expected that this will lead to the development of a new ILO standard for the fishing sector which is clearly understood and more likely to be found acceptable not only by ministries responsible for labour issues but also by those responsible for fisheries management and fishing vessel safety, as well as fishing vessel owners and those working on fishing vessels. Similarly, the questionnaire attempts to draw upon internationally accepted fisheries terminology.

With regard to article 38, paragraph 1, of the Standing Orders of the Conference, governments are requested to consult with the most representative organizations of employers and workers before finalizing their replies to this questionnaire, to give reasons for their replies and to indicate which organizations have been consulted. Governments are also reminded of the importance of ensuring that all relevant departments are involved in the present consultative process including the departments responsible for labour and social affairs, fisheries, maritime safety, health and the environment. The experience gained by the Office in obtaining the information provided in the law and practice report also points to the value of consultations, where possible, with regional and local authorities within member States. **In order to enable the Office to take account of the replies to this questionnaire, governments are requested to send their replies so as to reach the Office no later than 1 August 2003.**

In preparing replies to the questionnaire, governments, as well as representative organizations of employers and workers, are encouraged to provide reasons for their replies and to provide any additional comments or information which they believe will contribute to an internationally shared sense of what should or should not be addressed in the proposed new Convention and Recommendation. This is particularly important when the reply by the member State does not fit into the set answers (i.e., the “yes” and “no” boxes) provided by the Office. Respondents are also strongly encouraged to draw attention to any issues which the Office has not addressed or which require further development.

While the Office has attempted to provide a questionnaire which is not overly onerous or time consuming to answer, it recognizes the work involved in preparing replies and extends its thanks, in advance, to those carrying out this essential work.

---

<sup>1</sup> The World Summit on Sustainable Development, *inter alia*, agreed that to achieve sustainable fisheries, States should implement the Code, taking note of the special requirements of developing countries and the relevant FAO international plans of action and technical guidelines.

## A. FORM OF THE INSTRUMENT OR INSTRUMENTS

**Question A1** – *Do you consider that the International Labour Conference should adopt one or more instruments on work in the fishing sector?*

Yes       No

**Question A2** – *If yes, should the instrument or instruments take the form of (a) a Convention, (b) a Recommendation, (c) a Convention supplemented by a Recommendation?*

Comments: \_\_\_\_\_

Note: For practical reasons, the Office is presenting the following questions under the headings “Contents of a proposed Convention” and “Contents of a proposed Recommendation”. This presentation does not pre-determine the final form of the instrument or instruments or the number of instruments that could be adopted.

## B. CONTENTS OF A PROPOSED CONVENTION

### *B1. Scope*

#### Commentary

The seven existing ILO instruments concerning work on board fishing vessels set out their scope in different ways. Generally, they provide that they apply to vessels engaged in “maritime fishing in salt waters”. Several provide exceptions or exemptions for certain categories of fishing vessels (those engaged in whaling or recreational fishing, or primarily propelled by sail) or for fishing vessels operating in certain areas (ports, harbours, estuaries of rivers). Some provide that the instrument applies, in whole or in part, to fishing vessels of a certain size (vessel length in feet and metres, or tonnage) or engine power.

For the purpose of this Convention the term “fishing vessel” should mean any vessel used or intended for use for the purposes of the commercial exploitation of living marine resources, including mother ships and any other vessels directly engaged in fishing operations.<sup>2</sup>

When preparing the law and practice report, the Office observed that many States regulated some aspects of conditions of work on board fishing vessels according to the area of operation of the vessel. To delimit their application these States often use terms such as “coastal”, “inshore”, “offshore”, “small-scale” and “artisanal”. Such terms are often not defined by States or, even when defined, vary from State to State. In an attempt to improve clarity in the use of terms concerning the area of operation, the

<sup>2</sup> Extracted from the FAO Agreement to Promote Compliance with International Conservation and Management Measures by Fishing Vessels on the High Seas, article I(a).

Office for the purposes of this questionnaire, identifies five areas of operation. In doing so, it recognizes that many States may not regulate conditions of work on fishing vessels according to these five areas of operation. Nevertheless, responses using these five areas of operation will help the Office obtain a common understanding of the preferred scope of the instruments. If such an approach is not considered appropriate by the respondent, the questionnaire also provides for the possibility of indicating preferences for other methods of setting out the scope (e.g. by vessel length, tonnage, length of time at sea).

The following areas of operation are used in the questionnaire:<sup>3</sup>

- vessels engaged in fishing operations on the high seas and in waters other than those of the flag State (hereinafter referred to as “A”);<sup>4</sup>
- vessels engaged in fishing operations up to the limits of the exclusive economic zone of the flag State (hereinafter referred to as “B”);
- vessels engaged in fishing operations up to the limits of the territorial waters of the flag State (hereinafter referred to as “C”);
- vessels engaged in fishing operations up to three miles from the baseline (hereinafter referred to as “D”);<sup>5</sup>
- vessels engaged in fishing operations in rivers and inland waters (hereinafter referred to as “E”).

**Question B1(a)** – *Should the Convention apply to fishing vessels in all of the abovementioned areas of operation?*

Yes             No

**Question B1(b)** – *Should the Convention provide the possibility to exclude certain fishing vessels in the following areas of operation:*

- vessels engaged in fishing operations up to the limits of the territorial waters of the flag State (“C”)?*
- vessels engaged in fishing operations up to three miles from the baseline (“D”)?*
- vessels engaged in fishing operations in rivers and inland waters (“E”)?*

**Question B1(c)** – *Should the Convention provide for any other exclusions?*

Yes             No

Comments: \_\_\_\_\_

\_\_\_\_\_

<sup>3</sup> The categories are given letters (A, B, C, D, E) for ease of reference when answering questions.

<sup>4</sup> Based on the FAO Agreement to Promote Compliance with International Conservation and Management Measures by Fishing Vessels on the High Seas, article II(1), and on terms used in the FAO Standard Specifications for Marking and Identification of Fishing Vessels.

<sup>5</sup> Article 5 of the UNCLOS Convention provides that “... the normal baseline for measuring the breadth of the territorial sea is the low-water line along the coast as marked on large-scale charts officially recognized by the coastal State”.

**Question B1(d)** – If “areas of operation” would not be an appropriate method of delimiting the scope of the Convention, what other method should be used for this purpose:

fishing vessel length?

tonnage?

time fishing vessel spends at sea?

other? Please specify: \_\_\_\_\_

Comments: \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

**Question B1(e)** – Should the Convention apply to all persons working on board fishing vessels irrespective of nationality?

Yes

No

Comments: \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

## B2. Minimum age

**Question B2(a)** – Should the Convention include provisions concerning the minimum age for work on board fishing vessels?

Yes

No

**Question B2(b)** – If yes, should the minimum age be:

15 years?<sup>6</sup>

16 years?<sup>7</sup>

18 years?

Comments: \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

**Question B2(c)** – Should the Convention provide for exemptions?

Yes

No

**Question B2(d)** – If yes, please specify: \_\_\_\_\_

<sup>6</sup> Article 2, paragraph 1, of Convention No. 112, ratified by 29 States but since denounced by 20 States following ratification of Convention No. 138 accepting a minimum age of at least 15 years.

<sup>7</sup> The Tripartite Meeting on Safety and Health in the Fishing Industry (Geneva, 1999) recommended that States party to Convention No. 112 contemplate ratifying Convention No. 138 and, where the minimum age for work is less than 16 years, to specify that Article 3 of Convention No. 138 apply to employment in maritime fishing.

**Question B2(e)** – *Should the Convention provide that work on certain fishing vessels should be prohibited for persons under the age of 18 years?*

Yes             No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Question B2(f)** – *Should the Convention provide that certain types and conditions of work on fishing vessels should be prohibited for persons under the age of 18 years?*

Yes             No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

### B3. Medical examination

**Question B3(a)** – *Should the Convention provide that persons working on board fishing vessels should undergo initial and subsequent periodic medical examinations?*

Yes             No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Question B3(b)** – *Should the Convention provide for exemptions from the above requirement?*

Yes             No

**Question B3(c)** – *If yes, please indicate what these exemptions should be?*

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Question B3(d)** – *Should the Convention provide that a person working on board a fishing vessel and for which a medical examination is required should hold a medical certificate attesting to fitness for work for which he or she is to be employed at sea?*

Yes             No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

---

*B4. Medical care at sea*

**Question B4(a)** – *Should the Convention provide that fishing vessels should be required to carry appropriate medical supplies?*

Yes             No

Comments: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**Question B4(b)** – *Should the Convention provide that fishing vessels should normally have on board a person (e.g. the master or a member of the crew) qualified or trained in first aid or other forms of medical care?*

Yes             No

Comments: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**Question B4(c)** – *Should the Convention provide that certain fishing vessels should be excluded from the above requirement?*

Yes             No

**Question B4(d)** – *If yes, please specify:* \_\_\_\_\_

*B5. Contracts for work*

**Question B5(a)** – *Should the Convention provide that every person working on board a fishing vessel should have a written contract or articles of agreement, subject to such conditions as may be provided for in national laws and regulations?*

Yes             No

Comments: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**Question B5(b)** – *Should the Convention provide for possible exemptions from the above requirement?*

Yes             No

**Question B5(c)** – *If yes, which categories of persons working on board fishing vessels could be exempted from the provisions concerning written contracts or articles of agreement?*

Comments: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**Question B5(d)** – *Should the Convention provide that persons working on board a fishing vessel should have access to appropriate mechanisms for the settlement of disputes concerning their contract or articles of agreement?*

Yes             No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

#### *B6. Accommodation and provisions on board fishing vessels*

**Question B6(a)** – *Should the Convention provide that all fishing vessels should have appropriate accommodation and sufficient food and drinking water for the service of the fishing vessel?*

Yes             No

**Question B6(b)** – *If yes, should it provide for the possibility of exempting certain categories of fishing vessels from the requirement concerning accommodation?*

Yes             No

**Question B6(c)** – *If yes, please indicate which fishing vessels could be exempted.*

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

#### *B7. Crewing of fishing vessels*

**Question B7(a)** – *Should the Convention provide that States should take measures to ensure that fishing vessels have sufficient and competent crew for safe navigation and fishing operations in accordance with international standards?*

Yes             No

**Question B7(b)** – *If yes, please indicate which fishing vessels could be exempted.*

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

*B8. Hours of rest*

**Question B8(a)** – *Should the Convention provide that persons working on board fishing vessels should have minimum periods of rest established in accordance with national laws and regulations?*

Yes       No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

*B9. Occupational safety and health*

**Question B9(a)** – *Should the Convention provide that persons working on board fishing vessels should be covered by occupational safety and health provisions?*

Yes       No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Question B9(b)** – *If applicable provisions do not at present cover work on board fishing vessels, should such protection be provided through one of the following means:*

- extension of general occupational safety and health provisions?*
- extension of maritime occupational safety and health provisions?*
- specific provisions for work on board fishing vessels?*
- combination of any of the above?*

Yes       No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

*B10. Social security*

**Question B10(a)** – *Should the Convention provide that persons working on board fishing vessels should be entitled to social security benefits applicable to other workers?*

Yes       No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Question B10(b)** – *Should the Convention provide that such benefits might be progressively extended?*

Yes             No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Question B10(c)** – *Should the Convention provide for the possible exemption of certain categories of persons working on board fishing vessels?*

Yes             No

**Question B10(d)** – *If yes, which categories of persons might be exempted?*

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**B11. Extension of protection for seafarers to persons working on board fishing vessels**

**Question B11(a)** – *Should the Convention provide that persons working on board fishing vessels registered in the State, engaged in fishing operations on the high seas and in the waters of States other than those of the flag State, should generally have labour conditions which are no less favourable than those provided to seafarers working on board vessels registered in the State, engaged in commercial maritime transport?*

Yes             No

**Question B11(b)** – *If yes, should such a provision cover persons working on board other fishing vessels?*

Yes             No

**Question B11(c)** – *If yes, please indicate the persons working on board other fishing vessels to whom the above provision should apply (e.g. those working on vessels of a certain length, vessels intended for fishing in a certain area of operation, vessels remaining at sea for a specified period of time).*

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Question B11(d)** – *Should the Convention contain provisions on the following issues:*

- recruitment and placement?
- identity documents?
- repatriation?
- other issues? Please specify: \_\_\_\_\_

Comments: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

### *B12. Enforcement*

**Question B12(a)** – *Should the Convention provide that States should adopt measures to verify compliance with the provisions of the Convention?*

Yes       No

Comments: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**Question B12(b)** – *If yes, should the Convention provide for the possibility of exempting certain fishing vessels from the above requirements?*

Yes       No

**Question B12(c)** – *If yes, please indicate which fishing vessels:*

Comments: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**Question B12(d)** – *Should the Convention include a provision on port state control?<sup>8</sup>*

Yes       No

Comments: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

### *B13. Consultation*

**Question B13(a)** – *Should the Convention include a provision concerning consultation with representative employers' and workers' organizations, as well as representative organizations of persons working on board fishing vessels in the development and implementation of national laws and regulations concerning conditions of work on board fishing vessels?*

Yes       No

Comments: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

---

<sup>8</sup> Port state control implies the exercise by the port State of control concerning compliance by a fishing vessel calling at that State's port with relevant provisions of an international instrument ratified by that State.

*B14. Other issues*

**Question B14(a)** – Please indicate any other issues which should be addressed in the Convention.

Comments: \_\_\_\_\_  
 \_\_\_\_\_

C. CONTENTS OF A PROPOSED RECOMMENDATION

*C1. Minimum age and work of young persons*

**Question C1(a)** – Should the Recommendation provide guidance on the types of work (e.g. night work or in hazardous conditions) or the types of fishing vessels that should be prohibited for persons under the age of 18?

Yes             No

**Question C1(b)** – If yes, what should be included in such guidance?

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

*C2. Medical examination*

**Question C2(a)** – Should the Recommendation set out guidance on the content of the medical certificate and the procedures to be followed for the issue of the medical certificate?

Yes             No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Question C2(b)** – Should the Recommendation provide that the persons issuing such a certificate be approved by the competent authority?

Yes             No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

*C3. Medical care at sea*

**Question C3(a)** – Should the Recommendation provide guidance on the contents of the medicine chest and the type of medical equipment<sup>9</sup> required to be carried on board fishing vessels?

<sup>9</sup> Or first-aid kit for certain smaller fishing vessels.

Yes       No

Comments: \_\_\_\_\_

**Question C3(b)** – *Should the Recommendation set out guidance on the availability and on instruction concerning the use of radio-medical and similar services on board fishing vessels?*

Yes       No

Comments: \_\_\_\_\_

#### C4. Qualifications of persons working on board fishing vessels

**Question C4(a)** – *Should the Recommendation provide additional guidance beyond that provided in international standards<sup>10</sup> concerning training of persons working on board fishing vessels?*

Yes       No

**Question C4(b)** – *If yes, what issues should this guidance address?*

Comments: \_\_\_\_\_

#### C5. Contractual arrangements concerning work on board fishing vessels

**Question C5(a)** – *Should the Recommendation provide guidance, on the basis of the elements contained in Convention No. 114,<sup>11</sup> concerning the content of contracts or articles of agreement for work on board fishing vessels?*

Yes       No

**Question C5(b)(i)** – *If yes, should the guidance provided in the Recommendation also include elements not addressed in Convention No. 114?*

Yes       No

**Question C5(b)(ii)** – *If yes, should one of these elements concern the specification of insurance coverage for persons working on board fishing vessels in the event of injury, illness or death<sup>12</sup> in the contract or articles of agreement?*

<sup>10</sup> For example, the International Convention on Standards of Training, Certification and Watchkeeping of Fishing Vessel Personnel, 1995 (STCW-F Convention) (see Chapter III of the report).

<sup>11</sup> See, in particular, Article 6 of the Convention.

<sup>12</sup> Paragraph 8.2.8 of the FAO Code of Conduct for Responsible Fisheries provides that: “States should promote access to insurance coverage by owners and charterers of fishing vessels. Owners or charterers of fishing vessels should carry sufficient insurance cover to protect the crew of such vessels and their interests, to indemnify third parties against loss or damage and to protect their own interests.”

Yes       No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Question C5(c)** – *Should the Recommendation provide guidance on contracts or articles of agreements (e.g. procedures concerning the examination prior to signing; signing and termination of contracts or articles of agreement; records of employment; circumstances for discharge) for work on board fishing vessels?*<sup>13</sup>

Yes       No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Question C5(d)** – *Should the Recommendation provide guidance on systems of remuneration and, if appropriate, including systems based on a share of the catch?*

Yes       No

**Question C5(e)** – *If yes, please specify the issues to be included:*

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

#### *C6. Accommodation and provisions on board fishing vessels*

**Question C6(a)** – *Should the Recommendation provide that States should have national laws and regulations concerning planning and control of crew accommodation on board fishing vessels?*

Yes       No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Question C6(b)** – *Should the Recommendation provide guidance concerning standards of accommodation and of food and drinking water?*

Yes       No

**Question C6(c)** – *If yes, should these cover:*

- construction and location?*
- ventilation?*
- heating?*

<sup>13</sup> See Convention No. 114.

- lighting?
- sleeping rooms?
- sanitary accommodation?
- noise and vibration?
- drinking water?
- food?
- other issues?

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Question C6(d)** – *Should the above guidance concerning accommodation and provisions on board fishing vessels make distinctions based on:*

- fishing vessel length?
- operating area?
- tonnage?
- time a fishing vessel normally spends at sea?
- other?

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

#### *C7. Hours of work and rest*

**Question C7(a)** – *Should the Recommendation set out guidance concerning hours of work or rest periods?*

- Yes                       No

**Question C7(b)** – *If yes, please indicate what should be the limits of working hours or provisions for minimum rest periods.*

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

#### *C8. Occupational safety and health*

**Question C8(a)** – *Should the following issues be addressed in the Recommendation:*

- the inclusion of fishing occupational safety and health issues in an integrated national policy on occupational safety and health?
- rights and duties of fishing vessel owners and of persons working on board fishing vessels in the area of occupational safety and health?
- where appropriate, safety management systems?
- personal protective equipment?
- guarding of machinery?

- the recording and notification of accidents, injuries and fatalities?  
 investigation of occupational accidents?  
 other issues? Please specify: \_\_\_\_\_

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

### C9. Social security

**Question C9(a)** – Should the Recommendation include guidance on social security provisions for persons working on board fishing vessels?

- Yes       No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

**Question C9(b)** – Should the guidance include the following benefits (please specify the reasons for your choice):

- medical care?  
 sickness benefit?  
 old-age benefit?  
 employment injury benefit?  
 maternity benefit?  
 invalidity benefit?  
 survivors' benefit?  
 unemployment benefit?  
 family benefit?

Comments: \_\_\_\_\_

### C10. Register of persons working on board fishing vessels

**Question C10(a)** – Should the Recommendation include provisions concerning maintenance by the competent authority of a register of persons working on board fishing vessels?

- Yes       No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

*C11. Fisheries observers*

**Question C11(a)** – *Should the Recommendation provide guidance concerning the conditions of work of fisheries observers<sup>14</sup> on board fishing vessels?*

Yes       No

**Question C11(b)** – *If yes, what should be included in such guidance?*

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

*C12. Application within the exclusive economic zone*

**Question C12(a)** – *Should the Recommendation provide that coastal States should require, when they grant licences for fishing in their exclusive economic zones, that fishing vessels conform with the standards of this Convention?*

Yes       No

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

*C13. Other issues*

**Question C13(a)** – *Please indicate any other issues which should be addressed in the Recommendation.*

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

<sup>14</sup> Article 62 (Utilization of the living resources) of the UNCLOS Convention provides that: “Nationals of other States fishing in the exclusive economic zone shall comply with the conservation measures and with other terms and conditions established in the laws and regulations of the coastal State. These laws and regulations shall be consistent with the Convention and may relate, inter alia, to the following: ... (g) the placing of observers ... on board such vessels by the coastal State”.

## ANNEX

---

**SUBSTANTIVE TEXTS OF ILO CONVENTIONS AND RECOMMENDATIONS  
SPECIFICALLY CONCERNED WITH THE FISHING SECTOR**

**Hours of Work (Fishing) Recommendation, 1920 (No. 7)**

The General Conference of the International Labour Organisation,

Having been convened at Genoa by the Governing Body of the International Labour Office on the 15th day of June 1920, and

Having decided upon the adoption of certain proposals with regard to the application to seamen of the Convention drafted at Washington, last November, limiting the hours of work in all industrial undertakings, including transport by sea and, under conditions to be determined, transport by inland waterways, to eight hours in the day and forty-eight in the week; consequential effects as regards manning and the regulations relating to accommodation and health on board ship, which is the first item in the agenda for the Genoa meeting of the Conference, and

Having determined that these proposals shall take the form of a Recommendation,

adopts the following Recommendation, which may be cited as the Hours of Work (Fishing) Recommendation, 1920, to be submitted to the Members of the International Labour Organisation for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of the Constitution of the International Labour Organisation:

In view of the declaration in the Constitution of the International Labour Organisation that all industrial communities should endeavour to adopt, so far as their special circumstances will permit, “an eight hours’ day or a forty-eight hours’ week as the standard to be aimed at where it has not already been attained”, the International Labour Conference recommends that each Member of the International Labour Organisation enact legislation limiting in this direction the hours of work of all workers employed in the fishing industry, with such special provisions as may be necessary to meet the conditions peculiar to the fishing industry in each country; and that in framing such legislation each Government consult with the organisations of employers and the organisations of workers concerned.

**Minimum Age (Fishermen) Convention, 1959 (No. 112)**

*Article 1*

1. For the purpose of this Convention the term “fishing vessel” includes all ships and boats, of any nature whatsoever, whether publicly or privately owned, which are engaged in maritime fishing in salt waters.

2. This Convention shall not apply to fishing in ports and harbours or in estuaries of rivers, or to individuals fishing for sport or recreation.

*Article 2*

1. Children under the age of fifteen years shall not be employed or work on fishing vessels.

2. Provided that such children may occasionally take part in the activities on board fishing vessels during school holidays, subject to the conditions that the activities in which they are engaged:

- (a) are not harmful to their health or normal development;
- (b) are not such as to prejudice their attendance at school; and
- (c) are not intended for commercial profit.

3. Provided further that national laws or regulations may provide for the issue in respect of children of not less than fourteen years of age of certificates permitting them to be employed in cases in which an educational or other appropriate authority designated by such laws or regulations is satisfied, after having due regard to the health and physical condition of the child and to the prospective as well as to the immediate benefit to the child of the employment proposed, that such employment will be beneficial to the child.

#### *Article 3*

Young persons under the age of eighteen years shall not be employed or work on coal-burning fishing vessels as trimmers or stokers.

#### *Article 4*

The provisions of Articles 2 and 3 shall not apply to work done by children on school-ships or training-ships, provided that such work is approved and supervised by public authority.

#### *Article 5*

The formal ratifications of this Convention shall be communicated to the Director-General of the International Labour Office for registration.

#### *Article 6*

1. This Convention shall be binding only upon those Members of the International Labour Organisation whose ratifications have been registered with the Director-General.

2. It shall come into force twelve months after the date on which the ratifications of two Members have been registered with the Director-General.

3. Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

#### *Article 7*

1. A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Director-General of the International Labour Office for registration. Such denunciation shall not take effect until one year after the date on which it is registered.

2. Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of ten years and, thereafter, may denounce this Convention at the expiration of each period of ten years under the terms provided for in this Article.

### **Medical Examination (Fishermen) Convention, 1959 (No. 113)**

#### *Article 1*

1. For the purpose of this Convention the term "fishing vessel" includes all ships and boats, of any nature whatsoever, whether publicly or privately owned, which are engaged in maritime fishing in salt waters.

2. The competent authority may, after consultation with the fishing-boat owners' and fishermen's organisations concerned, where such exist, grant exemptions from the application of the provisions of this Convention in respect of vessels which do not normally remain at sea for periods of more than three days.

3. This Convention shall not apply to fishing in ports and harbours or in estuaries of rivers, or to individuals fishing for sport or recreation.

#### *Article 2*

No person shall be engaged for employment in any capacity on a fishing vessel unless he produces a certificate attesting to his fitness for the work for which he is to be employed at sea signed by a medical practitioner who shall be approved by the competent authority.

#### *Article 3*

1. The competent authority shall, after consultation with the fishing-boat owners' and fishermen's organisations concerned, where such exist, prescribe the nature of the medical examination to be made and the particulars to be included in the medical certificate.

2. When prescribing the nature of the examination, due regard shall be had to the age of the person to be examined and the nature of the duties to be performed.

3. In particular the medical certificate shall attest that the person is not suffering from any disease likely to be aggravated by, or to render him unfit for, service at sea or likely to endanger the health of other persons on board.

#### *Article 4*

1. In the case of young persons of less than twenty-one years of age, the medical certificate shall remain in force for a period not exceeding one year from the date on which it was granted.

2. In the case of persons who have attained the age of twenty-one years, the competent authority shall determine the period for which the medical certificate shall remain in force.

3. If the period of validity of a certificate expires in the course of a voyage the certificate shall continue in force until the end of that voyage.

#### *Article 5*

Arrangements shall be made to enable a person who, after examination, has been refused a certificate to apply for a further examination by a medical referee or referees who shall be independent of any fishing-boat owner or of any organisation of fishing-boat owners or fishermen.

### **Fishermen's Articles of Agreement Convention, 1959 (No. 114)**

#### *Article 1*

1. For the purpose of this Convention, the term "fishing vessel" includes all registered or documented ships and boats of any nature whatsoever, whether publicly or privately owned, which are engaged in maritime fishing in salt waters.

2. The competent authority may exempt from the application of the provisions of this Convention fishing vessels of a type and size determined after consultation with the fishing-boat owners' and fishermen's organisations concerned, where such exist.

3. The competent authority may, if satisfied that the matters dealt with in this Convention are adequately regulated by collective agreements between fishing-boat owners or fishing-boat owners' organisations, and fishermen's organisations, exempt from the provisions of the Convention concerning individual agreements owners and fishermen covered by such collective agreements.

*Article 2*

For the purpose of this Convention, the term “fisherman” includes every person employed or engaged in any capacity on board any fishing vessel and entered on the ship’s articles. It excludes pilots, cadets and duly indentured apprentices, naval ratings, and other persons in the permanent service of a government.

*Article 3*

1. Articles of agreement shall be signed both by the owner of the fishing vessel or his authorised representative and by the fisherman. Reasonable facilities to examine the articles of agreement before they are signed shall be given to the fisherman and, as the case may be, also to his adviser.

2. The fisherman shall sign the agreement under conditions which shall be prescribed by national law in order to ensure adequate supervision by the competent public authority.

3. The foregoing provisions shall be deemed to have been fulfilled if the competent authority certifies that the provisions of the agreement have been laid before it in writing and have been confirmed both by the owner of the fishing vessel or his authorised representative and by the fisherman.

4. National law shall make adequate provision to ensure that the fisherman has understood the agreement.

5. The agreement shall not contain anything which is contrary to the provisions of national law.

6. National law shall prescribe such further formalities and safeguards in respect of the completion of the agreement as may be considered necessary for the protection of the interests of the owner of the fishing vessel and of the fisherman.

*Article 4*

1. Adequate measures shall be taken in accordance with national law for ensuring that the agreement shall not contain any stipulation by which the parties purport to contract in advance to depart from the ordinary rules as to jurisdiction over the agreement.

2. This Article shall not be interpreted as excluding a reference to arbitration.

*Article 5*

A record of employment shall be maintained for every fisherman by or in a manner prescribed by the competent authority. At the end of each voyage or venture a record of service in regard to that voyage or venture shall be available to the fisherman concerned or entered in his service book.

*Article 6*

1. The agreement may be made either for a definite period or for a voyage or, if permitted by national law, for an indefinite period.

2. The agreement shall state clearly the respective rights and obligations of each of the parties.

3. It shall contain the following particulars, except in so far as the inclusion of one or more of them is rendered unnecessary by the fact that the matter is regulated in another manner by national laws or regulations:

- (a) the surname and other names of the fisherman, the date of his birth or his age, and his birthplace;
- (b) the place at which and date on which the agreement was completed;
- (c) the name of the fishing vessel or vessels on board which the fisherman undertakes to serve;

- (d) the voyage or voyages to be undertaken, if this can be determined at the time of making the agreement;
- (e) the capacity in which the fisherman is to be employed;
- (f) if possible, the place at which and date on which the fisherman is required to report on board for service;
- (g) the scale of provisions to be supplied to the fisherman, unless some alternative system is provided for by national law;
- (h) the amount of his wages, or the amount of his share and the method of calculating such share if he is to be remunerated on a share basis, or the amount of his wage and share and the method of calculating the latter if he is to be remunerated on a combined basis, and any agreed minimum wage;
- (i) the termination of the agreement and the conditions thereof, that is to say:
  - (i) if the agreement has been made for a definite period, the date fixed for its expiry;
  - (ii) if the agreement has been made for a voyage, the port of destination and the time which has to expire after arrival before the fisherman shall be discharged;
  - (iii) if the agreement has been made for an indefinite period, the conditions which shall entitle either party to rescind it, as well as the required period of notice for rescission: Provided that such period shall not be less for the owner of the fishing vessel than for the fisherman;
- (j) any other particulars which national law may require.

#### *Article 7*

If national law provides that a list of crew shall be carried on board the agreement shall either be recorded in or annexed to the list of crew.

#### *Article 8*

In order that the fisherman may satisfy himself as to the nature and extent of his rights and obligations the competent authority shall lay down the measures to be taken to enable clear information to be obtained on board as to the conditions of employment.

#### *Article 9*

An agreement entered into for a voyage, for a definite period, or for an indefinite period, shall be duly terminated by:

- (a) mutual consent of the parties;
- (b) death of the fisherman;
- (c) loss or total unseaworthiness of the fishing vessel;
- (d) any other cause that may be provided for in national law.

#### *Article 10*

National law, collective agreements or individual agreements shall determine the circumstances in which the owner or skipper may immediately discharge a fisherman.

#### *Article 11*

National law, collective agreements or individual agreements shall also determine the circumstances in which the fisherman may demand his immediate discharge.

#### *Article 12*

Except as otherwise provided therein, effect may be given to the provisions of this Convention by national law or by collective agreements.

**Fishermen's Competency Certificates Convention, 1966 (No. 125)**

## PART I. SCOPE AND DEFINITIONS

*Article 1*

For the purposes of this Convention, the term "fishing vessel" includes all ships and boats, of any nature whatsoever, whether publicly or privately owned, which are engaged in maritime fishing in salt waters and are registered in a territory for which the Convention is in force, with the exception of:

- (a) ships and boats of less than 25 gross registered tons;
- (b) ships and boats engaged in whaling or similar pursuits;
- (c) ships and boats engaged in fishing for sport or recreation;
- (d) fishery research and fishery protection vessels.

*Article 2*

The competent authority may, after consultation with the fishing vessel owners' and fishermen's organisations where such exist, exempt from this Convention fishing vessels engaged in inshore fishing, as defined by national laws and regulations.

*Article 3*

For the purpose of this Convention, the following terms have the meanings hereby assigned to them:

- (a) skipper: any person having command or charge of a fishing vessel;
- (b) mate: any person exercising subordinate command of a fishing vessel, including any person, other than a pilot, liable at any time to be in charge of the navigation of such a vessel;
- (c) engineer: any person permanently responsible for the mechanical propulsion of a fishing vessel.

## PART II. CERTIFICATION

*Article 4*

Each Member which ratifies this Convention shall establish standards of qualification for certificates of competency entitling a person to perform the duties of skipper, mate or engineer on board a fishing vessel.

*Article 5*

1. All fishing vessels to which this Convention applies shall be required to carry a certificated skipper.

2. All fishing vessels over 100 gross registered tons engaged in operations and areas to be defined by national laws or regulations shall be required to carry a certificated mate.

3. All fishing vessels with an engine power above a level to be determined by the competent authority, after consultation with the fishing vessel owners' and fishermen's organisations where such exist, shall be required to carry a certificated engineer: Provided that the skipper or mate of a fishing vessel may act as engineer in appropriate cases and on condition that he also holds an engineer's certificate.

4. The certificates of skippers, mates or engineers may be full or limited, according to the size, type, and nature and area of operations of the fishing vessel, as determined by national laws or regulations.

5. The competent authority may in individual cases permit a fishing vessel to put to sea without the full complement of certificated personnel if it is satisfied that no suitable substitutes are available and that, having regard to all the circumstances of the case, it is safe to allow the vessel to put to sea.

#### *Article 6*

1. The minimum age prescribed by national laws or regulations for the issue of a certificate of competency shall be not less than:

- (a) 20 years in the case of a skipper;
- (b) 19 years in the case of a mate;
- (c) 20 years in the case of an engineer.

2. For the purpose of service as a skipper or mate in a fishing vessel engaged in inshore fishing and for the purpose of service as an engineer in small fishing vessels with an engine power below a level to be determined by the competent authority after consultation with the fishing vessel owners' and fishermen's organisations, where such exist, the minimum age may be fixed at 18 years.

#### *Article 7*

The minimum professional experience prescribed by national laws or regulations for the issue of a mate's certificate of competency shall be not less than three years' sea service engaged in deck duties.

#### *Article 8*

1. The minimum professional experience prescribed by national laws or regulations for the issue of a skipper's certificate of competency shall be not less than four years' sea service engaged in deck duties.

2. The competent authority may, after consultation with the fishing vessel owners' and fishermen's organisations where such exist, require a part of this period to be served as a certificated mate; where national laws or regulations provide for the issue of different grades of certificates of competency, full and limited, to skippers of fishing vessels, the nature of the qualifying service as a certificated mate or the type of certificate held while performing such qualifying service may vary accordingly.

#### *Article 9*

1. The minimum professional experience prescribed by national laws or regulations for the issue of an engineer's certificate of competency shall be not less than three years' sea service in the engine-room.

2. In the case of a certificated skipper or mate a shorter qualifying period of sea service may be prescribed.

3. In the case of the small fishing vessels referred to in Article 6, paragraph 2, of this Convention, the competent authority may, after consultation with the fishing vessel owners' and fishermen's organisations where such exist, prescribe a qualifying period of sea service of twelve months.

4. Work in an engineering workshop may be regarded as equivalent to sea service for part of the qualifying periods provided for in paragraphs 1 to 3 of this Article.

#### *Article 10*

In respect of persons who have successfully completed an approved training course, the periods of sea service required in virtue of Articles 7, 8 and 9 of this Convention may be reduced by the period of training, but in no case by more than twelve months.

## PART III. EXAMINATIONS

*Article 11*

In the examinations organised and supervised by the competent authority for the purpose of testing whether candidates for competency certificates possess the qualifications necessary for performing the corresponding duties, the candidates shall be required to show knowledge, appropriate to the categories and grades of certificates, of such subjects as:

- (a) in the case of skippers and mates:
  - (i) general nautical subjects, including seamanship, shiphandling and safety of life at sea, and a proper knowledge of the international Regulations for Preventing Collisions at Sea;
  - (ii) practical navigation, including the use of electronic and mechanical aids to navigation;
  - (iii) safe working practices, including safety in the handling of fishing gear;
- (b) in the case of engineers:
  - (i) theory, operation, maintenance and repair of steam or internal combustion engines and related auxiliary equipment;
  - (ii) operation, maintenance and repair of refrigeration systems, pumps, deck winches and other mechanical equipment of fishing vessels, including the effects on stability;
  - (iii) principles of shipboard electric power installations, and maintenance and repair of the electrical machinery and equipment of fishing vessels; and
  - (iv) engineering safety precautions and emergency procedures, including the use of life-saving and fire-fighting appliances.

*Article 12*

The examinations for certificates of skippers and mates referred to in Article 11, subparagraph (a), of this Convention may also cover the following subjects:

- (a) fishing techniques, including where appropriate the operation of electronic fish-finding devices, and the operation, maintenance and repair of fishing-gear; and
- (b) stowage, cleaning and processing of fish on board.

*Article 13*

During a period of three years from the date of the coming into force of national laws or regulations giving effect to the provisions of this Convention, competency certificates may be issued to persons who have not passed an examination referred to in Articles 11 and 12 of this Convention, but who have in fact had sufficient practical experience of the duties corresponding to the certificate in question and have no record of any serious technical error against them.

## PART IV. ENFORCEMENT MEASURES

*Article 14*

1. Each Member shall ensure the enforcement of national laws or regulations giving effect to the provisions of this Convention by an efficient system of inspection.

2. National laws or regulations giving effect to the provisions of this Convention shall provide for the cases in which the authorities of a Member may detain vessels registered in its territory on account of a breach of these laws or regulations.

*Article 15*

1. National laws or regulations giving effect to the provisions of this Convention shall prescribe penalties or disciplinary measures for cases in which these laws or regulations are not respected.

2. In particular, such penalties or disciplinary measures shall be prescribed for cases in which:

- (a) a fishing vessel owner or his agent, or a skipper, has engaged a person not certificated as required;
- (b) a person has obtained by fraud or forged documents an engagement to perform duties requiring certification without holding the requisite certificate.

**Accommodation of Crews (Fishermen) Convention, 1966 (No. 126)**

## PART I. GENERAL PROVISIONS

*Article 1*

1. This Convention applies to all seagoing mechanically propelled ships and boats, of any nature whatsoever, whether publicly or privately owned, which are engaged in maritime fishing in salt waters and are registered in a territory for which this Convention is in force.

2. National laws or regulations shall determine when ships and boats are to be regarded as seagoing for the purpose of this Convention.

3. This Convention does not apply to ships and boats of less than 75 tons: Provided that the Convention shall be applied to ships and boats of between 25 and 75 tons where the competent authority determines, after consultation with the fishing-vessel owners' and fishermen's organisations where such exist, that this is reasonable and practicable.

4. The competent authority may, after consultation with the fishing-vessel owners' and fishermen's organisations where such exist, use length instead of tonnage as a parameter for the purposes of this Convention, in which event the Convention does not apply to ships and boats of less than 80 feet (24.4 metres) in length: Provided that the Convention shall be applied to ships and boats of between 45 and 80 feet (13.7 and 24.4 metres) in length where the competent authority determines, after consultation with the fishing-vessel owners' and fishermen's organisations where such exist, that this is reasonable and practicable.

5. This Convention does not apply to:

- (a) ships and boats normally employed in fishing for sport or recreation;
- (b) ships and boats primarily propelled by sail but having auxiliary engines;
- (c) ships and boats engaged in whaling or similar pursuits;
- (d) fishery research and fishery protection vessels.

6. The following provisions of this Convention do not apply to vessels which normally remain away from their home ports for periods of less than 36 hours and in which the crew does not live permanently on board when in port:

- (a) Article 9, paragraph 4;
- (b) Article 10;
- (c) Article 11;
- (d) Article 12;
- (e) Article 13, paragraph 1;
- (f) Article 14;
- (g) Article 16;

Provided that in such vessels adequate sanitary installations as well as messing and cooking facilities and accommodation for resting shall be provided.

7. The provisions of Part III of this Convention may be varied in the case of any vessel if the competent authority is satisfied, after consultation with the fishing-vessel owners' and fishermen's organisations where such exist, that the variations to be made provide corresponding advantages as a result of which the over-all conditions are no less favourable than those that would result from the full application of the provisions of the Convention; particulars of all such variations shall be communicated by the Member to the Director-General of the International Labour Office, who shall notify the Members of the International Labour Organisation.

#### *Article 2*

In this Convention:

- (a) the term "fishing vessel" or "vessel" means a ship or boat to which the Convention applies;
- (b) the term "tons" means gross registered tons;
- (c) the term "length" means the length measured from the fore part of the stem on the line of the forecastle deck to the after side of the head of the sternpost, or to the foreside of the rudderstock where no sternpost exists;
- (d) the term "officer" means a person other than a skipper ranked as an officer by national laws or regulations or, in the absence of any relevant laws or regulations, by collective agreement or custom;
- (e) the term "rating" means a member of the crew other than an officer;
- (f) the term "crew accommodation" includes such sleeping rooms, mess rooms and sanitary accommodation as are provided for the use of the crew;
- (g) the term "prescribed" means prescribed by national laws or regulations, or by the competent authority;
- (h) the term "approved" means approved by the competent authority;
- (i) the term "re-registered" means re-registered on the occasion of a simultaneous change in the territory of registration and in the ownership of the vessel.

#### *Article 3*

1. Each Member for which this Convention is in force undertakes to maintain in force laws or regulations which ensure the application of the provisions of Parts II, III and IV of this Convention.

2. The laws or regulations shall:

- (a) require the competent authority to bring them to the notice of all persons concerned;
- (b) define the persons responsible for compliance therewith;
- (c) provide for the maintenance of a system of inspection adequate to ensure effective enforcement;
- (d) prescribe adequate penalties for any violation thereof;
- (e) require the competent authority to consult periodically the fishing-vessel owners' and fishermen's organisations, where such exist, in regard to the framing of regulations, and to collaborate so far as practicable with such parties in the administration thereof.

## PART II. PLANNING AND CONTROL OF CREW ACCOMMODATION

#### *Article 4*

Before the construction of a fishing vessel is begun, and before the crew accommodation of an existing vessel is substantially altered or reconstructed, detailed plans of, and information concerning, the accommodation shall be submitted to the competent authority for approval.

*Article 5*

1. On every occasion when:
  - (a) a fishing vessel is registered or re-registered,
  - (b) the crew accommodation of a vessel has been substantially altered or reconstructed, or
  - (c) complaint that the crew accommodation is not in compliance with the terms of this Convention has been made to the competent authority, in the prescribed manner and in time to prevent any delay to the vessel, by a recognised fishermen's organisation representing all or part of the crew or by a prescribed number or proportion of the members of the crew of the vessel,the competent authority shall inspect the vessel and satisfy itself that the crew accommodation complies with the requirements of the laws and regulations.
2. Periodical inspections may be held at the discretion of the competent authority.

## PART III. CREW ACCOMMODATION REQUIREMENTS

*Article 6*

1. The location, means of access, structure and arrangement of crew accommodation in relation to other spaces shall be such as to ensure adequate security, protection against weather and sea and insulation from heat or cold, undue noise or effluvia from other spaces.
2. Emergency escapes shall be provided from all crew accommodation spaces as necessary.
3. Every effort shall be made to exclude direct openings into sleeping rooms from fish holds and fish meal rooms, from spaces for machinery, from galleys, lamp and paint rooms or from engine, deck and other bulk store rooms, drying rooms, communal wash places or water closets. That part of the bulkhead separating such places from sleeping rooms and external bulkheads shall be efficiently constructed of steel or other approved substance and shall be water-tight and gas-tight.
4. External bulkheads of sleeping rooms and mess rooms shall be adequately insulated. All machinery casings and all boundary bulkheads of galleys and other spaces in which heat is produced shall be adequately insulated when there is a possibility of resulting heat effects in adjoining accommodation or passageways. Care shall also be taken to provide protection from heat effects of steam and/or hot-water service pipes.
5. Internal bulkheads shall be of approved material which is not likely to harbour vermin.
6. Sleeping rooms, mess rooms, recreation rooms and passageways in the crew accommodation space shall be adequately insulated to prevent condensation or over-heating.
7. Main steam and exhaust pipes for winches and similar gear shall, whenever technically possible, not pass through crew accommodation or through passageways leading to crew accommodation; where they do pass through such accommodation or passageways they shall be adequately insulated and encased.
8. Inside panelling or sheeting shall be of material with a surface easily kept clean. Tongued and grooved boarding or any other form of construction likely to harbour vermin shall not be used.
9. The competent authority shall decide to what extent fire prevention or fire retarding measures shall be required to be taken in the construction of the accommodation.
10. The wall surface and deckheads in sleeping rooms and mess rooms shall be easily kept clean and, if painted, shall be light in colour; lime wash must not be used.
11. The wall surfaces shall be renewed or restored as necessary.
12. The decks in all crew accommodation shall be of approved material and construction and shall provide a surface impervious to damp and easily kept clean.

13. Overhead exposed decks over crew accommodation shall be sheathed with wood or equivalent insulation.

14. Where the floorings are of composition the joinings with sides shall be rounded to avoid crevices.

15. Sufficient drainage shall be provided.

16. All practicable measures shall be taken to protect crew accommodation against the admission of flies and other insects.

#### *Article 7*

1. Sleeping rooms and mess rooms shall be adequately ventilated.

2. The system of ventilation shall be controlled so as to maintain the air in a satisfactory condition and to ensure a sufficiency of air movement in all conditions of weather and climate.

3. Vessels regularly engaged on voyages in the tropics and other areas with similar climatic conditions shall, as required by such conditions, be equipped both with mechanical means of ventilation and with electric fans: Provided that one only of these means need be adopted in spaces where this ensures satisfactory ventilation.

4. Vessels engaged elsewhere shall be equipped either with mechanical means of ventilation or with electric fans. The competent authority may exempt vessels normally employed in the cold waters of the northern or southern hemispheres from this requirement.

5. Power for the operation of the aids to ventilation required by paragraphs 3 and 4 of this Article shall, when practicable, be available at all times when the crew is living or working on board and conditions so require.

#### *Article 8*

1. An adequate system of heating the crew accommodation shall be provided as required by climatic conditions.

2. The heating system shall, when practicable, be in operation at all times when the crew is living or working on board and conditions so require.

3. Heating by means of open fires shall be prohibited.

4. The heating system shall be capable of maintaining the temperature in crew accommodation at a satisfactory level under normal conditions of weather and climate likely to be met with on service; the competent authority shall prescribe the standard to be provided.

5. Radiators and other heating apparatus shall be so placed and, where necessary, shielded and fitted with safety devices as to avoid risk of fire or danger or discomfort to the occupants.

#### *Article 9*

1. All crew spaces shall be adequately lighted. The minimum standard for natural lighting in living rooms shall be such as to permit a person with normal vision to read on a clear day an ordinary newspaper in any part of the space available for free movement. When it is not possible to provide adequate natural lighting, artificial lighting of the above minimum standard shall be provided.

2. In all vessels electric lights shall, as far as practicable, be provided in the crew accommodation. If there are not two independent sources of electricity for lighting, additional lighting shall be provided by properly constructed lamps or lighting apparatus for emergency use.

3. Artificial lighting shall be so disposed as to give maximum benefit to the occupants of the room.

4. Adequate reading light shall be provided for every berth in addition to the normal lighting of the cabin.

5. A permanent blue light shall, in addition, be provided in the sleeping room during the night.

#### Article 10

1. Sleeping rooms shall be situated amidships or aft; the competent authority may, in particular cases, if the size, type or intended service of the vessel renders any other location unreasonable or impracticable, permit the location of sleeping rooms in the fore part of the vessel, but in no case forward of the collision bulkhead.

2. The floor area per person of sleeping rooms, excluding space occupied by berths and lockers, shall not be less than:

- (a) in vessels of 25 tons but below 50 tons ... 5.4 sq. ft. (0.5 sq. m)
- (b) in vessels of 50 tons but below 100 tons ... 8.1 sq. ft. (0.75 sq. m)
- (c) in vessels of 100 tons but below 250 tons ... 9.7 sq. ft. (0.9 sq. m)
- (d) in vessels of 250 tons or over ... 10.8 sq. ft. (1.0 sq. m)

3. Where the competent authority decides, as provided for in Article 1, paragraph 4, of this Convention, that length shall be the parameter for this Convention, the floor area per person of sleeping rooms, excluding space occupied by berths and lockers, shall not be less than:

- (a) in vessels of 45 feet (13.7 m) but below 65 feet (19.8 m) in length ... 5.4 sq. ft. (0.5 sq. m)
- (b) in vessels of 65 feet (19.8 m) but below 88 feet (26.8 m) in length ... 8.1 sq. ft. (0.75 sq. m)
- (c) in vessels of 88 feet (26.8 m) but below 115 feet (35.1 m) in length ... 9.7 sq. ft. (0.9 sq. m)
- (d) in vessels of 115 feet (35.1 m) in length or over ... 10.8 sq. ft. (1.0 sq. m)

4. The clear head room in the crew sleeping room shall, wherever possible, be not less than 6 feet 3 inches (1.90 metres).

5. There shall be a sufficient number of sleeping rooms to provide a separate room or rooms for each department: Provided that the competent authority may relax this requirement in the case of small vessels.

6. The number of persons allowed to occupy sleeping rooms shall not exceed the following maxima:

- (a) officers: one person per room wherever possible, and in no case more than two;
- (b) ratings: two or three persons per room wherever possible, and in no case more than the following:
  - (i) in vessels of 250 tons and over, four persons;
  - (ii) in vessels under 250 tons, six persons.

7. Where the competent authority decides, as provided for in Article 1, paragraph 4, of this Convention, that length shall be the parameter for this Convention, the number of ratings allowed to occupy sleeping rooms shall in no case be more than the following:

- (a) in vessels of 115 feet (35.1 m) in length and over, four persons;
- (b) in vessels under 115 feet (35.1 m) in length, six persons.

8. The competent authority may permit exceptions to the requirements of paragraphs 6 and 7 of this Article in particular cases if the size, type or intended service of the vessel make these requirements unreasonable or impracticable.

9. The maximum number of persons to be accommodated in any sleeping room shall be legibly and indelibly marked in some place in the room where it can conveniently be seen.

10. Members of the crew shall be provided with individual berths.

11. Berths shall not be placed side by side in such a way that access to one berth can be obtained only over another.

12. Berths shall not be arranged in tiers of more than two; in the case of berths placed along the vessel's side, there shall be only a single tier where a sidelight is situated above a berth.

13. The lower berth in a double tier shall not be less than 12 inches (0.30 metre) above the floor; the upper berth shall be placed approximately midway between the bottom of the lower berth and the lower side of the deckhead beams.

14. The minimum inside dimensions of a berth shall wherever practicable be 6 feet 3 inches by 2 feet 3 inches (1.90 metres by 0.68 metre).

15. The framework and the lee-board, if any, of a berth shall be of approved material, hard, smooth and not likely to corrode or to harbour vermin.

16. If tubular frames are used for the construction of berths, they shall be completely sealed and without perforations which would give access to vermin.

17. Each berth shall be fitted with a spring mattress of approved material or with a spring bottom and a mattress of approved material. Stuffing of straw or other material likely to harbour vermin shall not be used.

18. When one berth is placed over another a dust-proof bottom of wood, canvas or other suitable material shall be fitted beneath the upper berth.

19. Sleeping rooms shall be so planned and equipped as to ensure reasonable comfort for the occupants and to facilitate tidiness.

20. The furniture shall include a clothes locker for each occupant, fitted with a hasp for a padlock and a rod for holding clothes on hangers. The competent authority shall ensure that the locker is as commodious as practicable.

21. Each sleeping room shall be provided with a table or desk, which may be of the fixed, dropleaf or slide-out type, and with comfortable seating accommodation as necessary.

22. The furniture shall be of smooth, hard material not liable to warp or corrode, or to harbour vermin.

23. The furniture shall include a drawer or equivalent space for each occupant which shall, wherever practicable, be not less than 2 cubic feet (0.056 cubic metre).

24. Sleeping rooms shall be fitted with curtains for the sidelights.

25. Sleeping rooms shall be fitted with a mirror, small cabinets for toilet requisites, a book rack and a sufficient number of coat hooks.

26. As far as practicable, berthing of crew members shall be so arranged that watches are separated and that no day-men share a room with watchkeepers.

#### *Article 11*

1. Mess room accommodation separate from sleeping quarters shall be provided in all vessels carrying a crew of more than ten persons. Wherever possible it shall be provided also in vessels carrying a smaller crew; if, however, this is impracticable, the mess room may be combined with the sleeping accommodation.

2. In vessels engaged in fishing on the high seas and carrying a crew of more than 20, separate mess room accommodation may be provided for the skipper and officers.

3. The dimensions and equipment of each mess room shall be sufficient for the number of persons likely to use it at any one time.

4. Mess rooms shall be equipped with tables and approved seats sufficient for the number of persons likely to use them at any one time.

5. Mess rooms shall be as close as practicable to the galley.

6. Where pantries are not accessible to mess rooms, adequate lockers for mess utensils and proper facilities for washing them shall be provided.

7. The tops of tables and seats shall be of damp-resisting material without cracks and easily kept clean.

8. Wherever practicable mess rooms shall be planned, furnished and equipped to give recreational facilities.

#### *Article 12*

1. Sufficient sanitary accommodation, including washbasins and tub and/or shower baths, shall be provided in all vessels.

2. Sanitary facilities for all members of the crew who do not occupy rooms to which private facilities are attached shall, wherever practicable, be provided for each department of the crew on the following scale:

- (a) one tub and/or shower bath for every eight persons or less;
- (b) one water closet for every eight persons or less;
- (c) one wash basin for every six persons or less:

Provided that when the number of persons in a department exceeds an even multiple of the specified number by less than one-half of the specified number, this surplus may be ignored for the purpose of this paragraph.

3. Cold fresh water and hot fresh water or means of heating water shall be available in all communal wash places. The competent authority, in consultation with the fishing-vessel owners' and fishermen's organisations where such exist, may fix the minimum amount of fresh water which shall be supplied per man per day.

4. Wash basins and tub baths shall be of adequate size and constructed of approved material with a smooth surface not liable to crack, flake or corrode.

5. All water closets shall have ventilation to the open air, independently of any other part of the accommodation.

6. The sanitary equipment to be placed in water closets shall be of an approved pattern and provided with an ample flush of water, available at all times and independently controllable.

7. Soil pipes and waste pipes shall be of adequate dimensions and shall be so constructed as to minimise the risk of obstruction and to facilitate cleaning. They shall not pass through fresh water or drinking water tanks; neither shall they, if practicable, pass overhead in mess rooms or sleeping accommodation.

8. Sanitary accommodation intended for the use of more than one person shall comply with the following requirements:

- (a) floors shall be of approved durable material, easily cleaned and impervious to damp, and shall be properly drained;
- (b) bulkheads shall be of steel or other approved material and shall be water-tight up to at least 9 inches (0.23 metre) above the level of the deck;
- (c) the accommodation shall be sufficiently lighted, heated and ventilated;
- (d) water closets shall be situated convenient to, but separate from, sleeping rooms and washrooms, without direct access from the sleeping rooms or from a passage between sleeping rooms and water closets to which there is no other access: Provided that this requirement shall not apply where a water closet is located between two sleeping rooms having a total of not more than four persons;
- (e) where there is more than one water closet in a compartment, they shall be sufficiently screened to ensure privacy.

9. Facilities for washing and drying clothes shall be provided on a scale appropriate to the size of the crew and the normal duration of the voyage.

10. The facilities for washing clothes shall include suitable sinks equipped with drainage which may be installed in washrooms if separate laundry accommodation is not reasonably practicable. The sinks shall be provided with an adequate supply of cold fresh water and hot fresh water or means of heating water.

11. The facilities for drying clothes shall be provided in a compartment separate from sleeping rooms, mess rooms and water closets, adequately ventilated and heated and equipped with lines or other fittings for hanging clothes.

### Article 13

1. Wherever possible, an isolated cabin shall be provided for a member of the crew who suffers from illness or injury. On vessels of 500 tons or over there shall be a sick bay. Where the competent authority decides, as provided for in Article 1, paragraph 4, of this Convention, that length shall be the parameter for this Convention, there shall be a sick bay on vessels of 150 ft (45.7 metres) in length or over.

2. An approved medicine chest with readily understandable instructions shall be carried in every vessel which does not carry a doctor. In this connection the competent authority shall give consideration to the Ships' Medicine Chests Recommendation, 1958, and the Medical Advice at Sea Recommendation, 1958.

*Article 14*

Sufficient and adequately ventilated accommodation for the hanging of oilskins shall be provided outside but convenient to the sleeping rooms.

*Article 15*

Crew accommodation shall be maintained in a clean and decently habitable condition and shall be kept free of goods and stores which are not the personal property of the occupants.

*Article 16*

1. Satisfactory cooking equipment shall be provided on board and shall, wherever practicable, be fitted in a separate galley.

2. The galley shall be of adequate dimensions for the purpose and shall be well lighted and ventilated.

3. The galley shall be equipped with cooking utensils, the necessary number of cupboards and shelves, and sinks and dish racks of rust-proof material and with satisfactory drainage. Drinking water shall be supplied to the galley by means of pipes; where it is supplied under pressure, the system shall contain protection against backflow. Where hot water is not supplied to the galley, an apparatus for heating water shall be provided.

4. The galley shall be provided with suitable facilities for the preparation of hot drinks for the crew at all times.

5. A provision storeroom of adequate capacity shall be provided which can be kept dry, cool and well ventilated in order to avoid deterioration of the stores. Where necessary, refrigerators or other low-temperature storage space shall be provided.

6. Where butane or propane gas is used for cooking purposes in the galley the gas containers shall be kept on the open deck.

**PART IV. APPLICATION TO EXISTING SHIPS***Article 17*

1. Subject to the provisions of paragraph 2, 3 and 4 of this Article, this Convention applies to vessels the keels of which are laid down subsequent to the coming into force of the Convention for the territory of registration.

2. In the case of a vessel which is fully complete on the date of the coming into force of this Convention for the territory of registration and which is below the standard set by Part III of this Convention, the competent authority may, after consultation with the fishing-vessel owners' and fishermen's organisations where such exist, require such alterations for the purpose of bringing the vessel into conformity with the requirements of the Convention as it deems possible having regard to the practical problems involved, to be made when:

- (a) the vessel is re-registered;
- (b) substantial structural alterations or major repairs are made to the vessel as a result of long-range plans and not as a result of an accident or an emergency.

3. In the case of a vessel in the process of building and/or reconversion on the date of the coming into force of this Convention for the territory of registration, the competent authority may, after consultation with the fishing-vessel owners' and fishermen's organisations where such exist, require such alterations for the purpose of bringing the vessel into conformity with the requirements of the Convention as it deems possible having regard to the practical problems involved; such alterations shall constitute final compliance with the terms of this Convention, unless and until the vessel be re-registered.

4. In the case of a vessel, other than such a vessel as is referred to in paragraphs 2 and 3 of this Article or a vessel to which the provisions of this Convention were applicable while she was under construction, being re-registered in a territory after the date of the coming into force of this Convention for that territory, the competent authority may, after consultation with the fishing-vessel owners' and fishermen's organisations where such exist, require such alterations for the purpose of bringing the vessel into conformity with the requirements of the Convention as it deems possible having regard to the practical problems involved; such alterations shall constitute final compliance with the terms of this Convention, unless and until the vessel is again re-registered.

## PART V. FINAL PROVISIONS

### *Article 18*

Nothing in this Convention shall affect any law, award, custom or agreement between fishing vessel owners and fishermen which ensures more favourable conditions than those provided for by this Convention.

### **Vocational Training (Fishermen) Recommendation, 1966 (No. 126)**

#### I. SCOPE AND DEFINITIONS

1. (1) For the purposes of this Recommendation, the term "fishing vessel" includes all ships and boats, of any nature whatsoever, whether publicly or privately owned, which are engaged in maritime fishing in salt waters, with the exception of ships and boats engaged in whaling or similar pursuits and fishery research and fishery protection vessels.
  - (2) This Recommendation applies to all training for work on board fishing vessels.
  - (3) This Recommendation does not apply to persons fishing for sport or recreation.
2. For the purpose of this Recommendation, the following terms have the meanings hereby assigned to them:
  - (a) skipper: any person having command or charge of a fishing vessel;
  - (b) mate: any person exercising subordinate command of a fishing vessel, including any person, other than a pilot, liable at any time to be in charge of the navigation of such a vessel;
  - (c) engineer: any person permanently responsible for the mechanical propulsion of a fishing vessel, as well as any other person liable at any time to operate and maintain the engines and mechanical equipment of such a vessel;
  - (d) skilled fisherman: any experienced member of the deck crew working on board a fishing vessel, participating in the operation of the vessel, preparing gear for fishing, catching, loading catch and processing it, and maintaining and repairing nets or other fishing equipment.

#### II. NATIONAL PLANNING AND ADMINISTRATION

##### *Planning and Co-ordination*

3. In planning a national education and training policy, the competent authorities in the countries possessing or intending to develop a fishing industry should ensure that adequate provision is made in the general network of training facilities for the training of fishermen.

4. Where national circumstances do not permit the development of facilities for the training of fishermen at all levels of skill required, collaboration with other countries, as well as with international organisations, in the development of common fishery training schemes for such skills and occupations as cannot be covered by national programmes should be considered.

5. (1) The activities of all public and private institutions in each country engaged in the training of fishermen should be co-ordinated and developed on the basis of a national programme.

(2) Such a programme should be drawn up by the competent authorities in co-operation with fishing vessel owners' and fishermen's organisations, with educational and fishery research institutions, and with other bodies or individuals having an intimate knowledge of the vocational training of fishermen. In developing countries in which specialised fishery research or development institutes are established in co-operation with other countries or international organisations, such institutes should play a leading part in the establishment of the national programme.

(3) To facilitate the planning, development, co-ordination and administration of fishermen's training schemes, joint advisory policy and administrative bodies should whenever possible be set up at the national level and, where appropriate, also at the regional and local levels.

6. The competent authorities should ensure that the various agencies and institutions responsible for the dissemination of information on training and employment opportunities, such as primary and secondary schools, vocational guidance and employment counselling services, public employment services, vocational and technical training institutions and fishing vessel owners' and fishermen's organisations, are supplied with complete information on public and private training schemes for fishermen and on conditions of entry into fishing.

7. The competent authorities should ensure that fishermen's vocational training schemes are fully co-ordinated with any other programmes and activities, public or private, related to the fishing industry. In particular, they should make certain that:

- (a) fishery research institutions make information on their latest discoveries of practical interest to fishing readily available to training centres and other interested bodies, and through these to working fishermen; where possible, the research institutions should contribute to the advanced training of fishermen, and fishermen's training centres should, as appropriate, assist these institutions in their work;
- (b) measures are taken, through the provision of general education prior to or simultaneously with vocational training, to advance the general level of education in fishing communities, to promote greater satisfaction among fishermen and to facilitate the assimilation of technical and vocational training;
- (c) arrangements are made, with the co-operation of fishing vessel owners' and fishermen's organisations, in order that, other things being equal, preference may be given in employment placement to persons who have completed a public or private training course;
- (d) arrangements are made, with the co-operation of fishing vessel owners' and fishermen's organisations, particularly in developing countries, for trainees completing public and private courses either to enter employment on fishing vessels or, alternatively, to acquire and operate suitably equipped fishing vessels, either individually, or by forming co-operatives for the joint purchase and use of fishing boats, or by any other appropriate means;
- (e) the number of trained fishermen corresponds to the number of boats and the equipment available or planned to be available in the country.

#### *Financing*

8. (1) Fishermen's training schemes should be systematically organised; financing should be on a regular and adequate basis and should have regard to the present and planned requirements and development of the fishing industry.

(2) Where required, the government should make financial contributions to training schemes carried on by local government or private bodies. These contributions may take the form of general subsidies, grants of land and buildings or of demonstration material such as boats, engines, navigational equipment and fishing gear, provision of instructors free of charge, or payment of fees for trainees.

(3) Training in publicly operated training centres for fishermen should be given without charge to the trainee. In addition, the training of adults and young persons in need should be facilitated by financial and economic assistance of the kind envisaged in Paragraph 7, subparagraphs (3) and (5), of the Vocational Training Recommendation, 1962.

### *Training Standards*

9. (1) The competent authorities, in co-operation with the joint bodies mentioned in Paragraph 5, subparagraph (3), of this Recommendation, should define and establish general standards for fishermen's training applicable throughout the territory of the country. These standards should be in conformity with the national requirements for obtaining the various fishermen's certificates of competency and should lay down:

- (a) the minimum age of entry into fishermen's training schemes;
- (b) the nature of medical examinations, including chest X-rays and hearing and sight tests, required for persons entering training schemes; the examinations, particularly the hearing and sight tests, may differ for persons entering deck and persons entering engine courses;
- (c) the level of general education which is required for admission to fishermen's training schemes;
- (d) the fishing, navigation and seamanship, safety, engineering, catering and other subject matter which should be included in the training curricula;
- (e) the amount of practical training, including time spent in engineering shops and at sea, which trainees should undergo;
- (f) the duration of the training courses for the various fishing occupations and the different levels of competency;
- (g) the nature of any examinations following the completion of the training courses; and
- (h) the experience and qualifications of the teaching staff of training institutions.

(2) Where it is not possible to lay down standards applicable throughout the country, recommended standards should be drawn up by the competent authorities, in co-operation with the joint bodies mentioned in Paragraph 5, subparagraph (3), of this Recommendation, to serve as a guide to the setting of standards which are as uniform as possible throughout the country.

### III. TRAINING PROGRAMMES

10. The curricula of the various training programmes for fishermen should be based on a systematic analysis of the work required in fishing and should be established in co-operation with the joint bodies mentioned in Paragraph 5, subparagraph (3), of this Recommendation. They should be periodically reviewed and kept up to date with technical developments and should, as appropriate for the functions to be exercised, include training in:

- (a) fishing techniques, including where appropriate the operation and care of electronic fish-finding devices, and operation, maintenance and repair of fishing gear;
- (b) navigation, seamanship and ship handling appropriate to the sea area and to the type of fishing for which the course is designed, including a proper knowledge of the international Regulations for Preventing Collisions at Sea;
- (c) stowage, cleaning and processing of fish on board;
- (d) vessel maintenance and other related matters;
- (e) operation, maintenance and repair of steam or internal combustion (gasoline or diesel) engines or other equipment which the trainee may be called upon to use;

- (f) operation and care of radio and radar installations which the trainee may be called upon to use;
- (g) safety at sea and safety in handling fishing gear, including such matters as stability, effects of icing, fire fighting, water-tight integrity, personal safety, gear and machinery safeguards, rigging safety measures, engine-room safety, lifeboat handling, use of inflatable life rafts, first aid and medical care and other related matters;
- (h) theoretical subjects relevant to fishing, including marine biology and oceanography, which will enable trainees to gain a broad foundation for further instruction and training leading to promotion or to transfer to another fishing occupation or another type of fishing;
- (i) general education subjects, although this may be provided for to a more limited extent in short courses;
- (j) operation, maintenance and repair of refrigeration systems, fire-fighting equipment, deck and trawling winches and other mechanical equipment of fishing vessels;
- (k) principles of shipboard electrical power installations, and maintenance and repair of the electrical machinery and equipment of fishing vessels;
- (l) health and physical education, especially swimming, where training facilities permit;
- (m) specialised courses in deck, engine and other subjects after an introductory period of general fishing instruction.

11. (1) National standards should, where practicable and appropriate, be established for certificates of competency or diplomas qualifying a person to act as skipper (various grades); mate (various grades); engineer (various grades); fishery technician (various grades); boatswain; skilled fisherman (various grades); cook; or other deck or engine-room personnel.

(2) Training programmes should be chiefly designed to prepare trainees for certification and should be directly related to national certification standards; they should take account of the minimum ages and minimum professional experience laid down by the competent authorities in respect of the various grades of certificates of competency.

(3) Where national certification examinations do not exist or do not exist for the particular duty in question, training courses should nevertheless prepare trainees for particular duties such as those listed above. All trainees successfully completing such training courses should receive a diploma concerning the course followed.

12. (1) Programmes should be available to train fishermen to perform duties as skippers and engineers of all types of vessels in use in the fishing fleet of the country concerned, including larger distant-water vessels.

(2) Where appropriate to the vessels in use, college-level fishing and navigation courses should be established which are of the same level as merchant navy officers' training programmes but which provide training in subject matters appropriate to fishing.

13. The duration of the various training programmes should be sufficient to enable trainees to assimilate the instruction given, and should be determined with reference to such matters as:

- (a) the level of training required for the occupation for which the course is designed;
- (b) the general educational level and age required of trainees entering the course;
- (c) the trainees' previous practical experience; and
- (d) the urgency of turning out trained fishermen in the country, subject to the maintenance of adequate standards of training.

14. (1) The teaching staff should consist of persons possessing a broad general education, a theoretical technical education and satisfactory relevant practical fishing experience.

(2) Where it is not possible to recruit a teaching staff with these qualifications, persons with practical experience in fishing and holding appropriate certificates of competency should be employed.

(3) Where it is not possible to recruit a full-time teaching staff with practical fishing experience, persons with satisfactory relevant practical fishing experience should be employed on a part-time basis.

(4) All teaching staff should have an aptitude for teaching and should be given appropriate teacher training by the competent educational authorities.

#### *Pre-Vocational Training*

15. In fishing communities, measures consistent with the Minimum Age (Fishermen) Convention, 1959, should be taken to provide pre-vocational training to schoolchildren, including training in elementary practical seamanship, basic commercial fishing techniques and navigational principles, in so far as this is appropriate to the general conditions in the particular country.

#### *Short Courses for Working Fishermen*

16. Training courses should be available for working fishermen to enable them to increase their technical skills and knowledge, to keep abreast of improved fishing and navigation techniques, and to qualify for promotion.

17. (1) Training courses for working fishermen should be specifically designed for the purposes of:

- (a) complementing the basic long-term courses by providing advanced specialised training for promotion;
- (b) providing training in fishing techniques new to the area; in operating, maintaining and repairing new types of engines or gear; and in making gear where appropriate;
- (c) providing all levels of training for fishermen who were unable to participate in a basic long-term training course;
- (d) providing accelerated training in developing countries.

(2) The courses should be of short duration and should be considered to be complementary to and not substitutes for basic long-term training programmes.

18. The courses, which may take the form of mobile courses bringing instructors and demonstration equipment to fishing centres, should in particular consist of programmes involving:

- (a) evening courses;
- (b) seasonal courses offered during stormy months or slack fishing periods; or
- (c) daytime courses for which fishermen temporarily leave their work for short periods.

19. (1) All appropriate measures should be taken to enable working fishermen to attend short courses ashore.

(2) Working fishermen should receive adequate financial compensation for the periods in which they attend short training courses.

20. Where long-term courses and short courses for working fishermen do not meet training needs, particularly in isolated areas, these courses may be supplemented by:

- (a) special radio and television courses and programmes providing fishing information;
- (b) correspondence courses specially adapted to the needs of working fishermen and arranged for use by study groups with occasional lectures or attendance at training schools;
- (c) periodic visits of research workers and extension officers to fishing communities.

#### IV. METHODS OF TRAINING

21. The training methods adopted by fishermen's training schemes should be the most effective possible, having regard to the nature of the courses, the trainees' experience, general education and age, and the demonstration equipment and financial support available.

22. Practical training, in which the students themselves participate, should be an important part of all fishermen's training programmes.

23. (1) Fishing training vessels should be used by all training institutions with programmes for persons entering fishing to provide instruction in fishing techniques,

navigation and seamanship, engine operation and other matters. These vessels should conduct actual fishing operations.

(2) Training vessels should, whenever possible, be attached to technical schools providing advanced training.

24. (1) Demonstration equipment such as engines, gear, fishing-boat models, workshop equipment and navigational aids should be used in training programmes.

(2) Such equipment should be prepared in collaboration with fishery research institutions and should include, whenever possible, the latest gear and navigational aids.

(3) Such equipment should be selected with reference to the gear, boats and engines which the trainees may be called upon to use.

(4) Films and other audio-visual aids, although they may be useful in some cases, should not be a substitute for demonstration equipment in the use of which trainees themselves take an active part.

(5) Visits should be organised for trainees to fishing vessels equipped with modern or special installations, to fishery research institutions, or to fishing centres away from the area in which the school is located.

25. Practical training may also be provided by periods of fishing at sea on board commercial fishing vessels.

26. Theoretical training, including general education, given as part of a training course should be directly related to the knowledge and skills required by fishermen and should, wherever possible, be integrated with the practical training offered.

#### V. INTERNATIONAL CO-OPERATION

27. (1) Countries should co-operate in promoting fishermen's vocational training, particularly in developing countries.

(2) This co-operation, as appropriate, may include such matters as:

- (a) with the help of international organisations or other countries, obtaining and training teaching staff to establish and improve fishermen's training facilities;
- (b) establishing joint training facilities or joint fishery research institutions with other countries;
- (c) making training facilities available to selected trainees or instructor trainees from other countries, and sending trainees or instructor trainees to training facilities in other countries;
- (d) arranging international exchanges of personnel and international seminars and working parties;
- (e) providing instructors for fishermen's training schools in other countries.

## INTRODUCTION

At its 283rd Session (March 2002)<sup>1</sup> the Governing Body of the International Labour Office decided to place on the agenda of the 92nd Session (June 2004) of the International Labour Conference an item concerning a comprehensive standard (a Convention supplemented by a Recommendation) on work in the fishing sector. This new standard (or standards) would revise the existing seven ILO instruments on the subject – five Conventions (concerning minimum age, medical examination, articles of agreement, accommodation and competency certificates) and two Recommendations (concerning vocational training and hours of work). The rationale for this revision was to reflect the changes in the sector which have occurred over the last 40 years; to achieve more widespread ratification; to reach, where possible, a greater portion of the world's fishers, particularly those working on smaller vessels; and to address other critical issues, such as safety and health. It will also take into account differences in fishing operations, employment arrangements, methods of remuneration and other aspects. This revision will complement the parallel work being done by the ILO to consolidate its standards for seafarers into a comprehensive new standard.<sup>2</sup>

In accordance with article 39 of the Standing Orders of the Conference, which deals with the preparatory stages of the double-discussion procedure, the Office drew up a preliminary report,<sup>3</sup> intended to serve as a basis for the first discussion of the item on the fishing sector standard by the Conference in 2004. The report gives an overview of the fishing sector and analyses the relevant legislation and practice concerning labour conditions in the sector in various ILO member States. The report and the attached questionnaire were communicated to the governments of member States of the ILO, which were invited to send their replies so as to reach the International Labour Office by 1 August 2003 at the latest.

The present report consists of a summarized compilation of the replies to the abovementioned questionnaire received by the Office. At the time of drawing up this report, the Office had received replies from the governments of the following 83 member States:<sup>4</sup> Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia,

---

<sup>1</sup> GB.283/2/1, para. 21(b).

<sup>2</sup> A new consolidated maritime labour Convention is due for discussion and possible adoption by the International Labour Conference in 2005.

<sup>3</sup> ILO: *Conditions of work in the fishing sector: A comprehensive standard (a Convention supplemented by a Recommendation) on work in the fishing sector*, Report V(1), International Labour Conference, 92nd Session, Geneva, 2004.

<sup>4</sup> To be able to send this report to member States in February 2004, only those replies received by the Office before 7 November 2003 have been taken into account. Replies that arrived too late to be included in the report may be consulted by delegates at the Conference.

Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

In accordance with article 39, paragraph 1, of the Standing Orders of the Conference, governments were requested to consult the most representative organizations of employers and workers before finalizing their replies to the questionnaire, to give reasons for their replies and to indicate which organizations have been consulted. Governments were also reminded of the importance of ensuring that all relevant departments were involved in the present consultative process, including the departments responsible for labour and social affairs, fisheries, maritime safety, health and the environment. The experience gained by the Office in obtaining the information provided in the law and practice report also points to the value of consultations, where possible, with regional and local authorities within member States.

The governments of the following member States indicated that their replies had been drawn up after consultation with employers' and workers' organizations, and some included in their replies the opinions expressed on certain points by these organizations: Algeria, Argentina, Australia, Austria, Bangladesh, Belarus, Benin, Bulgaria, Burundi, Canada, China, Costa Rica, Cuba, Czech Republic, Denmark, Ecuador, Egypt, Estonia, Finland, Germany, Greece, Guatemala, Honduras, Iceland, Indonesia, Islamic Republic of Iran, Ireland, Italy, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Poland, Portugal, Romania, Russian Federation, Saudi Arabia, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Ukraine, United Kingdom, United States, Venezuela, Zimbabwe.

The governments of the following member States sent separately the replies from employers', workers' or other organizations; in some cases, replies were received directly by the Office: Argentina, Belgium, Brazil, Canada, Colombia, Croatia, Denmark, Egypt, Eritrea, Estonia, France, Gabon, Guinea, Ghana, Honduras, Indonesia, Italy, Japan, Republic of Korea, Latvia, Lebanon, Morocco, Namibia, Netherlands, Poland, Portugal, Romania, Russian Federation, Sierra Leone, Sri Lanka, Sudan, Switzerland, Thailand, Trinidad and Tobago, United Kingdom, United States, Zimbabwe.

Replies have also been received from the International Christian Maritime Association (ICMA), the International Collective in Support of Fishworkers (ICSF) and the International Maritime Health Association (IMHA).

The present report, which has been drawn up on the basis of the replies received from governments, and employers' and workers' organizations, contains the essential points of their observations, together with brief commentaries.

This report also takes into account the report of the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector, held in Geneva from 2 to 4 September

2003, in keeping with the decisions taken by the Governing Body,<sup>5</sup> in order to discuss issues to be covered in the fishing standard. The report of the Meeting of Experts is reproduced in Annex I to this report.

The proposed Conclusions with a view to a Convention and a Recommendation appear at the end of this report.

<sup>5</sup> GB.284/Inf.1; GB.285/20, paras. 10-14; GB.286/21, paras. 16-17; GB.287/12, paras. 3-5.

## REPLIES RECEIVED AND COMMENTARIES

This section contains the substance of the general observations made by governments and of the replies to the questionnaire contained in Report V (1), as well as of replies received from employers' and workers' organizations, three international non-governmental organizations, and a few joint replies.

Each question is reproduced and followed by a list indicating those that replied to it, grouped according to the nature of the replies (affirmative, negative or other). Whenever a respondent has made an observation qualifying or explaining the reply, the substance of each comment is given, in alphabetical order of countries; in some cases, similar replies have been grouped together.

A summary of the replies to each question and the related commentary by the Office are provided at the end of each section. The Office commentary refers to both the questions and the relevant point (or points) of the Proposed Conclusions at the end of the report, and thus serves as a link between the information gathered and analysed by the Office through the questionnaire and the Proposed Conclusions concerning a standard for the fishing sector. It also takes into account the views expressed by the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector.

A number of countries stated that the preliminary report constituted a satisfactory basis for discussion and made general comments without answering specific questions. Some governments reported on their national law and practice, while others provided detailed information on the situation in their countries with regard to fishing. While this is most useful for the work of the Office, this information has not been reproduced unless it is necessary for an understanding of the reply.

### General observations

*Australia.* Primary responsibility for the fishing sector lies with the governments of the six states and the Northern Territory. The federal Government has responsibility only for those fishing vessels which voyage overseas. It is difficult to justify why the fishing sector should have separate standards from the seafaring sector; separate standards for fishing vessels are superfluous. Each member State should determine whether maritime standards should also apply to fishing vessels.

*New Zealand.* ILO standards should be practicable, i.e. able to accommodate a variety of national circumstances, while promoting universally accepted core principles. They should focus on outcomes so that countries can achieve the underlying principles even if the means differ according to national policies and practices. The level of detail regarding the method of implementation should reflect the need to achieve the desired outcomes, but should be limited. They should have broad application – minimum universal standards should be set to provide minimum employment and working conditions across all sectors. The objective of the proposed instrument is to provide a comprehensive standard for securing working conditions in the fishing sector to achieve decent work outcomes. Generally, instruments should not be set for specific sectors of the workforce. However, a high number of workers are engaged in work on

vessels registered in States other than their own. Given the transnational nature of the work and the varying state laws and practices covering the sector, it is appropriate for a fishing instrument to be developed to provide minimum universally recognized standards. New Zealand strongly supports the consolidation of ILO instruments where appropriate, and considers the potential consolidation of fishing sector instruments to be a positive rationalization.

*Norway.* There is a clear need for a Convention regulating fishermen's working and living conditions. The ILO has classified fishing as hazardous work. As globalization has a profound impact on working and living conditions in this industry, it is evident that global solutions must be sought. As fish stocks are depleted and international competition increases, the protection of the health and welfare of workers in the fishing sector is an international challenge. To ensure that the instrument meets future challenges, parts of it need to be amended through the tacit acceptance of the amendment procedure adopted in the Seafarers' Identity Documents Convention (Revised), 2003 (No. 185). The ILO should further introduce in the instrument a requirement to ensure that all vessels, regardless of their flag, operating within the member State's exclusive economic zone (EEZ) must comply with the Convention before they are granted a licence to fish. This is an effective means to ensure compliance. The introduction of on-board ombudsmen and safety committees and/or regional safety committees is essential, as is a requirement to ensure the reporting and follow-up of accidents and the facilitation of sharing of information. These measures can be implemented with minimal cost to fishermen but can be effective tools in reducing the dangers. The new instrument should also recognize the diverse employment relationships that exist within the fishing industry (share fishermen, self-employed owners/skippers). It is essential that the new instrument should not simply amalgamate the provisions of previous ILO fishing standards without thoroughly reviewing and updating them. The new instrument should take into account provisions of existing standards of other international organizations. For example, it should not conflict with existing provisions of the STCW-F Convention. Finally, compatibility with the provisions of the proposed consolidated maritime labour Convention should be considered.

*United Kingdom.* Firstly, the new instrument should recognize the diverse employment relationships that exist within the fishing industry. As stated in Report V (1), the majority of workers are share fishermen or self-employed owners/skippers. If the new instrument is to be practical, it will be important that it provide for generally applicable standards that do not depend on traditional employer/employee relationships for their implementation. Secondly, the new instrument should not simply amalgamate the provisions of previous ILO fishing industry Conventions and Recommendations without thoroughly reviewing and updating them. The new instrument should also take into account provisions of existing standards of other international organizations. For example, it should not duplicate, and certainly not conflict with, existing provisions of the STCW-F Convention. Thirdly, the need for compatibility with the provisions of the proposed consolidated maritime labour Convention should be considered. This may be important for those occasions where a fishing vessel may in effect operate as a merchant ship, e.g. when undertaking the role of a standby vessel in the offshore industry or acting as a guard ship during seismic surveys. Finally, for EU Member States there will be a need to ensure compatibility with EU Council Regulations/Directives. This is potentially relevant in relation to issues such as medical care, working time, OSH and social protection for those on fishing vessels.

*Austria and Switzerland* indicated that, because they are landlocked countries and have only limited numbers of persons engaged in lake and river fishing, the new standard would be of only marginal interest to them. *Finland*, noting decreasing numbers of persons engaged in fishing and a rapid increase in their age, pointed out that improving the profitability of fishing and creating better working conditions would help to ensure the survival of the fishery profession.

## A. Form of the instrument or instruments

*Do you consider that the International Labour Conference should adopt one or more instruments on work in the fishing sector?* **Qu. A1**

### *Affirmative*

*Governments:* 74. Algeria, Argentina, Austria, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Czech Republic, Denmark, Ecuador, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Namibia, Netherlands, New Zealand, Nicaragua, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), CCIAB (Lebanon), CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECOT (Thailand), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA (Italy), Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Negative*

*Governments:* 2. Australia, Myanmar.

*Employers' organizations:* Association of Employers of Burundi (Burundi), LEC (Latvia).

### *Other*

*Governments:* 6. Bahrain, Cuba, Egypt, Ireland, Nigeria, United States.

*Employers' organization:* ECA (Trinidad and Tobago).

*Workers' organization:* ZZMiR (Poland).

### *Comments*

*Australia.* Given that ILO seafarer Conventions have the option of being applied to the fishing sector, where appropriate, separate instruments addressing the fishing sector would be superfluous.

*Latvia.* The National Board of Fisheries disagrees.

*United States.* USCIB: The new standard should also address other issues such as occupational safety and health.

**Qu. A2** *If yes, should the instrument or instruments take the form of (a) a Convention, (b) a Recommendation, (c) a Convention supplemented by a Recommendation?*

#### *(a) A Convention*

*Governments:* 6. Algeria, Ireland, Malawi, Panama, Switzerland, United Arab Emirates.

*Employers' organizations:* MEDEF (France), CCIAB (Lebanon).

*Workers' organizations:* UFAWU-CAW (Canada), CDT (Morocco), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), USS (Switzerland), ZCTU (Zimbabwe).

#### *(b) A Recommendation*

*Governments:* 9. Bahrain, Bangladesh, Egypt, Estonia, India, Mexico, Oman, Poland, Thailand.

*Employers' organizations:* ESA/Estonian Fishermen's Association (Estonia), CCIAS (Lebanon), NEF (Namibia), Norwegian Fishing Vessel Owners' Association/Norwegian Trawlers' Association (Norway), ANDELAIPP (Panama).

*Workers' organizations:* Estonian Fishery Workers Trade Union (Estonia).

#### *(c) A Convention supplemented by a Recommendation*

*Governments:* 64. Argentina, Australia, Austria, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Cuba, Czech Republic, Ecuador, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, Indonesia, Islamic Republic of Iran, Italy, Jamaica,

Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Malaysia, Mauritius, Mozambique, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Syrian Arab Republic, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), COHEP (Honduras), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CGT (Brazil), CAW-Canada (Canada), PPDIV (Croatia), GTUWA (Egypt), Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), SLIMAPG (Guinea), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), RPRRKh (Russian Federation), UFFC (Sri Lanka), SWTUF (Sudan), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *A consolidated Convention*

*Governments:* 2. Denmark, Norway.

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), JSU (Japan), KSM NSZZ Solidarnosc, PSU (Poland), SALFU (Sierra Leone).

### *Comments*

*Canada, Eritrea, Finland, Japan, Kuwait, Lebanon, Mozambique, Portugal, Spain, Tunisia, Turkey, United States, USCIB (United States)* agree that the new Convention should set out principles, while the details should be laid down in a Recommendation. They point out that this is in conformity with the decision of the Governing Body (283rd Session, March 2002) on this agenda item. This would provide for flexibility and facilitate wider ratification.

*Egypt and Oman* prefer a Recommendation for reasons of flexibility in the light of regional and national variations in conditions of work.

*Argentina.* The different types of fishing and areas of operation should be taken into account.

*CAPeCA/CALAPA/CAPA:* A Convention supplemented by a Recommendation would have the widest coverage, taking into account the different regulations existing among countries.

*Australia.* If there is a majority support for new instruments, the Convention should specify broad principles focused on the appropriate goals and protections, and should be flexible enough to accommodate different national situations and levels of social and economic development, as well as future developments. Other more detailed and sector-specific fishing standards should be incorporated in the non-binding Recommendation and/or code of practice.

*Brazil.* The Convention should have optional appendices along the lines of the Merchant Shipping (Minimum Standards) Convention, 1976 (No. 147).

*Costa Rica.* INS: In addition to reflecting the provisions of the Prevention of Accidents (Seafarers) Convention, 1970 (No. 134), there should be other instruments such as Recommendations that are more in keeping with the current reality of work at sea.

*Denmark.* The new instrument should be a Convention including a code divided into a mandatory and a non-mandatory part; failing this, a Convention supplemented by a Recommendation.

*Finland.* The Convention should apply only to salaried workers.

*France.* The new standards should include guidelines for port state control.

*Ireland.* HSA: A Convention supplemented by a Recommendation.

*Namibia.* NEF: Start with a Recommendation on a pilot study basis and assess the implications thereof after a two-year period.

*New Zealand.* Generally, ILO Conventions should not be in the form of sector-specific provisions. However, given the unique features of the international shipping and fishing sectors and the dearth of international maritime instruments in force that deal with all safety aspects of international fishing, regulation of the fishing sector should be an exemption from the preferred approach.

*Norway.* The new instrument should be similar to the proposed consolidated maritime labour Convention being developed for seafarers, which has mandatory and non-mandatory parts. In order to achieve the widest possible ratification, there must be flexibility in the implementation of the regulations, and “substantial equivalence” will be just as important here as in the ongoing ILO work on seafarers’ working and living conditions, while the critical balance with effective regulations must be found. In view of the different national regulations, the Convention should seek to establish a baseline to ensure the best possible working and living conditions at the time of entry into force, while the tacit amendment procedures and Recommendation (guidelines) should contribute to gradually lifting nations to a higher level. Norway indicates that the Norwegian Fishing Vessels Owners’ Association/Norwegian Trawlers’ Association prefer just a Recommendation, in order to ensure that the provisions are as “close” to the user as possible, leaving it to the EU and national legislation to regulate the industry.

*Panama.* The Convention should contain updated standards on work on board fishing vessels.

APOM: The Convention should protect not only life at sea but also marine resources and environment.

*Romania.* CNS Cartel Alfa: A Convention would standardize the provisions in this area.

*Saint Vincent and the Grenadines.* Special consideration should be given to artisanal and small-scale fishing vessels. Less stringent measures should be imposed without compromising safety.

*Spain.* Even if ILO Conventions have the dual nature of a minimum but at the same time flexible standard, the new standard should be supplemented by a Recommendation, which could offer Members non-binding guidance that would elaborate on, supplement and enhance the Convention.

*Switzerland.* A binding Convention is more effective than a Recommendation.

*Trinidad and Tobago.* While some provisions should be binding, it would limit the scope of the instrument if none of the provisions could be solely for guidance.

*United Kingdom.* It is important to remember that fishing is not a homogeneous activity across the globe. Any set of rules will have to fit circumstances which are different from one region or country to another. If a final Convention, or Convention and Recommendation, are produced they should not be too prescriptive.

*Venezuela.* A Convention supplemented by a Recommendation should be adopted, taking into account the safety systems in each country and the instruments adopted in this sector in the last 40 years.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), JSU (Japan), KSM NSZZ Solidarnosc, PSU (Poland), SALFU (Sierra Leone): There is a need for a mandatory instrument in order to improve conditions for fishermen in many parts of the world. The Convention should be a stand-alone instrument and should include a recommendatory code integrally linked to the Convention, i.e. an annex providing additional guidance for the implementation of the mandatory standards.

The vast majority of States (74 of 83) replying to the questionnaire said that the ILO should adopt one or more instruments on work in the fishing sector. Sixty-four indicated their preference for a Convention supplemented by a Recommendation, in conformity with the decision of the Governing Body (283rd Session, March 2002). A Convention setting out the main principles, with a Recommendation containing the details, would allow sufficient flexibility for widespread ratification and application to a large number of fishers (e.g. in developing countries and on small vessels). A few States and several workers' organizations argued in favour of a consolidated framework Convention with mandatory and non-mandatory parts similar to that being considered by the ILO for seafarers.

Recalling the decision by the Governing Body to place on the agenda of the Conference an item concerning a comprehensive standard (a Convention supplemented by a Recommendation) on work in the fishing sector, and noting that a majority of States indicated their support for this in their replies, the Office has prepared Proposed Conclusions with a view to a Convention, followed by Proposed Conclusions with a view to a Recommendation.

The Office drafted the Proposed Conclusions taking into account the replies to the questionnaire, the outcome of the Tripartite Meeting on Safety and Health in the Fishing Industry (December 1999), and the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector (September 2003).<sup>1</sup> It has also taken into consideration the proposed extension of the scope of the instruments to cover all fishers, as well as the importance of achieving the widest possible ratification of the new Convention. The Office has placed certain provisions in annexes to make the main body of the Convention more readable.

The Conference may also wish to consider an alternative form for the fishing standard. Such an alternative could be a consolidated framework Convention similar to the standard being developed by the ILO for seafarers. In this regard, the Office notes that

---

<sup>1</sup> The report of the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector is appended to this report as Annex I.

this idea was suggested by Worker experts<sup>2</sup> participating in the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector and was supported by several other participants at that Meeting. The Conference may therefore wish to consider whether the Office should be instructed to redraft the standard in such a format, i.e. as a framework Convention containing Articles, Regulations, and a code divided into a mandatory part (Part A) and a recommendatory part (Part B). This could be submitted to the Conference for the second discussion in June 2005.

## B. Contents of a proposed Convention

### B1. SCOPE

The following areas of operation are used in the questionnaire:

- vessels engaged in fishing operations on the high seas and in waters other than those of the flag State (hereinafter referred to as “A”);
- vessels engaged in fishing operations up to the limits of the exclusive economic zone of the flag State (hereinafter referred to as “B”);
- vessels engaged in fishing operations up to the limits of the territorial waters of the flag State (hereinafter referred to as “C”);
- vessels engaged in fishing operations up to three miles from the baseline (hereinafter referred to as “D”);
- vessels engaged in fishing operations in rivers and inland waters (hereinafter referred to as “E”).

**Qu. B1(a)** *Should the Convention apply to fishing vessels in all of the abovementioned areas of operation?*

#### *Affirmative*

*Governments:* 41. Argentina, Austria, Bahrain, Belarus, Belgium, Brazil, Burundi, Canada, Croatia, Czech Republic, Ecuador, El Salvador, Eritrea, Estonia, Honduras, Hungary, Iceland, Ireland, Jamaica, Kuwait, Lithuania, Malawi, Mexico, Mozambique, Myanmar, New Zealand, Nicaragua, Norway, Panama, Portugal, Russian Federation, Saint Vincent and the Grenadines, Serbia and Montenegro, Spain, Sweden, Switzerland, Ukraine, United Arab Emirates, United States, Venezuela, Zimbabwe.

*Employers’ organizations:* EFE (Eritrea), CCIAB, CCIAS (Lebanon), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

---

<sup>2</sup> See Annex I, Appendix I to the report of the Tripartite Meeting.

*Workers' organizations:* SOMU (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), GTUWA (Egypt), Estonian Fishery Workers Trade Union (Estonia), CSG (Gabon), SLIMAPG (Guinea), FTUS (Lebanon), NUNW (Namibia), APOM (Panama), ZZMiR (Poland), RPRRKh (Russian Federation), UFFC (Sri Lanka), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), Confcooperative (Italy), ICMA.

### *Negative*

*Governments:* 35. Algeria, Australia, Bangladesh, Benin, Bulgaria, China, Cuba, Cyprus, Egypt, Finland, France, Germany, Greece, Guatemala, India, Indonesia, Italy, Japan, Republic of Korea, Latvia, Lebanon, Malaysia, Mauritius, Namibia, Netherlands, Oman, Philippines, Qatar, Saudi Arabia, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, United Kingdom.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), NEF (Namibia), Norwegian Fishing Vessel Owners' Association/Norwegian Trawlers' Association (Norway), ECOT (Thailand).

*Workers' organizations:* CCUOMM, CGT, UMAFLUP (Argentina), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), Estonian Water Transport Workers Federation (Estonia), MDU (Ghana), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), NSU/NSF/DNMF (Norway), KSM NSZZ Solidarnosc, PSU (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), SALFU (Sierra Leone), SWTUF (Sudan), TUC (United Kingdom).

*Others:* AGCI PESCA (Italy), PVIS (Netherlands), ICSF.

### *Other*

*Governments:* 6. Costa Rica, Denmark, Fiji, Islamic Republic of Iran, Nigeria, Romania.

*Employers' organization:* LEC (Latvia).

*Workers' organization:* CDT (Morocco).

### *Comments*

*Costa Rica.* INS agrees.

*Oman.* The Ministry of Agriculture and Fisheries agrees.

*Panama.* The Convention should apply to vessels engaged in commercial exploitation of living marine resources, including support vessels and any other vessels directly employed in

fishing operations, which are registered in a member State. National legislation should determine when a vessel is considered to be involved in maritime navigation.

*Sweden.* The Convention should apply to all fishing vessels, but there should be the possibility to exclude certain vessels (see B1(b)).

*United States.* In addition, the requirements of the Convention should differ depending upon areas of operation.

**Qu. B1(b)** *Should the Convention provide the possibility to exclude certain fishing vessels in the following areas of operation:*

*Vessels engaged in area “C”?*

*Governments:* 23. Belarus, Benin, China, Cuba, Cyprus, Estonia, Finland, Germany, Greece, India, Republic of Korea, Malaysia, Mauritius, Mexico, New Zealand, Philippines, Russian Federation, Serbia and Montenegro, Syrian Arab Republic, Trinidad and Tobago, Tunisia, United Arab Emirates, Zimbabwe.

*Employers’ organizations:* ESA/Estonian Fishermen’s Association (Estonia), COHEP (Honduras), USCIB (United States).

*Workers’ organizations:* CAW-Canada (Canada), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), FKSU (Republic of Korea), NUNW (Namibia), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SWTUF (Sudan).

*Vessels engaged in area “D”?*

*Governments:* 29. Algeria, Australia, Bahrain, Bangladesh, Belarus, China, Cuba, Cyprus, Eritrea, Finland, Germany, Greece, Guatemala, Indonesia, Italy, Latvia, Lithuania, Mauritius, Netherlands, New Zealand, Philippines, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Sweden, Thailand, Trinidad and Tobago, Tunisia, United Arab Emirates.

*Employers’ organizations:* MEDEF (France), COHEP (Honduras), NEF (Namibia), ECOT (Thailand), USCIB (United States).

*Workers’ organizations:* CAW-Canada (Canada), CNS Cartel Alfa (Romania), UFFC (Sri Lanka), SWTUF (Sudan).

*Others:* HSA (Ireland), AGCI PESCA (Italy), ICSF.

*Vessels engaged in area “E”?*

*Governments:* 46. Algeria, Australia, Belarus, Belgium, Bulgaria, Canada, China, Croatia, Cuba, Cyprus, Ecuador, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Hungary, Iceland, India, Indonesia, Italy, Japan, Latvia, Lithuania,

Mauritius, Namibia, Netherlands, New Zealand, Nigeria, Oman, Philippines, Qatar, Saint Vincent and the Grenadines, Serbia and Montenegro, Spain, Sweden, Switzerland, Thailand, Trinidad and Tobago, Tunisia, Turkey, United Arab Emirates, United Kingdom, United States.

*Employers' organizations:* MEDEF (France), COHEP (Honduras), Norwegian Fishing Vessels Owners' Association/Norwegian Trawler's Association (Norway), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CAW-Canada (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), NSU/NSF/DNMF (Norway), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), NCTL (Thailand), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA (Italy), PVIS (Netherlands).

### Comments

*Austria.* The Convention should apply to fishing vessels in all areas of operation but provide the possibility to exclude certain vessels. The huge differences between deep-sea and inland-water fishing in some areas should be taken into consideration. The Convention should stipulate rules that are appropriate to the conditions prevailing in deep-sea and inland-water fishing, respectively.

*Ecuador.* Exclusion of artisanal or subsistence fishing in rivers and inland waters is done on a non-commercial or subsistence basis.

*Ireland.* The Marine Survey Office questions how this would be enforced. HSA: Areas "D" and "E".

*United Kingdom.* TUC: The exclusion of operating area "E" should not be available to ratifying member States if the conditions of work in their major inland waters are similar to those at sea.

*United States.* USCIB: The Convention should not include fishing vessels covered in most countries by domestic legislation or by other ILO Conventions protecting all workers. To do otherwise will lead to the situation of the Minimum Age (Sea) Convention, 1920 (No. 7), denounced by the vast majority of nations because they ratified the Minimum Age Convention, 1973 (No. 138). In the United States fishing operations taking place within state territorial waters are under federal and state jurisdiction with respect to hours worked, OSH, and minimum wage. However, fishing operations outside of state waters are governed by federal maritime law, which is silent on matters such as hours of work and minimum wage but covers worker safety, minimum age and other subjects raised by the fishing Conventions.

*ICSF.* Agrees with the exclusion of vessels of category "D", and of categories "C" and "E", provided that fishing operations only last one day.

**Qu. B1(c)** *Should the Convention provide for any other exclusion?**Affirmative*

*Governments:* 26. Argentina, Austria, China, Cuba, Denmark, Egypt, Finland, Germany, Greece, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lithuania, Malaysia, Nigeria, Philippines, Qatar, Saint Vincent and the Grenadines, Saudi Arabia, Sweden, Syrian Arab Republic, Turkey, United Arab Emirates, United Kingdom.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), ESA/Estonian Fishermen's Association (Estonia), COHEP (Honduras), NEF (Namibia), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), NUNW (Namibia), KSM NSZZ Solidarnosc, PSU (Poland), SALFU (Sierra Leone), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Negative*

*Governments:* 43. Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, Cyprus, Czech Republic, Ecuador, Eritrea, Estonia, France, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Ireland, Italy, Malawi, Mauritius, Mexico, Mozambique, Myanmar, Namibia, New Zealand, Nicaragua, Norway, Oman, Portugal, Russian Federation, Serbia and Montenegro, Spain, Switzerland, Trinidad and Tobago, Tunisia, Ukraine, United States, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), MEDEF (France), CCIAB, CCIAS (Lebanon), Norwegian Fishing Vessels Owners' Association/Norwegian Trawlers' Association (Norway), ECOT (Thailand), ECA (Trinidad and Tobago).

*Workers' organizations:* CGT (Brazil), UFAWU-CAW (Canada), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), NSU/NSF/DNMF (Norway), APOM (Panama), ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), UFFC (Sri Lanka), USS (Switzerland), NCTL (Thailand), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), ICMA.

*Other*

*Governments:* 13. Algeria, Australia, Bahrain, Costa Rica, Croatia, El Salvador, Fiji, Islamic Republic of Iran, Lebanon, Netherlands, Panama, Romania, Thailand.

*Employers' organization:* LEC (Latvia).

*Workers' organizations:* CAW-Canada (Canada), PPDIV (Croatia), CDT (Morocco), SWTUF (Sudan).

*Comments*

*Argentina, SOMU (Argentina), Austria, Brazil, Germany, Jamaica, Japan, Latvia, Lebanon, Nigeria, Panama, Philippines, Qatar, Saint Vincent and the Grenadines* recommend that exclusions should apply particularly to small boats (e.g. less than 5 tons), recreational and/or educational fishing vessels, vessels fishing for sport, in rivers and lakes and close to the shore, without paid workers, or operated exclusively by members of the same family. Other exclusions should be provided for fishing vessels engaged in EEZ (*Egypt, Malaysia*) and those under 20 GRT (*Egypt, Sweden*).

*Costa Rica.* INS disagrees.

*Denmark.* The scope of application should be as wide as possible. However, the Convention should provide the possibility of exemptions relating to a certain item. For example, the items concerning minimum basic safety training, minimum age and articles of agreement should cover all fishermen regardless of the vessel's area of operation, but the training requirement, for example, could depend on the size of the vessel.

*El Salvador.* Include production sectors that do not use vessels to exploit resources (oysters, molluscs, crabs, etc.).

*Finland.* The scope of application depends on the content of the Convention – if it is sufficiently general in nature the scope could be wide. The Recommendation should exclude the owners of a business enterprise (vessel owners).

*France.* The exclusion referred to in B1(b) should be understood as targeting inland waters within the meaning of international maritime law (e.g. the UNCLOS Convention).

*Greece.* Fishing vessels using special traditional fishing methods common to one or more States.

*Guinea.* SLIMAPG: Vessels operating in area “E” are not subject to certain dangers such as collisions with other vessels or severe weather conditions.

*Honduras.* COHEP: Artisanal and small-scale fishing.

*Republic of Korea.* Fishing vessels of less than 24 m in length.

*Lebanon.* OSH provisions should be applied to fishing vessels of all kinds.

*Namibia.* NEF: Smaller vessels would, in some instances, not provide for specific facilities.

*Norway.* Fishing vessels under 10.67 m in length are not obliged to hold a certificate in Norway.

*Serbia and Montenegro.* Some working conditions are the same on board almost all fishing vessels (e.g. exposure to humidity, occupational diseases, etc.).

*Spain.* Nevertheless, in order to achieve widespread ratification, the instrument should include the standard flexibility clause according to which each State may, after consulting the representative employers' and workers' organizations of the sector, exclude additional vessels, provided that it justifies such exclusion.

*Thailand.* ECOT: The Convention should focus on organized and commercial vessels rather than small-scale fishing vessels.

*Trinidad and Tobago.* NATUC: As conditions vary from one country to another, what may represent a valid exclusion in one State might not be valid in another country.

*Turkey.* The operating area of fishing vessels is not always the appropriate method of delimiting the scope of the Convention, because it is sometimes not possible to determine the operating areas of fishing vessels at sea.

*United Arab Emirates.* Fishing vessels operating within 1 mile of the baseline.

*United Kingdom.* Other exclusions should be provided, depending on the content and structure of the Convention.

*United States.* USCIB: The Convention should be open to the possibility of excluding fishing operations, where the circumstances are substantially different from the conditions necessitating the establishment of an international minimum standard.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), SALFU (Sierra Leone), TUC (United Kingdom): The Convention should provide for the exclusion of very small and single-manned vessels.

**Qu. B1(d)** *If “areas of operation” would not be an appropriate method of delimiting the scope of the Convention, what other method should be used for this purpose:*

#### *Fishing vessel length*

*Governments:* 36. Argentina, Algeria, Bangladesh, Benin, Burundi, China, Croatia, Cyprus, Denmark, Ecuador, Finland, France, Iceland, India, Indonesia, Italy, Jamaica, Republic of Korea, Latvia, Lebanon, Malawi, Mauritius, Mexico, Netherlands, New Zealand, Nicaragua, Nigeria, Qatar, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Syrian Arab Republic, Tunisia, Turkey, United Arab Emirates, United Kingdom.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), COHEP (Honduras), CCIAS (Lebanon), Norwegian Fishing Vessel Owners' Association/Norwegian Trawlers' Association (Norway), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CAW-Canada (Canada), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), FKSU (Republic of Korea), FTUS (Lebanon), NUNW (Namibia), NSU/NSF/DNMF (Norway), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), SALFU (Sierra Leone), SWTUF (Sudan), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA.

#### *Tonnage*

*Governments:* 30. Algeria, Benin, Bulgaria, Burundi, China, Croatia, Ecuador, Egypt, Fiji, Guatemala, Iceland, Indonesia, Japan, Lebanon, Lithuania, Malawi,

Malaysia, Myanmar, Nicaragua, Nigeria, Norway, Panama, Serbia and Montenegro, Spain, Sweden, Syrian Arab Republic, Thailand, Tunisia, Turkey, Zimbabwe.

*Employers' organizations:* ESA/Estonian Fishermen's Association (Estonia), COHEP (Honduras), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CAW-Canada (Canada), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), JSU (Japan), NSU/NSF/DNMF (Norway), APOM (Panama), KSM NSZZ Solidarnosc, PSU (Poland), CNS Cartel Alfa (Romania), SALFU (Sierra Leone), SWTUF (Sudan), NCTL (Thailand), TUC (United Kingdom).

*Others:* AGCI PESCA (Italy), ICMA.

#### *Time fishing vessel spends at sea*

*Governments:* 34. Algeria, Bahrain, Benin, Bulgaria, Burundi, Cuba, Denmark, El Salvador, Estonia, France, Germany, Guatemala, Honduras, Hungary, Iceland, Indonesia, Ireland, Kuwait, Mauritius, Namibia, Netherlands, Nicaragua, Nigeria, Norway, Qatar, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Syrian Arab Republic, Tunisia, Ukraine, United Kingdom, Venezuela.

*Employers' organizations:* ESA/Estonian Fishermen's Association (Estonia), CCIAB (Lebanon), COHEP (Honduras), ECA (Trinidad and Tobago).

*Workers' organizations:* CGT, SOMU (Argentina), CGT (Brazil), CAW-Canada (Canada), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), SLIMAPG (Guinea), JSU (Japan), UFFC (Sri Lanka), SWTUF (Sudan), NATUC (Trinidad and Tobago).

#### *Other methods*

*Bangladesh, Lebanon, CCIAS (Lebanon).* Number of fishermen on board.

*Brazil, Canada.* Differentiation between artisanal fishing vessels using family members of the vessel owner and other commercial fishing vessels.

*Indonesia, AGCI PESCA (Italy), Lebanon, Nigeria.* Engine power (e.g. 250/500/750/more than 750 Hp).

*Bahrain.* Method of commercial fishing.

*El Salvador.* Artisanal fishing not using vessels for export.

*Eritrea.* EFE: Availability and capability of machinery and facilities.

*Greece.* Fishing methods.

*Jamaica.* Type of operation and category of fishing, e.g. artisanal, industrial or recreational.

*Lebanon.* Equipment for refrigeration and preservation.

*Mexico.* Depending on the fishing activity, the criteria should be established according to the radius of activity, construction, speed, operating area and fishing vessel length.

*Saint Vincent and the Grenadines.* Type of fishing vessel.

*Ukraine.* Displacement of the vessel.

*United Arab Emirates.* Exempt fishing vessels under 24 m in length.

*Zimbabwe.* ZCTU: Depth of waters.

*Views shared by several workers' organizations,* as well as *Bahrain* and *ICSF:* CCUOMM, CGT, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), SALFU (Sierra Leone), TUC (United Kingdom): Type of fishing gear.

*ICSF.* Type of fishing operations.

### Comments

*Costa Rica.* INS: Fishing vessel length, tonnage and time spent.

*Estonia.* If a vessel spends many days at sea and for the purpose of implementation of shift work, it would be necessary to take into account the time spent on board vessels.

*France.* Combination of area criteria with the abovementioned criteria.

*Honduras.* The classification of areas of operation mentioned above is sufficient, but the time a fishing vessel spends at sea can be used as well.

*Indonesia.* The engine power influences the area of operation and is related to the certificate of seaworthiness of fishing vessels.

*Ireland.* HSA agrees with all and states that the Convention should appropriately target matters of concern and not impose a disproportionate burden on small fishing operations.

*Italy.* The scope should distinguish between vessels under and over 24 m in length.

*Japan.* In addition to the areas of operation, the tonnage should delimit the scope.

JSU: The vessel length in the Convention should be in line with the SFV 1977 Convention. The Convention should clearly provide for working conditions of fishing vessels operating for a period of over six months.

*Republic of Korea.* Several international instruments (SFV 1977, SFV PROT 1993, STCW-F, Fishing Safety Code, Document for Guidance) use the fishing vessel length for delimiting the scope of application.

*Malawi.* Length and tonnage determine the amount of fish to be caught per trip. Delimiting the scope in terms of these areas would ensure the replenishing of fish resources.

*Namibia.* The time a fishing vessel spends at sea is important with regard to fatigue, comfort and hygiene.

*Norway.* It is impossible to have an effective uniform set of regulations for subsistence fishing and modern factory trawlers. It appears reasonable to exclude the former from the scope or to divide the Convention into a general part (applicable to all) and more specific parts depending on the vessel and/or time at sea, as the importance of working and living conditions increases proportionally with the time spent at sea. Moreover, if tonnage or length are strictly maintained as limits for the regulations, there will be an incentive to build, own and operate vessels just below that limit to avoid obligations. However, the existing tonnage limits set in the

Accommodation of Crews (Fishermen) Convention, 1966 (No. 126), should be kept with regard to accommodation.

*Oman.* The Ministry of Agriculture and Fisheries selects fishing vessel length, tonnage and time at sea as alternative criteria.

*Panama.* Tonnage, as it is used to determine the application of Convention No. 126.

*Qatar.* Internationally agreed standards should be applied, to achieve standardization of measurements and facilitate exchange of information between States.

*Spain.* The time factor, which is unfailingly linked to working time, rest periods, leisure time and social and family relations, is one of the major determinants of security on board and the well-being of fishermen.

*Sri Lanka.* UFFC: Sri Lankan fishing vessels are regularly used beyond their design capacity as expressed in length or tonnage.

*Sudan.* SWTUF: All possible information should be available about the vessel. The Convention should include all methods in order to determine whether it is applicable to a ship.

*United Kingdom.* For certain parts of the new Convention any of the above application parameters could be appropriate.

TUC: The abovementioned criteria should be viewed as additional and not as a substitute for areas of operation.

*United States.* Fishing vessel length has not been shown to be an effective indicator of risk. Tonnage is too subjective a measurement. Time cannot be enforced or monitored without the addition of expensive equipment.

*Zimbabwe.* ZCTU: Area of operation is not the appropriate criterion for setting the relevant requirements on board different vessels.

*ICMA.* For the purpose of enforceability, requirements should be based upon vessel size rather than area of operation. Vessels subject to the requirements of the Convention should be subjected to enforcement wherever they are found.

*ICSF.* Instead of the above criteria in isolation, it might be possible to adopt a matrix approach with proposed criteria on the column and proposed standards in the row.

*Should the Convention apply to all persons working on board fishing vessels irrespective of nationality?* **Qu. B1(e)**

#### *Affirmative*

*Governments:* 75. Algeria, Argentina, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago,

Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Negative*

*Governments:* 3. Australia, Greece, Myanmar.

*Employers' organization:* LEC (Latvia).

*Workers' organization:* FTUS (Lebanon).

### *Other*

*Governments:* 4. Egypt, Islamic Republic of Iran, Lebanon, Romania.

### *Comments*

*Argentina.* National legislation provides that foreigners shall be employed only if there are no national personnel available.

*CAPeCA/CALAPA/CAPA:* The standards should be the same for the entire crew in view of the legal principle of all being equal before the law, and for the purpose of avoiding unfair competition between flag States.

*Australia.* The proposed instrument should apply only to employees on board fishing vessels.

*Austria.* However, the Convention should either refer expressly to "workers" or, if the term "person", which includes self-employed persons, is used, provide the possibility to exclude self-employed fishers in order to avoid an obstacle to ratification of the kind encountered with the Safety and Health in Agriculture Convention, 2001 (No. 184).

*Brazil.* The new Convention could provide for procedures similar to those laid down in Convention No. 147 so that the ratifying State could require at least equivalent protection for persons of any nationality and on board any fishing vessel, even foreign vessels.

*Costa Rica.* INS: Labour standards, be they national or extraterritorial, should be applied irrespective of nationality.

*Fiji.* Migrant workers should also be covered to avoid their exploitation.

*Greece.* It should be noted that the obligation to take measures rests as much with the flag State as with the State of the seafarer's nationality.

*Lebanon.* The answer depends on the fishing vessels and workers covered by the scope of the Convention. While the provisions regarding OSH and rest periods apply to all persons working on board ship regardless of nationality, the scope of provisions concerning paid leave and social security benefits depends on national legislation.

FTUS: The Convention should only apply to Lebanese fishers.

*Mozambique.* In respect of foreigners, the provisions to be adopted should be different to take due account of the fact that they are foreign.

*Norway.* However, exceptions will have to be made because if social security coverage is required by the Convention, only nationals and other permanent residents should be eligible.

*Romania.* CNS Cartel Alfa: The Convention regulates a specific sector and should apply to all persons carrying out those specific activities, irrespective of nationality.

*Spain.* In view of the increasing number of foreign workers on fishing vessels and the proliferation of joint ventures, it is indispensable that the working conditions of the crew be regulated without discrimination based on nationality.

*Sudan.* SWTUF: The world is a global village, and the exchange of skills and the free movement of persons to earn livelihoods is a right for all.

*United Kingdom.* The United Kingdom social security system makes no distinction on the ground of nationality of contributors: the rules and regulations governing the payment of social security contributions by mariners (including deep-sea fishermen who are employed earners) and by share fishermen (who are self-employed earners) apply equally to all such workers, provided they are either domiciled or resident in the United Kingdom.

TUC: The fishing sector is not immune from the plague of sub-standard ships flying FOC and, in some cases, engaged in illegal fishing. The Convention should seek to ensure that workers of all nationalities and on ships flying all flags are covered.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom): To do otherwise would be discriminatory.

States were fairly evenly divided (41 for; 35 against) as to whether or not the Convention should apply to vessels in all of the five areas of operation set out by the Office. Many affirmative replies (22 of 41) considered that, while applying to all operating areas, the Convention should provide for the possibility of excluding some of them. A significant minority of States and a few employers' or workers' organizations indicated that the Convention should provide for exclusion of vessels engaged in fishing operations up to the limits of the territorial waters of the flag States (23) or engaged in fishing within three miles of the baseline (29). However, more than half (46)

indicated that the Convention should provide for the exclusion of vessels engaged in fishing operations in rivers and inland waters. A significant minority of States (26) replied that the Convention should contain other exclusions, for example for very small vessels operating close to shore, or without paid workers, single-manned, family fishing enterprises, subsistence and artisanal fishing, or recreational fishing. A substantial number of States noted that fishing vessel length (36), time spent at sea (34) or tonnage (30) might be a more useful means of delimiting the scope of the Convention than “areas of operation”, or could be combined with the area criterion. States overwhelmingly indicated that the Convention should apply to all persons working on fishing vessels irrespective of nationality, many noting that to do otherwise would be discriminatory.

In addition to the issues addressed in the questionnaire, the following commentary covers matters that were not reflected in the questionnaire but have been included in the Proposed Conclusions.

### *Preamble*

The proposed Preamble aims to set out the objectives of the instruments. The Office believes that this would clarify the specific aims of the standard within the ILO’s overall efforts to ensure decent work for fishers.

### *Definitions*

The questionnaire did not specifically address the issue of definitions. The definitions provided (in *Point 5*) have been taken, where possible, from existing ILO Conventions, particularly those concerning the fishing sector. Some modifications have been made to ensure that the Convention would apply to share fishers, who, in some member States, may be considered as “self-employed” and therefore might have been considered excluded.

The term “commercial maritime fishing” used in several existing ILO standards has been changed to “commercial fishing”. This would cover all but subsistence fishing and recreational fishing, and it would include fishing operations on inland lakes and rivers.

The Office has defined “consultation” in *Point 5(b)* so as to avoid the unnecessary repetition of the text in this paragraph throughout the proposed Convention and Recommendation. The definition is consistent with the obligations of States under other ILO Conventions (e.g. the Tripartite Consultation (International Labour Standards) Convention, 1976 (No. 144)), but also specifically aims to promote consultations with representative organizations of fishing vessel owners and fishers, where they exist.

### *Scope*

*Point 6* provides that the proposed Convention applies to all vessels engaged in commercial fishing. However, *Point 8(1)(a)* provides that competent authorities, after consultation, might exclude vessels engaged in fishing operations in rivers and inland waters.

*Point 8(1)(b)* allows Members the possibility of excluding “limited categories of fishers or fishing vessels in respect of which special and substantial problems relating

to application arise in the light of particular conditions of service of the fishers or the fishing vessel's operations". However, States would also be called upon to take measures to progressively extend the protections under the proposed Convention to those categories of fishers and fishing vessels (*Points 8(2) to 10*). The intention is that this obligation would encourage Members to work with the ILO towards achieving the overall objectives as set out in the Preamble.

### *Implementation*

*Point 11* provides Members with considerable flexibility as concerns implementation and enforcement of the proposed Convention. The provision is based on a similar provision in the draft consolidated maritime labour Convention which, in turn, draws upon similar provisions in other ILO instruments.

### *Coordination*

*Point 12* provides not only for the designation of the competent authorities but also for coordination among relevant authorities. The concept of coordination at all levels has been included, bearing in mind that in many members States certain provisions of the Convention would be implemented not only by national authorities but also by local authorities.

## B2. MINIMUM AGE

*Should the Convention include provisions concerning the minimum age for work on board fishing vessels?* **Qu. B2(a)**

### *Affirmative*

*Governments:* 78. Algeria, Argentina, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Negative*

*Governments:* 2. Australia, Lebanon.

### *Other*

*Governments:* 2. China, Islamic Republic of Iran.

*Workers' organizations:* ZZMiR (Poland), USS (Switzerland).

### *Comments*

*Australia.* The regulation of minimum age for employment should not be undertaken on an individual industry basis. Convention No. 138, which applies to all sectors, already addresses minimum age for employment on fishing vessels. The ILO is already considering "shelving" old sector-specific minimum age standards. If there is majority support for minimum age provisions they should be consistent with, and refer to, Convention No. 138.

*Switzerland.* Some Offices of the Federal Administration believe that the instrument should not provide for a "minimum age for admission to employment" in this particular sector; this would run counter to the progress demonstrated by Convention No. 138 in moving away from sectoral Conventions in this matter, each with its own minimum age.

*United States.* USCIB: But only to the extent that such vessels are not covered by domestic legislation or other ratified international labour standards. Otherwise the new Convention will not be ratified or will be subject to future denunciations.

### **Qu. B2(b)** *If yes, should the minimum age be:*

#### *15 years*

*Governments:* 9. Austria, Costa Rica, Czech Republic, Iceland, Japan, Mexico, Serbia and Montenegro, New Zealand, Saint Vincent and the Grenadines.

*Workers' organizations:* JSU (Japan), NUNW (Namibia), UFFC (Sri Lanka), NATUC (Trinidad and Tobago).

*Other:* Confcooperative (Italy).

### 16 years

*Governments:* 31. Algeria, Brazil, Bulgaria, Canada, Cyprus, Denmark, Finland, France, Germany, Greece, Guatemala, Hungary, Ireland, Italy, Japan, Republic of Korea, Latvia, Namibia, Netherlands, Nicaragua, Norway, Portugal, Russian Federation, Sweden, Thailand, Tunisia, Turkey, Ukraine, United Kingdom, United States, Zimbabwe.

*Employers' organization:* MEDEF (France).

*Workers' organizations:* CAW-Canada (Canada), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), FKSU (Republic of Korea), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), ZCTU (Zimbabwe).

*Others:* PVIS (Netherlands), ICSF.

### 18 years

*Governments:* 43. Argentina, Austria, Bahrain, Bangladesh, Belarus, Belgium, Burundi, China, Croatia, Cuba, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Guatemala, Honduras, India, Indonesia, Jamaica, Kuwait, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mozambique, Myanmar, Nigeria, Oman, Philippines, Qatar, Romania, Russian Federation, Saudi Arabia, Spain, Switzerland, Syrian Arab Republic, Trinidad and Tobago, United Arab Emirates, Venezuela.

*Employers' organizations:* CAPECA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), CSG (Gabon), MDU (Ghana), KPI (Indonesia), CDT (Morocco), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), RPRRKh (Russian Federation), SALFU (Sierra Leone), SWTUF (Sudan), LO, TCO (Sweden), USS (Switzerland), NCTL (Thailand), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA (Italy), ICMA.

### Comments

Several replies refer to Convention No. 138 and the Worst Forms of Child Labour Convention, 1999 (No. 182), and Recommendation (No. 190).

*Burundi, Egypt, El Salvador, Eritrea, CSG (Gabon), SLIMAPG (Guinea), Honduras, National Board of Fisheries (Latvia), Lebanon, CCIAB (Lebanon), Malawi, Mozambique, NEF (Namibia), Norway, Oman, Qatar, Serbia and Montenegro, Trinidad and Tobago, United Arab Emirates* draw attention to the hazardous nature of the fishing industry, which requires a level of maturity unlikely to be attained before the age of 18.

*Argentina.* Work on fishing vessels should be prohibited for persons under the age of 18, given their lack of training, at this stage of their physical and mental and development, which could be perturbed owing to the characteristics of this activity. National legislation and collective labour agreements however provide for 16 as the age at which they can be admitted as apprentices on board a vessel under a contract specifying the tasks to be carried out.

SOMU: The contract should clearly define the work they are to do in order to prevent abuses.

*Australia.* If there is to be a specific minimum age for employment on fishing vessels which is higher than that established by Convention No. 138, it should be determined by the competent authority in accordance with the risk assessment for fishing vessels as a workplace.

*Austria.* The minimum age should be 15 years, if it can be ensured that work on certain vessels and certain types of (heavy) work and working conditions are prohibited for persons aged under 18. Otherwise, the minimum age should be 18 years.

*Brazil.* The minimum age for any work in Brazil is 16 years. Admission to the fishing occupation shall only be permitted for persons under 18 years who are legally emancipated. Persons aged over 14 and under 18 may be admitted to the fishing occupation as apprentices.

*Costa Rica.* INS: The age should be 18 years.

*Ecuador.* Given the hazardous nature of the work, a minimum age of 21 years would be preferable for permanent employment.

*Estonia.* Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation: Exceptionally and under supervised working conditions, persons at least 15 years of age could be allowed to work on board coastal fishing vessels to gain an insight into the fishing profession.

*Finland.* Account should be taken of Council Directive 94/33/EC.<sup>3</sup>

*Greece.* The Convention should deal only with foreign-going fishing vessels.

*Ireland.* Persons aged under 16 are legally “children”.

*Japan.* The minimum age should be in conformity with the proposed consolidated maritime labour Convention.

JSU: The minimum age of 15 years is appropriate, in order to avoid a gap after the age of graduation from junior high school, which is the last compulsory educational establishment in Japan.

*Lebanon.* FTUS: There is no minimum or maximum age in this regard, and persons able to work should be allowed to do so. Many children have learned this trade from their parents.

*Namibia.* Thus, young persons who leave school early would have the chance to obtain a job.

*New Zealand.* There is generally no minimum age in New Zealand. Restrictions on the employment of young people are generally in terms of the need to ensure that the work does not

<sup>3</sup> See Annex II to this report.

interfere with their education. National legislation provides for compliance with the Minimum Age (Sea) Convention (Revised), 1936 (No. 58), by prohibiting employment of any person of an age that requires that person to be enrolled at a school, or any person under the age of 18, as a trimmer or stoker.

*Nicaragua.* It is important that there be transitional provisions for countries whose economies and means of education are not sufficiently developed.

*Panama.* The minimum age is currently 17 years, depending on the category or position held on the fishing vessel, in accordance with Convention No. 138.

APOM: It should further be compulsory to receive instruction and training from the employer or the State.

*Russian Federation.* The minimum age for sea cadets is 16 years. The specific conditions on board the particular vessel and traditional features of the fishing industry should be taken into account.

*Saint Vincent and the Grenadines.* This should apply to maritime fishing only. Minors should show competence for exercising this activity.

*Saudi Arabia.* The hazards that fishermen face on industrial fishing vessels require skills and experience that young persons may not possess.

*Spain.* The minimum age of 16 is in conformity with Article 1 of Convention No. 138, according to which the member States should raise progressively the age of admission to employment or work. However, given that fishing has been declared a hazardous activity, minors should be excluded from it.

*Sri Lanka.* UFFC: A minimum age higher than 15 would deny school leavers from the fishing community the legal right to work.

*Sweden.* LO and TCO: The minimum age should be 18. As the fishing industry is one of the most dangerous trades, the minimum age limits for hazardous work established by the ILO should be applied. The conclusions of the Tripartite Meeting on Safety and Health in the Fishing Industry held in 1999<sup>4</sup> recommended that countries bound by the Minimum Age (Fishermen) Convention, 1959 (No. 112), ratify Convention No. 138 and apply its Article 3. Furthermore, countries that have ratified Convention No. 138 but have a minimum age of less than 16 years were encouraged to adopt Article 3 of the Convention by sending a declaration to the ILO.

*Switzerland.* Some Offices of the Federal Administration note that the minimum age of 15 years given in Convention No. 138 is also valid for the fishing sector. However, fishing work should be considered hazardous and should therefore be prohibited for persons under 18 years of age if, by its nature or the circumstances in which it is carried out, it is likely to jeopardize the health, safety or morals of a child. Fishing, at least at sea, displays several characteristics of intrinsically hazardous work, as described in particular in Paragraph 3 of the Worst Forms of Child Labour Recommendation, 1999 (No. 190): working in a confined space: (b); or in an unhealthy environment (temperature, noise, vibrations: (d)); working with dangerous machinery, equipment or tools: (c); manually handling or transporting heavy loads: (c); working under difficult conditions (long hours, night work: (e)); being at sea for long periods of time, and the possible physical, psychological or sexual abuse to which children could be exposed in that environment: (a).

---

<sup>4</sup> ILO: *Note on the proceedings*, Tripartite Meeting on Safety and Health in the Fishing Industry, Geneva, 13-17 Dec. 1999.

*Trinidad and Tobago.* NATUC: A minimum age of 15 is in conformity with Convention No. 138.

*United Kingdom.* The minimum age of 16 years ties in with existing United Kingdom and EU requirements. The United Kingdom has ratified Convention No. 138.

TUC: The United Kingdom is one of more than 130 member States to have ratified both Conventions Nos. 138 and 182. Fishing is a hazardous industry worldwide with a high rate of occupational accidents, illnesses and fatalities. The basic age for entry into the industry should be 18 in recognition of those hazards.

*Venezuela.* Depending on the type of fishing, the Convention could give the opportunity to persons under 18 provided that working conditions are supervised.

*Zimbabwe.* ZCTU: Provided that minors are accompanied by adults.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), SALFU (Sierra Leone): As fishing is a hazardous industry, the general age for employment under Convention No. 182 should be 18. However, it is desirable that young persons who are undergoing training should be allowed to undertake some tasks which would give them experience, provided that they enjoy suitable protection, e.g. when there is an apprenticeship contract.

*ICMA.* Fishers' families voiced strong support for placing age restrictions on working on fishing vessels.

*ICSF.* Sixteen years is the school-leaving age in many countries.

### **Qu. B2(c)** *Should the Convention provide for exemptions?*

#### *Affirmative*

*Governments:* 39. Argentina, Australia, Bangladesh, Belgium, Benin, Canada, Costa Rica, Cuba, Denmark, El Salvador, Estonia, France, Greece, India, Jamaica, Japan, Republic of Korea, Kuwait, Lebanon, Malawi, Netherlands, New Zealand, Nigeria, Norway, Philippines, Portugal, Qatar, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Sweden, Switzerland, Thailand, Tunisia, Ukraine, United Arab Emirates, United States, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), APOM (Panama), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), NCTL (Thailand), TUC (United Kingdom).

*Others:* CCE (Belgium), PVIS (Netherlands), ICMA, ICSF.

*Negative*

*Governments:* 40. Algeria, Bahrain, Belarus, Brazil, Bulgaria, Burundi, China, Croatia, Cyprus, Czech Republic, Ecuador, Egypt, Eritrea, Fiji, Germany, Guatemala, Honduras, Hungary, Iceland, Indonesia, Islamic Republic of Iran, Ireland, Italy, Latvia, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Nicaragua, Oman, Panama, Romania, Spain, Syrian Arab Republic, Trinidad and Tobago, Turkey, United Kingdom, Venezuela.

*Employers' organizations:* EFE (Eritrea), LEC (Latvia), CCIAB (Lebanon).

*Workers' organizations:* CGT (Brazil), PPDIV (Croatia), CSG (Gabon), JSU (Japan), NUNW (Namibia), ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NATUC (Trinidad and Tobago), ZCTU (Zimbabwe).

*Others:* AGCI PESCA, Confcooperative (Italy).

*Other*

*Governments:* 2. Finland, Lithuania.

*Comments*

*Austria.* Exemptions to the minimum age of 15 should under no circumstances be provided. If the minimum age is fixed at 18 years, exemptions should be possible for certain fishing vessels and certain (light) activities.

*Costa Rica.* INS disagrees.

*Oman.* The Ministry of Agriculture and Fisheries agrees.

*If yes, please specify.***Qu. B2(d)**

*Argentina,* CAPeCA/CALAPA/CAPA, SOMU (Argentina), *Australia, Belgium, Benin, Brazil, Canada, Cuba, Denmark,* Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), *Greece,* COHEP (Honduras), *India,* NEF (Namibia), PVIS (Netherlands), *Nigeria, Norway, Russian Federation,* RPRRKh (Russian Federation) list training work placements as exemptions.

*Canada,* CAW-Canada (Canada), *Costa Rica, El Salvador, Ireland, Japan,* JSU (Japan), *Republic of Korea,* FKSU (Republic of Korea), *Oman, Qatar,* ECA (Trinidad and Tobago), *Tunisia, United States,* USCIB (United States), EMCOZ (Zimbabwe) suggest exempting vessels, especially in the artisanal sector, operated by members of the same family, where minors would be working under close supervision, assuming that the work is not hazardous.

*Australia.* The types of exemption in Convention No. 138 should be taken into account.

*Bangladesh.* Self-employed fishing workers.

*Canada.* UFAWU-CAW: Fishing vessels in area “C” spending less than one day at sea.

*Denmark.* Young persons between 16 and 18 years of age should be protected by national legislation against physically dangerous working conditions on board. It should be possible for them to work on board if sea service is part of their training. Thus, there should be an agreement between the young fishermen and the shipowner concerning a training programme in accordance with national fishing education programmes recognized by the competent authority. This is in line with the provisions for the merchant fleet in the Seafarers’ Hours of Work and the Manning of Ships Convention, 1996 (No. 180).

*Egypt.* GTUWA: Children at least 12 years of age trained in safe waters.

*Estonia.* Maritime students during training (at least 15 years old), as well as persons working on fishing vessels of categories “C” and “E” (at least 16 years old).

ESA/Estonian Fishermen’s Association: Exemptions should be possible, if the area of navigation is restricted.

*France.* Persons at least 15 years of age during school holidays.

*Guinea.* SLIMAPG: Coasters.

*India.* Cadets and students in vocational training.

*Republic of Korea* and FKSU (Republic of Korea): The employment of persons under 18 should be conditional on the production of a medical certificate attesting fitness for work, as provided in the Medical Examination of Young Persons (Sea) Convention, 1921 (No. 16).

*Lebanon.* The minimum age might be set at 16, provided that the safety and morals of the children concerned are fully protected, that they have received adequate specific instruction or vocational training, and that they work in territorial or coastal waters, with their parents’ consent.

CCIAS: There should be no exemptions, but the situation of individual fishermen should be taken into consideration.

*Malawi.* The Convention should consider exceptions based on the cultural background and level of economic development.

*Namibia.* NEF: Persons enrolled in an accredited training programme (e.g. cadet training).

*Netherlands.* In conformity with Conventions Nos. 138 and 182.

*New Zealand.* Fishing vessels operating within the territorial waters of the flag State.

*Norway.* In order to secure recruitment to the fishing profession, there needs to be an exemption for young people as part of their basic education. Norway has recently passed legislation making it possible to base a larger part or all of the skill training on apprenticeship contracts. When starting the first year of skill training the pupil might be 15 years of age.

*Philippines.* Persons between 16 and 18 years of age, with the official permission of the member State concerned and parental/guardian consent.

*Portugal.* The minimum age could be 15 years once obligatory schooling has been completed.

*Saudi Arabia.* Small vessels only operating by day.

*Serbia and Montenegro.* Fishing vessels of category “C”, particularly in artisanal small-scale fishery.

*Sierra Leone.* SALFU: The minimum age for apprenticeship should be 15 years in order to gain experience.

*Sweden.* Persons aged 13–15 years should be allowed to perform light tasks that are not detrimental to their health, development or schooling.

*Switzerland.* In cases where the time spent at sea is short. Some Offices of the Federal Administration consider that, if fishing at sea is deemed to be hazardous work within the meaning of Convention No. 182, exemptions could only be made as from the age of 16, and then only if the health, safety and morals of the child were completely protected and the child had received specific education or vocational training for the work (Article 4(1) of Convention No. 182, Paragraphs 3 and 4 of Recommendation No. 190).

*Thailand.* Persons not under 15 years of age, with written parental/guardian consent.

ECOT: Exemptions should be accompanied by clear guidelines for supervision and control by the competent authority.

*United Arab Emirates.* Children aged between 15 and 17 working during their holidays, if it is not an ocean-going vessel, and with the consent of the competent authorities.

*United Kingdom.* TUC: If the requirements of both Convention No. 138, Article 3(3), and Recommendation No. 190, Paragraph 4, are met, and noting the recommendations of the Tripartite Meeting on Safety and Health in the Fishing Industry (1999), entry into employment in the sector might be acceptable at age 16 in certain circumstances, for example for properly constituted apprenticeships.

*Zimbabwe.* Vessels fishing for leisure or subsistence.

*Views shared by several workers' organizations:* CCUOMM, CGT, UMAFLUP, (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), SALFU (Sierra Leone), LO, TCO (Sweden): As fishing is a hazardous industry, the general age for employment under Convention No. 182 should be 18. However, it is desirable that young persons who are undergoing training be allowed to undertake some tasks, which would give them experience, provided that they enjoy suitable protection, e.g. when there is an apprenticeship contract.

*ICMA.* Allowances should be made for younger family members to learn the family business working on their family-owned vessel under proper supervision. Some aspects of the work, however, should be restricted to persons aged over 18 years. Specific guidelines should be laid down for under-age workers who are allowed to work on fishing vessels.

*ICSF.* Persons aged under 16 fishing as part of vocational training, working with a parent or relative, and participating in fishing operations that are not considered to be dangerous should be exempt.

*Should the Convention provide that work on certain fishing vessels should be prohibited for persons under the age of 18 years?*

**Qu. B2(e)**

### *Affirmative*

*Governments:* 3. Germany, Saint Vincent and the Grenadines, Trinidad and Tobago.

*Workers' organizations:* ZZMiR (Poland), USS (Switzerland).

### *Comments*

Several replies suggest prohibiting work on board fishing vessels on the high seas (Australia, Benin, Estonia, SLIMAPG (Guinea), India, Lebanon, Serbia and Montenegro, SWTUF

(Sudan), *Tunisia*, factory vessels (*Benin, France, TUC (United Kingdom), USCIB (United States)*), fishing vessels of category “A” (*Brazil, COHEP (Honduras), CDT (Morocco), NSU/NSF/DNMF (Norway), APOM (Panama), Serbia and Montenegro, UFFC (Sri Lanka)*) or “B” (*Brazil, COHEP (Honduras), APOM (Panama), Serbia and Montenegro, UFFC (Sri Lanka)*), vessels spending long periods at sea (*Brazil, France, Lebanon, Serbia and Montenegro, SWTUF (Sudan), TUC (United Kingdom)*), or vessels spending more than one day at sea (*Nigeria, Ukraine*).

*Cuba, New Zealand, ECOT (Thailand)*. Prohibitions could be subject to exceptions by taking into account factors including proper training, experience and/or supervision.

*Canada*. CAW-Canada: Trawlers fishing outside territorial sea.

*Ecuador*. Vessels that go beyond territorial waters.

*Ireland*. HSA disagrees.

*Japan*. JSU: Operation of a line hauler, a capstan, etc.

*Latvia*. The National Board of Fisheries agrees.

*Oman*. The Ministry of Agriculture and Fisheries suggests exempting fishing vessels that operate in international waters.

*Portugal*. It is not the type of fishing vessel that should determine whether or not persons under the age of 18 are allowed on board, but rather the tasks to be performed and the place where they are to be performed.

*Qatar*. Many families in developing countries have limited incomes, so providing work opportunities for minors would help them, especially as unemployment is a major concern.

*Spain*. It should be taken into account that the risk lies in the environment of the activity itself, e.g. risk of shipwreck, storms, noise, vibration and pace of work.

*Sweden*. LO and TCO agree.

*Switzerland*. Some Offices of the Federal Administration find Questions B2(e) and B2(f) superfluous, if it is judged that fishing is an intrinsically hazardous job within the meaning of Convention No. 182 and therefore prohibited for persons under 18.

*Sudan*. SWTUF: Vessels operating in cold climates and dangerous areas and technologically sophisticated vessels.

*United Kingdom*. TUC: Fishing vessels at sea for lengthy periods confine the crew to the premises of the employer and deny the possibility of frequent return to the family.

*United States*. Fishing vessels with large machinery or vessels operating more than 3 miles from shore.

*ICMA*. Large industrial vessels. Age exceptions should be allowed only on small family-owned enterprise vessels.

*ICSF*. The Convention should rather prohibit certain fishing operations for persons under 18, e.g. *muro-ami* fishing in the Philippines.

**Qu. B2(f)** *Should the Convention provide that certain types and conditions of work on fishing vessels should be prohibited for persons under the age of 18 years?*

*Affirmative*

*Governments:* 69. *Negative*

*Governments:* 11. Australia, Eritrea, Indonesia, Islamic Republic of Iran, Italy, Jamaica, Malawi, Malaysia, Saint Vincent and the Grenadines, Spain, United Kingdom.

*Employers' organizations:* Norwegian Fishing Vessel Owners' Association/Norwegian Trawlers' Association (Norway), MEDEF (France).

*Workers' organizations:* CAW-Canada (Canada), CSG (Gabon).

*Other:* Confcooperative (Italy).

*Other*

*Governments:* 2. Egypt, Trinidad and Tobago.

*Workers' organizations:* PPDIV (Croatia), USS (Switzerland).

*Comments*

*Algeria, Brazil, Canada, Costa Rica, Czech Republic, GTUWA (Egypt), Estonia, ESA/ Estonian Fishermen's Association (Estonia), France, Greece, Iceland, HSA (Ireland), Japan, JSU (Japan), Republic of Korea, FKSU (Republic of Korea), Mauritius, CDT (Morocco), Mozambique, Namibia, Nicaragua, Norway, KSM NSZZ Solidarnosc (Poland), Portugal, Qatar, Russian Federation, UFFC (Sri Lanka), SWTUF (Sudan), Sweden, Switzerland, Thailand, ECA (Trinidad and Tobago), Tunisia, Ukraine, United Arab Emirates, United States, USCIB (United States), EMCOZ (Zimbabwe):* Persons of less than 18 years of age should be excluded from work involving hazards and a high level of responsibility: e.g. physically or psychologically unhealthy, difficult or stressful work, night work, underwater work, or use of lifting machinery. Some replies stressed that young persons should not be involved in long voyages and generally in work that can be detrimental to their development.

*Australia.* Certain levels and types of employment on board vessels (e.g. coxswain, skipper, master or engineer, diver).

*Egypt.* GTUWA: Navigation, watches, maintenance in the water.

*Estonia.* ESA/Estonian Fishermen's Association: Deck work.

*Hungary.* Overtime.

*Ireland.* The Marine Survey Office recommends referring to the appropriate EU Directive.

*Mexico.* Work as trimmers or stokers.

*Netherlands.* The Convention should follow the age requirements set out in the STCW-F Convention and EU legislation on hours of work for young persons.

*Norway.* Norway has ratified Convention No. 182. The Government opposes double regulations on these matters and requests that obligations in this area be the same and/or that those who have ratified Convention No. 182 and apply it to fishermen be deemed to be in compliance with the new Convention. There should also be requirements for identification of possible risks and the development of a plan to avoid the identified risks in relation to all working operations on board.

*Panama.* APOM: All types of fishing vessels where there is operation and monitoring of equipment, specialized use of chemical substances, etc.

*Saudi Arabia.* Operation of winches on demersal fishing vessels or overnight stays on lighters far from the mother ship.

*Serbia and Montenegro.* Types of work with dangerous fishing gear, e.g. longline fishing.

*Spain.* The risk is always present on a fishing vessel, regardless of its size, area of operation or time spent at sea.

*Syrian Arab Republic.* In the case of those who are prosecuted legally and on security grounds.

*United Arab Emirates.* Work requiring physical handling of heavy loads or exposure to high temperatures, or work for long periods.

*United Kingdom.* Blanket prohibitions are inappropriate. The capability of young persons (16-18 years) for particular types of work should be assessed by risk assessment, as is the case in the United Kingdom. The United Kingdom has ratified Convention No. 182.

TUC: Furthermore, risk assessment may apply to some potentially dangerous tasks. Consideration should also be given to prohibiting work of persons under 18 on board fishing vessels in sea and weather conditions known or expected to be hazardous, e.g. deep-sea fishing in winter or during other extreme weather conditions.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom): To do otherwise in an industry which has been designated as "hazardous" would be in breach of Convention No. 182. This is the case with dangerous tasks, watchkeeping and other work without supervision.

*ICMA.* Work should be categorized and those operations that are particularly onerous, dangerous, toxic or painful should be prohibited.

*ICSF.* Deck-based work under rough, cold and/or windy sea conditions, and work in the fish hold.

The vast majority of States (78 of 83) want the Convention to include a provision concerning minimum age for work on board fishing vessels.

While the majority (43) preferred a minimum age of 18, a significant number (31) supported a minimum age of 16 and a few (9) preferred an age of 15. Several States provided their reasons for requiring a minimum age: the hazardous nature of fishing, the difficulty and demanding nature of the occupation, and the importance of having fishers who have reached a certain level of mental and physical maturity, or who have an understanding of their rights, responsibilities and safety regulations. Several noted that the minimum age should not be below the school-leaving age, in order not to impact on educational development; others pointed to the importance of harmonizing the minimum age with the school-leaving age, in order to avoid a gap between compulsory education and work in the fishing sector. It was pointed out that fishers often learned their occupation from their parents, and this should be taken into account. Some replies drew attention to the fact that the minimum age of 15 or 16 complies with Convention No. 138; others considered 18 years more appropriate since, owing to the hazardous nature of fishing, Article 3 of Convention No. 138 and/or Convention No. 182, as well as Recommendation No. 190, are applicable.

There was an even distribution (39 for; 40 against) among those who wanted the Convention to provide for exemptions and those that did not. Some replies proposed that exemptions be in line with the provisions of Conventions Nos. 138 and 182 aimed at protecting the health, safety and morals of the child. Exemptions were suggested for young persons undergoing training or in apprenticeships. It was also suggested that there could be a requirement for the young person to receive pre-sea compulsory training by the employer or State in advance. Some replies suggested exemptions, for small vessels, day fishing, artisanal fishing, or fishing in rivers, inland waters and coastal areas. One reply called for exemptions based on cultural or economic factors. A few

suggested exemptions for young persons on family-operated vessels or working under proper supervision, or if the parent or guardian gave written permission. Others considered that work could be permitted during school holidays. Some stated that exemptions should permit neither night work nor work on holidays.

A majority of States (54) were in favour of prohibiting work by persons aged under 18 on certain fishing vessels, such as deep-sea vessels, vessels at sea for long periods, factory vessels, vessels operating in area “A” or “B”, vessels operating in dangerous areas or cold climates and vessels with certain types of machinery.

A large majority (69) was in favour of prohibiting certain types and conditions of work. These included: physically or psychologically unhealthy, difficult or dangerous work, certain senior positions, work without supervision (e.g. watchkeeping), maintenance in water, use of lifting machinery, difficult deck work, night work, diving, operation of dangerous machinery, equipment or tools, manual handling or transport of heavy loads, long hours, exposure to high temperatures, work in the fish-hold, work involving toxic or noxious chemicals, or work on deck in rough, cold and/or windy sea conditions. Some replies suggested that restrictions on the work of young persons should be based on risk assessment.

The Office has proposed a minimum age of 16, as the majority of government replies supported a minimum age of 16 or 18 years and as this was consistent with the views expressed at the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector. The Office has also borne in mind views expressed by Employer participants at the Tripartite Meeting concerning the need to avoid duplication of provisions in Conventions Nos. 138 and 182 and Recommendation No. 190.

### B3. MEDICAL EXAMINATION

*Should the Convention provide that persons working on board fishing vessels should undergo initial and subsequent periodic medical examinations?*

**Qu. B3(a)**

#### *Affirmative*

*Governments:* 75. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Norway, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Syrian Arab Republic, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, Venezuela, Zimbabwe.

*Employers' organizations:* CAPECA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF, IMHA.

#### *Negative*

*Governments:* 4. Indonesia, Saint Vincent and the Grenadines, Switzerland, United States.

*Employers' organization:* USCIB (United States).

#### *Other*

*Governments:* 3. India, Nigeria, Thailand.

*Workers' organization:* FTUS (Lebanon).

#### *Comments*

*Algeria, Bahrain, Bulgaria, Burundi, INS (Costa Rica), Egypt, Eritrea, Fiji, CSG (Gabon), SLIMAPG (Guinea), Jamaica, National Board of Fisheries (Latvia), Mauritius, CDT (Morocco), Mozambique, Namibia, NEF, NUNW (Namibia), Nigeria, Oman, Qatar, CNS Cartel Alfa (Romania), Saudi Arabia, Serbia and Montenegro, Spain, United Arab Emirates, Zimbabwe* support initial and periodic medical examinations to ensure fitness for work in the hostile maritime environment. Some replies also stress the need to ensure that contagious diseases do not spread aboard vessels or contaminate the catch. These measures would benefit both workers and employers.

*Argentina.* CCUOMM: The requirements of the initial medical examination and subsequent checkups should be consistent with the ILO/WHO *Guidelines for Conducting Pre-sea and Periodic Medical Fitness Examinations for Seafarers*, 1997.

*Australia.* Such provisions should be qualified by the words "as appropriate" or, alternatively, this provision should be included in the Recommendation rather than the Convention. If health issues are identified as risk factors in fishing operations, they should be taken into consid-

eration in the risk assessment – initial and subsequent periodic medical examinations would be appropriate within that framework. However, medical examinations should not be used in order to discriminate against and exclude people with particular medical conditions from employment.

*Brazil.* Every Brazilian worker under a formal contract of employment is required to undergo initial, periodic and exit medical examinations, at the employer's expense, including fishermen.

*Greece.* According to the standards laid down in the Medical Examination (Seafarers) Convention, 1946 (No. 73).

*Honduras.* COHEP: Countries should require an initial medical examination, with records updated on a yearly basis.

*India.* Certified hands and other trained crew working on board fishing vessels in categories "A" and "B" above 20 m OAL should undergo initial and subsequent periodic medical examinations.

*Ireland.* A report by the Fishing Vessel Safety Review Group published in 1996 recommended that all candidates for certification under manning regulations should be required to pass a full medical fitness examination and subsequently be subject to two-yearly medical examinations.

*Republic of Korea.* The Government refers to Convention No. 73, according to which the medical certificate should remain in force for a period not exceeding two years from the date on which it was granted. If the period of validity of a certificate expires in the course of a voyage the certificate should continue in force until the end of that voyage.

*Lebanon.* Medical examinations of persons up to the age of 21 should be stipulated, then it should be at the discretion of each signatory to determine who can undertake such work.

CCCIAB. Their costs should be borne by the employer.

FTUS: Assigned doctors should undertake free medical examinations for those workers in the fishing sector who need them.

*Malaysia.* It is important to determine the health status, particularly with regard to contagious diseases, of foreign crew members on board vessels.

*Nicaragua.* There should be a medical examination when the worker retires from fishing activities.

*Norway.* The Convention must allow member States to implement regulations in this field through provisions of Conventions principally applying to seafarers and made applicable to fishermen.

*Panama.* APOM: The period between examinations should be not more than one year.

*Portugal.* Each State should draw up and keep up to date a list of doctors and health services for workers to consult.

*Russian Federation.* This should be a condition of employment.

*Saint Vincent and the Grenadines.* An initial medical examination would only prove useful on vessels over 24 m.

*Switzerland.* In developing countries such an examination is not really practicable.

*Thailand.* NCTL: The medical examination should be made at least once a year.

*Trinidad and Tobago.* NATUC: Subsequent medical problems would be more easily differentiated.

*United Kingdom.* TUC: Apart from the health needs of individual crew members, their health is also essential to the safety of the crew at sea.

*United States.* In the United States crew members working on fishing vessels are not required to undergo medical examinations. In some instances, medical examinations are required for licensed crew members.

USCIB: Hiring from remote locations would render this requirement impossible to fulfil in the absence of qualified medical facilities or in medically under-served areas, and might pose an undue financial hardship for the applicant or company covering the related costs. However, larger seagoing vessels must carry licensed personnel. The issue and renewal of their professional licence must be accompanied by a medical examination and drug test.

*Zimbabwe.* ZCTU: They may be compensated for work-related illnesses.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), JSU (Japan), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom): Access to shore-based medical assistance cannot be relied upon. Moreover, the fishing industry is hazardous and often operates in difficult conditions with a small crew heavily dependent on each member.

*ICMA.* Examinations should be required at least every two years. Persons involved in navigational duties should be tested for colour-blindness.

*ICSF.* It should be a state obligation in countries where fishing men and women cannot afford it.

*IMHA.* Regulations about medical examination and certification should follow the same standards as for other seafarers requiring a periodic and job-specific examination to determine fitness for sea service. The ILO/WHO *Guidelines for Conducting Pre-sea and Periodic Medical Fitness Examinations for Seafarers*, 1997, should be applied, with possible updates and developments in cooperation with IMHA, and authorized doctors should decide to adapt or limit the fitness for enrolment to fishermen's personal health according to job, navigation, etc. To exclude fishermen because they remain at sea for periods of three days or less (as provided in the Medical Examination (Fishermen) Convention, 1959 (No. 113)) makes no sense nowadays in view of the culture of prevention of occupational risks and new navigation conditions.

**Qu. B3(b)** *Should the Convention provide for exemptions from the above requirement?*

#### *Affirmative*

*Governments:* 19. Australia, Canada, Costa Rica, Denmark, Eritrea, India, Islamic Republic of Iran, Jamaica, Japan, Lebanon, Malaysia, Netherlands, Oman, Saint Vincent and the Grenadines, Saudi Arabia, Sweden, Tunisia, Turkey, United Arab Emirates.

*Employers' organizations:* COHEP (Honduras), Norwegian Fishing Vessel Owners' Association/Norwegian Trawlers' Association (Norway), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States).

*Workers' organizations:* CAW-Canada (Canada), GTUWA (Egypt), CDT (Morocco), UFFC (Sri Lanka).

*Others:* PVIS (Netherlands), ICMA, ICSF.

### *Negative*

*Governments:* 57. Algeria, Argentina, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, China, Cuba, Cyprus, Czech Republic, Ecuador, Egypt, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, Indonesia, Ireland, Italy, Republic of Korea, Kuwait, Latvia, Lithuania, Malawi, Mauritius, Mexico, Mozambique, Myanmar, Namibia, New Zealand, Nicaragua, Nigeria, Norway, Philippines, Portugal, Qatar, Romania, Russian Federation, Serbia and Montenegro, Spain, Syrian Arab Republic, Trinidad and Tobago, Ukraine, United Kingdom, Venezuela, Zimbabwe.

*Employers' organizations:* CAPECA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), SWTUF (Sudan), LO, TCO (Sweden), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy).

### *Other*

*Governments:* 6. Croatia, El Salvador, Panama, Switzerland, Thailand, United States.

### *Comments*

*Costa Rica.* INS disagrees.

*Oman.* The Ministry of Agriculture and Fisheries disagrees.

*If yes, please indicate what these exemptions should be?*

**Qu. B3(c)**

*Canada, Costa Rica, COHEP (Honduras), India, Saint Vincent and the Grenadines, Tunisia, United Arab Emirates* and ICMA suggest the exemption of small vessels, artisanal or family-operated vessels and those operating close to the coast.

*Saudi Arabia*, ECA (Trinidad and Tobago), *United Arab Emirates* suggest the exemption of amateur and recreational fishing.

*Australia*. Activities not requiring this condition to be met (e.g. computer work versus trawl netting), or fishing vessels having access to prompt medical services.

*Canada*. CAW-Canada: Fishing vessels less than 19 m in length.

*Denmark*. The exemptions provided for in Convention No. 73 (Articles 1 and 2).

*Eritrea*. Diseases not expected in the fishing sector.

*Ireland*. The Marine Survey Office recommends exemptions for certain types of fishing. HSA suggests exemptions for visitors, fisheries officers, maintenance officers, etc.

*Jamaica*. The type of work performed should be taken into consideration.

*Japan*. Workers unable to undergo the periodic examinations for such inevitable reasons as being at sea for too long a period.

*Malaysia*. Local crews.

*Netherlands*. Fishing vessels of categories “B” and “C”.

*Norway*. The Norwegian Fishing Vessels Owners’ Association/Norwegian Trawler’s Association suggest exemptions for work during holidays and “work weeks” during junior high school.

*Panama*. This depends on the position held on board the fishing vessel or the work to be carried out.

*Sri Lanka*. UFFC: Vessels of categories “C”, “D” and “E”.

*Sweden*. Vessels below 20 GT or operating only in areas “D” and “E”.

*Turkey*. Personnel that are not involved in navigation.

*United States*. USCIB: Small fishing operations of less than 50 persons. Persons who are not engaged in safety-sensitive positions should be subject to medical examinations at the employer’s or master’s discretion.

*ICSF*. Persons involved in day fishing operations.

**Qu. B3(d)** *Should the Convention provide that a person working on board a fishing vessel and for which a medical examination is required should hold a medical certificate attesting to fitness for work for which he or she is to be employed at sea?*

### *Affirmative*

*Governments: 76.* Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Latvia, Lebanon, Lithuania, Malawi, Mauritius, Mexico, Mozambique,

Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Syrian Arab Republic, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), PPDIV (Croatia), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), SLIMAPG (Guinea), JSU (Japan), FKSU (Republic of Korea), NUNW (Namibia), ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), RPRRKh (Russian Federation), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, IMHA.

### *Negative*

*Governments:* 4. Iceland, Malaysia, Switzerland, United States.

*Employers' organization:* CCIAS (Lebanon).

*Workers' organizations:* UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), FTUS (Lebanon), APOM (Panama), KSM NSZZ Solidarnosc, PSU (Poland), CNS Cartel Alfa (Romania), SALFU (Sierra Leone), TUC (United Kingdom).

*Other:* ICSF.

### *Other*

*Governments:* 2. Kuwait, Thailand.

*Workers' organization:* CDT (Morocco).

### *Comments*

*Argentina.* CCUOMM: This certificate should be consistent with the ILO/WHO *Guidelines for Conducting Pre-sea and Periodic Medical Fitness Examinations for Seafarers*.

CGT: The certificate should be issued by medical personnel approved by the competent authority.

SOMU: This is noted in the seafarers' book based on medical examination of the crew member.

*Australia.* There are a number of occupational activities requiring medical surveillance and/or medical fitness certificates, including use of hazardous substances and underwater diving. Fishing vessels may entail the risk of being some distance from medical assistance.

*Bahrain.* The medical certificate should be of a limited duration (two years).

*Brazil.* All persons working in the fishing sector, even artisanal fishermen, should undergo occupational medical certification, which could be provided by the State, in view of the activity's high degree of risk.

*Burundi.* The medical certificate should be reviewed every six months.

*Costa Rica.* INS states that this would be a means of protection for the worker and would relieve the employer of liability.

*Egypt.* Agrees for the safety of fishing personnel and fishery production.

*Estonia.* The medical certificate of workers aged under 21 or over 50 years should only be valid for one year.

Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation: Except for areas of operation "D" and "E".

*India.* This should be required for all vessels fishing outside territorial waters.

*Jamaica.* This will depend on the type of work to be done.

*Japan.* JSU: Nowadays fishermen from many different countries work together on board, and there should be an international standard on their health certification.

*Republic of Korea.* The certificate should be signed by a medical practitioner authorized by the competent authority.

*Lebanon.* Each person should carry a certificate providing medical information, such as blood type, general individual information, and other details set out by the competent authority.

*Namibia.* The Government requests the same medical certificate as in the merchant fleet.

*Nicaragua.* The examination should be exhaustive and highly technical, without the worker having to pay high costs; these provisions could be set out in a Recommendation.

*Norway.* This will ensure that only those who are medically fit will be allowed to work on board, which is an essential safety element. For those who are denied access on medical grounds, the Convention must provide for the right to an administrative appeal.

*Oman.* Control by the authorities should ensure that shipowners require medical certificates from workers on board fishing vessels.

*Philippines.* This would be mutually advantageous to the employer and the worker, since it would ensure that only those who are physically fit and able to work will be hired and that timely treatment and recovery of those afflicted is possible.

*Portugal.* The period of validity of the certificate should be shorter for persons aged under 18 and over 50.

*Qatar.* Certain chronic diseases (e.g. heart and pulmonary diseases) impede work on fishing vessels, given its difficult nature and the effort exerted.

*Russian Federation.* The Convention should include a provision on the personal responsibility of the crew member.

*Spain.* Such a certificate could be replaced with an annotation and brief summary contained in the worker's identity document.

*Sudan.* SWTUF: Certificates prove entitlement to medical care as part of insurance coverage in the event of injury. On the basis of the medical certificate, the real causes of an ailment may be examined.

*Thailand.* NCTL: The certificate should be issued by a doctor or government health official.

*United Arab Emirates.* In addition to the physical examination, the medical certificate should include psychological testing, eye and hearing tests for the skipper and officers.

*United States.* USCIB: Unless the medical examination is a requirement of a licence or certificate which is also required to be current and posted on board the vessel.

*Zimbabwe.* This is consistent with OSH measures.

ZCTU: Fitness for work should be certified by nationally recognized medical personnel or professionals.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), JSU (Japan), KSM NSZZ Solidarnosc, PSU (Poland), SALFU (Sierra Leone), TUC (United Kingdom): There should be a general medical certificate based on Question B3(a) above, rather than different ones related to specific work functions.

*ICMA.* There could be exceptions for family members working for small family-owned enterprises. However, such an exemption might be moot if insurance were unavailable for those without certificates.

*ICSF.* It would be impractical to implement.

*IMHA.* Medical certificates are legal documents and, as such, are a guarantee and a tool for inspectors to facilitate preventive and healthy measures on board. Compliance with a minimum standard should be required to ensure homogeneity. There should be authorized maritime health occupational doctors. IMHA could help prepare guidelines for their continuing education or minimum standard training. Restrictions or limitations on the job or navigation should also be stated in the certificate, rather than only a declaration as "fit" or "unfit". The doctor should propose a period of validity, within a maximum range, according to the fishermen's health and conditions of navigation.

A large majority of States (75 of 83) supported mandatory initial and subsequent periodic medical examinations in view of the hazardous nature of fishing, the extreme working conditions, and the possibility of transmitting disease to other fishers and to the public through contamination of the catch. Reference was made to Convention No. 73. There were specific suggestions on what might be checked during such examinations. The majority (57) did not support exemptions to the requirement for medical examinations. A minority suggested exemptions for: small vessels, artisanal or family fishing, vessels operating close to shore; operations involving less than a certain number of persons; day fishing; amateur and leisure fishing; and young persons working during school holidays.

A large majority of States (76 of 83) indicated that the Convention should provide that a person working on board a fishing vessel and for which a medical examination is required should hold a medical certificate attesting to fitness for work. It was

suggested that the certificate should be issued by medical personnel approved by the competent authority. It should be consistent with the ILO/WHO *Guidelines for Conducting Pre-sea and Periodic Medical Fitness Examinations for Seafarers*. Appropriate administrative appeal procedures should be in place in the event that a fisher is denied a certificate. The period of validity should be shorter for young fishers and those aged over 50. The certificate might indicate restrictions or limitations on work rather than simply stating “fit” or “unfit”.

Bearing in mind these replies and views expressed on this issue by the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector, the Office has proposed a general requirement (in *Point 18*) for persons on board to hold a valid medical certificate, coupled with the possibility that the competent authority might, after consultation, grant exemptions in respect of vessels which do not normally undertake voyages of more than a certain number of days (*Point 19*). The figure for the number of days has been left open for the Conference to discuss. *Point 20* sets out the main issues to be addressed in national laws and regulations or other measures with regard to such medical examinations and medical certificates, drawing upon the main concepts of Convention No. 113. Other details of Convention No. 113 have been moved to the Proposed Conclusions with a view to a Recommendation.

#### B4. MEDICAL CARE AT SEA

**Qu. B4(a)** *Should the Convention provide that fishing vessels should be required to carry appropriate medical supplies?*

##### *Affirmative*

*Governments:* 81. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF, IMHA.

### Negative

*Government:* I. Lebanon.

### Comments

*Algeria, Bangladesh, Brazil, India, Indonesia, Lebanon, FTUS (Lebanon), Malaysia, NEF (Namibia), APOM (Panama), Portugal, Romania, Thailand, NCTL (Thailand), Tunisia* would prefer these medical supplies to consist of “first aid” or “emergency medication” as a minimum.

*Argentina, Denmark, Eritrea, Estonia, Honduras, Lebanon, Philippines, Portugal, Saint Vincent and the Grenadines, United States* suggest that vessels should carry medical supplies that are appropriate to the area of operation, vessel size, number of persons on board and other such factors. These should depend on the expected specific risks, as in diving, for example.

*Australia.* Fishing vessels can be a hazardous work environment, and at a distance from prompt medical assistance. Any provision should take account of relevant IMO standards, i.e. the SFV 1977 and the SFV PROT 1993.

*Bahrain.* At least basic supplies and medication should be available to treat diseases.

*Costa Rica.* INS considers that this should be compulsory for fishing vessels remaining at sea for more than 72 hours.

*Denmark.* Council Directive 92/29/EEC<sup>5</sup> covers this item for EU Member States.

*Egypt.* GTUWA: The wording should rather be “sufficient supplies”.

*El Salvador.* In order to be prepared for taking any preventative or curative measures necessary.

*Estonia.* ESA/Estonian Fishermen’s Association: It should be an obligation of the member State to require that appropriate medical supplies be carried according to national conditions.

*Fiji.* This would cater for work-related injuries and diseases.

*Guinea.* SLIMAPG: For the purpose of primary care and preventative treatment.

<sup>5</sup> See Annex II to this report.

*Honduras.* COHEP: For artisanal and small-scale fishing vessels, this should remain a recommendation.

*Ireland.* Refer to the appropriate EU Directive.

*Republic of Korea.* Refers to the Ships' Medicine Chests Recommendation, 1958 (No. 105).

*Malawi.* Fishing vessels operating for a long period of time should carry medical supplies for any eventuality .

*Mexico.* This is the responsibility of the employer.

*Namibia.* Medical supplies on board fishing vessels should correspond to those required on board merchant vessels, although fishing vessels are even more dangerous.

*Netherlands.* This requirement should be in line with Council Directive 92/29/EEC.

*Nicaragua.* The fishing vessel should be able to deal immediately with any accident that takes place.

*Oman.* As fishing vessels are often far from medical facilities and medical care centres, such supplies should be available on board.

*Qatar.* In Qatar, fishing vessels are inspected annually, including safety and first-aid equipment.

*Romania:* CNS Cartel Alfa: Common medications and first aid should be available.

*Russian Federation.* There should be a mandatory provision on a standard set of medical supplies.

*Saudi Arabia.* First-aid supplies and antivenom serums.

*Serbia and Montenegro.* Especially for vessels of categories "A" and "B".

*Spain.* The distance from the coast and lack of external emergency services means that medical supplies are so vital that the administration of a drug on board can save a seafarer's life.

*Switzerland.* The danger of injury is greater than on shore.

*United Arab Emirates.* Supplies for treating injuries, headaches, heart disease, diabetes, vertigo; medical oxygen and masks; and the usual first-aid supplies.

*United Kingdom.* The appropriate standard would be that set out in Council Directive 92/29/EEC.

*United States.* USCIB: Fishing vessels should have a complete first-aid manual and medicine chest with drugs and supplies appropriate to the overall size of the crew.

*Zimbabwe.* Otherwise injuries offshore may be fatal.

*Views shared by several workers' organizations:* CCUOMM, CGT, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), JSU (Japan), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom): Specific requirements depend on the area of operation.

*ICMA.* All vessels should be required to carry basic medical supplies. Vessels operating on the deep sea or on long voyages could be required to carry larger medical chests.

*IMHA.* No limitations based on the type and size of fishing vessels should be applied, except in order to adapt the content. IMHA could help update Appendix IV "Recommended

contents of fishing vessels' medicine chest" of the Fishing Safety Code (e.g. with regard to first-aid kits for small ships), given that it is already contributing to preparing the third edition of the International Medical Guide for Ships, taking into account basic regulations such as Council Directive 92/29/EEC.

*Should the Convention provide that fishing vessels should normally have on board a person (e.g. the master or a member of the crew) qualified or trained in first aid or other forms of medical care?* **Qu. B4(b)**

#### *Affirmative*

*Governments:* 81. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPECA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF, IMHA.

#### *Other*

*Government:* 1. Lebanon.

*Comments*

*Argentina.* Vessels with a large number of crew and at sea for a considerable period should have a doctor on board, failing which there should be a trained person on board. Without prejudice to the foregoing, it might be suggested that deep-sea vessels should carry a doctor and a nurse; coastal and outlying coastal vessels should have nursing staff.

CAPeCA/CALAPA/CAPA: It should be the captain.

SOMU: There should also be means to allow rapid consultations with qualified doctors on shore to ensure that appropriate assistance is provided.

*Canada.* UFAWU-CAW: There should be two persons (master or crew members) trained in first aid.

*Bulgaria.* This requirement should be limited to SOLAS vessels.

*Denmark.* This training requirement should however depend on the size and operating area of the fishing vessel.

*Ecuador.* The person should have particular knowledge of the accidents that occur in the sector and the associated illnesses.

*Estonia.* At least one person on board should always be qualified or trained in first aid, but not necessarily in other forms of medical care. First aid should be available in fishing vessels of all categories, and medical treatment should be available on fishing vessels of category "A".

Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation: Professional skills of fishermen should include first aid in case of injuries.

*Finland.* Depending on the length of the vessel a qualified person should be required.

*France.* Training should vary according to the type of fishing vessel and navigation, and there should be a transition period allowing for the implementation of such training.

MEDEF: There should be temporary provisions ensuring the gradual extension of the above to small fishing vessels.

*Honduras.* COHEP: This requirement should apply to fishing on the high seas or fishing vessels that are out for a number of days; for the others, this should only be recommended.

*India.* This should be required for all vessels beyond 20 m OAL.

*Ireland.* Reference should be made to the appropriate EU Directive.

*Jamaica.* This is desirable but depends on the type of operation.

*Japan.* JSU: The actual requirements should be developed taking into account the area of operation and availability of a shore-based support system.

*Lebanon.* Such a person should only be available on board vessels operating in international waters or outside territorial waters.

CCIAS: Moreover, a doctor should be present on board large vessels.

FTUS: This should be done through certification and training courses for the crew of each ship.

*Malaysia.* But only for fishing vessels operating on the high seas.

*Namibia.* NEF: At least two persons should hold advanced first-aid certificates.

NUNW: At least three crew members should be trained in first aid.

*Netherlands.* This requirement should be in line with Council Directive 92/29/EEC.

*Panama.* APOM: All crew members should have to take basic first-aid and swimming courses.

*Philippines.* Where there are ten to 50 workers in a workplace, the services of a graduate first-aider is to be provided; this person may be one of the workers and should have immediate access to the first-aid equipment. Where there are 50 to 200 workers, the services of a full-time registered nurse are to be provided. However, if the workplace is non-hazardous and a nurse is not available, the services of a full-time first-aider may suffice.

*Portugal.* There should be a person with sufficient training to use the supplies referred to in Question B4(a) and to follow instructions provided by radio.

*Qatar.* In view of the specific possibilities of national implementation, this proposal should rather be a Recommendation.

*Saudi Arabia.* Especially for vessels spending several days at sea, to ensure that no injury deteriorates before the vessel reaches land.

*Serbia and Montenegro.* Especially for vessels of categories “A” and “B”.

*Switzerland.* Basic training would be sufficient.

*Thailand.* ECOT: Five to ten years should be provided for arranging training and implementation.

*Tunisia.* Particularly fishing vessels operating on the high seas.

*United Arab Emirates.* As fishermen are exposed to sun and heat, which could lead to unconsciousness, injury or drowning, the presence of an experienced person is essential.

*United Kingdom.* This should be proportionate depending on the stores carried – cf. Council Directive 92/29/EEC.

TUC: The skill level required will further depend on the stores carried and should be appropriate even for single-handed vessels, which may come to the aid of other vessels.

*United States.* This should depend upon the area in which the vessel is operating. In the United States, commercial fishing vessels carrying three or more crew members and operating outside 3 miles must have a person trained in first aid and CPR.

USCIB: Each vessel with two to 15 individuals on board should have at least one person trained in basic first-aid response by a certified trainer and CPR delivery. Vessels that carry 16 or more crew members should have additional trained and certified crew members.

*Zimbabwe.* ZCTU: This should be compulsory if there are no medical rescue services in the vicinity.

*Views shared by several workers' organizations:* CCUOMM, CGT, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom): The skill level would depend on the area of operation and ability to secure shore-based medical assistance.

*ICMA.* Each fishing vessel should be required to have on board a person qualified in first aid. That person's certificate should be posted on the vessel at all times so that all persons on board are informed of who is responsible for emergency medical care.

*IMHA.* According to the STCW-F Convention, it should be a responsible person who undergoes refresher courses at least every five years. IMHA could help update the minimum content of these courses and adapt them to the type of ship and navigation (i.e. distance from appropriate onshore medical resources). Fishermen should be trained on radio-medical consultations and carry an updated and appropriate medical chest and a copy of the International Medical Guide for Ships.

**Qu. B4(c)** *Should the Convention provide that certain fishing vessels should be excluded from the above requirement?*

*Affirmative*

*Governments:* 31. Argentina, Austria, Bangladesh, Brazil, Bulgaria, China, Costa Rica, Croatia, Cyprus, El Salvador, Finland, France, Hungary, India, Islamic Republic of Iran, Italy, Jamaica, Japan, Republic of Korea, Latvia, Malaysia, Mauritius, Netherlands, Nicaragua, Philippines, Qatar, Saint Vincent and the Grenadines, Saudi Arabia, Tunisia, United Arab Emirates, United States.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAS (Lebanon), Norwegian Fishing Vessel Owners' Association/Norwegian Trawlers' Association (Norway), ECA (Trinidad and Tobago).

*Workers' organizations:* GTUWA (Egypt), FKSU (Republic of Korea), CDT (Morocco), APOM (Panama), UFFC (Sri Lanka), SWTUF (Sudan), NCTL (Thailand), NATUC (Trinidad and Tobago), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), ICSF.

*Negative*

*Governments:* 50. Algeria, Australia, Bahrain, Belarus, Belgium, Benin, Canada, Cuba, Czech Republic, Denmark, Ecuador, Egypt, Eritrea, Estonia, Fiji, Germany, Greece, Guatemala, Honduras, Iceland, Indonesia, Ireland, Kuwait, Lebanon, Lithuania, Malawi, Mexico, Mozambique, Myanmar, Namibia, New Zealand, Nigeria, Norway, Oman, Panama, Portugal, Romania, Russian Federation, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Turkey, Ukraine, United Kingdom, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), CCIAB (Lebanon), NEF (Namibia), ECOT (Thailand), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FTUS (Lebanon), NUNW (Namibia), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), USS (Switzerland), TUC (United Kingdom).

*Others:* AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, IMHA.

*Other*

*Government:* 1. Burundi.

*Comments*

*Australia.* All workplaces, including fishing vessels, should have first-aid equipment and facilities readily available for use, and these should be adequate for the types of injuries or emergencies anticipated. In such circumstances, one or more trained persons should be available to administer first aid in accordance with the risk assessment for fishing vessels as a workplace. Rather than providing for exemptions, the Convention should qualify this requirement by the words “as appropriate for the length and distance of the proposed voyage”.

*Oman.* The Ministry of Agriculture and Fisheries agrees.

*IMHA.* No limitations based on type and size of the fishing vessels should be applied, except in order to adapt the content of the medical chest or the first-aid and medical care courses. In small-scale fisheries account should be taken of hypothermia, artificial respiration, and stings and poisoning by marine animals, as well as preventive devices.

*If yes, please specify:*

**Qu. B4(d)**

*Argentina, CAPeCA/CALAPA/CAPA (Argentina), Austria, Brazil, Bulgaria, China, Costa Rica, INS (Costa Rica), El Salvador, France, MEDEF (France), COHEP (Honduras), India, Italy, Jamaica, Latvia, National Board of Fisheries, LEC (Latvia), CCIAS (Lebanon), Malaysia, Mauritius, CDT (Morocco), Netherlands, Norwegian Fishing Vessels Owners' Association/Norwegian Trawlers' Association (Norway), Oman, APOM (Panama), Philippines, Qatar, Saint Vincent and the Grenadines, Saudi Arabia, UFFC (Sri Lanka), SWTUF (Sudan), Tunisia, United Arab Emirates, ZCTU (Zimbabwe)* suggest that small coastal and artisanal vessels typically less than 10 to 20 m in length could be excluded, depending on the area of operation, or that vessels operating in areas “C”, “D” and “E” within territorial waters could be excluded, especially if they remain at sea for less than 48 hours.

*Australia.* There should be no exemptions. Even if fishing vessels are close to shore or medical assistance, first aid should be available on board. The same consideration would apply to all workplaces. First aid refers to the provision of immediate assistance in an emergency.

*Croatia.* The above requirement should depend on fishing vessel length and tonnage.

*Estonia.* ESA/Estonian Fishermen's Association: Requirements should only apply to international fishing vessels. For inland and territorial waters there should be different training requirements.

*Finland.* A qualified person should be required according to the length of the vessel.

*Greece.* The Convention should only deal with fishing vessels sailing internationally.

*Hungary.* The medical supplies required should depend on the number of crew members and vessel size, as defined by national law.

*Ireland.* The Marine Survey Office indicates that the location of the operation may negate the requirement. HSA suggests excluding vessels of category “E” during training.

*Japan.* Vessels should be exempted according to tonnage, length and time at sea.

*Nicaragua.* The length of time spent at sea should be taken into consideration.

*Qatar.* The availability of first-aid equipment is essential for all fishing vessels.

*Thailand.* NCTL: Fishing vessels with fewer than 50 persons on board.

*Trinidad and Tobago*. ECA: Vessels used for sports or recreation.  
NATUC: Family-operated vessels.

*United Kingdom*. In principle there should be no exclusions, but all depends on the exact coverage of the Convention.

*United States*. First-aid supplies and the ability to administer first aid should be determined based on the vessel's size, distance from shore and number of crew members.

*ICSF*. Fishing vessels only performing short fishing trips or day fishing operations.

The vast majority of States (81 of 83) indicated that the Convention should provide that fishing vessels should be required to carry appropriate medical supplies. Reasons given included the high degree of risk in fishing and the remoteness of fishing operations from medical care ashore. Several replies suggested a first-aid kit as a minimum; others considered that medical supplies should depend on operating area, vessel size, number of persons on board, etc.

Nearly all States (81) agreed that the presence on board of a person qualified or trained in first aid or other forms of medical care should be mandatory. Several replies called for flexibility regarding the implementation of this provision (depending on the fishing operation, time at sea, or size of the vessel and allowing a transitional period for the extension of this requirement to small fishing vessels). On large vessels, more than one person should be so trained, especially on the high seas. Consideration should be given to the STCW-F Convention, and reference was made by European countries to Council Directive 92/29/EEC. Very large vessels (or vessels with large crews) could carry medical doctors. Training in the use of radio-medical services would be useful.

The majority of States (50) did not want the Convention to provide for the possibility of exclusions. However, some proposed the exclusion of small vessels, artisanal vessels, family-owned vessels, vessels operating within 3 miles of the baseline or in territorial waters, or at sea for only one or two days at a time, or vessels with a small number of persons on board. It was also suggested that the requirement be qualified by the words "as appropriate for the length and distance of the proposed voyage" and be based on risk assessment.

The Office has proposed provisions that take into account the vast majority of affirmative replies to Questions B4(a) and (b). *Point 32* draws upon the Accommodation of Crews (Fishermen) Convention, 1966 (No. 126) and certain provisions of the Health Protection and Medical Care (Seafarers) Convention, 1987 (No. 164). A new provision concerns the right to have access to medical treatment ashore. *Point 33* has been added to strengthen the requirements for vessels on international voyages. More detailed provisions have also been included in the Proposed Conclusions with a view to a Recommendation.

## B5. CONTRACTS FOR WORK

**Qu. B5(a)** *Should the Convention provide that every person working on board a fishing vessel should have a written contract or articles of agreement, subject to such conditions as may be provided for in national laws and regulations?*

*Affirmative*

*Governments:* 78. Algeria, Argentina, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Burundi, Canada, China, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB (Lebanon), NEF (Namibia), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA.

*Negative*

*Governments:* 3. Australia, Bulgaria, Thailand.

*Employers' organizations:* CCIAS (Lebanon), ECOT (Thailand).

*Workers' organization:* FTUS (Lebanon).

*Other:* ICSF.

*Other*

*Government:* 1. Germany.

*Comments*

*Austria, Burundi, Indonesia, Islamic Republic of Iran, CCIAB (Lebanon), Oman, Spain* consider that a written contract should stipulate the working conditions, rights and basic duties of both parties.

INS (Costa Rica), *Czech Republic, Eritrea, Mozambique, Norway, Oman, Saudi Arabia, United Arab Emirates* consider that a contract would serve as a reference for and facilitate the settlement of disputes and enable fishers to claim their entitlements.

*Algeria.* Fishing should not be excluded from labour legislation.

*Australia.* The regulation of employment contracts should not be undertaken on an individual industry basis. Legislation and/or ILO Conventions that apply across all industries are the most appropriate avenue for this type of regulation.

*Bahrain.* It is preferable that every fisher be covered by insurance.

*Brazil.* In Brazil, the contract of employment must be registered in the Work and Social Welfare Booklet, an official document containing a record of the worker's entire working life.

*Canada.* UFAWU-CAW: Preferably there should be a collective agreement.

*Costa Rica.* INS: This would prevent disputes and facilitate their resolution through the interpretation of the employment contract.

*Denmark.* Council Directive 91/533/EEC<sup>6</sup> covers this item for EU Member States.

*Egypt.* Fishers would thus obtain appropriate compensation in the event of injury or death.

*Finland.* The requirement of written contracts or articles of agreement should be in accordance with those set out for salaried workers in other sectors. This issue could also be included in the Recommendation.

*Greece.* The contract should specify whether it covers persons working on board fishing vessels involved in navigation or those involved in fishing (using fishing machinery).

*India.* This should be required for deep sea fishing vessels only.

*Ireland.* The Marine Survey Office indicates that this may conflict with traditional agreements, e.g. share agreements. HSA disagrees.

*Lebanon.* The written contract or terms of employment should be clearly set out in a language understood by the worker.

CCIAS: It would be very difficult to follow up on compliance with this obligation.

FTUS: No written contract is needed, except in the case of foreign fishermen working for a Lebanese employer.

*Malawi.* To avoid exploitation of workers, as is the case where the form of employment is predominantly oral.

*Malaysia.* Only for fishing vessels operating on the high seas.

*Namibia.* No temporary employment without a contract should be allowed.

*Norway.* The main principle is that the contract enables any claim to be legally enforceable. The special provisions of the Fishermen's Articles of Agreement Convention, 1959 (No. 114), concerning shares and methods of calculating them should be retained.

*Russian Federation.* The Convention should include a provision on the responsibility of an employer who refuses to conclude a collective agreement and individual contracts of employment.

*Sweden.* This provision should only be applicable to employees.

*Thailand.* A labour contract is valid whether written or oral.

---

<sup>6</sup> See Annex II to this report.

*United Kingdom.* This requirement will need to take into account the particular arrangements that apply to share fishermen in the fishing industry.

*TUC:* This would be in line with Article 4 of the Right to Organise and Collective Bargaining Convention, 1949 (No. 98).

*Venezuela.* In many countries workers' rights are violated, and a contract ensures compliance with the legislation and the stipulated conditions.

*Zimbabwe. ZCTU:* Provided that there are supervisory mechanisms.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom): The competent authority should ensure that such documents reflect the terms and conditions of applicable collective agreements and take active measures to promote the negotiation of collective agreements.

*ICMA.* Employment in many fisheries is defined by traditional terms known by everyone in the traditional community. However, because fishing vessels increasingly employ persons from outside the traditional community, all persons employed on fishing vessels should have a written contract.

*ICSF.* A written contract should only be required if the fishing operations extend to other EEZs or the high seas, and only if there are distinct categories of owners and workers.

*Should the Convention provide for possible exemptions from the above requirement?* **Qu. B5(b)**

### *Affirmative*

*Governments:* 28. Algeria, Australia, Bangladesh, Belgium, Brazil, Canada, Costa Rica, Cyprus, Czech Republic, Denmark, Egypt, El Salvador, Finland, Greece, Hungary, India, Jamaica, Republic of Korea, Netherlands, Philippines, Qatar, Russian Federation, Saint Vincent and the Grenadines, Serbia and Montenegro, Sweden, Tunisia, United Kingdom, United States.

*Employers' organizations:* CAPECA/CALAPA/CAPA (Argentina), MEDEF (France), COHEP (Honduras), Norwegian Fishing Vessel Owners' Association/Norwegian Trawlers' Association (Norway), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States).

*Workers' organizations:* CCUOMM (Argentina), CAW-Canada (Canada), GTUWA (Egypt), FKSU (Republic of Korea), CDT (Morocco), RPRRKh (Russian Federation), UFFC (Sri Lanka), NATUC (Trinidad and Tobago).

*Others:* PVIS (Netherlands), ICSF.

### *Negative*

*Governments:* 51. Argentina, Bahrain, Belarus, Benin, Burundi, China, Croatia, Cuba, Ecuador, Eritrea, Estonia, Fiji, France, Guatemala, Honduras, Iceland, Indonesia,

Islamic Republic of Iran, Ireland, Italy, Japan, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Portugal, Romania, Saudi Arabia, Spain, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Turkey, Ukraine, United Arab Emirates, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), EMCOZ (Zimbabwe).

*Workers' organizations:* CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FTUS (Lebanon), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), SALFU (Sierra Leone), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), ICMA.

### *Other*

*Governments:* 3. Austria, Bulgaria, Germany.

### *Comments*

*Ireland.* HSA agrees.

*Oman.* The Ministry of Agriculture and Fisheries agrees.

**Qu. B5(c)** *If yes, which categories of persons working on board fishing vessels could be exempted from the provisions concerning written contracts or articles of agreement?*

*Algeria, Argentina, CCUOMM (Argentina), Bangladesh, Brazil, Canada, CAW-Canada (Canada), Costa Rica, Cyprus, El Salvador, COHEP (Honduras), Ministry of Agriculture and Fisheries (Oman), Philippines, Qatar, NATUC (Trinidad and Tobago), Tunisia, United Arab Emirates, USCIB (United States) suggest exempting small vessels engaged in artisanal, coastal or small-scale fishing and/or operated by the owner and his/her family.*

*Argentina.* CAPeCa/CALAPA/CAPA: Exemptions should be made according to the type of fishing vessel.

*Australia.* Observers, scientists and students.

*Costa Rica.* INS suggests exempting persons who represent the interests of the employer, e.g. fishing-vessel captains.

*Czech Republic.* Persons doing short-term auxiliary work.

*Denmark.* According to Council Directive 91/533/EEC, employees in very short-term employment.

*Egypt.* Seasonal and part-time employees and persons working on board while the vessel is in port.

*France.* MEDEF: Subject to the existence of a collective agreement setting the conditions of employment.

*Greece.* Persons undergoing training.

*Hungary.* Direct or indirect vessel owners.

*India.* Persons working on powered or non-powered coastal vessels below 20 m length.

*Ireland.* HSA suggests excluding persons on board vessels of categories “D” and “E”.

*Jamaica.* This depends on the type of operation. There should be a standard short-term contract for engineers and fishers, for example.

*Republic of Korea.* If there is a collective agreement signed by employers’ and workers’ organizations.

*Morocco.* CDT: Trainees.

*Netherlands.* Share fishermen.

*Norway.* Norwegian Fishing Vessel Owners’ Association/Norwegian Trawlers’ Association: exemptions for work during holidays and “work weeks” during junior high school.

*Philippines.* Fishers working on fishing vessels operating in areas “C”, “D”, and “E”.

*Russian Federation.* Directors of enterprises on board vessels belonging to such enterprises, persons sent on mission to areas of operation, passengers.

*Saint Vincent and the Grenadines.* Short-term workers, observers and researchers.

*Sri Lanka.* UFFC: Vessels of categories “D” and “E”.

*Sweden.* Persons working for less than one month.

*Thailand.* ECOT: Educational personnel, observers, etc.

*Trinidad and Tobago.* ECA: Minors working on board fishing vessels owned or operated by the guardian.

*United Arab Emirates.* Research and fisheries protection vessels, leisure and cruise craft.

*United Kingdom.* Land-based workers temporarily on the vessel to carry out works, or fishing surveillance.

*United States.* Commercial vessels of up to 20 GT.

*ICSF.* Persons working on board fishing vessels going on shorter fishing trips or day-fishing.

**Qu. B5(d)** *Should the Convention provide that persons working on board a fishing vessel should have access to appropriate mechanisms for the settlement of disputes concerning their contract or articles of agreement?*

#### *Affirmative*

*Governments:* 78. Algeria, Argentina, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), MEDEF (France), COHEP (Honduras), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

#### *Negative*

*Governments:* 3. Australia, Hungary, Tunisia.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), ESA/Estonian Fishermen's Association (Estonia), LEC (Latvia).

*Workers' organizations:* Estonian Fishery Workers Trade Union (Estonia), FTUS (Lebanon).

#### *Other*

*Government:* 1. Costa Rica.

*Comments*

*Norway, Sweden.* The responsibility should lie with the flag State, and the issues should be brought before the administration or courts of the flag State or country of residence of the fisherman. General mechanisms available to all workers (e.g. access to arbitration in certain circumstances, or employment tribunals) should be considered as substantially equivalent to any special mechanisms devised in the context of this instrument.

*Argentina.* The administrative labour authority and national or federal courts, as appropriate. CAPeCA/CALAPA/CAPA: It is not necessary to create separate mechanisms or proceedings.

CGT: The mechanisms should be stipulated in the collective agreements and in the relevant national legislation.

*Brazil.* In Brazil, the Labour Court is competent.

*Costa Rica.* INS agrees and considers that, as this work, in most cases, takes place outside the territory of the flag State, special facilities should be provided to settle disputes.

*Denmark.* However, the Convention should provide that claims concerning articles of agreement can only be presented to an administration or court of the flag State.

*Ecuador.* Mediation, arbitration and administrative or judicial tribunals.

*Egypt.* Courts with competence to examine labour contracts, fishermen's confederations, trade unions and insurance companies.

*Eritrea.* EFE: Mediators.

*Estonia.* ESA/Estonian Fishermen's Association: In the case of small countries it is not necessary to provide for special mechanisms.

*Fiji.* However, not all fishing vessels can carry personnel for dispute settlement.

*Finland.* Disputes should be settled in court in the same way as other labour disputes.

*Ghana.* MDU: The appropriate workers' organization.

*Hungary.* International private law rules should apply here.

*Republic of Korea.* The competent authority could mediate between employers and workers.

*Latvia.* The National Board of Fisheries disagrees.

*Lebanon.* FTUS: Relations between fishers are governed by traditions. The arbitrator in the event of a dispute is one of their peers, and the judgement is binding and irrevocable.

*Malawi.* The Government agrees to provide for collective bargaining, social dialogue and expeditious resolution of disputes conducive to social and economic progress.

*Mauritius.* Recourse to court would be too time-consuming.

*Mexico.* In Mexico, the Federal Conciliation and Arbitration Board is competent.

*Morocco.* CDT: There should be occupational or administrative bodies for arbitration before submitting complaints to courts.

*Namibia.* A union representative or a lawyer.

NEF: District labour courts.

*Panama.* APOM: Maritime labour tribunals for vessels of categories "A" and "B" with guarantees of legal assistance.

*Philippines.* Pertinent government agencies of countries whose citizens or nationals work on foreign-flag/registered fishing vessels.

*Portugal.* Bodies with general jurisdiction in labour law (labour inspectorate, labour tribunals) and the competent maritime authority.

*Russian Federation.* The Convention should provide for a standard system of settlement of labour conflicts on a vessel, with the personal responsibility of the shipowner and employer.

*Saudi Arabia.* The fisher's country of origin should be informed of the terms of the contract and the settlement of disputes mechanism in the employer's State.

*Spain.* The contract should specify the means of settlement of disputes.

*Sri Lanka.* UFFC: The Convention should also provide for the right to association or union membership, without which individual fishermen might find it impossible to settle disputes.

*Thailand.* NCTL: Arbitration or labour courts.

*Trinidad and Tobago.* ECA: This would be useful, especially for workers on the open sea deciding to take matters into their own hands.

*United States.* In the United States there is a process that allows for a dispute to be resolved in civil court.

USCIB: Such settlement mechanisms should be defined and set forth in the contract of employment.

ICMA. Alternative dispute mechanisms should be considered because the high costs of court litigation can effectively bar workers from this remedy.

The vast majority of States (78) replied that the Convention should provide that every person working on board a fishing vessel should have a written contract or articles of agreement, subject to national laws and regulations. This was necessary for the settlement of disputes and to clarify the rights and responsibilities of all parties. However, many said that their national laws and regulations already set out such a requirement for all workers, including fishers. Some also pointed to the relevant EU requirements (Council Directive 91/533/EEC). A few noted that in their countries, particularly for small or artisanal vessels, an oral contract was sufficient. Others said that the requirement for a written contract was only necessary for work on deep-sea vessels. One country stated that the main principle is that the contract enables any claim to be legally enforceable.

Nearly twice as many States (51) opposed possible exemptions as supported them (28). Suggestions for exemptions included: observers, scientists, students (in particular, those working during school holidays or "work weeks"), vessel owners, family members, fishing-vessel captains, directors of enterprises, part-time or seasonal workers, fishers in small-scale, artisanal and coastal fishing, as well as share fishers and those working under a collective agreement covering all employees, and those working on vessels under a certain size (e.g. 20 m) or tonnage (e.g. 20 GT).

The vast majority of States (78) said that persons working on board a fishing vessel should have access to appropriate mechanisms for the settlement of disputes relating to their contracts or articles of agreement. Several States indicated that this could be provided through the mechanisms already available for other workers.

The Office notes that the majority of governments were in favour of a provision calling for fishers to have a written agreement, and that the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector also generally agreed that the standard should provide that there should be a contract, which could be a contract of employment or articles of agreement for employed fishers, or another form of agreement between the fishing vessel owner and share fishers. The provisions in *Points 23 to 26* are a reduced and modified version of provisions in Convention No. 114. In *Point 24(a)* the word “concluded” has been used instead of “signed” to provide additional flexibility. Elements of the fisher’s work agreement (drawn from Convention No. 114, Article 6, with some additions) have been placed in Annex I to lighten the body of the proposed Convention. These provisions have been slightly changed to make it clear that they refer not only to “employed” fishers but to all fishers (including, for example, those paid on the basis of a share of the catch). The reference to the annex in *Point 25* would make it mandatory and an integral part of the Convention. *Point 27* requiring that every fishing vessel carry a list of the fishers on board has been added by the Office, based on the replies received (see also the commentary on Question C10).

#### B6. ACCOMMODATION AND PROVISIONS ON BOARD FISHING VESSELS

*Should the Convention provide that all fishing vessels should have appropriate accommodation and sufficient food and drinking water for the service of the fishing vessel?* **Qu. B6(a)**

##### *Affirmative*

*Governments:* 81. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers’ organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen’s Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers’ organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia),

PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Negative*

*Government:* 1. Benin.

### *Comments*

*Australia.* The importance of these matters to OSH is recognized.

*Mozambique.* In order to provide an appropriate working environment and to prevent health problems.

**Qu. B6(b)** *If yes, should it provide for the possibility of exempting certain categories of fishing vessels from the requirement concerning accommodation?*

### *Affirmative*

*Governments:* 50. Algeria, Argentina, Austria, Bangladesh, Belgium, Benin, Brazil, Bulgaria, Canada, China, Cuba, Cyprus, Czech Republic, El Salvador, Estonia, Finland, France, Germany, Guatemala, Hungary, India, Islamic Republic of Iran, Italy, Jamaica, Japan, Republic of Korea, Latvia, Lebanon, Malaysia, Mozambique, Myanmar, Namibia, Netherlands, Nicaragua, Norway, Panama, Philippines, Portugal, Qatar, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Sweden, Trinidad and Tobago, Tunisia, Ukraine, United Arab Emirates, United Kingdom, United States, Zimbabwe.

*Employers' organizations:* ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada (Canada), UNIMPESCOL (Colombia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), MDU (Ghana), KPI (Indonesia), JSU (Japan), FKSU

(Republic of Korea), CDT (Morocco), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Negative*

*Governments:* 29. Australia, Bahrain, Belarus, Burundi, Costa Rica, Croatia, Ecuador, Egypt, Eritrea, Fiji, Greece, Honduras, Iceland, Ireland, Lithuania, Malawi, Mauritius, Mexico, New Zealand, Nigeria, Oman, Romania, Russian Federation, Spain, Switzerland, Syrian Arab Republic, Thailand, Turkey, Venezuela.

*Employers' organizations:* CAPECA/CALAPA/CAPA (Argentina), EFE (Eritrea), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States).

*Workers' organizations:* UFAWU-CAW (Canada), PPDIV (Croatia), CSG (Gabon), SLIMAPG (Guinea), FTUS (Lebanon), NUNW (Namibia), NSU/NSF/DNMF (Norway), Federation of Fishing Sector Trade Unions (Portugal), USS (Switzerland), NCTL (Thailand).

### *Other*

*Governments:* 3. Denmark, Indonesia, Kuwait.

### *Comments*

*Australia.* "Appropriate accommodation" should be defined to have a wider meaning than just "sleeping accommodation". This would take into account those very small fishing vessels which do not stay at sea overnight and therefore have no requirement for sleeping arrangements.

*Burundi.* Accommodation is necessary in case of bad weather.

*Costa Rica.* INS agrees.

*Mozambique.* Not all fishing vessels perform activities of the same scale. Some vessels require accommodation owing to the nature of their activities, and others do not.

*Oman.* The Ministry of Agriculture and Fisheries agrees.

*If yes, please indicate which fishing vessels could be exempted.*

**Qu. B6(c)**

Several replies indicate that drinking water and food requirements are relevant to all vessels.

*Algeria, Bulgaria, CCIAB (Lebanon), CNS Cartel Alfa (Romania), ZCTU (Zimbabwe)* suggest exempting small vessels spending short periods at sea. *Algeria, Brazil, Canada, El*

Salvador, Jamaica, Mozambique, Saint Vincent and the Grenadines, Serbia and Montenegro propose exempting artisanal or small-scale vessels.

Argentina, Austria, Belgium, CCE (Belgium), Brazil, CGT (Brazil), Bulgaria, Czech Republic, GTUWA (Egypt), ESA/Estonian Fishermen's Association, Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), Saudi Arabia, SWTUF (Sudan), Sweden, United States, EMCOZ (Zimbabwe) suggest vessels remaining at sea for less than one day or less than 24 hours could be exempted. Canada, CAW-Canada (Canada), France, Namibia, ICMA and ICSF suggest exempting vessels operating only during the day. Hungary suggested 11 hours. Japan said a short period of time.

Many replies suggest exempting vessels according to operating area. Brazil, China, Costa Rica, Cyprus, COHEP (Honduras), AGCI PESCA (Italy), National Board of Fisheries, LEC (Latvia), CCIAS (Lebanon), Malaysia, Netherlands, PVIS (Netherlands), APOM (Panama), Trinidad and Tobago suggest vessels in operating area "C"; Benin, Brazil, Costa Rica, Cyprus, MEDEF (France), Guatemala, COHEP (Honduras), AGCI PESCA (Italy), National Board of Fisheries, LEC (Latvia), CCIAS (Lebanon), CDT (Morocco), Netherlands, PVIS (Netherlands), APOM (Panama), Philippines, Qatar, UFFC (Sri Lanka), Sweden propose vessels in operating area "D"; and Benin, Brazil, Cyprus, Estonia, Guatemala, COHEP (Honduras), AGCI PESCA (Italy), National Board of Fisheries, LEC (Latvia), CCIAS (Lebanon), CDT (Morocco), Myanmar, Netherlands, PVIS (Netherlands), APOM (Panama), Philippines, Qatar, UFFC (Sri Lanka) suggest operating area "E". Germany, Islamic Republic of Iran, Italy, Tunisia, Ukraine suggest that coastal vessels could be exempted.

A number of replies suggest size as a determining factor: for example, Denmark points out that the national legislation excluded fishing vessels of less than 15 m, whereby for vessels less than 24 m, deviations may be granted and less severe provisions were stipulated; El Salvador suggests excluding artisanal fishing vessels less than 10 m long; Latvia and Confcooperative (Italy) suggest vessels less than 12 m in length; NEF (Namibia) suggests fishing vessels under 20 m in length and of less than 100 GRT; Panama notes that, according to the Accommodation of Crews (Fishermen) Convention, 1966 (No. 126), fishing vessels of less than 75 GRT should be exempted. Japan and Lebanon suggest exemptions according to tonnage and length, as well as time at sea.

Finland, United States suggest number of crew as the basis for exemption.

Republic of Korea and FKSU (Republic of Korea) indicate that existing vessels could be exempted.

France. Day-fishing vessels and those which for technical reasons do not lend themselves to being fitted with accommodation facilities.

Greece. The Convention should only cover foreign-going fishing vessels.

India. All non-powered day-fishing vessels generally operating in territorial waters.

Ireland. No exemptions should be permitted. Recommendations made by the Fishing Vessel Safety Review Group in 1996 and the Task Force on Training and Employment in 2001 advise that, through legislative changes and the introduction of COC, e.g. for vessels under 17 m, skippers and crew should be encouraged to improve their competence. The Marine Survey Office indicates that exemptions should be made having regard to the age of the vessel, nature and location. The HSA agrees and suggests exemptions for vessels of categories "D" and "E".

Lebanon. FTUS: Vessels operating within their local areas near where fishers live.

Oman: Small fishing vessels under 10 m and fishing vessels only operating for a few hours per day.

*Portugal.* Fishing vessels in service that cannot be adapted for structural and safety reasons, as any alterations would imply changes to the stability of the vessel and, as a result, to its ability to fulfil its function.

*Sierra Leone.* SALFU: Small and single-crewed vessels should also be exempted.

*Trinidad and Tobago.* NATUC: Non-commercial vessels.

*United Arab Emirates.* Traditional crafts, coastal vessels and leisure or cruise crafts.

*United Kingdom.* Day boats, small vessels, and some vessels built before certain dates that may not be able to comply retroactively.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), ESA/Estonian Fishermen's Association (Estonia), MDU (Ghana), KPI (Indonesia), JSU (Japan), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom) suggest cases in which the duration of the voyage makes such a requirement redundant, and open-decked vessels.

*ICSF.* Fishing vessels on short trips and day-fishing operations, as crew accommodation is essential for trips of three days or more.

Nearly all States (81) replied that the Convention should provide that all fishing vessels should have appropriate accommodation and sufficient food and drinking water, although a majority (50 for; 29 against) supported the possibility of exempting certain categories of fishing vessels from the requirement concerning accommodation. Such exemptions could be based on: time at sea (one day or less), the size of the vessel, or area of operation. However, a number of replies indicated that, while there could be exemptions for accommodation, there should not be exemptions to the food and water requirement.

*Points 29 to 31* reflect the support by the vast majority of governments for provisions on accommodation and food and drinking water. The Tripartite Meeting of Experts on Labour Standards for the Fishing Sector also expressed support for such a provision. That Meeting called for a listing of the broad objectives concerning accommodation, and details to be included in the non-mandatory part of the instrument in the form of guidance. This would provide guidance to shipbuilders for the construction of fishing vessel accommodation.

Noting that Convention No. 126 has rather detailed requirements, and that Report V (1) indicates that many States have laws or regulations concerning many of the subject areas covered in Convention No. 126, albeit in less detail, the Office has proposed only general provisions in *Points 29 to 31*. However, the Office felt that it was not within its mandate to simply eliminate or convert to guidance the extensive protection provided in Convention No. 126. It has therefore included in Annex II of the Proposed Conclusions a somewhat simplified version of that Convention. In the annex, the Office has removed references to tonnage but has retained references to vessel length, bearing in mind that "gross tonnage" (GT), rather than "gross registered tonnage" (GRT), has become the commonly used means of measuring ships following the coming into force of the International Convention on Tonnage Measurement of Ships, 1969, and that the Office has not identified a means of directly and consistently converting GRT to GT. The Conference may also wish to note that the provisions of

Convention No. 126 are mandatory only for vessels of 24.4 m in length and over (a small percentage of the world fishing fleet) and that for these vessels certain provisions do not apply to vessels which “normally remain away from their home ports for periods of less than 36 hours and in which the crew does not live permanently on board when in port”. Annex II follows the same approach.

In view of the above, the Conference should determine the content of Annex II and decide whether it should be mandatory or recommendatory. The Office proposes that the issue of accommodation might be dealt with by a working group that could be set up by the Conference Committee.<sup>7</sup>

## B7. CREWING OF FISHING VESSELS

**Qu. B7(a)** *Should the Convention provide that States should take measures to ensure that fishing vessels have sufficient and competent crew for safe navigation and fishing operations in accordance with international standards?*

### *Affirmative*

*Governments:* 79. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Islamic Republic of Iran, Ireland, Italy, Jamaica, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of

<sup>7</sup> Such a working group might also take into account experience gained during the development of the consolidated maritime labour Convention and might also take into account the work under way by the FAO, ILO and IMO to revise the FAO/ILO/IMO Code of Safety for Fishermen and Fishing Vessels, Part B, Safety and Health Requirements for the Construction and Equipment of Fishing Vessels.

Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Negative*

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), ECOT (Thailand).

### *Other*

*Governments:* 3. Indonesia, Japan, Thailand.

### *Comments*

*Japan.* There should be a requirement for sufficient and competent crew with respect to navigation but not as regards fishing operations.

*Panama.* Training and COC should be revised in order to have a single ILO/IMO overall standard on training, qualifications and shifts for crews on fishing vessels.

*If yes, please indicate which fishing vessels could be exempted.*

**Qu. B7(b)**

*Australia, SOMU (Argentina), Bahrain, Benin, Brazil, Bulgaria, UFAWU-CAW (Canada), Cuba, Denmark, Estonia, Fiji, France, CSG (Gabon), SLIMAPG (Guinea), Honduras, Hungary, Italy, Confcooperative (Italy), Jamaica, Lebanon, CCIAB (Lebanon), Malawi, Namibia, NUNW (Namibia), PVIS (Netherlands), New Zealand, Nigeria, Norway, Portugal, Romania, CNS Cartel Alfa (Romania), Serbia and Montenegro, Spain, Sweden, NATUC (Trinidad and Tobago), Ukraine, USCIB (United States), Venezuela, ICMA* indicate that there should be no exemptions.

*Burundi, Costa Rica, Egypt, El Salvador, Finland, Saint Vincent and the Grenadines, United Arab Emirates, ZCTU (Zimbabwe)* suggest that artisanal, family or small fishing vessels could be exempted.

*China, AGCI PESCA (Italy), Latvia, National Board of Fisheries, LEC (Latvia), Malaysia, Mauritius, CDT (Morocco)* suggest exempting vessels in operating area "C"; *Cyprus, Guatemala, COHEP (Honduras), AGCI PESCA (Italy), Latvia, LEC (Latvia), Mauritius, APOM (Panama), Philippines, Qatar, UFFC (Sri Lanka), SWTUF (Sudan), NCTL (Thailand), Tunisia* suggest exempting those in operating area "D"; and *Cyprus, Guatemala, COHEP (Honduras), Indonesia, AGCI PESCA (Italy), Latvia, National Board of Fisheries, LEC (Latvia), CCIAS (Lebanon), Mauritius, Oman, APOM (Panama), Philippines, Qatar, UFFC (Sri Lanka), NCTL (Thailand)* indicate those in operating area "E".

*Myanmar* suggests exempting inland fishing vessels, while *Islamic Republic of Iran*, *FKSU* (Republic of Korea), *Mexico*, *Switzerland*, *United Arab Emirates* propose coastal vessels. *CGT* (Brazil) suggests fishing vessels with a small navigational range.

Size was the determining factor for several countries: *Japan* suggests exemptions according to tonnage; *Republic of Korea*, *FKSU* (Republic of Korea) suggest vessels of less than 24 m in length; the Ministry of Agriculture and Fisheries of *Oman* suggests excluding small fishing vessels under 10 m in length; and the *United Kingdom* suggests fishing vessels under 15 m.

*Argentina*. *CAPeCA/CALAPA/CAPA*: It is for the maritime authority to determine the crew for safe navigation and for the owner to determine the crew for fishing operations.

*Australia*. In a commercial maritime environment, there should be no exemptions with regard to competency requirements for the purpose of safe navigation. Since some legislation limits the use of crew for fishing, in an attempt to protect the fishery and stop over-fishing, any provisions in the new instruments should bear this in mind, so as not to conflict with it.

*Brazil*. No vessel should be exempted from having a document issued by the national maritime authority determining minimum safety crewing levels.

*Denmark*. In principle there should always be a certified master on board regardless of the vessel's size. The training requirements should of course take into account the vessel's size and operating area. The Convention should refer to the *STCW-F* Convention.

*Greece*. The provision should only cover crew whose duties relate to safe navigation, not fishing, since this is an economic activity.

*Ireland*. Knowledge and skill level should be appropriate to vessel function and area.

*Mozambique*. Large fishing vessels that carry out large-scale activities.

*Norway*. It is the flag State's responsibility to have legislation requiring the owners to ensure that all vessels within in its jurisdiction are sufficiently manned with competent crews. However, particularities with regard to the many types and sizes of vessels, areas of operation and time spent at sea are so varied that it is impossible to set uniform standards. An international attempt to regulate manning in detail would be a major obstacle to ratification. Thus, the Convention should not have regulations other than the general provision in Question B7(a). Moreover, if a sufficient manning level is set, it will become very difficult to strengthen the manning of vessels, as the minimum tends to become the maximum. Finally, the matter should be seen in relation to hours of rest and accident prevention regulations, including risk assessment.

*Russian Federation* and *RPRRKh* (Russian Federation): Fishing vessels with an engine under 80 horsepower.

*Saudi Arabia*. Small traditional vessels spending not more than one day at sea.

*Thailand*. *ECOT*: This should be left to the jurisdiction of the vessel, but guidance might be useful.

*United Arab Emirates*. Small vessels, sports fishing vessels or leisure craft, research or fisheries protection vessels and coastal fishing vessels.

*United States*. Standards should be developed based on a vessel's size, route, and number of crew. The number of requirements should decrease as a vessel gets smaller and operates closer to shore.

*View shared by several workers' organizations*: *CCUOMM*, *CGT*, *UMAFLUP* (Argentina), *UNIMPESCOL* (Colombia), *PPDIV* (Croatia), *SiD* (Denmark), *Estonian Water Trans-*

port Workers Federation (Estonia), MDU (Ghana), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), SALFU (Sierra Leone), SWTUF (Sudan), TUC (United Kingdom): Small and single-manned vessels.

*ICSF.* Out-powered and non-mechanized fishing vessels, and those undertaking shorter trips or day-fishing operations.

Nearly all States (79) agreed that mandatory provisions should require that fishing vessels have sufficient and competent crew for safe navigation and fishing operations. Suggested exemptions included small vessels (by length or tonnage), artisanal vessels, family fishing vessels, those operating in rivers or inland waters, those operating within 3 miles of the baseline, and those operating out to the limits of the territorial sea, small and single-crewed vessels and vessels on short or one-day trips. Several States opposed all exemptions.

In view of the overwhelmingly positive response to Question B7(a), and bearing in mind the views expressed at the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector, the Office has drafted the provision as it now appears in *Point 21*. This provision places responsibility directly on the fishing vessel owner but would not be overly prescriptive.

## B8. HOURS OF REST

*Should the Convention provide that persons working on board fishing vessels should have minimum periods of rest established in accordance with national laws and regulations?* **Qu. B8(a)**

### *Affirmative*

*Governments:* 79. Algeria, Argentina, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### Negative

*Governments:* 2. Australia, Saudi Arabia.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), USCIB (United States).

### Other

*Government:* 1. Costa Rica

*Workers' organizations:* FTUS (Lebanon), APOM (Panama).

### Comments

*Algeria, UFAWU-CAW (Canada), SLIMAP (Guinea), Indonesia, Ireland, Lebanon, Malawi, Malaysia, Mozambique, Nigeria, Spain, Trinidad and Tobago, TUC (United Kingdom), Venezuela, ICMA and IMHA* indicate that this is important given the impact of fatigue on health and safety, particularly as concerns safety of navigation. Several workers' organizations – CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom) – also point out that fatigue is a significant causal factor in the high level of casualties and occupational accidents.

*Canada, CAW-Canada (Canada), EFE (Eritrea), COHEP (Honduras), Jamaica, Japan, FTUS (Lebanon), SWTUF (Sudan), Tunisia, United States* generally point out that guidance would have to vary for a number of reasons (e.g. the difficulty of work at sea, weather, duration of the fishing season, type of fishing operation, vessel's route, size, tonnage, time at sea, or number of persons on board). Flexibility or exemptions are therefore required.

*Denmark, Ireland, Netherlands, PVIS (Netherlands), Norway, United Kingdom* all draw attention to EU Directive 2000/34/EC,<sup>8</sup> noting that the ILO standard should not conflict with its provisions. *Denmark* and *Italy* also refer to Convention No. 180. *New Zealand* suggests that such provisions should be aligned with the STCW-F Convention.

<sup>8</sup> See Annex II to this report.

APOM (Panama) and *Qatar* note that these issues were set out in employment contracts, and *India* states that the minimum period of rest can be decided by the company or master.

*Russian Federation*, RPRRKh (Russian Federation), NUNW (Namibia) said that there should be not less than eight hours of rest per day or 24-hour period.

*Argentina*. There should be an average of 48 hours of work per week over a 12-month period. Rest hours should not be divided into more than two segments, and one of those segments should last at least six hours.

*Australia*. If such a provision is included, it should be qualified by “as appropriate”, given that not all fishing vessels necessarily work long hours, and not all fishing personnel have the same abilities. While fatigue can be a risk factor on fishing vessels, especially those undertaking long trips, it should be addressed by the general OSH duty of care.

*Bahrain*. Depending on the period spent at sea, the minimum period of rest should be in days if it is a long voyage, and in hours if it is a day trip.

*Burundi*. The rest period should be two days a week for the various types of fishing (traditional, artisanal, semi-industrial).

*Costa Rica*. INS agrees and states that the workday should not exceed 12 hours with a one-and-a-half hour break for meals.

*Estonia*. The minimum periods of rest should be similar to those of other categories of worker, taking differences into account.

*Fiji*. Refers to the question of monitoring.

*Japan*. JSU: Hours of rest should not be so excessive that they hinder operations.

*Republic of Korea*. Hours of work should be limited to 12 hours. Minimum rest periods should comprise at least six consecutive hours in every 24-hour period.

*Morocco*. CDT: This should be done according to labour legislation applicable to other sectors. The right to leave should take into account the specificity of the sector concerned.

*Namibia*. Suggests a maximum of 11 working hours.

NEF: A specific number of total and consecutive rest hours should be provided within a 48-hour period.

*Oman*. Eight working hours, with a 30-minute break every six working hours.

*Philippines*. See comment under Question C7(b).

*Portugal*. In Portugal daily rest during fishing work can be no less than eight hours, six of which must be consecutive. Minors have longer rest periods. All seafarers are entitled to one day of rest per week, in principle on Sunday; for each rest day spent at sea they are entitled to one day off, following their arrival in port or added to their leave. They can even be allowed to take an additional half or full day of rest.

*Saudi Arabia*. Compulsory rest periods would not be appropriate, as this type of activity differs from shore employment owing to considerations concerning the fishing season, areas where fishing is allowed, or duration of the vessel’s fishing licence.

*Sri Lanka*. UFFC: Note should be taken of the rest periods between fishing trips excluding re-equipping and maintenance of the vessel.

*United Arab Emirates*. Fishermen should have ten hours’ rest per day, divided into two parts, during fishing periods.

*United States.* USCIB: The nature of fishing often requires that individuals work non-standard hours when fish are located and/or landed. Larger fishing operations generally have enough workers on hand to accommodate scheduled breaks, but mid-sized and smaller operations often must react to the resource availability.

*ICMA.* As crews are usually paid on the share system, they are motivated to work far beyond safe limits. There should therefore be established minimum hours of rest and maximum hours of work, the limits of which are based on fatigue considerations. For example, there could be a maximum period of work in any 24 hours and rest periods between hauls.

*ICSF.* Provided that these are fishing operations that do not permit any respite (e.g. longlining, trawling, etc.).

Nearly all States (79) agreed that the Convention should provide for minimum periods of rest established in accordance with national laws and regulations to combat excessive fatigue and for general health reasons. However, there were differing views on possible specific requirements. Reference was made to EU Directive 2000/34/EC, the STCW-F Convention and Convention No. 180.

In the light of the overwhelmingly positive response to this question, and bearing in mind views expressed at the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector, the Office has proposed a provision in *Point 22*, under the heading “manning and hours of rest”, which places on the fishing vessel owner the responsibility for ensuring the crew receives sufficient rest to enable them to perform their duties under safe and healthy conditions.

## B9. OCCUPATIONAL SAFETY AND HEALTH

**Qu. B9(a)** *Should the Convention provide that persons working on board fishing vessels should be covered by occupational safety and health provisions?*

### *Affirmative*

*Governments:* 80. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Hon-

duros), LEC (Latvia), CCIAB (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Negative*

*Employers' organization:* CCIAS (Lebanon).

### *Other*

*Governments:* 2. Costa Rica, Syrian Arab Republic.

### *Comments*

*Argentina, Burundi, Costa Rica, PPDIV (Croatia), Egypt, Eritrea, Fiji, Mozambique, Oman, Portugal, Saudi Arabia, Spain, United Arab Emirates, Zimbabwe* comment on the hazards or risks in the fishing sector and the importance of addressing those risks. Several workers' organizations – CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom) – point out that this is essential for the fishing industry, which the ILO has designated as a hazardous industry.

*Australia, Mexico* note that OSH laws and regulations for other workers applied to fishers. Australia also states that the new instruments should take into account the Occupational Safety and Health Convention, 1981 (No. 155).

*Argentina.* CAPeCA/CALAPA/CAPA: The general OSH system in force should be applied to all workers, with specific provisions for fishing, taking into account its specific characteristics.

*Bahrain.* Fishing personnel should be acquainted with sea conditions and should master swimming.

*Bangladesh.* Provisions on treatment and compensation should be included in national legislation.

*Brazil.* The instrument should provide for the use of individual and collective protective equipment, and contain other provisions on accident prevention, maintenance of vessels and rescue equipment.

*Canada.* UFAWU-CAW: There should be shore-based employee representatives.

*Denmark.* Denmark has adopted both specific provisions concerning the occupational safety and health of fishermen and maritime OSH provisions and action plans applicable to fishermen. As part of the implementation of Council Directive 93/103/EC,<sup>9</sup> it established a Fisheries Occupational Health Council.

*Honduras.* COHEP is concerned about artisanal fishermen who, in some cases, do not pay social security contributions and do not operate within the minimum safety conditions.

*Jamaica.* Standards should vary according to the type of fishing performed.

*Japan.* Fishing workers should be protected in the same way as workers on board commercial vessels. It is appropriate to stipulate minimum provisions in the Convention and details in the Recommendation so that each State might take measures flexibly according to its OSH situation.

*Lebanon.* Some requirements need to be mentioned in the Convention, such as the provision of protective clothing and shoes, while details can be included in the Recommendation.

CCIAS: Such a provision would make the work of the crew more complicated, and it would be difficult to follow up on its implementation.

*Malaysia.* Owner-operated fishing vessels should be excluded.

*Netherlands.* This requirement should be in line with Council Directives 93/103/EC and 97/70/EC (cf. Commission Directive 1999/19/EC).<sup>10</sup>

*Russian Federation.* It should cover all members of the crew without any exceptions.

*Sri Lanka.* UFFC: Vessels of categories “D” and “E” should be exempt.

*ICMA.* OSH provisions should not erode fishers’ existing rights to maintenance and cure, in other words entitlement to medical care should not be limited to occupational injuries and illnesses.

*ICSF.* Agrees, depending on the nature of the fishing operations and type of fishing grounds.

*IMHA.* National regulations should not exclude the maritime industry or small vessels from some regulations, e.g. preventive measures for those exposed to noise, minimum standards of accommodation, food and sanitation, possibility of inspection in ports, construction of ships, safety equipment, etc.

**Qu. B9(b)** *If applicable provisions do not at present cover work on board fishing vessels, should such protection be provided through one of the following means:*

#### *Extension of general occupational safety and health provisions*

*Governments:* 8. Algeria, Austria, Cuba, Hungary, Indonesia, Mexico, United Arab Emirates, Zimbabwe.

---

<sup>9</sup> See Annex II to this report.

<sup>10</sup> See Annex II to this report.

*Employers' organizations:* NEF (Namibia), ECOT (Thailand).

*Workers' organizations:* CGT, SOMU, UMAFLUP (Argentina), CSG (Gabon), NSU/NSF/DNMF (Norway), Federation of Fishing Sector Trade Unions (Portugal).

*Extension of maritime occupational safety and health provisions*

*Governments:* 13. Estonia, Hungary, India, Indonesia, Italy, Lebanon, New Zealand, Nigeria, Norway, Qatar, Panama, Switzerland, Turkey.

*Employers' organization:* ECOT (Thailand).

*Workers' organizations:* CGT, SOMU, UMAFLUP (Argentina), Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), ASI (Iceland), NUNW (Namibia), NATUC (Trinidad and Tobago).

*Other:* ICMA.

*Specific provisions for work on board fishing vessels*

*Governments:* 24. Argentina, Bangladesh, Brazil, Burundi, Cuba, Cyprus, Eritrea, France, Guatemala, Iceland, India, Indonesia, Jamaica, Republic of Korea, Lebanon, Mozambique, Netherlands, New Zealand, Nigeria, Romania, Spain, Syrian Arab Republic, Thailand, Trinidad and Tobago.

*Employers' organizations:* EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), CCIAB, CCIAS (Lebanon), USCIB (United States).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union (Estonia), CSG (Gabon), MDU (Ghana), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), NCTL (Thailand), TUC (United Kingdom).

*Others:* PVIS (Netherlands), ICSF.

*Combination of any of the above*

*Governments:* 57. Argentina, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Bulgaria, Canada, China, Croatia, Cyprus, Czech Republic, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Germany, Greece, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lithuania, Malawi, Mauritius, Myanmar, New Zealand, Nicaragua, Nigeria, Oman, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Sweden, Thailand, Tunisia, Turkey, Ukraine, United Arab Emirates, United States, Venezuela.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), COHEP (Honduras),

CCIAB (Lebanon), ECOT (Thailand), ECA (Trinidad and Tobago), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), SWTUF (Sudan), USS (Switzerland), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy).

### Comments

*Belgium, Egypt, Eritrea, Gabon, Jamaica* note the importance of having at least certain provisions that address the specific OSH issues in the fishing sector.

*Argentina.* There should be state inspectors who are highly qualified in the subject.

CCUOMM: The provisions should be at least of the same level as those for maritime labour.

SOMU: While labour legislation is normally general in nature, specific provisions should be included relating to fishing and maritime work and aligned with existing maritime and fishing standards.

*Australia.* It would be inappropriate for an ILO standard to prescribe what OSH provisions should apply to fishing vessels.

*Costa Rica.* INS agrees with a combination of any of the above and points out that Costa Rica has ratified ILO Conventions Nos. 16, 112, 113 and 114, as well as the Accommodation of Crews Convention (Revised), 1949 (No. 92), the Dock Work Convention, 1973 (No. 137), and the Continuity of Employment (Seafarers) Convention, 1976 (No. 145), all of which, in one way or another, have to do with work at sea.

*Cuba.* This can be done through collective agreements.

*Honduras.* COHEP: The general OSH regulations should be applied, with adjustments in special regulations referring to maritime work (shipboard personnel), as well as provisions dealing only with work on board fishing vessels, given their specific characteristics.

*India.* Separate provisions should be set out because protection must be location-specific and vessel-specific.

*Japan.* General or maritime OSH provisions should apply to fishing vessels of certain categories.

*Lebanon.* This might be done through guidelines.

*Malawi.* In order not to leave any loophole that unscrupulous employers might use to exploit workers.

*Norway.* All workers in the fishing sector are covered by the Norwegian regulations on the working environment, safety and health. These are the same as for seafarers and are applicable on all Norwegian-registered ships.

*Saudi Arabia.* Given the dual nature of work in local fisheries (artisanal and industrial), it would be necessary to establish two separate sets of OSH rules, with due regard to each sector's elements, equipment and working conditions.

*Spain.* The specificity of the fishing sector is so important that it certainly requires special treatment, while the intent of simply transferring the standard safety provisions to it seems insufficient and unsatisfactory.

*United Kingdom.* The majority of the maritime OSH provisions already apply to workers on United Kingdom fishing vessels.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom): The special nature of the industry should be taken into account through provisions relating specifically to fishing vessels. These should, at least, be of the same standard as on shore.

Nearly all States (80) agreed that the Convention should provide that persons working on board fishing vessels should be covered by occupational safety and health provisions in view of the hazardous nature of fishing, high injury and fatality rate in the sector. The majority (57) agreed that this could be achieved through a combination of extension of general occupational safety and health provisions and maritime occupational safety and health provisions for fishing and, most importantly, specific provisions for work on board fishing vessels. A few States said that the Convention should be in line with EU requirements, in particular Council Directives 93/103/EC and 97/70/EC. Attention was also drawn to the Occupational Safety and Health Convention, 1981 (No. 155). Some States called for exclusions for work on certain vessels (e.g. within 3 miles of the baseline or in inland waters) but most wanted occupational safety and health provisions to apply to all vessels.

As the vast majority of governments replied affirmatively to Question B9(a), the Office has proposed the provision in *Point 34*, which aims to ensure that Members take action on the main elements of occupational safety and health. Further guidance on this issue is provided in the Proposed Conclusions with a view to a Recommendation.

## B10. SOCIAL SECURITY

*Should the Convention provide that persons working on board fishing vessels should be entitled to social security benefits applicable to other workers?* **Qu. B10(a)**

### *Affirmative*

*Governments:* 77. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Brazil, Bulgaria, Burundi, Canada, China, Croatia, Cuba, Cyprus,

Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Negative*

*Governments:* 3. Benin, Kuwait, Thailand.

*Employer's organizations:* Norwegian Fishing Vessel Owners' Association/Norwegian Trawlers' Association (Norway).

### *Other*

*Governments:* 2. Costa Rica, Trinidad and Tobago.

### *Comments*

*Bahrain, Benin, Costa Rica, Egypt, Eritrea, India, Mauritius, Mozambique, Saint Vincent and the Grenadines, Spain, Tunisia* generally note the importance of providing such coverage in view of the nature or hazards of the occupation. NCTL (Thailand) indicates that there should be social security benefits in case of injury or death.

*Finland, Mexico, Oman, NEF (Namibia), Netherlands, ICMA* indicate that protection for fishers should be in line with that afforded to other workers.

*Ireland, Norwegian Fishing Vessel Owners' Association/Norwegian Trawlers' Association (Norway), Qatar, United Arab Emirates* note that because fishers are often considered as self-employed (owing to the catch-sharing system), they may be excluded from certain benefits.

*Spain and Thailand* note that some benefits for fishers would require a specific method of processing, e.g. unemployment, old-age, employment injury and survivors' benefit.

*Australia.* Publicly funded social security benefits are not available to persons who have a temporary entry visa. There could be a generic provision concerning social security. However, the standard should not conflict with the Social Security (Minimum Standards) Convention, 1952 (No. 102).

*Denmark.* The Convention should clearly indicate the responsibilities of the flag State and the State of domicile.

*France.* The Convention should provide the same degree of protection as that provided to other seafarers.

MEDEF: Provided that there could nevertheless be a specific social security regime.

*Honduras.* COHEP: Agrees with regard to basic benefits, but the specific characteristics of fishing and its different forms should be considered.

*Japan.* Due account should be taken of the specificity of the fishing sector; for example, as workers on board fishing vessels not operating all year round are expected to be unemployed for certain periods during the year, it is not appropriate to apply unemployment benefit in the same manner as for ordinary workers.

*Kuwait.* In Kuwait, certain laws are restricted to nationals only.

*Lebanon.* The social security rights of seafarers are laid down in the Seafarers' Pensions Convention, 1946 (No. 71), and Convention No. 147, among others.

*Namibia.* All workers should be covered by social security, regardless of nationality.

*Norway.* Norway has a special system for fishermen regarding social security, financed by a "product fee". While it supports international efforts to extend social security benefits to fishers, the method of financing such benefits should be left to national legislation.

*Panama.* With regard to foreign crew working on Panamanian vessels, it is the owner's responsibility to provide the crew with private social security cover (P&I Clubs).

*Russian Federation.* The Convention should include a provision on social security for crew members of vessels registered on a second register or leased by foreign shipowners/employers.

*Switzerland.* This country has specific provisions for fishers on the high seas, which are included in bilateral social security conventions applying only to nationals of Switzerland and the contracting State.

*United Kingdom.* United Kingdom resident fishermen categorized as employed persons in the national legislation should have the same protection as employed workers in other sectors, and those categorized as share-fishermen or self-employed workers should have the same protection as self-employed persons working in the territory. United Kingdom share-fishermen are also covered for an unemployment benefit that is not generally available to other self-employed persons.

TUC: Protection should be provided to share-fishermen, particularly as concerns injury benefits.

*United States.* USCIB: The Convention should not mandate any social security benefits for fishing workers that are not otherwise provided to other workers in accordance with national law and practice. Moreover, fishing workers must meet the same eligibility requirements as other workers in the national system.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone): To do otherwise would be discriminatory against a group of especially vulnerable workers.

*ICSF.* In Kerala, India, fishermen are entitled to social security, while other workers (with a few exceptions) are not. It is therefore important to protect existing social security measures for the fishing sector.

**Qu. B10(b)** *Should the Convention provide that such benefits might be progressively extended?*

#### *Affirmative*

*Governments:* 61. Algeria, Argentina, Australia, Bangladesh, Belarus, Belgium, Benin, Burundi, Canada, China, Croatia, Cuba, Cyprus, Ecuador, Egypt, El Salvador, Eritrea, Fiji, France, Germany, Greece, Guatemala, Honduras, Hungary, India, Indonesia, Islamic Republic of Iran, Ireland, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mozambique, Myanmar, Namibia, New Zealand, Nicaragua, Oman, Panama, Philippines, Portugal, Romania, Russian Federation, Saudi Arabia, Serbia and Montenegro, Spain, Switzerland, Syrian Arab Republic, Tunisia, Turkey, Ukraine, United Arab Emirates, United States, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), CCIAS (Lebanon), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), PPDIV (Croatia), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), SLIMAPG (Guinea), ASI (Iceland), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), KSM NSZZ Solidarnosc, ZZMiR (Poland), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NATUC (Trinidad and Tobago), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA (Italy), ICSF.

#### *Negative*

*Governments:* 16. Bahrain, Brazil, Bulgaria, Czech Republic, Denmark, Estonia, Finland, Iceland, Italy, Mexico, Netherlands, Nigeria, Qatar, Saint Vincent and the Grenadines, Sweden, Thailand.

*Employers' organizations:* CAPECA/CALAPA/CAPA (Argentina), COHEP (Honduras), LEC (Latvia), CCIAB (Lebanon), NEF (Namibia), Norwegian Fishing Vessel Owners' Association/Norwegian Trawlers' Association (Norway).

*Workers' organizations:* CCUOMM (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), CSG (Gabon), MDU (Ghana), KPI (Indonesia), JSU (Japan), NSU/NSF/DNMF (Norway), APOM (Panama), PSU (Poland), Federation of Fishing Sector Trade Unions (Portugal), SALFU (Sierra Leone), NCTL (Thailand), TUC (United Kingdom).

*Others:* Confcooperative (Italy), PVIS (Netherlands), ICMA.

#### *Other*

*Governments:* 5. Austria, Costa Rica, Norway, Trinidad and Tobago, United Kingdom.

*Employers' organization:* MEDEF (France).

#### *Comments*

CCUOMM (Argentina), *Bahrain*, *Burundi* refer to the need to provide benefits in the event of unemployment due to fisheries management decisions or new technology.

*El Salvador* and *India* indicate that such a provision is important to make progress with regard to artisanal or small-scale fishers.

*Argentina.* Benefits should be universal and equal for all activities.

CCUOMM: Particular consideration should be given to the possibility of accessing retirement and/or pension benefits at an earlier age.

*Australia.* However, it should not be mandatory to do so.

*Finland.* Those persons should automatically have the right to the same protection as any other workers, while these rights should not exceed those of other groups in the framework of statutory social security.

*France.* In order to take into account the situation of the least developed countries in the area of social security, the Convention should provide for the progressive extension of benefits and protection with regard to the different risks and branches, beginning with maritime occupational injuries.

*Gabon.* CSG: The Convention should provide for States to ensure that there is no discrimination with regard to social security provision between workers, including seafarers.

*Honduras.* COHEP: The characteristics and possibilities of each country need to be considered.

*Latvia.* The National Board of Fisheries disagrees.

*Malawi.* In order to include new elements arising from the work relationship, e.g. issues related to HIV/AIDS.

*Norway.* The use of the term "progressive extension" is less than clear. It is essential that fishermen know their coverage at all times and that the benefits be administered in a fair and effective manner.

*Oman.* If these benefits could not be provided all at once, they might be progressively applied until the highest possible level is achieved, depending on the wishes and circumstances of the ratifying State.

*Panama.* Provided that they are classified as seafarers working on fishing vessels.

*Philippines.* The grant of ideal wages, benefits and other emoluments to workers on fishing vessels in general is dependent on the level of industrial development of the flag State or on the owner.

*Sweden.* Issues concerning coverage and scope of social security should preferably be regulated in social security Conventions.

*Tunisia.* This is necessary given the differences between different categories of fishermen and their ability to pay social protection contributions.

*United Kingdom.* The term “progressive extension” is not clear. There should not be a limited range of benefits available to workers just because they fall into the category of either fishermen or share-fishermen.

TUC: Progressive extension would be predicated either on an initial stage of coverage of a limited section or sections of the workforce in the industry, or on limited universal coverage which should then be extended. The first would run counter and the second could run counter to the need for basic social security coverage of all workers as an essential component of decent work.

*Views shared by several workers’ organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), SALFU (Sierra Leone), TUC (United Kingdom): Given the nature of the fishing industry, there are good reasons to increase benefits over and above those provided for shore workers, in other words to positively discriminate because of the hazardous nature of the industry.

*ICMA.* All should be covered from the outset.

*ICSF.* Best national practices should be taken into account.

**Qu. B10(c)** *Should the Convention provide for the possible exemption of certain categories of persons working on board fishing vessels?*

*Affirmative*

*Governments:* 18. Australia, Cyprus, Estonia, India, Jamaica, Japan, Republic of Korea, Kuwait, Lebanon, Netherlands, New Zealand, Norway, Portugal, Saudi Arabia, Sweden, Syrian Arab Republic, Ukraine, United States.

*Employers’ organizations:* ESA/Estonian Fishermen’s Association (Estonia), LEC (Latvia), USCIB (United States).

*Workers’ organizations:* UNIMPESCOL (Colombia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), KPI (Indonesia), FKSU (Republic of Korea), PSU (Poland), SALFU (Sierra Leone), UFFC (Sri Lanka).

*Others:* PVIS (Netherlands), ICMA.

*Negative*

*Governments:* 58. Algeria, Argentina, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Croatia, Cuba, Czech Republic, Ecuador, Egypt, El Salvador, Eritrea, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, Indonesia, Islamic Republic of Iran, Ireland, Italy, Latvia, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Nicaragua, Nigeria, Oman, Panama, Philippines, Romania, Russian Federation, Saint Vincent and the Grenadines, Serbia and Montenegro, Spain, Switzerland, Thailand, Tunisia, Turkey, United Arab Emirates, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), MEDEF (France), COHEP (Honduras), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), PPDIV (Croatia), SLIMAPG (Guinea), JSU (Japan), FTUS (Lebanon), NUNW (Namibia), NSU/NSF/DNMF (Norway), APOM (Panama), KSM NSZZ Solidarnosc, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium) AGCI PESCA, Confcooperative (Italy), ICSF.

*Other*

*Governments:* 6. Austria, Costa Rica, Denmark, Qatar, Trinidad and Tobago, United Kingdom.

*Workers' organization:* CDT (Morocco).

*Comments*

*Costa Rica.* INS disagrees.

*France.* The Government cannot see any possible exemption. If the persons working on board a fishing vessel take part in its navigation and operation, they are seafarers.

*Latvia.* The National Board of Fisheries agrees.

*United States.* USCIB: These should depend on national circumstances and be permitted at the time the country ratifies the Convention.

*If yes, which categories of persons might be exempted?*

**Qu. B10(d)**

There were two general groupings of replies to this question: those that referred to the nationality or residence of fishers; and those that referred to the person's position on board the vessel.

*Nationality/residence*

*Republic of Korea*, FKSU (Republic of Korea), *Lebanon*, *New Zealand* refer to foreign seafarers on flag state vessels.

*Norway*, *Sweden*. Persons who are neither nationals nor permanent residents of the ratifying State should be exempted. Such fishermen should be covered by social security schemes in their countries of residence or by a mandatory insurance scheme for the period they are working on board, paid by the owners.

*Australia*. Non-resident Australians working on fishing vessels would not be eligible for publicly funded social security benefits. However, they would be entitled to those benefits which are part of their employment conditions.

*Estonia* and ESA/Estonian Fishermen's Association (Estonia). Exemptions may be considered in the following cases: Where workers are covered by social insurance and provided with medical care in their country of residence; or where a social security system does not exist in the country of residence but the person has a private social insurance contract; or where there are different kinds of insurance services in the countries concerned.

*Portugal*. Workers employed on board foreign fishing vessels, when they are covered by the social security system of the country of origin of the enterprise concerned.

*United Kingdom*. The United Kingdom would not favour a Member being responsible for the payment of social security benefits to those fishermen or share-fishermen, sailing on its registered vessels, who are neither domiciled nor resident in its territory and therefore not contributors to that country's scheme or system. Nor would it be in favour of a system that would require a member State to collect its social security contributions with a view to being responsible and competent for the payment of any social security benefit entitlement that might derive from them to fishermen resident in the territory of another Member, unless an existing bilateral social security agreement between the member States concerned made specific provision for that on a reciprocal basis.

TUC: While recognizing the complexities of ensuring social security coverage for workers on domestic vessels or of various nationalities working on board vessels flagged in other States and operating in or off that State's waters, or of workers of various nationalities on flagged-out ships, the Convention must aim to ensure fundamental social security coverage to all those working on board fishing vessels.

*United States*. Exemptions might be based upon immigration status. In the United States, employees authorized to work under certain visa categories, as well as students, are exempted.

*ICMA*. Foreign non-resident workers who have no practical opportunity to collect social security benefits should not be required to pay into the system.

*Position on board*

*Bahrain*, *Ireland*, *Jamaica*. Persons in very temporary or casual employment might be exempted.

*Argentina*. CGT, SOMU, UMAFLUP: Personnel, including those who work on factory fishing vessels, should have a document certifying them as fishermen, complying with all necessary requirements.

*France*. Scientists and observers not involved in the navigation and operation of the fishing vessel might be exempted.

*India.* Scientists and other personnel otherwise covered for hazardous work; as well as certified persons working on vessels above 20 m OAL and leased joint-venture vessels.

*Japan.* Persons whose employment status is the same as that of workers on shore.

*Netherlands.* Self-employed fishermen and share-fishermen.

PVIS: Self-employed fishermen, if collective private insurance provides for their social security (i.e. at least medical care, sickness and long-term disability benefits).

*Portugal.* Certain categories of workers whose work on board fishing vessels is not specifically related to actual fishing, as they are already compulsorily covered under the general social security system, irrespective of where they are working.

*Saudi Arabia.* Trainee students and sons of fishermen working during the holidays.

*Sri Lanka.* UFFC: Persons on vessels operating in areas “D” and “E”.

*United Arab Emirates.* Traditional vessels.

*Views shared by several workers’ organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone): Personnel engaged on factory vessels for the sole purpose of processing the catch might be exempted.

The vast majority of States (77) agreed that the Convention should provide for entitlement to social security benefits applicable to other workers. Health coverage was important for fishing, given the inherent risks of the sector. It was pointed out that social security benefits would have to take into account the specific nature of fishing. Some said that fishers should have the same protection as seafarers. Four States noted that share-fishers were treated similarly to self-employed workers. A number of workers’ organizations said that to deny fishers the same protection as other workers would be discriminatory.

A majority of States (61) agreed that benefits might be progressively extended, for instance based on risks and beginning with protection in case of maritime occupational injuries. It was also suggested that fishers should know what coverage they have and that benefits should be administered in a fair and effective manner. Some respondents felt that coverage should be provided immediately and universally.

The majority of States (58) opposed the exemption of certain categories of fishers. However, exemptions were suggested for: scientists and observers, persons in temporary or casual employment, persons whose employment status is the same as that of workers on shore, self-employed or share fishers, self-employed fishers covered by collective private insurance, or persons engaged on factory vessels for the sole purpose of processing the catch. Some States wished to exempt persons who are neither nationals nor permanent residents; however, others, and several workers’ organizations, indicated the importance of covering foreign fishers on flag state vessels.

### *Social security*

*Point 35* reflects the strong support for inclusion of a provision to ensure that fishers are entitled to social security protection on conditions no less favourable than those applicable to other workers. *Point 36* addresses the issue of social security

protection for non-national fishers. With regard to Question B10(b), the Office notes that the provisions concerning progressive extension included in *Point 8* would also apply to social security protection.

*Protection in the case of work-related sickness, injury, or death*

Bearing in mind the fatality and injury rates in the fishing sector, the Office has created a separate set of provisions on the issue of protection in the event of work-related sickness, injury, or death. *Point 37* provides that each Member should take measures to provide such protection. *Point 38* provides some flexibility as to how this could be ensured: either through a system of fishing vessel owners' liability or through compulsory insurance, workers' compensation or other schemes.

**B11. EXTENSION OF PROTECTION FOR SEAFARERS TO PERSONS WORKING ON BOARD FISHING VESSELS**

**Qu. B11(a)** *Should the Convention provide that persons working on board fishing vessels registered in the State, engaged in fishing operations on the high seas and in the waters of States other than those of the flag State, should generally have labour conditions which are no less favourable than those provided to seafarers working on board vessels registered in the State, engaged in commercial maritime transport?*

*Affirmative*

*Governments:* 63. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, China, Croatia, Cuba, Cyprus, Ecuador, Egypt, Eritrea, Estonia, Fiji, Finland, France, Germany, Honduras, Hungary, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, New Zealand, Nicaragua, Nigeria, Norway, Panama, Philippines, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Turkey, Ukraine, United Arab Emirates, United Kingdom, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), COHEP (Honduras), CCIAB (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland),

Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA (Italy), ICMA.

### *Negative*

*Governments:* 12. Denmark, El Salvador, Guatemala, Iceland, India, Japan, Mexico, Myanmar, Namibia, Netherlands, Oman, Tunisia.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), CCIAS (Lebanon), USCIB (United States).

*Workers' organizations:* SLIMAPG (Guinea), NUNW (Namibia), NCTL (Thailand).

*Others:* Confcooperative (Italy), ICSF.

### *Other*

*Governments:* 7. Canada, Costa Rica, Czech Republic, Greece, Mozambique, Portugal, United States.

*Employers' organization:* LEC (Latvia).

*Workers' organization:* ZCTU (Zimbabwe).

### *Comments*

*Costa Rica.* INS agrees.

*France.* MEDEF: Given the special nature of the work of fishermen, there should be specific regulations separate from those for maritime transport.

*Greece.* A more precise definition of the meaning of "labour conditions" is needed, since fishing vessels form a special category within maritime transport in general.

*Ireland.* The Marine Survey Office disagrees and indicates that the comparison between commercial transport and fishing is tenable but not to a great extent.

*Japan.* For persons working on board fishing vessels registered in a State and engaged in fishing operations on the high seas or in the waters of States other than the flag State, it is difficult to grant labour conditions equivalent to those in commercial maritime transport because of the peculiarity of fishing.

*Oman.* The Ministry of Agriculture and Fisheries agrees.

*United States.* USCIB: Workers on board commercial transport vessels will have duties and conditions which are quite dissimilar to those serving aboard fishing vessels. It is not possible to provide them with comparable conditions. The term "less favourable" is too vague.

**Qu. B11(b)** *If yes, should such a provision cover persons working on board other fishing vessels?*

*Affirmative*

*Governments:* 50. Algeria, Argentina, Australia, Austria, Belarus, Belgium, Benin, Brazil, Burundi, China, Croatia, Cuba, Cyprus, Ecuador, Fiji, France, Honduras, Hungary, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Kuwait, Latvia, Lithuania, Malaysia, Mauritius, New Zealand, Nicaragua, Nigeria, Norway, Panama, Philippines, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Thailand, Trinidad and Tobago, Ukraine, United Arab Emirates, United Kingdom, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), COHEP (Honduras), ECOT (Thailand), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FTUS (Lebanon), CDT (Morocco), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), USS (Switzerland), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA (Italy), ICMA.

*Negative*

*Governments:* 16. Bahrain, Bangladesh, Bulgaria, Egypt, Eritrea, Estonia, Germany, Republic of Korea, Lebanon, Malawi, Myanmar, Namibia, Qatar, Syrian Arab Republic, Tunisia, Turkey.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), ESA/Estonian Fishermen's Association (Estonia), CCIAB (Lebanon), NEF (Namibia).

*Workers' organizations:* FKSU (Republic of Korea), CNS Cartel Alfa (Romania), SWTUF (Sudan), NCTL (Thailand).

*Other*

*Governments:* 16. Canada, Costa Rica, Czech Republic, Denmark, El Salvador, Finland, Greece, Guatemala, Iceland, Japan, Mexico, Mozambique, Netherlands, Oman, Portugal, United States.

*Employers' organizations:* MEDEF (France), LEC (Latvia), CCIAS (Lebanon), ECA (Trinidad and Tobago), USCIB (United States).

*Workers' organizations:* GTUWA (Egypt), NUNW (Namibia), ZCTU (Zimbabwe).

*Comments*

*Costa Rica.* INS agrees.

*Ireland.* HSA disagrees.

*Oman.* The Ministry of Agriculture and Fisheries agrees.

*If yes, please indicate the persons working on board other fishing vessels to whom the above provision should apply (e.g. those working on vessels of a certain length, vessels intended for fishing in a certain area of operation, vessels remaining at sea for a specified period of time).* **Qu. B11(c)**

*Algeria, Australia, Burundi, PPDIV (Croatia), Cyprus, Honduras, COHEP (Honduras), Latvia, Nigeria, APOM (Panama), Romania, Russian Federation, UFFC (Sri Lanka), Serbia and Montenegro, Switzerland, Ukraine* mention time at sea as a basis for applying such a provision. The suggestions range from one day at sea to 30 days at sea.

*Algeria, Burundi, PPDIV (Croatia), Islamic Republic of Iran, Malaysia, Sri Lanka* suggest length or tonnage (10 m, 24 m or 30 m and 70 GT).

*Bahrain, Belgium, CCE (Belgium), Benin, CGT (Brazil), UFAWU-CAW (Canada), Croatia, Ecuador, GTUWA (Egypt), Fiji, CSG (Gabon), ASI (Iceland), Ireland, Italy, Japan, Mauritius, Namibia, Oman, ZZMiR (Poland), United Kingdom, TUC (United Kingdom), Venezuela, ICMA* indicate that the provision should apply to all persons working on board fishing vessels. *SLIMAPG (Guinea)* states all persons working in salt waters and on the high seas. *Norway and Sweden* suggest, more specifically, everyone working on a vessel covered by the Convention that comes under the jurisdiction of a flag State which has ratified the Convention, or visits the port of a Member which has ratified the Convention. *Spain* states that it should apply to all vessels operating in the territorial waters or EEZ of another State.

*Burundi, Latvia, Nigeria, Serbia and Montenegro, Spain, ECOT (Thailand)* indicate that operating area could be the basis.

*Brazil.* Fishermen of the coastal State who work on board foreign fishing vessels leased by local enterprises.

*Estonia.* ESA/Estonian Fishermen's Association: If the fishing vessel does not call at a foreign port, it would be very difficult to apply the above provision.

*Indonesia.* Persons working on fish transport vessels (cargoes) which move from fishing ground to fishing port or from fishing port to fishing port.

*Jamaica.* The different types of fisheries should be taken into account.

*New Zealand.* All vessels operating in domestic waters. Given the potential variations between conditions appropriate on commercial vessels and those feasible on many fishing vessels, factors such as duration of trip and size should be taken into account.

*Saudi Arabia.* Fishers operating on industrial fleets.

*Sudan.* SWTUF: Skippers, navigators and engineers might be subject to specific rules.

*United Arab Emirates.* Fishermen, seafarers, skippers, engineers, etc.

*Views shared by several workers' organizations:* CCUOMM, CGT, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM

NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone): All workers are entitled to some of the basic rights, while other measures may only be relevant to vessels in certain areas of operation, etc.

**Qu. B11(d)** *Should the Convention contain provisions on the following issues:*

*Recruitment and placement*

*Governments:* 61. Algeria, Argentina, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, China, Costa Rica, Croatia, Cuba, Ecuador, Egypt, El Salvador, Eritrea, France, Greece, Guatemala, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Republic of Korea, Kuwait, Latvia, Lithuania, Malawi, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), ECOT (Thailand).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/ Estonian Water Transport Workers Federation (Estonia), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), SWTUF (Sudan), USS (Switzerland), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICSF.

*Identity documents*

*Governments:* 62. Algeria, Argentina, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, China, Costa Rica, Croatia, Cuba, Ecuador, Egypt, El Salvador, Eritrea, Fiji, France, Guatemala, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mozambique, Myanmar, Namibia, Netherlands, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICSF.

### *Repatriation*

*Governments:* 61. Algeria, Argentina, Australia, Bahrain, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, China, Costa Rica, Cuba, Cyprus, Ecuador, Egypt, El Salvador, Eritrea, Fiji, France, Greece, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Malawi, Mauritius, Mozambique, Myanmar, Namibia, Netherlands, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, United Arab Emirates, United Kingdom.

*Employers' organizations:* EFE (Eritrea), MEDEF (France), COHEP (Honduras), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada (Canada), UNIMPESCOL (Colombia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICSF.

### *Other issues*

There were a great number and variety of suggestions for other topics to be dealt with in the standard. The following are items that were suggested that did not appear elsewhere in Part B of

the questionnaire: seafarers' book (*Argentina*), paid leave (CCUOMM (*Argentina*)), alcohol and drugs (CGT, UMAFLUP (*Argentina*)), vocational training (*Cuba, India, Malawi*), life insurance and beneficiaries (CGT, SOMU, UMAFLUP (*Argentina*), *Egypt*), health insurance (*Oman, Saudi Arabia*), compensation in case of illness or accident (*Algeria, Panama*), remuneration in the event of shipwreck (survival, disability, death) (SLIMAPG (*Guinea, Panama*)), human resource development (*Indonesia*), mandatory grounds for dismissal (*Philippines*), legal guarantees for the payment of remuneration and personal responsibility of the shipowner/ employer of organizations irrespective of form of ownership (*Russian Federation*), joint ventures (*Spain*), arrest of the vessel in cases of non-payment of remuneration (*Syrian Arab Republic*), obligation of employer to prepare employee registration and documents relating to wage payment (*Thailand*), overtime (*United Arab Emirates*), violence (e.g. piracy), temperature and ergonomics (TUC (*United Kingdom*)), definition for family-run enterprise vessels (*ICMA*), manning, fatigue, noise and vibration (*Argentina, CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), JSU (Japan), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone) and TUC (United Kingdom)*).

*Norway, Sweden.* The consequences of the Seafarers' Identity Documents Convention (Revised), 2003 (No. 185), should be taken into consideration. Fishermen will need a secure identity document to gain access to ports effectively both at home and abroad, and this is as important to fishermen as to other seafarers.

*Australia.* Australia does not consider that recruitment and placement of fishery workers is an appropriate subject for international standards. As for identity documents, Australian fishing personnel would rarely land in an overseas port. However, repatriation standards should apply to fishery workers, as appropriate.

*Burundi.* The provisions on recruitment and placement should draw upon labour legislation, including aspects that are specific to fishing work, e.g. hours worked for a normal wage and those requiring payment of overtime.

*Finland.* These issues could be dealt with in the Recommendation.

*Ireland.* The HSA considers that the issues related to identity documents and repatriation should be covered for vessels working in the waters of other States or in international waters.

*Japan.* If the definition of "recruitment and placement" corresponds to that of the Employment Service Convention, 1948 (No. 88), this issue has been sufficiently dealt with. As for identity documents, the discussion on whether or not to include the issue in the proposed consolidated maritime labour Convention has not yet been finalized.

*Republic of Korea.* Persons working as ratings on board fishing vessels solely operating in the EEZ of the State should be exempted.

*Latvia.* The National Board of Fisheries agrees with recruitment and placement and identity documents.

*Lebanon.* The provisions regarding identity documents and repatriation should apply to vessels operating on the high seas and in international waters and to fishermen whose nationality is other than that of the flag State. The issue of recruitment and placement should be dealt with in the Recommendation.

*Namibia.* NEF: Repatriation should only be granted in the event that a fisherman is discharged in a port outside the country in which he/she was recruited.

*New Zealand.* Reference should be made in the Recommendation to the relevant ILO instruments.

*Spain.* In the era of globalization, it is necessary to set out the conditions of employment and social security of workers employed in joint ventures or enterprises, including flags of convenience, and to consider means of verifying compliance with the legislation.

*United States.* USCIB: Employers should have a duty to return or arrange the return of workers to the port of hire unless otherwise specifically agreed to and set forth in writing in the fishing contract.

The majority of States (63) indicated that the Convention should provide that persons working on board fishing vessels registered in the State, operating on the high seas and in the waters of States other than the flag State, should generally have labour conditions no less favourable than those provided to seafarers working on board vessels registered in the State, engaged in commercial maritime transport. However, some respondents opposed this, primarily based on differences between commercial maritime transport and fishing operations. A majority of respondents also agreed that the Convention should cover other categories of fishers. Many indicated that protection could depend on time at sea (with replies varying from less than one day to 30 days) or on vessel size (length or tonnage). A large majority of States agreed that the Convention should contain provisions on: recruitment and placement (61), identity documents (62) and repatriation (61). Also suggested for inclusion were many issues covered elsewhere in the questionnaire, as well as a few issues not covered (e.g. grounds for dismissal, human resource development, annual leave, documents related to wages, remuneration in the event of shipwreck).

Taking into account the replies to Question B11(d), the Office has included a provision (in *Point 28*) that fishers working on vessels engaged on international voyages should enjoy treatment no less favourable than that provided to seafarers on ships engaged in commercial activities, with respect to three issues: identity documents,<sup>11</sup> repatriation conditions, and recruitment and placement services. The Conference may also wish to consider other issues that could be dealt with under this provision.

## B12. ENFORCEMENT

*Should the Convention provide that States should adopt measures to verify compliance with the provisions of the Convention?*

**Qu. B12(a)**

### *Affirmative*

*Governments:* 78. Algeria, Argentina, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Cuba,

<sup>11</sup> As concerns identity documents, the Conference may wish to recall that the Seafarers' Identity Documents Convention (Revised), 2003 (No. 185), provides that "after consulting the representative organizations of fishing-vessel owners and persons working on board fishing vessels, the competent authority may apply the provisions of this Convention to commercial maritime fishing" (Art. 1(3)).

Cyprus, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Negative*

*Governments:* 2. Malaysia, Saint Vincent and the Grenadines.

*Employers' organizations:* LEC (Latvia), Norwegian Fishing Vessel Owners' Association/Norwegian Trawlers' Association (Norway).

### *Other*

*Governments:* 2. Australia, Czech Republic.

### *Comments*

SOMU (Argentina), *Brazil, Burundi, Costa Rica, Egypt, Japan* noted that inspection would be a means to ensure compliance.

*Algeria.* The absence of control at the national level is one of the reasons for the inefficiency of enforcement of international conventions.

*Argentina.* The labour inspectorate is the body responsible for OSH supervision. This primary responsibility cannot be evaded or delegated.

*Australia.* Include a non-mandatory port state control provision.

*Canada.* UFAWU-CAW: There should be crew representatives in the regulatory body in order to ensure compliance.

*Egypt.* The ratifying flag State should verify compliance with the Convention, while the port State carries out inspections to ensure effective implementation.

*India.* A separate Directorate should be established.

*Japan.* JSU: Distant-water fishing vessels, which may visit foreign ports, should be inspected by port state control.

*Latvia.* The National Board of Fisheries disagrees.

*Lebanon.* The type and nature of these measures should be spelt out.

*Malaysia.* The adoption of measures to verify compliance with the Convention should be voluntary.

*Namibia.* The measures to be adopted should be the same as in the STCW Convention and other IMO Conventions.

*New Zealand.* Such measures would form part of the PSC activities of the contracting party – measures which are not available at present.

*Norway.* Flag States must ensure that vessels are efficiently controlled, that any documentation and programmes in relation to enforcement clearly identify the areas to be controlled and that any problems are identified. A “Document of compliance” and quality assurance system are essential to ensure both the needed flexibility and the effective and continuous implementation and enforcement of working and living conditions. Fishermen will benefit from such a system, as those responsible for implementation (especially flag States and shipowners) are forced to look at working and living conditions as part of the whole. A stand-alone certificate will only be a snapshot of the conditions at the time of inspection, and the limited resources for inspections worldwide will minimize its effectiveness and place the responsibility on governments and those on board, while it is the owner who should have the main responsibility for implementation. Working and living conditions do not lend themselves well to the current system of certification, which is usually used for more permanent fixtures like steel, nuts and bolts. The certificate issued in a quality assurance system should rather be used for on-board working and living conditions. Furthermore, the Convention must allow the issuance of any certificate and other control and enforcement mechanisms to be delegated, while the flag state administration must maintain the responsibility.

*Oman.* The measures should consist of adopting national legislation and defining the competent supervisory authority in each State in order to guarantee implementation of the Convention.

*Panama.* APOM: The flag State should have the leading role as regards compliance with Conventions and Recommendations.

*Russian Federation.* Verification should be carried out on a daily basis. The Convention should provide for a mechanism whereby the State can carry out coercive measures against the shipowner/employer.

*Saint Vincent and the Grenadines.* This provision should not be mandatory.

*United Kingdom.* The main responsibility should rest with the flag State, with provision also for port state control.

TUC: Flag States must also assume their responsibilities.

*Views shared by several workers' organizations:* CCUOMM, CGT, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom): In the case of distant-water fleets or vessels which may visit foreign ports, it is essential that one of the control measures should be PSC, which will require the inclusion of a "no more favourable treatment" clause ("no less favourable treatment" clause).

**Qu. B12(b)** *If yes, should the Convention provide for the possibility of exempting certain fishing vessels from the above requirements?*

#### *Affirmative*

*Governments:* 27. Bangladesh, Costa Rica, Denmark, Egypt, Finland, Guatemala, Hungary, India, Indonesia, Islamic Republic of Iran, Japan, Republic of Korea, Kuwait, Latvia, Mauritius, Mexico, Myanmar, Norway, Oman, Philippines, Saudi Arabia, Serbia and Montenegro, Syrian Arab Republic, Ukraine, United Arab Emirates, United States, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), ESA/Estonian Fishermen's Association (Estonia), COHEP (Honduras), NEF (Namibia), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* PVIS (Netherlands), ICSF.

#### *Negative*

*Governments:* 50. Algeria, Argentina, Australia, Austria, Bahrain, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Croatia, Cuba, Cyprus, Ecuador, El Salvador, Eritrea, Estonia, Fiji, France, Germany, Greece, Honduras, Iceland, Ireland, Italy, Jamaica, Lithuania, Malawi, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Panama, Portugal, Qatar, Romania, Russian Federation, Spain, Sweden, Switzerland, Thailand, Trinidad and Tobago, Tunisia, Turkey, United Kingdom, Venezuela.

*Employers' organizations:* EFE (Eritrea), MEDEF (France), CCIAB, CCIAS (Lebanon), ECOT (Thailand), ECA (Trinidad and Tobago).

*Workers' organizations:* CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), PPDIV (Croatia), CSG (Gabon), NUNW (Namibia), APOM (Panama), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), USS (Switzerland), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), ICMA.

#### *Other*

*Governments:* 5. Czech Republic, Lebanon, Malaysia, Mozambique, Saint Vincent and the Grenadines.

*Employers' organization:* LEC (Latvia).

#### *Comments*

*Australia.* If a fishing vessel has the facility to land at a foreign port, it should be eligible for inspection by that port authority.

*Costa Rica.* INS disagrees.

*Ireland.* The Marine Survey Office agrees.

*If yes, please indicate which fishing vessels:*

**Qu. B12(c)**

There were a great number and variety of replies to this question, including: coastal, artisanal, family fishing, vessels spending long periods at sea, vessels of less than 80 tons, small vessels, vessels in operating areas "C", "D" and "E", vessels fishing in fresh water, inland fishing vessels, research vessels, training vessels, survey vessels, vessels of less than 5 tons, vessels less than 12 m in length, near-shore vessels, vessels used in subsistence fishing, leisure craft, sport fishing vessels, amateur fishing vessels, vessels undertaking day-fishing operations or short fishing trips.

*United States.* Any exemption should be determined based on the size of the vessel, distance from shore, and crew size.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), JSU (Japan), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone) and the TUC (United Kingdom): Very small and single-manned vessels. The TUC adds that all efforts should be made to ensure the coverage of such craft, particularly with regard to fundamental principles and rights at work and OSH, including seaworthiness of vessels.

*Should the Convention include a provision on port state control?*

**Qu. B12(d)**

#### *Affirmative*

*Governments:* 67. Algeria, Argentina, Australia, Austria, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Cuba,

El Salvador, Eritrea, Estonia, Fiji, Finland, France, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Republic of Korea, Latvia, Lebanon, Malawi, Mauritius, Myanmar, Namibia, New Zealand, Nicaragua, Nigeria, Norway, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), COHEP (Honduras), CCIAB (Lebanon), NEF (Namibia), ECOT (Thailand), ECA (Trinidad and Tobago).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), ICMA, ICSF.

### *Negative*

*Governments:* 11. Bahrain, Cyprus, Ecuador, Egypt, Germany, Kuwait, Lithuania, Malaysia, Mexico, Netherlands, Oman.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), ESA/Estonian Fishermen's Association (Estonia), LEC (Latvia), CCIAS (Lebanon), Norwegian Fishing Vessel Owners' Association/Norwegian Trawlers' Association (Norway), EMCOZ (Zimbabwe).

*Other:* PVIS (Netherlands).

### *Other*

*Governments:* 4. Czech Republic, Denmark, Japan, Mozambique.

*Employers' organizations:* MEDEF (France), USCIB (United States).

*Workers' organization:* ZCTU (Zimbabwe).

### *Comments in favour of port state control*

*Argentina.* In order to ensure that the Convention is complied with by all fishing vessels, regardless of the country to which they belong, and to prevent commercial advantage being taken.

SOMU: PSC is essential to prevent discrimination, abuses, exploitation, fatigue, etc.

*Brazil.* It is important to include provisions on inspections by the port State or the State in whose territorial waters the vessel is located.

*Costa Rica.* INS: Port authorities should be required to exercise greater control so that vessels comply with safety measures (e.g. sufficient number of lifeboats and life vests).

*Egypt.* Ratifying flag and port States should only control vessels belonging to other ratifying States.

*Eritrea.* PSC is important for the safety and maintenance of fishing vessels.

*Gabon.* CSG: In order to ensure the safety of crew and property.

*Guinea.* SLIMAPG: In order to step up measures against FOC and secure compliance with international Conventions.

*India.* This is essential to safeguard the crew's interests in regard to aspects such as food, shelter, pay, medical care, etc. The port State should control the vessels operating in territorial waters.

*Morocco.* CDT: In order to preserve the State's sovereignty and guarantee the visiting ships' rights.

*Norway.* The agreement on PSC is dependent on there being a certificate of some kind; otherwise there would be thorough inspections every time. The main objective should be a certificate of compliance as part of a quality assurance regime, conforming to clear international standards against which compliance can be verified. The certificate should provide prima facie evidence of compliance, and PSC should only be carried out if there are clear grounds to believe that standards are not being complied with. For non-ratifying States there should be a "no more favourable treatment" clause. Council Directive 97/70/EC includes regulations concerning PSC.

*Russian Federation.* The Convention should strengthen the provision on responsibility of the port administration in the event of non-compliance with the rules on ships' documents.

*Spain.* This would be a highly efficient means of ensuring that vessels do not circumvent the implementation of the instrument.

*Sweden.* For non-ratifying States there should be a "no more favourable treatment" clause.

*Trinidad and Tobago.* This would ensure that workers on board vessels calling at the port State enjoy the same conditions.

*United Kingdom.* TUC: This is essential, if weak enforcement by flagging-out States is to be countered.

*Views shared by several workers' organizations:* CCUOMM, CGT, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom): The importance of such a provision cannot be overstated.

*ICMA.* Foreign fishing vessels should not be exempted from PSC and should be subject to inspection in any port at which they call, even if they are not fishing in that country's waters. Coastal States might consider requiring foreign vessels to comply with international standards as a condition of fishing in their waters. PSC should be authorized on all fishing vessels, irrespective of their flag States' ratification of the Convention.

*ICSF.* Particularly for the case of vessels registered in country A, employing workers from countries B, fishing in the waters of countries C and selling fish to countries D, or combinations of any of these arrangements.

#### *Comments questioning port state control*

*Argentina.* CAPeCA/CALAPA/CAPA: In this respect, the Latin American Agreement on Port State Control of Vessels (Viña del Mar Agreement), which has been ratified by many countries, is in force for the South American region. Thus, it is not necessary to include this in the Convention.

*Denmark.* Fishing is mainly a national or regional issue. It does not have the same characteristics as the merchant fleet. At present PSC should be concentrated on the merchant fleet.

*Greece.* PSC should be restricted to issues of safe navigation.

*Honduras.* COHEP: PSC should be restricted to the revision of requirements before authorizing the vessel's departure.

*Ireland.* It would not be practicable for one State to be involved in social security matters, for example, of another State.

*Japan.* It should be examined whether PSC is a suitable means to implement the new Convention, given the circumstances of PSC as regards the various IMO Conventions and the trend concerning treatment of PSC in the proposed consolidated maritime labour Convention.

*Latvia.* The National Board of Fisheries disagrees.

*Lebanon.* CCIAS: While the port State might have ratified the Convention, the State where the vessel is registered might not have done so and might not implement its provisions.

*Netherlands.* At present PSC on fishing vessels is not provided for in any international Convention in force.

*Qatar.* PSC should rather be included in the Recommendation, given the impossibility of implementing it in certain situations.

Nearly all States (78) supported the adoption of measures to verify compliance with the provisions of the Convention, for example inspections. A few replied that flag state enforcement was already current practice. One State called for quality assurance to be implemented by the flag State or other entity by delegation. More than half (50) of the governments opposed exemptions. Some respondents suggested exempting small vessels, vessels involved in artisanal, family or coastal fishing, recreational vessels, etc. A large majority of States (67) advocated a provision on port state control.

*Point 39* draws from one of the provisions under consideration for the consolidated maritime labour Convention. Bearing in mind that many States may not have the resources necessary to inspect regularly all fishing vessels, the Office has included the words "as appropriate". However, *Point 41* provides that the competent authority of the member State should appoint a sufficient number of inspectors to fulfil its responsibilities under *Point 39*, while allowing the possibility of authorizing public institutions or other competent bodies to carry out such inspections. *Point 42* provides for port state control of fishing vessels to verify compliance with the Convention. *Point 43* provides a "no more favourable treatment clause" similar to that under consideration in the consolidated maritime labour Convention.

## B13. CONSULTATION

*Should the Convention include a provision concerning consultation with representative employers' and workers' organizations, as well as representative organizations of persons working on board fishing vessels in the development and implementation of national laws and regulations concerning conditions of work on board fishing vessels?* **Qu. B13(a)**

*Affirmative*

*Governments:* 75. Algeria, Argentina, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, Croatia, Cuba, Cyprus, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Greece, Guatemala, Honduras, Hungary, Iceland, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malawi, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPECA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), CCIAB, CCIAS (Lebanon), NEF (Namibia), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom), ZCTU (Zimbabwe).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

*Negative*

*Governments:* 5. Australia, China, Czech Republic, India, Panama.

*Employers' organizations:* LEC (Latvia), ECOT (Thailand).

*Other*

*Governments:* 2. Costa Rica, Germany.

*Comments*

CAPeCA/CALAPA/CAPA (Argentina), *Brazil, Burundi*, INS (Costa Rica), *Egypt, Fiji, Eritrea, France*, COHEP (Honduras), *Ireland, Malawi*, CDT (Morocco), *Namibia*, NEF (Namibia), *Norway, Oman, Philippines, Portugal, Qatar, United Arab Emirates*, ZCTU (Zimbabwe) emphasize the value of such consultation. *Algeria* points out that it makes for better implementation of the national legislation on working conditions on board fishing vessels; *Argentina, Fiji* and *Saint Vincent and the Grenadines* note that it is important to involve those with an in-depth knowledge of the sector; *Brazil* believes that the tripartite method of developing, introducing and implementing legislation has proven to be more productive and effective with regard to compliance with provisions; *Philippines* considers that this is vital to forestall misunderstanding/misinterpretation of national legislation and to foster cooperation and amity especially in resolving grievances and disputes; *Qatar* indicates this guarantees a commitment by all involved to implementing the negotiated terms; *ICSF* suggests that this would develop a sense of ownership among those working on board fishing vessels.

*Australia, Czech Republic, Estonia*, ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), *Mexico, Mozambique, Spain, United Kingdom* indicate that consultation is already an obligation. *Australia, Czech Republic*, ESA/Estonian Fishermen's Association (Estonia), MEDEF (France) point to existing legal requirements for consultation in the development of agreements regulating conditions of work for all sectors.

*India*. In India laws are passed after the public representatives approve them. Operative consultation is the guiding spirit to guide and implement laws.

*Latvia*. The National Board of Fisheries disagrees.

*Malaysia*. Refers to fishermen's associations.

*United Kingdom*. The United Kingdom has organizations representing owners/employers/employees jointly and these federations are consulted about proposed regulations. The United Kingdom industry does not have separate organizations for constituent groups.

TUC: Effective social dialogue is an essential element of decent work and must be promoted. No Convention can be effectively implemented in law and practice without it. All the evidence shows that such consultation improves safety standards, among other measures. Governments should take care to ensure that an independent trade union and employer voice is heard. Where fisherfolk organizations combine employers and self-employed and employed workers, and there are no independent social partner organizations in the industry, governments should consult national employers' and trade union confederations to ensure that tripartite consultation can inform implementation that is in line with all the obligations arising from ILO membership and the ratification of its Conventions.

*United States*. USCIB: National legislation allows everyone to provide comments and participate in the rulemaking process.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone): Social dialogue is a fundamental element of the ILO Decent Work Agenda, and its absence would in itself constitute a substantial decent work deficit, which would require national and international measures to redress.

*ICMA.* If organizations representing workers and employers exist, there should be provisions for consultation. However, because of the independent nature of many fisheries, such organizations sometimes do not exist. There should always be the opportunity for public comments in the regulatory process.

The vast majority of States (75) agreed that the Convention should provide for consultations. A few respondents noted, however, that this applied to all sectors, not just fishing. The issue of consultation has been addressed under the section concerning definitions (*Point 5(b)*).

#### B14. OTHER ISSUES

*Please indicate any other issues which should be addressed in the Convention.*

**Qu. B14(a)**

A wide variety of replies refer to issues including: compensation in cases of shipwreck or bad weather (*Algeria*); professional responsibilities at work and corrective measures (CAPeCA/CALAPA/CAPA (Argentina)); drug and alcohol abuse prevention (CAPeCA/CALAPA/CAPA (Argentina)); education and training (CCUOMM, SOMU (Argentina), *Egypt, Tunisia*); construction of vessels and presence of important safety devices (*Bahrain*); pension benefits (PPDIV (Croatia), *Guatemala*); crew accommodation, noise and vibration (*Denmark*); work permits and life insurance (*El Salvador*); religious freedom on board (CSG (Gabon)); occupational hazards and communication on board (*Honduras*); fishing vessel loadlines (*Ireland*); equality of wages and social security (AGCI PESCA (Italy)); fisheries conservation and marine environmental protection measures (*Lebanon, CCIAB (Lebanon), United Arab Emirates*); maternity protection (*Malawi*); prevention of hijacking (*Nigeria*); social security and health insurance (*Oman*); trade union rights (SWTUF (Sudan)); protection against harassment on board (*Switzerland*); medical care expenses (NCTL (Thailand)); paid leave (*Tunisia*); maritime accidents (*United Arab Emirates*); OSH provisions for female workers (*Zimbabwe*).

Other replies suggest the inclusion of provisions concerning: coordination among all parties and ministries relevant to conditions of work of fishers (*Burundi*); an enhanced role of the ILO in ensuring implementation of the Convention and resolving conflicts concerning conditions of work in the fishing sector (*Costa Rica*); promotion of tripartism in the conclusion of contracts, implementation and monitoring (*Egypt*); sanctions (COHEP (Honduras)); systematic risk assessment and OSH management, reporting of accidents, investigation of serious accidents and publication of useful statistics (*Norway*); provisions to ensure that self-employed workers are covered by the same OSH rules as employed workers (*Sweden, TUC (United Kingdom)*); safety information and training in a language that workers can understand or appropriate methods if workers are illiterate (TUC (United Kingdom)); provisions to ensure that workers who are members of cooperatives are covered by the terms of the Convention (TUC (United Kingdom)); clarification whether provisions apply to all vessels (including existing vessels) or only to new vessels or those built after a particular date (*United Kingdom*); establishment of tripartite maritime commissions for the fishing sector (*Zimbabwe*).

*Spain.* Establishment of a body of officials reporting to the ILO to verify compliance with the Convention.

*ICMA.* Fishers should have the same protection in international law and general maritime law as persons engaged on merchant fleets.

There were a large number of replies suggesting other issues that should be addressed in the Convention. However, many of the issues raised came from only one or two States. Issues mentioned included: compensation in cases of shipwreck or bad weather, pension benefits, maternity protection, medical care expenses, life insurance, health insurance, social security, equal pay, paid leave, professional responsibilities at work and corrective measures, drug and alcohol abuse prevention, education and training, safety information and training in a language that workers can understand or appropriate methods if workers are illiterate, construction of vessels and presence of important safety devices, crew accommodation, noise and vibration, prevention of accidents, OSH provision for female workers, systematic risk assessment, OSH management, reporting of accidents, investigation of serious accidents and publication of useful statistics, prevention of hijacking, work permits, religious freedom on board, communication, fishing vessel loadlines, fisheries conservation and marine environmental protection measures, protection against harassment on board, sanctions, provisions to ensure that self-employed workers are covered by the same OSH rules as employed workers, provisions to ensure that workers who are members of cooperatives are covered by the terms of the Convention, clarification whether provisions apply to all vessels (including existing ones) or only to new vessels or those built after a particular date, coordination among all parties and ministries relevant to conditions of work of fishers, trade union rights, promotion of tripartism in the conclusion of contracts, implementation and monitoring, establishment of tripartite maritime commissions for the fishing sector, an enhanced role of the ILO in ensuring implementation of the Convention and resolving conflicts concerning conditions of work in the fishing sector, and the establishment of a body of officials reporting to the ILO to verify compliance with the Convention.

### **C. Contents of a proposed Recommendation**

#### **C1. MINIMUM AGE AND WORK OF YOUNG PERSONS**

**Qu.C1(a)** *Should the Recommendation provide guidance on the types of work (e.g. night work or in hazardous conditions) or the types of fishing vessels that should be prohibited for persons under the age of 18?*

#### *Affirmative*

*Governments:* 70. Algeria, Argentina, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, Estonia, Fiji, Finland, France, Germany, Greece,

Guatemala, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nigeria, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Switzerland, Syrian Arab Republic, Thailand, Turkey, Ukraine, United Arab Emirates, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), CCIAB, CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Negative*

*Governments:* 10. Australia, China, El Salvador, Eritrea, Honduras, Nicaragua, Norway, Sweden, Tunisia, United Kingdom.

*Employers' organizations:* LEC (Latvia), ECOT (Thailand).

*Workers' organizations:* JSU (Japan), USS (Switzerland).

*Other:* Confcooperative (Italy).

### *Other*

*Governments:* 2. Costa Rica, Trinidad and Tobago.

### *Comments*

*Australia.* Hazardous work should be addressed by appropriate OSH provisions, not minimum age provisions.

*Costa Rica.* INS agrees.

*Latvia.* National Board of Fisheries disagrees.

*Lebanon.* Careful consideration should be given to the question whether persons aged under 18 years are allowed to work on vessels of all types regardless of area of operation, especially in view of Convention No. 138, which allows employment as of the age of 16.

*Saudi Arabia.* On industrial fishing vessels skills and experience are necessary to handle hazardous fishing gear. Minors should not be employed before they have been trained and have understood the dangers of fishing operations.

*Switzerland.* Some Offices of the Federal Administration: No, if fishing is deemed to be hazardous work in itself. If not, the criteria laid down in Recommendation No. 190 should be included, adapting them to the fishing sector.

**Qu. C1(b)** *If yes, what should be included in such guidance?*

*Algeria, CAPeCA/CALAPA/CAPA (Argentina), Belgium, Benin, Burundi, Cuba, Cyprus, Czech Republic, France, CSG (Gabon), Greece, Hungary, Indonesia, Italy, JSU (Japan), Latvia, Lebanon, Mozambique, Oman, Philippines, Poland, Portugal, CNS Cartel Alfa (Romania), Russian Federation, RPRRKh (Russian Federation), Switzerland, Thailand, Turkey, Ukraine* consider that night work should be prohibited for persons under the age of 18 because it is detrimental to their health and development.

*Algeria, Bangladesh, Belgium, Benin, Canada, UFAWU-CAW (Canada), Cuba, Cyprus, Denmark, Germany, Greece, Indonesia, Japan, JSU (Japan), Oman, Qatar, CNS Cartel Alfa (Romania), Switzerland, Ukraine, United Arab Emirates* indicate that guidance should be included on inherently dangerous, heavy, arduous, hazardous, gruelling, physically strenuous or distressing activities or tasks detrimental to or endangering occupational safety and health.

*Argentina, CCUOMM (Argentina), Bangladesh, Brazil, Fiji, Finland, Italy, Latvia, Lebanon, Serbia and Montenegro, Nigeria, Poland, Russian Federation, RPRRKh (Russian Federation), Turkey* suggest including guidance on OSH measures related to work on board fishing vessels.

*Fiji, Germany, Portugal, Russian Federation, ECA (Trinidad and Tobago).* Periods of rest, working time.

*Norway and Sweden* request that the prohibitions be part of the Convention and not of the Recommendation.

*Argentina.* Weather-related or mechanical factors, and non-supervised work that is hazardous or heavy.

*CCUOMM:* The tasks included in a training curriculum for minors on board fishing vessels should be supervised, so as to prevent work with dangerous machinery or equipment, exposure to physical abuse, etc.

*Belgium.* Sunday work.

*Canada.* UFAWAU-CAW: Short trips, short working hours (not more than 12-hour days), work under supervision.

*Denmark.* The minimum age for fishermen is 16, but may be 18 for certain special working situations. Young persons aged between 16 and 18 years should be allowed to work on board fishing vessels, if sea service is part of training for fishermen. There should be an agreement between the young fishermen and the shipowner concerning a training programme in accordance with national fishing education programmes recognized by the Danish Maritime Authority.

*Ecuador.* A list of activities prohibited for different ages, including explanations of the risks associated with each one.

*France.* Work on factory vessels and long fishing operations. Persons under 18 should be able to take the weekly rest period on shore.

*Ghana.* MDU: Minimum age for apprenticeship.

*Guatemala.* Those working on vessels fishing in areas of operation “A”, “B” and “C” should be excluded from night work and dangerous tasks.

*Guinea.* SLIMAPG: Work on tuna boats, crabbers or longliners.

*Honduras.* COHEP: Prohibition to employ minors on fishing vessels of categories “A” and “B” and restrictions on hazardous work on those of category “C”.

*Hungary.* Overtime should be allowed only exceptionally, and hazardous conditions only in the event of a disaster.

*Iceland.* Work with dangerous machinery, equipment or tools and manual handling or transport of heavy loads.

*India.* Traditional fishermen operating in territorial waters and engaged in day fishing.

*Ireland.* The Marine Survey Office refers to EU legislation. HSA suggests guidance on working conditions, time at sea and operation of machinery, including lifting appliances.

*Jamaica.* Apprenticeship, families passing down traditions, safety measures, precautions, supervision and monitoring of specific types of work.

*Japan.* JSU: Work requiring proficiency. No guidance should be provided on the types of fishing vessels on which persons under 18 should be prohibited to work.

*Republic of Korea.* Work on board fishing vessels operating in the Arctic Sea and in high-latitude longline fisheries.

*Lebanon.* The guidance could be based on the standards applied to commercial vessels, or those in ILO codes of conduct, or guidelines issued by other international organizations, while not constituting a binding commitment for Members.

*Mauritius.* Night duty within the vicinity of the operational area.

*Mexico.* Work as trimmers or stokers.

*Oman.* Overtime and work during weekly days of rest or official holidays without authorization by the competent authority.

*Panama.* Legal authority of the competent body to set the minimum age for the various jobs and any additional requirements.

ANDELAIPP: Guidelines should be defined according to the type and activity of the vessel.

APOM: Minimum guarantees of appropriate food and accommodation according to the length of time at sea.

*Philippines.* Dangers of rough seas and disadvantages of working on small vessels.

*Poland.* Work should be supervised.

*Qatar.* Work in machine-rooms or refrigeration chambers, diving, work on board vessels in category “A” in view of the long time spent at sea.

*Saudi Arabia.* Operation of winches, leaving the mother ship during fishing.

*Sri Lanka.* UFFC: Work on vessels of categories “A” and “B”.

*Sudan.* SWTUF: Aptitudes of persons under the age of 18 should be taken into consideration for their safety and that of the vessel.

*Syrian Arab Republic.* Work in international waters.

*Thailand.* NCTL: Work with the engine.

*Turkey.* Operations on the open sea.

*Ukraine.* Work on holidays.

*United Arab Emirates.* Lifting work.

*United Kingdom.* Blanket prohibitions are inappropriate. The capability of young persons (aged 16-18 years) for particular types of work should be assessed by special risk assessment.

TUC: The essential principles of Convention No. 182 must be reflected in the Convention. The new instruments must be, at least, consonant with other Conventions in force, paying particular regard to the fundamental Conventions and their accompanying Recommendations, and must not in any way discourage governments from fulfilling their constitutional obligations either with regard to ratified Conventions or those arising from the ILO Declaration on Fundamental Principles and Rights at Work of 1998.

*United States.* Conditions that should be prohibited for persons under the age of 18 should be identified. This should include the use of heavy equipment and machinery and crew member positions that require extensive skill and experience. In addition, duties involving the use of power-driven wood-working machines, hoisting apparatuses, bakery machines, and meat-cutting machines should be prohibited.

*Zimbabwe.* Work in deep waters.

*ICMA.* Persons under 18 should not be employed on vessels other than small family-owned and -operated vessels. They should not work at night unless they have received prior training. There should be a designated mentor responsible for training and supervising under-age fishers.

*ICSF.* Types of fishing operations proscribed, sea conditions to be avoided, and conditions under which young persons may be employed.

The majority of States (70) agreed that the Recommendation should provide guidance on the types of work that should be prohibited for persons under the age of 18. Many replies listed the work that should be prohibited (e.g. night work, hazardous or gruelling tasks, work with dangerous machinery, manual handling or transport of heavy loads, work in high latitudes, for excessive periods of time, or on holidays). Other issues that might be addressed in the Recommendation included: apprenticeships, working in family operations, occupational safety and health, training, rest periods, restrictions on the operation of certain equipment.

The provisions in *Points 44* and *45* take into account certain details of Convention No. 112. They reflect a concern for the protection of young persons and draw upon suggestions made by governments in their replies. In *Point 46*, the Office has included a general provision addressing the need for properly fitted safety equipment for young persons. Arguably, such provisions might also be included under the part of the proposed Recommendation concerning occupational safety and health. However, the Office believes that including these provisions in this section would give them greater visibility.

## C2. MEDICAL EXAMINATION

*Should the Recommendation set out guidance on the content of the medical certificate and the procedures to be followed for the issue of the medical certificate?* **Qu. C2(a)**

*Affirmative*

*Governments:* 74. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Syrian Arab Republic, Trinidad and Tobago, Turkey, Ukraine, United Arab Emirates, United Kingdom, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF, IMHA.

*Negative*

*Governments:* 6. China, Lithuania, Sweden, Switzerland, Tunisia, United States.

*Employers' organization:* ECOT (Thailand).

*Other*

*Governments:* 2. Denmark, Thailand.

*Employers' organization:* EMCOZ (Zimbabwe).

*Workers' organization:* USS (Switzerland).

### *Comments*

*Brazil, Denmark, Ecuador, Republic of Korea, Qatar, Venezuela* consider that guidance could include the content of the medical examination, and sometimes request specific indications regarding hazardous activities.

*Greece* and *Norway* suggest that a standard model for the medical certificate should be drawn up.

*Indonesia, Saint Vincent and the Grenadines, Trinidad and Tobago* feel that this guidance is necessary to standardize the medical examination and issuance of medical certificates.

*Oman, Qatar, Saudi Arabia* consider that the certificate should certify that the worker is physically fit and free of communicable diseases.

*Panama, United Kingdom, TUC* (United Kingdom) suggest following the ILO/WHO *Guidelines for Conducting Pre-sea and Periodic Medical Fitness Examinations for Seafarers*.

*Argentina*. CCUOMM: The costs of carrying out medical examinations and issuing medical certificates should not be borne by the fishermen.

*Australia*. The guidance should be in accordance with relevant IMO standards.

*Canada*. Only for those positions where medical evaluation is required or necessary.

*El Salvador*. A mechanism to certify the activities of workers should be established at every port.

*Fiji*. A proper check and reporting system should be included.

*France*. The period of validity should be determined.

*Jamaica*. Vessel size, time at sea and distance of fishing ground from shore should be taken into account.

*Latvia*. This guidance should only apply to persons on fishing vessels operating on the high seas.

*Lebanon*. The type of medical certificate should be taken into account, as it should not be the same, for example, for persons working on small or coastal fishing vessels and for skippers or captains of larger vessels.

*Namibia*. This would assist the officer in charge during the auditing by the flag State.  
NEF: The medical examination should be similar to that for an export food handler.

*Netherlands*. This requirement should be in line with the medical examination for seafarers.  
PVIS: A right of appeal in the event that the fisher is declared unfit should be included.

*Oman*. Medical certificates should certify that the worker's sight and hearing are sound.

*Portugal*. For example, the certificate should indicate the examination result (fit/unfit for work) and refer to the worker's ability to adapt to the post.

*Qatar*. The certificate should be issued free of charge by the competent authority.

*Switzerland*. USS: Patient confidentiality should be respected.

*United States.* United States law does not require medical examinations for persons working on fishing vessels.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), JSU (Japan), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom): Such guidance would be essential, as this is one aspect which should be subject to port state control, where the vessel calls at foreign ports.

*Should the Recommendation provide that the persons issuing such a certificate be approved by the competent authority?* **Qu. C2(b)**

### *Affirmative*

*Governments:* 71. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Benin, Brazil, Bulgaria, Burundi, Canada, Costa Rica, Croatia, Cuba, Czech Republic, Ecuador, Egypt, El Salvador, Eritrea, Fiji, Finland, France, Germany, Greece, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Republic of Korea, Kuwait, Latvia, Lebanon, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Syrian Arab Republic, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF, IMHA.

### *Negative*

*Governments:* 7. Belgium, China, Cyprus, Estonia, Japan, Lithuania, Switzerland.

*Employers' organization:* ESA/Estonian Fishermen's Association (Estonia).

*Workers' organization:* USS (Switzerland).

### *Other*

*Governments:* 4. Denmark, Guatemala, Thailand, United States.

*Employers' organization:* EMCOZ (Zimbabwe).

*Workers' organization:* FTUS (Lebanon).

### *Comments*

*Algeria, CCUOMM (Argentina), Bahrain, Norway, Serbia and Montenegro, ICMA* consider that persons issuing medical certificates should be specialized in maritime health and/or have experience and training in medical considerations relating to work on a fishing vessel, e.g. familiarity with the specification of "hazardous conditions" and "dangerous work", etc.

*Brazil, INS (Costa Rica), El Salvador, Eritrea, ESA/Estonian Fishermen's Association (Estonia), Fiji, Marine Survey Office (Ireland), NEF (Namibia), Nigeria, Norway, Panama, Saudi Arabia, ECA (Trinidad and Tobago), ICMA* state that issuing persons should be limited to medical doctors/physicians/practitioners who should be fully qualified, registered and/or practising.

*Burundi, Egypt, CSG (Gabon), SLIMAPG (Guinea), Indonesia, CDT (Morocco), Oman, Philippines, SALFU (Sierra Leone), SWTUF (Sudan), Trinidad and Tobago* point out that this requirement would avoid fraud, irregularities and forged medical certificates, and would ensure accuracy and reliability of the results of medical tests as well as the genuineness, credibility and universal validity of medical certificates.

*Argentina.* The issuance of certificates should not be delegated to private enterprises.

*CCUOMM:* Medical personnel responsible for issuing certificates should be duly qualified along the lines of the WHO/ILO Guidelines.

*SOMU:* The port State should be responsible for monitoring medical certificates.

*Australia.* The guidance should be in accordance with relevant IMO standards.

*Belgium.* Under Belgian law, it is occupational health services that are approved, not occupational physicians themselves.

*Denmark.* This should be included in the mandatory part of the Convention. A provision should state that a Member could, after consultations with employers' and workers' organizations, adopt national regulations ensuring that seafarers have the right to an administrative appeal against the decision.

*Egypt.* In order to avoid diseases and specify the required vaccinations.

*Iceland.* They should be recognized, as for example doctors are, but not necessarily in such a way that only a particular doctor can issue a certificate.

*India.* The requirement should be the same as for merchant shipping.

*Ireland.* HSA disagrees.

*Japan.* The approval of the issuing person by the authority should not be necessary as long as a valid certificate is issued.

*Lebanon.* There should be an official medical committee mainly composed of members of the public health ministries and ministries involved in maritime fishing.

*Norway.* The medical practitioner should be objective and have no ties to either employers or employees.

*Panama.* APOM: Issuance should be restricted to specific clinics and/or appropriate persons recommended by the authorities.

*Philippines.* Thus, accountability and responsibility of the issuing person or entity could be established in cases where sanctions are imposed.

*Qatar.* In Qatar, specialized government hospitals carry out medical examinations and issue certificates according to occupation. The employer covers the expenses for preliminary examinations and treatment.

*Saint Vincent and the Grenadines.* Measures should be taken to verify authenticity and allow for accountability.

*Spain.* The public health services should be involved, either by directly issuing the certificates or by validating those issued by other authorities.

*United States.* Not applicable.

*Zimbabwe.* Otherwise the certificate should be invalid.

The vast majority of States (75) indicated that the Recommendation should set out guidance on the content of the medical certificate and the procedures to be followed for the issue of the medical certificate. Most States (71) agreed that the issuing persons should be approved by the competent authority.

Certain provisions that had been included in Convention No. 113 have been moved to the proposed Conclusions with a view to a Recommendation (*Points 47 to 53*). The Office has also included a reference, in *Point 54*, to the ILO/WHO *Guidelines for Conducting Pre-sea and Periodic Medical Fitness Examinations for Seafarers*, as this might be relevant to fishers working in conditions equivalent to those of seafarers.<sup>12</sup> The Office notes that the Guidelines include: an overview of relevant international laws and regulations; a description of the purpose and contents of the seafarer's medical certificate; guidance on the right of privacy; recommended qualifications for those conducting medical fitness examinations of seafarers; a discussion of appeals procedures for seafarers denied a medical certificate; a brief description of aspects of seafaring life which may be relevant to the medical examination of seafarers; a brief description of the types and frequency of seafarers' medical examinations; recommended procedures for the conduct of medical examinations; recommended vaccinations for seafarers; and annexes on minimum in-service eyesight and hearing standards for seafarers, information on medical conditions which should be considered by medical examiners when deciding whether to issue medical certificates to seafarers, minimum requirements for the medical examination of seafarers, a sample medical certificate for service at sea, and an annex concerning the collection, processing and communication of health-related data.

<sup>12</sup> The ILO's Tripartite Meeting on Safety and Health in the Fishing Industry recommended that these Guidelines be taken into account in the revision of Convention No. 113.

In *Point 55* the Office has included a provision seeking to promote health among fishers exempted from the provisions concerning medical examination, in view of the importance of this issue for many fishing communities. However, it might be considered unnecessary in light of *Points 8* and *9* of the proposed Conclusions with a view to a Convention.

### C3. MEDICAL CARE AT SEA

**Qu. C3(a)** *Should the Recommendation provide guidance on the contents of the medicine chest and the type of medical equipment<sup>13</sup> required to be carried on board fishing vessels?*

#### *Affirmative*

*Governments:* 80. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

<sup>13</sup> Or first-aid kit for certain smaller fishing vessels.

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF, IMHA.

### *Negative*

*Governments:* 2. Guatemala, Trinidad and Tobago.

*Employers' organizations:* ESA/Estonian Fishermen's Association (Estonia), Norwegian Fishing Vessel Owners' Association/Norwegian Trawlers' Association (Norway).

### *Other*

*Employers' organization:* EMCOZ (Zimbabwe).

### *Comments*

*Burundi,* GTUWA (Egypt), *Indonesia, Malaysia, Philippines,* SWTUF (Sudan) consider that the guidance could recommend an appropriate first-aid kit to provide lifesaving and first aid in case of accident or illness at sea.

*Burundi,* APOM (Panama), *ICMA* believe that there should be clear instructions on the use of the contents of the medical chest or that workers should learn the correct use in basic courses.

The contents of the medicine chest should be defined according to the time spent at sea (*France, Portugal, Saudi Arabia, Switzerland*), vessel size (*Lebanon, Serbia and Montenegro, Spain*) or type of fishing vessel (*Brazil, COHEP (Honduras), Portugal*).

MEDEF (France), Marine Survey Office (Ireland), *Netherlands, United Kingdom,* TUC (United Kingdom) feel that this requirement should be in line with Council Directive 92/29/EEC.

*Australia.* The guidance should be in accordance with relevant IMO standards.

*Costa Rica.* INS agrees, in order to administer first aid to any crew member who has had an accident or is suffering from an illness, be it work-related or otherwise.

*Eritrea.* It would be helpful to update the medical supplies.

*Estonia.* ESA/Estonian Fishermen's Association: Only in the case of international fishing.

*India.* The requirement should be the same as in merchant shipping for deep-sea vessels.

*Jamaica.* The captain and chief mate need to have specified first-aid skills, in the event that there are no medical personnel on board.

*Namibia.* The medicine chest should be checked for expiries.

*Nigeria.* Medical cases occurring frequently at sea should be taken into account when determining the content of the medicine chest.

*Oman.* The contents should not be less than the minimum applied under international standards.

*Saint Vincent and the Grenadines.* Vessels operating at greater distance from shore should be required to have more medical supplies.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), JSU (Japan), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom): This could be accomplished by citing relevant instruments adopted by other competent international organizations.

**Qu. C3(b)** *Should the Recommendation set out guidance on the availability and on instruction concerning the use of radio-medical and similar services on board fishing vessels?*

#### *Affirmative*

*Governments:* 75. Algeria, Argentina, Australia, Austria, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Republic of Korea, Kuwait, Latvia, Lebanon, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Romania, Russian Federation, Saint Vincent and the Grenadines, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), CCIAB (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), MDU (Ghana), SLIMAPG (Guinea), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF, IMHA.

#### *Negative*

*Governments:* 6. Bahrain, Lithuania, Qatar, Saudi Arabia, Trinidad and Tobago, Tunisia.

*Employers' organizations:* LEC (Latvia), CCIAS (Lebanon), Norwegian Fishing Vessel Owners' Association/Norwegian Trawlers' Association (Norway).

*Workers' organizations:* CSG (Gabon), FTUS (Lebanon).

### *Other*

*Government:* 1. Japan.

*Employers' organization:* EMCOZ (Zimbabwe).

*Workers' organization:* KPI (Indonesia),

### *Comments*

*Argentina.* This guidance should include monitoring and functioning of radio services, communications, helicopters and other emergency systems for those categories of fishing vessels that remain at sea for long periods of time.

*Australia.* The guidance should be in accordance with relevant IMO standards and advocate a risk management approach to determining first-aid requirements, giving due consideration to the nature of the work; location, size and layout of workplace; and the number and distribution of workers. This could also cover information about consultation, confidentiality and record keeping; qualifications and training of first-aid personnel, content of first-aid kits and first-aid rooms; infection control and first-aid signs. Specific provisions could apply for fishing vessels engaged in diving work.

*Bahrain.* Only for very large vessels spending several months at sea.

*Burundi.* Radio-medical services with a health establishment should be free.

*Costa Rica.* INS: The provision of medical consultation services can avert serious consequences in the event of occupational accidents.

*Egypt.* For fishing vessels operating on the high seas and for periods exceeding six months.

*Gabon.* CSG: Employers would use it as an excuse not to provide a doctor or nurse on board.

*Ireland.* The Marine Survey Office suggests referring to the appropriate EU Directive.

*Jamaica.* The technologies put in place should be available in developing countries.

*Japan.* Medical treatment should be administered in person by doctors to patients, and radio-medical services should be used to supplement such treatment.

*Republic of Korea.* The Government refers to the Medical Advice at Sea Recommendation, 1958 (No. 106).

*Latvia.* The National Board of Fisheries disagrees.

*Lebanon.* For large vessels operating in international waters and oceans or on voyages lasting longer than 48 hours. The guidelines should also contain information regarding medical care via radio.

*Mozambique.* Radio communication reaches a large portion of the persons involved in the area and has the highest coverage.

*Namibia.* NEF: This would limit the accountability of the captain.

*Netherlands.* This requirement should be in line with Council Directive 92/29/EEC.

*Panama.* ANDELAIPP: Provided that this is a social security service.

*Portugal.* This is necessary in the event of accidents or illnesses occurring on board fishing vessels very far from shore.

*Qatar.* Sophisticated medical equipment is expensive and requires specialized skills for its use, which might not necessarily be available among crew members of a type "A" vessel.

*Russian Federation.* This should be compulsory.

*Saudi Arabia.* As most fishing vessels operating in territorial waters are traditional vessels under 9 m spending not more than three days at sea, or vessels under 20 m operating in the territorial waters for a limited period, it would not be practical to require them to have x-ray equipment, etc.

*Sri Lanka.* UFFC: This should only be valid for vessels fishing beyond the EEZ.

*Sudan.* SWTUF: The use of such equipment should be restricted to specialists under strict conditions and instructions.

*United Kingdom.* The same guidance should be used as for merchant ships.

*United States.* For those larger vessels where medical assistance could be given by radio, the crew member responsible for providing first aid should be familiar with whom to call for help.

*Venezuela.* This would assist those vessels which do not have personnel trained in first aid or medical personnel.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), JSU (Japan), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom): This could be done by citing relevant instruments adopted by other competent international organizations.

*ICMA.* This is particularly relevant to deep-sea fishing vessels.

*ICSF.* However, this might not be very relevant in most developing countries.

*IMHA.* Radio-medical consultations and other medical services should be included in training as a compulsory subject and could help to evaluate what diseases and injuries occur at sea, to take preventive measures and to know their causes (epidemiological and statistical studies). Governments should facilitate coordination among themselves and with local training and research centres.

The vast majority of States (80) indicated that the Recommendation should provide guidance on the contents of the medicine chest and the type of medical equipment that should be carried on board fishing vessels. A number of workers' organizations suggested that this could be accomplished by citing relevant instruments adopted by other competent international organizations. It was pointed out that the guidance should be in accordance with relevant IMO standards.

A large majority of States (75) agreed that the Recommendation should set out guidance on radio-medical services. Some States indicated that this guidance should

be in accordance with IMO standards and EU Council Directive 92/29/EEC, or that it could be dealt with by citing other international instruments. Another suggestion was that the guidance should be the same as that provided for merchant ships. Some replies mentioned details that should be included.

*Point 59* generally reflects a provision on medical supplies that had been included in Convention No. 126, and provides that Members should develop a list of medical supplies and equipment to be carried. *Point 61* addresses the issue of training in first aid. The instruments referred to could, for example, include the IMO's STCW-F Convention and certain FAO/ILO/IMO Codes. *Point 62* introduces the concept of a standard medical report, drawing upon Convention No. 164, Article 12, as well as a provision in the draft Consolidated Maritime Labour Convention for seafarers. Such a standard form would enhance medical treatment of fishers.

#### C4. QUALIFICATIONS OF PERSONS WORKING ON BOARD FISHING VESSELS

*Should the Recommendation provide additional guidance beyond that provided in international standards concerning training of persons working on board fishing vessels?* **Qu. C4(a)**

##### *Affirmative*

*Governments:* 34. Argentina, Australia, Austria, Bangladesh, Belgium, Brazil, Canada, Costa Rica, Denmark, Fiji, Finland, Honduras, Iceland, Indonesia, Islamic Republic of Iran, Ireland, Jamaica, Kuwait, Latvia, Malaysia, Mauritius, Mozambique, Nigeria, Oman, Portugal, Qatar, Russian Federation, Saudi Arabia, Spain, Trinidad and Tobago, Tunisia, United Arab Emirates, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), CCIAS (Lebanon), ECA (Trinidad and Tobago).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), CDT (Morocco), NUNW (Namibia), PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA (Italy), ICMA, ICSF.

##### *Negative*

*Governments:* 45. Algeria, Bahrain, Belarus, Benin, Bulgaria, Burundi, China, Croatia, Cuba, Cyprus, Czech Republic, Ecuador, Egypt, Eritrea, Estonia, France, El

Salvador, Guatemala, Greece, Hungary, India, Italy, Japan, Republic of Korea, Lebanon, Lithuania, Mexico, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Norway, Panama, Philippines, Poland, Romania, Saint Vincent and the Grenadines, Serbia and Montenegro, Sweden, Switzerland, Turkey, Ukraine, United Kingdom, United States.

*Employers' organizations:* EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECOT (Thailand), USCIB (United States).

*Workers' organizations:* Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), FKSU (Republic of Korea), FTUS (Lebanon), APOM (Panama), KSM NSZZ Solidarnosc (Poland), CNS Cartel Alfa (Romania), NCTL (Thailand).

*Others:* Confcooperative (Italy), PVIS (Netherlands).

#### *Other*

*Governments:* 3. Germany, Syrian Arab Republic, Thailand.

*Employers' organization:* EMCOZ (Zimbabwe).

*Workers' organization:* UFAWU-CAW (Canada).

#### *Comments*

MEDEF (France), *Ireland, Norway*, APOM (Panama), *Russian Federation* note that issue is dealt with by the STCW-F Convention.

*Ireland.* HSA disagrees.

*Latvia.* The National Board of Fisheries disagrees.

#### **Qu. C4(b)** *If yes, what issues should this guidance address?*

CGT, UMAFLUP (Argentina), *Australia, Belgium*, CGT (Brazil), *Canada*, PPDIV (Croatia), GTUWA (Egypt), *Honduras, India, Mauritius, Portugal*, SWTUF (Sudan), *Syrian Arab Republic, Tunisia, Venezuela, Zimbabwe* suggest that guidance concerning training should address OSH on board fishing vessels (e.g. principles, issues, risks, requirements, procedures, techniques, trends).

*Argentina.* Training of on-board inspection personnel.

CGT: Preservation of fishing resources and marine environment.

*Bahrain.* Practical training.

*Bangladesh.* Hazards, prevention and emergency duties.

*Brazil.* Vocational training, qualification and retraining.

*Croatia*. PPDIV: New technologies in the sector.

*Denmark*. Requirements for skipper qualifications on board fishing vessels under 24 m, which are not covered by the STCW-F Convention, if not already included in the mandatory part.

*Egypt*. GTUWA: Job specializations and jobs in the informal sector.

*Gabon*. CSG: Retraining.

*Guinea*. SLIMAPG: Training of captains or chief mechanics who did not have formal training, but learnt their trade on the job.

*Honduras*. On-the-job training.

*Indonesia*. Radio operator training in case of emergency and self-rescue training.

*Italy*. AGCI PESCA: Job descriptions.

*Malaysia*. Fishing vessels operating on the high seas.

*Mauritius*. First aid and watchkeeping.

*Mozambique*. Procedures and discipline for smooth operation of fishing activities, compliance with working hours and rest periods; conduct of workers towards one another, teamwork.

*Nigeria*. Observers and ad hoc staff during experimental research fishing.

*Portugal*. Occupational maritime training for the specific post, which should be periodically updated and take into account the type of vessel and new maritime technology.

*Qatar*. Use of modern communication equipment, rational management of fisheries resources, environmentally friendly fishing methods.

*Russian Federation*. Free vocational (re)training and sources of financing.

*Spain*. The various national laws should be harmonized so that certificates and degrees are internationally valid, provided they meet minimum training requirements common to all States.

*Sudan*. SWTUF: Economics and feasibility studies, workers' rights.

*Trinidad and Tobago*. Particular fishing activities or methods.

*United Arab Emirates*. 18-year-old workers should be trained in safety aspects, and navigators or engineers in new technologies in the areas of navigation and fishing.

*Zimbabwe*. Rescue operations, survival skills.

*ICMA*. Medical practitioners should be consulted on what recommendations should be made.

*ICSF*. A training manual for persons working on board small-scale fishing vessels, especially those that cover long distances in their fishing operations.

Less than half (34) of the responding States supported recommendatory provisions beyond those in existing international standards concerning the training of persons working on board fishing vessels. It was suggested that additional guidance should address, for example: risks, hazards, prevention and emergency duties; occupational safety and health; training of observers and temporary staff; modern communication equipment; rational fisheries management; environmentally friendly fishing

methods; survival skills; rescue operations; or work on board small-scale fishing vessels. However, some States said that the issue was already covered by the STCW-F Convention. One suggestion was to provide guidance on qualifications for skippers of fishing vessels under 24 m, which are not covered by the STCW-F Convention.

The Office notes that more governments replied negatively than positively to Question C4(a). The Tripartite Meeting of Experts on Labour Standards for the Fishing Sector also had mixed views on this issue. Furthermore, the Office notes that guidance on training is provided, to a great degree, in the FAO/ILO/IMO Document for Guidance on Training and Certification of Fishing Vessel Personnel. The Office therefore is hesitant to include in the Recommendation more specific requirements concerning training. However, bearing in mind the positive impact of Recommendation No. 126, the Office has also proposed including (in *Point 56*) guidance concerning the subject areas covered by that instrument, as a way to support the continuation or development of training institutions and programmes.

#### C5. CONTRACTUAL ARRANGEMENTS CONCERNING WORK ON BOARD FISHING VESSELS

**Qu. C5(a)** *Should the Recommendation provide guidance, on the basis of the elements contained in Convention No. 114, concerning the content of contracts or articles of agreement for work on board fishing vessels?*

#### *Affirmative*

*Governments:* 67. Algeria, Argentina, Austria, Bahrain, Bangladesh, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, Croatia, Cuba, Cyprus, Ecuador, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Switzerland, Syrian Arab Republic, Thailand, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), MEDEF (France), COHEP (Honduras), CCIAB (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States).

*Workers' organizations:* CCUOMM, CGT, SOMU (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), NUNW (Namibia), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania),

RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), LO, TCO (Sweden), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Negative*

*Governments:* 9. Australia, Belarus, China, Egypt, Greece, Latvia, Lithuania, Sweden, Trinidad and Tobago.

*Employers' organizations:* ESA/Estonian Fishermen's Association (Estonia), LEC (Latvia), CCIAS (Lebanon), ECOT (Thailand).

*Workers' organizations:* FTUS (Lebanon), APOM (Panama).

### *Other*

*Governments:* 6. Costa Rica, Czech Republic, Denmark, Germany, Lebanon, Namibia.

*Employers' organization:* EMCOZ (Zimbabwe).

*Workers' organization:* CDT (Morocco).

### *Comments*

*Costa Rica.* INS disagrees.

*Ireland.* HSA disagrees.

*Lebanon.* Provided that the Recommendation is independent from Convention No. 114, especially as it is proposed to partially revise it, although it is unclear which parts are involved.

*If yes, should the guidance provided in the Recommendation also include elements not addressed in Convention No. 114?*

**Qu. C5(b)(i)**

### *Affirmative*

*Governments:* 49. Algeria, Argentina, Belgium, Benin, Brazil, Bulgaria, Canada, Cuba, Ecuador, Eritrea, Estonia, Fiji, Finland, France, Honduras, Hungary, Iceland, India, Indonesia, Ireland, Jamaica, Republic of Korea, Kuwait, Malaysia, Mauritius, Mozambique, Myanmar, Nicaragua, Nigeria, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Thailand, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CCIAB (Lebanon), ECA (Trinidad and Tobago), USCIB (United States).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), LO, TCO (Sweden), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), ICMA, ICSF.

### *Negative*

*Governments:* 17. Bahrain, Bangladesh, Belarus, Burundi, Croatia, Cyprus, El Salvador, Guatemala, Islamic Republic of Iran, Italy, Japan, Lebanon, Mexico, Netherlands, New Zealand, Poland, Switzerland.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), NEF (Namibia), ANDELAIPP (Panama), ECOT (Thailand).

*Others:* AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands).

### *Other*

*Governments:* 16. Australia, Austria, China, Costa Rica, Czech Republic, Denmark, Egypt, Germany, Greece, Latvia, Lithuania, Namibia, Norway, Sweden, Syrian Arab Republic, Trinidad and Tobago.

*Employers' organizations:* LEC (Latvia), CCIAS (Lebanon), EMCOZ (Zimbabwe).

*Workers' organizations:* FTUS (Lebanon), CDT (Morocco).

### *Comments*

*Costa Rica.* INS disagrees.

*Honduras.* The contracts should be in the language of the country.

**Qu. C5(b)(ii)** *If yes, should one of these elements concern the specification of insurance coverage for persons working on board fishing vessels in the event of injury, illness or death in the contract or articles of agreement?*

*Affirmative*

*Governments:* 52. Algeria, Argentina, Bahrain, Bangladesh, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, Cuba, Ecuador, Eritrea, Estonia, Fiji, Finland, Greece, Honduras, Hungary, Iceland, Indonesia, Islamic Republic of Iran, Ireland, Jamaica, Republic of Korea, Kuwait, Lithuania, Malaysia, Mauritius, Mozambique, Myanmar, Nicaragua, Nigeria, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Serbia and Montenegro, Spain, Syrian Arab Republic, Thailand, Tunisia, Turkey, Ukraine, United Arab Emirates, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), COHEP (Honduras), CCIAB (Lebanon), ECA (Trinidad and Tobago), USCIB (United States).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), LO, TCO (Sweden), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA (Italy), ICMA, ICSF.

*Negative*

*Governments:* 5. Croatia, Egypt, France, Guatemala, United Kingdom.

*Employers' organizations:* ESA/Estonian Fishermen's Association (Estonia), NEF (Namibia), ECOT (Thailand).

*Other:* PVIS (Netherlands).

*Other*

*Governments:* 25. Australia, Austria, Belarus, China, Costa Rica, Cyprus, Czech Republic, Denmark, El Salvador, Germany, India, Italy, Japan, Latvia, Lebanon, Mexico, Namibia, Netherlands, New Zealand, Norway, Poland, Saudi Arabia, Sweden, Switzerland, Trinidad and Tobago.

*Employers' organizations:* MEDEF (France), LEC (Latvia), CCIAS (Lebanon), ANDELAIPP (Panama), EMCOZ (Zimbabwe).

*Workers' organizations:* FTUS (Lebanon), CDT (Morocco).

*Comments*

*Argentina.* This is essential to comply with the FAO Code of Conduct for Responsible Fisheries.

*Australia.* The proposed provisions should not apply to workers whose entitlement to remuneration is contingent upon the working of the ship producing gross earnings or profits, and whose remuneration is wholly or mainly a share of the gross earnings or profits.

*Burundi.* Insurance coverage in the event of injury, death or retraining for another job should be provided for in the employment contract.

*Costa Rica.* INS disagrees because the national legislation already lays down the minimum requirements that should be contained in an employment contract for these workers.

*Norway.* The Convention should require that insurance be an obligation of the shipowner and the further content be subject to negotiations between workers' and employers' organizations.

*Panama.* APOM: Owners should provide accident insurance coverage for crew.

*Philippines.* The indemnity should be quantified in relation to the nature, extent and seriousness of the injury.

*Russian Federation.* There should be a compulsory contribution of the shipowner/employer to the insurance payments of crew members, and the principle of voluntary individual insurance coverage by crew members with a share being paid by the shipowner.

*Spain.* Emphasis should also be placed on the wage system to establish guarantees for the payment of wages in the amount due.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), JSU (Japan), KSM NSZZ Solidarnosc, PSU (Poland), SALFU (Sierra Leone), TUC (United Kingdom): This is essential to give effect to the relevant provisions contained in the FAO Code of Conduct for Responsible Fisheries.

*ICMA.* Although there may be requirements for vessel operators to carry insurance, such requirements should not be misused by shifting operators' obligations to their crews or by reducing their existing legal obligation to provide medical care for crew members who become sick or injured while employed on a fishing vessel. There should be some specification on death benefits.

*ICSF.* It might also be useful to provide guidance concerning the content of contracts in multi-day fishing operations of the small-scale sector.

**Qu. C5(c)** *Should the Recommendation provide guidance on contracts or articles of agreements (e.g. procedures concerning the examination prior to signing; signing and termination of contracts or articles of agreement; records of employment; circumstances for discharge) for work on board fishing vessels?*

*Affirmative*

*Governments:* 67. Algeria, Argentina, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, Croatia, Cuba, Cyprus, Ecuador, El Salvador, Eritrea, Estonia, Fiji, France, Greece, Guatemala, Honduras, Hungary,

Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Switzerland, Syrian Arab Republic, Thailand, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), CCIAB (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), LO, TCO (Sweden), USS (Switzerland), NCTL (Thailand), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Negative*

*Governments:* 8. Australia, China, Czech Republic, Egypt, Finland, Latvia, Lithuania, Sweden.

*Employers' organizations:* ESA/Estonian Fishermen's Association (Estonia), COHEP (Honduras), LEC (Latvia), CCIAS (Lebanon), ECOT (Thailand).

*Workers' organization:* FTUS (Lebanon).

### *Other*

*Governments:* 7. Costa Rica, Denmark, Germany, Lebanon, Namibia, Panama, Trinidad and Tobago.

*Employers' organization:* MEDEF (France).

*Workers' organization:* CDT (Morocco).

### *Comments*

*Ecuador, Spain, ICMA:* Include a provision recommending a minimum contract content addressing the main rights and obligations of both parties.

*Czech Republic.* General provisions of labour law should be applied.

*Fiji.* This would help the attesting or witnessing officer.

*Greece.* The provision should only cover crew whose duties relate to safe navigation, not fishing, since this is an economic activity.

*India.* The requirements should be the same as for merchant shipping.

*Ireland.* HSA disagrees.

*Lebanon.* This depends on what is done with regard to the provisions of Convention No. 114.

*Malaysia.* Only for fishing vessels operating on the high seas.

*Mozambique.* Clarity could prevent labour disputes.

*Philippines.* An arbiter from the competent authority may be necessary with respect to contracts or articles of agreement and, most importantly, grounds for dismissal and disciplinary actions.

*Saudi Arabia.* The contract should also be approved by the competent authorities before its entry into force, to ensure that none of its provisions conflict with national legislation.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), KSM NSZZ Solidarnosc, PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom): Given the decent work deficit in this industry, such provisions are essential to the development of the social dimension of responsible fisheries.

**Qu. C5(d)** *Should the Recommendation provide guidance on systems of remuneration and, if appropriate, including systems based on a share of the catch?*

#### *Affirmative*

*Governments:* 42. Algeria, Argentina, Austria, Belgium, Benin, Brazil, Burundi, Canada, Croatia, Cuba, El Salvador, Eritrea, Fiji, France, Guatemala, Hungary, Ireland, Japan, Republic of Korea, Kuwait, Mauritius, Mozambique, New Zealand, Nicaragua, Oman, Panama, Philippines, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Switzerland, Syrian Arab Republic, Thailand, Tunisia, Turkey, Ukraine, United Arab Emirates.

*Employers' organizations:* EFE (Eritrea), COHEP (Honduras), CCIAB (Lebanon), ANDELAIPP (Panama), ECA (Trinidad and Tobago).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), NUNW (Namibia), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation),

SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), LO, TCO (Sweden), USS (Switzerland), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), ICMA, ICSF.

### *Negative*

*Governments:* 33. Australia, Bahrain, Bangladesh, Belarus, Bulgaria, China, Czech Republic, Ecuador, Egypt, Estonia, Finland, Germany, Greece, Honduras, Iceland, India, Indonesia, Islamic Republic of Iran, Italy, Jamaica, Latvia, Lebanon, Lithuania, Malaysia, Mexico, Myanmar, Netherlands, Poland, Sweden, Trinidad and Tobago, United Kingdom, Venezuela, Zimbabwe.

*Employers' organizations:* CAPECA/CALAPA/CAPA (Argentina), MEDEF (France), LEC (Latvia), CCIAS (Lebanon), NEF (Namibia), ECOT (Thailand), EMCOZ (Zimbabwe).

*Workers' organizations:* Estonian Fishery Workers Trade Union (Estonia), FTUS (Lebanon), APOM (Panama), Federation of Fishing Sector Trade Unions (Portugal), NCTL (Thailand).

*Other:* PVIS (Netherlands).

### *Other*

*Governments:* 7. Costa Rica, Cyprus, Denmark, Namibia, Nigeria, Norway, United States.

*Employers' organizations:* ESA/Estonian Fishermen's Association (Estonia), USCIB (United States).

*Workers' organizations:* SLIMAPG (Guinea), CDT (Morocco).

### *Comments*

*Australia.* These matters are negotiated between the fishing vessel master/owner and the crew.

*Costa Rica.* INS agrees.

*India.* There is an inherent system of remuneration exclusive to fishing vessels.

*Ireland.* The Marine Survey Office and HSA disagree.

*Japan.* JSU: As to the "share system", there is no other alternative but to accept it, although it is harmful to the conservation of marine resources.

*United States.* USCIB: The Recommendation should include guidance on setting forth the terms of remuneration in the contracts to avoid any possible misunderstandings between the worker and employer, but not on the systems themselves.

**Qu. C5(e)** *If yes, please specify the issues to be included:*

CCUOMM, CGT, SOMU, UMAFLUP (Argentina), *Brazil*, UNIMPESCOL, (Colombia), SiD (Denmark), GTUWA (Egypt), MDU (Ghana), KPI (Indonesia), JSU (Japan), *Oman*, KSM NSZZ Solidarnosc, PSU (Poland), *Sierra Leone*, SALFU (Sierra Leone), UFFC (Sri Lanka), *Ukraine*, TUC (United Kingdom): There should always be a guaranteed minimum wage.

*Algeria*. Real value of the catch and the method of calculation of the share.

*Argentina*. “Basic seamen’s contract” to be improved through collective labour agreements. Less favourable conditions would be null.

*Benin*. Basic wage to be paid in the event of immobilization of vessel and pro rata bonus shares of the catch. Area of operation, qualifications of workers and their position should be taken into account.

*Brazil*. The system based on a share of the catch is a system of payment within a contract of employment – never a system of employment.

*Burundi*. The remuneration and share-of-the-catch system should be included in the employment contract, so that there is no confusion or cheating. The competent authority should monitor employment contracts and give fishermen advice.

*Canada*. UFAWU-CAW: Hours of work, duties expected both on shore and fishing, shares or wages, expenses, dispute mechanism.

*Costa Rica*. INS: Share-of-the-catch systems should be clearly established in contracts to minimize disputes between the employer and the workers.

*Croatia*. PPDIV: The share of the catch should be regulated as an incentive rather than as remuneration.

*El Salvador*. Allotted percentage per tonne or part thereof of surplus production.

*Eritrea*. In the case of piece rates, there should be equitable sharing, and remuneration should be sufficient to provide a living.

*Fiji*. The issue of whether the share should be on a sliding scale.

*France*. Definition of expenses borne by shipowner, definition of common expenses, share between shipowner and crew, differentiated according to function.

*Ghana*. MDU: Tonnage bonus.

*Guatemala*. Percentage of profits according to position and determination of time of payment in the case of monetary profits.

*Honduras*. COHEP: The different types of fishing should be taken into account.

*Japan*. A certain amount of guaranteed wages in accordance with hours of work for persons employed based on a share of the catch. This is not intended to encourage the share system.

*Lebanon*. There should be provisions regarding paid leave for work in maritime fishing.

*Mauritius*. Payment as regards by-catch and undersized fish.

*Mozambique*. The contract should clearly indicate the manner and date of (overtime) payment.

*New Zealand*. Principles enshrined in the Seafarers’ Wages, Hours of Work and the Manning of Ships Recommendation, 1996 (No. 187), and guaranteed minimum wage whether the system is based on share of the catch or salary.

*Nigeria.* Minimization of cases of crew/skipper illegally selling off the catch.

*Norway.* This important and highly sensitive matter can become a hindrance. Guidance in this field may be included, if it is done through agreements with the social partners in the ILO.

*Panama.* Calculation of payment by production.

*Philippines.* Percentage sharing of the catch should be uniform and specific (i.e. include deductible items or charges against estimated earnings or value of the catch).

*Portugal.* It is recommended to adopt instruments that take into account the fact that the form of payment may lead to accidents, if it makes remuneration dependent on the amount of fish caught.

*Russian Federation.* Payment in the form of an individual share of a crew member, and minimum guaranteed remuneration taking into account the minimum subsistence level in the region concerned.

*Saudi Arabia.* Contractual stipulation of share of the catch, especially in the case of small-scale fishermen, and minimum additional wage in certain cases.

*Spain.* Control of the sale process and adequate information to ensure a more transparent determination of the wage.

*Sri Lanka.* Liability for damage to nets or boat.

*Syrian Arab Republic.* Payment at the end of each month; or, if the remuneration is based on a share of the catch, every 15 days.

*United Arab Emirates.* Hourly overtime pay, and compensation for damage.

*United Kingdom.* TUC: Protection of wages.

*ICMA.* Include guidance on free time between trips, repatriation, description of the share system, recruitment and placement.

*ICSF.* Guaranteed minimum living wage according to national standards or the equivalent share of the catch, and prevention of under-evaluation of the catch so that the share accruing to workers is not diminished.

The majority of States (67) indicated that the Recommendation should provide guidance, on the basis of the elements contained in Convention No. 114, concerning the content of contracts or articles of agreement for work on board fishing vessels. However, a significant percentage did not support this.

Many States (49) indicated that the guidance should also include elements not addressed in Convention No. 114. The majority (52) agreed that insurance coverage for persons working on board fishing vessels in the event of injury, illness or death should be one of those elements. It was also noted that this should give effect to relevant provisions in the FAO Code of Conduct for Responsible Fisheries.

The majority of States (67) indicated that the Recommendation should provide guidance on contracts or articles of agreements (e.g. procedures concerning the examination prior to signing; signing and termination of contracts or articles of agreements; records of employment; circumstances for discharge) for work on board fishing vessels.

Only half of the replies (42) considered that the Recommendation should provide guidance on systems of remuneration and, where appropriate, systems based on a

share of the catch. Negative replies pointed out that these matters were negotiated between the fishing vessel master/owner and the crew, or suggested that the Recommendation might include guidance on the terms of remuneration in the contracts but not on the nature of the systems themselves. Affirmative replies proposed that the issues to be considered should include: the real value of the catch and the method of calculation of the share, a clear definition of the base-level salary to be paid in the event of immobilization of the vessel, the pro rata bonus shares of the catch, definition of the expenses borne by the fishing vessel owner, definition of common expenses; bonuses, payment as concerns by-catch and undersized fish, principles included in Recommendation No. 187, control of the sale process, transparency concerning the determination of the wages paid, or protection of wages. Several workers' organizations, as well as a number of States, advocated provision for a minimum wage.

*Point 57* is based on a provision from Convention No. 114. *Point 58* attempts to promote protection for those fishers excluded from the scope of the Convention. This provision might be considered unnecessary, bearing in mind *Points 8* and *9* of the Proposed Conclusions with a view to a Convention.

#### C6. ACCOMMODATION AND PROVISIONS ON BOARD FISHING VESSELS

**Qu. C6(a)** *Should the Recommendation provide that States should have national laws and regulations concerning planning and control of crew accommodation on board fishing vessels?*

##### *Affirmative*

*Governments:* 73. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, Croatia, Cuba, Cyprus, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Lebanon, Mauritius, Mexico, Mozambique, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), CCIAB, CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia),

PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Negative*

*Governments:* 7. China, India, Latvia, Lithuania, Malaysia, Myanmar, Switzerland.

*Employers' organizations:* LEC (Latvia), ECOT (Thailand).

*Workers' organization:* FTUS (Lebanon).

### *Other*

*Governments:* 2. Costa Rica, Czech Republic.

*Workers' organization:* CDT (Morocco).

### *Comments*

*Argentina.* Decent accommodation would prevent overcrowding and take into account voyage periods and number of crew.

*Brazil.* For new vessels and those already in operation, provision should be made for conditions of accommodation and for modernization of existing accommodation where possible.

*Costa Rica.* INS agrees, as this is part of compliance with OSH measures.

*India.* Traditional and motorized boats operating within territorial waters should be excluded.

*Lebanon.* Due account should be taken of the size of the vessel, areas of operation, periods at sea and existence of an appropriate inspection regime.

*Namibia.* As in the case of merchant vessels.

*NEF:* There should be independent surveys of vessels with regard to safety, etc., including accommodation and mess rooms.

*Netherlands.* This requirement should be in line with Council Directive 93/103/EC.

*Oman.* This should be done based on Convention No. 126.

*Panama.* ANDELAIPP: The type and activity of the vessel should be classified.

*Portugal.* It is indispensable for the modernization of fleets and the improvement of working and resting conditions for crew.

*Qatar.* In Qatar accommodation is inspected as part of the annual inspection of fishing vessels.

*Russian Federation.* It should provide for the responsibility of the State in this area for all organizations, irrespective of type or form of ownership.

*Saudi Arabia.* This should be done based on Convention No. 126.

*Serbia and Montenegro.* Exclude small boats engaged in artisanal near-shore fishing.

*Trinidad and Tobago.* This would prevent inappropriate accommodation and substandard conditions through imports of foreign vessels.

*United States.* The standards should be consistent with those of other industrial fleets within the nation.

*ICMA.* Given that in some countries fishing vessels are not inspected, there should be guidance on minimum construction and maintenance standards for crew accommodation.

*ICSF.* But only for multi-day fishing vessels.

**Qu. C6(b)** *Should the Recommendation provide guidance concerning standards of accommodation and of food and drinking water?*

*Affirmative*

*Governments:* 74. Algeria, Argentina, Australia, Austria, Bahrain, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Ireland, Italy, Jamaica, Japan, Republic of Korea, Latvia, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Switzerland, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Zimbabwe.

### *Other issues*

*Argentina, CCUOMM, SOMU (Argentina), Panama, Zimbabwe* suggest sick bays or infirmary facilities.

CCUOMM (Argentina), GTUWA (Egypt), *India, Lebanon, Mauritius, Panama, APOM (Panama), United Arab Emirates* propose space and/or facilities for recreation, entertainment or leisure.

GTUWA (Egypt), *El Salvador, Ireland, APOM (Panama)* advocate facilities and equipment for communication, e.g. with family, friends or the employer onshore.

*Argentina. CCUOMM:* Mess room, kitchen and laundry facilities.

*Australia.* Floor area, air space, lunch places, dressing rooms, seating, first aid, cleaning of interior of buildings and lock-up facilities.

*Belgium.* Working clothes.

*Benin.* Air conditioning.

*Brazil.* Fire prevention.

*Republic of Korea. FKSU:* Air conditioning.

*Lebanon.* Equipment safety as mentioned in the SOLAS Convention for commercial vessels. Due account should be taken of the need to provide for some of the matters mentioned above for small boats.

*Mauritius.* Facilities for taking meals; changing rooms and accommodation for clothing and belongings.

*Portugal.* Cooking, embarkation and disembarkation, organization and arrangement of space, electrical installation, emergency routes and exits, and fire detection and control.

*Russian Federation.* Tax exemption of expenses of the shipowner and crew members on catering provisions and normal living conditions on board.

*Sierra Leone.* SALFU: Fishing gear and safety equipment.

*Spain.* Emergency exits and passageways, rescue means and signals.

### Comments

*Algeria.* Minimum standards should be established.

*Fiji.* The above items are necessary for healthy workers and a safe working environment.

*Finland.* Other issues should be covered, depending on vessel length and crew size.

*Honduras.* COHEP: Bunks and accommodation in groups should be accepted according to vessel size.

*Italy.* Fishing vessels operating up to six miles from the coast should be exempt.

*Japan.* There should be exemptions of vessels according to tonnage, length and time at sea.

*Namibia.* Refers to the Accommodation of Crews Convention (Revised), 1949 (No. 92), and Accommodation of Crews (Supplementary Provisions) Convention, 1970 (No. 133).

*Netherlands.* This requirement should be in line with Council Directive 93/103/EC.

*Philippines.* This is necessary for the preservation and promotion of the well-being of workers on board fishing vessels.

*Serbia and Montenegro.* Exclude small boats for artisanal near-shore fisheries spending not more than eight hours at sea.

*Sudan.* SWTUF: These items are particularly important on board large ships or vessels spending extended periods at sea.

*Ukraine.* An exception should be made for vessels engaged in coastal fishing.

*ICSF.* However, heating should only be required in cold latitudes.

*ICMA.* The Recommendation should provide guidance to port state and flag state inspectors on the requirements of the Convention. It is unrealistic to expect that independent vessel operators will voluntarily comply with the Recommendation without subsidies or insurance requirements.

*Should the above guidance concerning accommodation and provisions on board fishing vessels make distinctions based on:* **Qu. C6(d)**

### *Fishing vessel length*

*Governments:* 45. Algeria, Argentina, Australia, Austria, Bahrain, Belarus, Benin, Brazil, Burundi, Canada, China, Croatia, Ecuador, Egypt, Finland, France, Germany, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Republic of Korea, Kuwait, Latvia, Mauritius, Mozambique, Netherlands, Nigeria, Philippines, Portugal, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, United Arab Emirates, United Kingdom, United States,

*Employers' organizations:* EFE (Eritrea), MEDEF (France), COHEP (Honduras), CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), KPI (Indonesia), FKSU (Republic of Korea), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Operating area*

*Governments:* 48. Algeria, Argentina, Austria, Belarus, Benin, Brazil, Bulgaria, Burundi, Canada, China, Cuba, Ecuador, Egypt, Estonia, France, Greece, Iceland, India, Indonesia, Italy, Jamaica, Japan, Kuwait, Latvia, Malaysia, Mauritius, Mozambique, Namibia, Netherlands, New Zealand, Nigeria, Norway, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, United Arab Emirates, United States.

*Employers' organizations:* EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), COHEP (Honduras), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), NUNW (Namibia), KSM NSZZ Solidarnosc,

PSU, ZZMiR (Poland), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), SWTUF (Sudan), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* ICMA, ICSF.

### *Tonnage*

*Governments:* 41. Algeria, Austria, Belarus, Brazil, Bulgaria, Burundi, Canada, China, Croatia, Ecuador, Egypt, France, Greece, Guatemala, Iceland, India, Indonesia, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Mozambique, Myanmar, Nigeria, Panama, Philippines, Portugal, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Spain, Sweden, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, United Arab Emirates, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), COHEP (Honduras), CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), CSG (Gabon), MDU (Ghana), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), SWTUF (Sudan), TUC (United Kingdom).

*Other:* ICMA.

### *Time a fishing vessel normally spends at sea*

*Governments:* 63. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Croatia, Cuba, Cyprus, Czech Republic, Ecuador, Egypt, El Salvador, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Jamaica, Japan, Kuwait, Mauritius, Mexico, Mozambique, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Philippines, Poland, Portugal, Qatar, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), CCIAB, CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CGT, SOMU (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), PPDIV (Croatia), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), SLIMAPG (Guinea), JSU (Japan), CDT (Morocco), NUNW (Namibia),

APOM (Panama), ZZMiR (Poland), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), UFFC (Sri Lanka), SWTUF (Sudan), NATUC (Trinidad and Tobago).

*Others:* CCE (Belgium), AGCI PESCA (Italy), ICMA, ICSF.

### *Other*

*Australia*, CGT (Brazil), EFE (Eritrea), *Greece*, COHEP (Honduras), *ICSF* propose the nature of fishing operations, methods or types of fishing in order to have applicable standards.

*Australia*, *ICMA* suggest the number of crew members (usual or maximum).

*Argentina*. Type of vessel.

*Benin*. Nature of the catch.

*Italy*. AGCI PESCA: Engine power.

*Lebanon*. Classification of the vessel with a standardization organization.

*Sudan*. SWTUF: Religious beliefs, e.g. prohibition of alcoholic drinks and drugs.

*Trinidad and Tobago*. Vessel characteristics.

### *Comments*

*Costa Rica*. INS agrees with all items.

*Eritrea*. There is no need for distinctions based on the abovementioned points.

*Ireland*. HSA replies yes to all.

*Japan*. JSU: Long-term operation with a vessel that has only poor accommodation facilities, such as the current Japanese tuna fishing boat, is anachronistic and problematic from the humanitarian point of view.

*Oman*. The Ministry of Agriculture and Fisheries agrees to all.

*Qatar*. The longer the period spent at sea, the greater the need to provide accommodation, food and drinking water.

*Trinidad and Tobago*. ECA: These items are important in the event of an accident at sea and might be used as a mechanism for monitoring the safety and operation of the vessel.

*Venezuela*. Workers should be provided with the necessary conditions to spend long periods at sea.

The vast majority of States (73) indicated that there should be national laws and regulations concerning planning and control of crew accommodation on board fishing vessels. Some said that this should be in line with EU Council Directive 93/103/EC or with Convention No. 126. The vast majority (74) also agreed that the Recommendation should provide guidance concerning standards of accommodation, food and drinking water. A very large majority indicated that these should cover: construction and location (68), ventilation (75), heating (70), lighting (73), sleeping rooms (74), sanitary accommodation (74), noise and vibration (72), drinking water (76), and food

(75). Other issues suggested included: entertainment and communication facilities, infirmary facilities, working clothes, air conditioning, and fire prevention. Many replies stated that guidance on accommodation and provisions on board fishing vessels should make distinctions based on: fishing vessel length (45), operating area (48), tonnage (41) or time at sea (63). Others indicated that this could be based on: the number of crew, the nature of the catch, fishing methods, and vessel characteristics.

See commentary on Question B6.

## C7. HOURS OF WORK AND REST

**Qu. C7(a)** *Should the Recommendation set out guidance concerning hours of work or rest periods?*

### *Affirmative*

*Governments:* 69. Algeria, Argentina, Australia, Austria, Bangladesh, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, China, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Egypt, El Salvador, Eritrea, Fiji, Finland, France, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lithuania, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Serbia and Montenegro, Spain, Switzerland, Syrian Arab Republic, Trinidad and Tobago, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), CCIAB, CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), LO, TCO (Sweden), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), ICMA, ICSF, IMHA.

*Negative*

*Governments:* 8. Bahrain, Belarus, Ecuador, Estonia, Islamic Republic of Iran, Saudi Arabia, Sweden, Thailand.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), LEC (Latvia).

*Workers' organization:* FTUS (Lebanon).

*Other:* PVIS (Netherlands).

*Other*

*Governments:* 5. Costa Rica, Germany, Lebanon, Netherlands, Tunisia.

*Employers' organization:* ECOT (Thailand).

*Comments*

*Costa Rica.* INS agrees.

*Latvia.* The National Board of Fisheries disagrees.

*Lebanon.* Only with regard to hours of rest. Hours of work are difficult to determine, considering the nature of maritime fishing, and should be left to national legislation.

*Poland.* Only the minimum period of rest should be specified.

*Tunisia.* There should be guidance concerning rest periods but not on hours of work, because the work schedule on board fishing vessels is fixed by the owner, who is the only one to determine embarking and disembarking times.

*IMHA.* The fishing industry should not be excluded from the maritime provisions in national legislation concerning health protection, employment agreements, social security (even for foreigners), insurance, etc.

*If yes, please indicate what should be the limits of working hours or provisions for minimum rest periods.* **Qu. C7(b)**

*Algeria, CAPeCA/CALAPA/CAPA (Argentina), Czech Republic, Myanmar, NEF (Namibia), Poland, Federation of Fishing Sector Trade Unions (Portugal), NCTL (Thailand)* consider that the minimum rest period should be eight hours per 24-hour period.

*CAPeCA/CALAPA/CAPA (Argentina), Brazil, INS (Costa Rica), PPDIV (Croatia), Malaysia, Nigeria, Russian Federation, Spain* consider that the maximum working hours should be fixed at 12 hours per 24-hour period.

*CCUOMM (Argentina), Belgium, Latvia, KSM NSZZ Solidarnosc (Poland), Tunisia, United Arab Emirates* feel that the minimum rest period should not be less than ten hours per day.

*Benin, Burundi, GTUWA (Egypt), Eritrea, Fiji, MDU (Ghana), Guatemala, Oman, Philippines, Portugal, Serbia and Montenegro, SALFU (Sierra Leone), Syrian Arab Republic, NATUC (Trinidad and Tobago), Zimbabwe* advocate a workday not exceeding eight hours.

*UFAWU-CAW (Canada), ESA/Estonian Fishermen's Association (Estonia), SLIMAPG (Guinea), Qatar, Romania, SALFU (Sierra Leone), Spain* suggest the minimum rest period should be six hours.

*Argentina:* CCUOMM: Six continuous hours of rest should be provided.

*Australia.* Some Australian provisions provide for ten minutes' rest after four hours' work.

*Austria.* A daily minimum continuous rest period of 11 hours should be provided. It should be made possible for ratifying States and social partners by virtue of an administrative regulation or by agreement to permit this rest period to be calculated over a longer period. In this regard, the Holidays with Pay Convention (Revised), 1970 (No. 132), and the Night Work Convention, 1990 (No. 171), should be taken into consideration.

*Belgium.* An average of 48 hours per week, calculated on the basis of a maximum reference period of 12 months. The minimum rest period should not be less than 77 hours per seven-day period. Hours of rest should not be divided into more than two periods, of which one must last at least six hours, and the interval between consecutive rest periods should not be more than 14 hours.

*Brazil.* The number of days at sea should correspond to the number of days on land.

*CGT:* Account should be taken of the fact that there may be obstacles preventing fishing.

*Estonia.* Estonian Water Transport Workers Federation: Working time should not be longer than 14 hours per 24-hour period.

*France.* The minimum rest period should include a six-hour block within an overall rest period to be determined.

*Gabon.* CSG: Taking into account internal arrangements on vessels, there should be ten hours of work, eight hours of sleep and six hours of rest.

*Guatemala.* The working period for night-time fishing (6:00 p.m. to 6:00 a.m.) should be six hours.

*Guinea.* SLIMAPG: Six hours of work.

*Japan.* The limit on working hours, except for the hours of fishing operations, should be eight hours per day and 40 hours per week. The minimum rest period during fishing operations should be ten hours per day (if exceptionally necessary, 18 hours per two days) or eight hours per day (if exceptionally necessary, 16 hours per two days) according to the type or tonnage of vessel.

*JSU:* Although a limit of working hours that will hinder operations (e.g. eight hours per day) is not acceptable, the Recommendation should provide guidance on maximum working hours.

*Mauritius.* Same as in the IMO STCW Convention.

*Myanmar.* Ten working hours.

*Namibia.* NEF: An average of 12 hours of work per sea-day per trip, not exceeding 16 hours on duty.

*Oman.* A maximum of 48 hours per week. The minimum rest period should not be less than 30 minutes for every six hours of work.

*Philippines.* It is the duty of employers, whether operating for profit or not, to provide employees a rest period of not less than 24 consecutive hours after every six consecutive working days.

*Poland.* KSM NSZZ Solidarnosc: The minimum period of rest should not be less than 72 hours in any seven-day period. Periods of rest may be divided into no more than two periods, one of which should be at least six hours. Intervals between periods of rest should not exceed 14 hours.

*Portugal.* Efforts should be made to bring working time into line with normal hours of work (e.g. 40 hours per week, two days' weekly rest, 11-hour interval between working days). In view of the seasonal nature of certain types of fishing, recommend the use of mechanisms to achieve flexibility and adapt hours of work. The advantages include improving workers' quality of life, enabling them to reconcile working and family life, and allowing the recovery of fish stocks.

*Qatar.* It is important to distinguish between periods of rest on board and between trips. Work periods are set at 48 hours per week in Qatar.

*Romania.* CNS Cartel Alfa: Maximum hours of work should be ten hours per day.

*Russian Federation.* One of the rest periods should be not less than eight hours in a 24-hour period. Where necessary, it should be possible to organize a three-watch schedule during fishing operations.

*Saint Vincent and the Grenadines.* Six hours of work per day.

*Spain.* There should be mechanisms for granting compensatory rest.

*Sri Lanka.* UFFC: The minimum rest period between fishing trips should be one-and-a-half full days per five days at sea, excluding maintenance of nets or re-equipping and preparing the vessel.

*Sudan.* SWTUF: Fishing operations should not last more than six hours per day.

*Switzerland.* Ten hours of work and at least five hours of rest.

*Trinidad and Tobago.* There should be a normal rest period when the vessel is not fishing at sea. During fishing operations, hours of work cannot be limited because interruptions would have an impact on the catch.

*United Arab Emirates.* Maximum hours of work of 14 hours, and a period of rest divided into two periods.

*United States.* In the United States there are only work hour provisions for licensed officers on vessels over 200 GT who are in a watch rotation. Generally, these requirements take into account the route of the vessel (inland, coastwise or ocean) and the length of the voyage. For example, with respect to "coastwise" or "ocean" routes, licensed personnel on navigational or engineering watches must receive at least ten hours of rest per day, six of which must be uninterrupted, but there are exceptions for situations in which persons or property may be endangered.

USCIB: Maximum hours of work should be 16 in any 24-hour period.

### Comments

*Australia.* Prescriptive advice is not recommended, but rather general guidelines as a basis for reducing incidents due to fatigue. The guidance should set out examples of limits and

provisions, in a performance framework, and take into account the type of work, prevailing conditions, workload, organization and individual factors.

*Bahrain.* It depends on the fish catch, i.e. whether this period is intermittent (rest period between each fishing operation) or continuous.

*Ecuador.* The binding Convention should contain provisions on these aspects.

*Egypt.* This should be determined by the flag state administration.

*Finland.* Account should be taken of Council Directive 93/104/EC.<sup>14</sup>

*Greece.* Refers to article 17(b) of Directive 2000/34/EC.

*Hungary.* The guidance provided should be in accordance with Council Directive 1999/63/EC.<sup>15</sup>

*Ireland.* The Marine Survey Office suggests referring to the appropriate EU Directive.

*Italy.* The limits should correspond to those provided in Convention No. 180.

*Confcooperative:* The various fishing techniques should be taken into account.

*Jamaica.* This would depend on the type of fishing.

*Morocco.* CDT: The different types of vessels and fishing should be taken into account.

*Namibia.* Refer to Convention No. 147.

*New Zealand.* This should be aligned with the STCW-F Convention.

*Norway.* Directive 2000/34/EC should be used as the basis for deliberation on this matter. The focus should be on minimum rest periods.

*Panama.* This should be in accordance with the STCW-F Convention.

*APOM:* The provisions should be consistent with Convention No. 180.

*United Kingdom.* For EU countries these are covered by the provisions of Directive 2000/34/EC.

*Venezuela.* Working hours and rest periods depend on the type of fishing and the hazards to which workers are exposed.

*ICMA.* The hours of work/rest provisions should be based on scientific fatigue research.

*ICSF.* The minimum period of rest could be specified, rather than limits on working hours.

The vast majority of States (69) indicated that the Recommendation should cover hours of work or rest periods. There were many different replies to the question of what should be the limits of working hours or provisions for minimum rest periods. Several countries referred to STCW-F provisions, EU Council Directive 2000/34/EC or Convention No. 180.

See commentary on Question B8.

<sup>14</sup> See Annex II to this report.

<sup>15</sup> See Annex II to this report.

## C8. OCCUPATIONAL SAFETY AND HEALTH

*Should the following issues be addressed in the Recommendation:*

**Qu. C8(a)**

*The inclusion of fishing occupational safety and health issues in an integrated national policy on occupational safety and health*

*Governments:* 72. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Canada, China, Costa Rica, Croatia, Cuba, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Lebanon, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), MEDEF (France), CCIAB (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

*Rights and duties of fishing vessel owners and of persons working on board fishing vessels in the area of occupational safety and health*

*Governments:* 76. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Canada, China, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Greece, Guatemala, Honduras, Hungary, Iceland, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia,

Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), COHEP (Honduras), LEC (Latvia), CCIAB (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

#### *Where appropriate, safety management systems*

*Governments:* 67. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Canada, China, Costa Rica, Croatia, Cuba, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Fiji, Greece, Honduras, Iceland, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Lebanon, Malaysia, Mauritius, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United States, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), COHEP (Honduras), CCIAB, CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Personal protective equipment*

*Governments:* 79. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Canada, China, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPECA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

### *Guarding of machinery*

*Governments:* 72. Algeria, Argentina, Australia, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Canada, China, Costa Rica, Croatia, Cuba, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Fiji, France, Greece, Honduras, Hungary, Iceland, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Malaysia, Mauritius, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Switzerland, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

#### *The recording and notification of accidents, injuries and fatalities*

*Governments:* 77. Algeria, Argentina, Australia, Austria, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Canada, China, Costa Rica, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), CCIAB, CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

*Investigation of occupational accidents*

*Governments:* 73. Algeria, Argentina, Australia, Austria, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Canada, China, Croatia, Cuba, Cyprus, Czech Republic, Denmark, Ecuador, El Salvador, Eritrea, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Lebanon, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Portugal, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Sweden, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), CCIAB (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA (Italy), PVIS (Netherlands), ICMA, ICSF.

*Other issues*

*Australia.* Appropriate safety training.

*Belgium.* Contagious diseases.

*Egypt.* Investigation of individual incidents among crew members.

*France.* Use of a safety management system adapted to the type of fishing vessel.

*Ireland.* Manual handling and lifting equipment on board vessels, standard system of accident reporting, collection and presentation.

*Mozambique.* Inspection service for equipment safety.

*Norway.* Systematic risk assessment and management, introduction of joint on-board and/or regional tripartite accident prevention committees.

*Spain.* Means of rescue and fire-fighting, which are basic safety issues on board fishing vessels.

*Trinidad and Tobago.* ECA: Number of employees.

*United States.* Voluntary system of reporting near injuries or casualties such as that used for federal air administrations.

*ICMA.* Guidelines on notifying next of kin of deaths and accidents, release of information to them from investigations, provision of communication facilities for private use by crew.

### Comments

*Argentina.* Referring to the notification of accidents, standardized forms should be considered for this area of activity.

*Australia.* Many of these issues are dealt with under IMO standards and ILO Conventions Nos. 155, 133 and 92.

*Canada.* UFAWU-CAW: Safety and health standards should be at least equal to those provided on shore.

*Costa Rica.* INS agrees with all.

*Honduras.* COHEP: Information should be provided in the language of the seafarers concerned.

*Ireland.* Council Directive 93/103/EC should be reviewed to include vessels 10 m in length and above.

*Latvia.* National Board of Fisheries: Rights and duties, personal protective equipment and guarding of machinery.

*Lebanon.* Due account should be taken of the size of the ship and its range of operation, as safety management systems, for example, might not be necessary on fishing boats.

*Mozambique.* This ensures that fishing activities are successfully performed, avoiding the risk of accidents, injuries and fatalities, and that the equipment used is the most appropriate for the protection of people working on board fishing vessels.

*Netherlands.* This requirement should be in line with Council Directive 93/103/EC.

The vast majority of States indicated that the Recommendation should address: inclusion of fishing occupational safety and health issues in an integrated national policy on occupational safety and health (72); rights and duties of fishing vessel owners and persons working on board fishing vessels in the area of occupational safety and health (76); safety management systems, where appropriate (67); personal protective equipment (79); guarding of machinery (72); recording and notification of accidents, injuries and fatalities (77); and investigation of occupational accidents (73). Other issues suggested for inclusion were: safety training; contagious diseases; inspection; risk assessment and management; joint on-board and/or regional tripartite accident prevention committees; voluntary system of reporting near injuries or casualties; guidelines on the notification of next of kin of deaths and accidents, release of information to them from investigations, and provision of communication facilities for private use by crew.

*Points 63 to 68* provide additional guidance with regard to occupational safety and health of fishers. *Point 66* contains a list of issues that should be addressed, to the

extent practicable and as appropriate to the conditions in the fishing sector. *Point 67* seeks to respond to views expressed at the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector. *Point 68* draws upon a provision of the List of Occupational Diseases Recommendation, 2002 (No. 194). This last provision might also be relevant to the issue of social security protection.

## C9. SOCIAL SECURITY

*Should the Recommendation include guidance on social security provisions for persons working on board fishing vessels?* **Qu. C9(a)**

### *Affirmative*

*Governments:* 72. Algeria, Argentina, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, Croatia, Cuba, Cyprus, Czech Republic, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, France, Germany, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, New Zealand, Nicaragua, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Switzerland, Syrian Arab Republic, Thailand, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States, Venezuela, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), CCIAB, CCIAS (Lebanon), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), ICMA, ICSF.

### *Negative*

*Governments:* 5. Australia, China, Finland, Greece, Netherlands.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), LEC (Latvia), NEF (Namibia).

*Other:* PVIS (Netherlands).

### *Other*

*Governments:* 5. Costa Rica, Denmark, Nigeria, Sweden, Trinidad and Tobago.

### *Comments*

*Argentina.* The national fishing legislation provides for the creation of a registry of all the people involved in this activity, and of the employers affiliated to the Occupational Risk System. This is necessary, particularly in view of the physically exhausting and hazardous nature of the work and the fact that the active working life of workers in this sector is shortened.

*Australia.* ILO social security standards already apply to the fishing industry.

*Brazil.* Fishermen should be entitled to an old-age pension, length of service pension, death benefit, disability benefit, occupational accident insurance and unemployment insurance for the period during which it is prohibited to fish certain species, in the case of artisanal fishing that is exclusively family-based.

*Costa Rica.* INS agrees.

*Finland.* As the organization, structure and administration of social security schemes vary considerably in different countries, it is impossible to give guidance at the global level.

*Greece.* This should be regulated by the legislation of the flag State and/or State of nationality.

*Ireland.* The Marine Survey Office disagrees.

*Japan.* In view of the specific employment status of persons on board fishing vessels, there should not be general guidance on social security provisions.

*Latvia.* The National Board of Fisheries disagrees.

*Lebanon.* Guidance in the form of minimum social security benefits would be important, considering the contents of Convention No. 102.

*Netherlands.* Special provisions are not necessary because national fishing workers are treated in the same way as other categories of employees.

*Nigeria.* Adequate protection and compensation should be provided to workers and their families.

*Norway.* Fishermen should have the same level of social protection as that provided to workers in general, given the nature of their employment relationship. This should include share fishermen who are "self-employed". Fishermen should be integrated into the social security system for all workers.

*Panama.* APOM: Except for artisanal vessels operated only by the owner, all employees should be part of a social security plan.

*Philippines.* This is to ensure that the interests and welfare of the fishing vessel owner/operator and workers are treated equally and to create a climate conducive to understanding, cooperation and compromise.

*Portugal.* Provided that they are the same as for other workers.

*Qatar.* However, working conditions differ from one country to the next, wages on board fishing vessels are usually based on the catch-sharing system, and workers are considered as self-employed.

*Russian Federation.* A provision should guarantee social security coverage of persons working on board vessels placed on a second register or leased by foreign shipowners/employers.

*Saudi Arabia.* A study should be made of fishermen's conditions and social environment to determine the categories to be covered by social security provisions.

*Spain.* A list of benefits to which fishermen are entitled should be included, with the possibility of extending it.

*Sweden.* Fishermen should be integrated into the social security system for all workers.

*United Kingdom.* TUC: TUC proposed at the International Labour Conference in 2003 to initiate a campaign for universal ratification of the central social security and OSH instruments, because these embody principles that are fundamental elements of decent work.

*ICSF.* Irrespective of the existence of a national social security system, the fishing sector should be brought under the purview of social security, given the hazardous nature of the occupation.

*Should the guidance include the following benefits (please specify the reasons for your choice):* **Qu. C9(b)**

### *Medical care*

*Governments:* 63. Algeria, Argentina, Austria, Bahrain, Bangladesh, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, Croatia, Cuba, Cyprus, Ecuador, Egypt, El Salvador, Eritrea, Estonia, France, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Malaysia, Mexico, Mozambique, Myanmar, Nicaragua, Nigeria, Norway, Oman, Panama, Philippines, Poland, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Switzerland, Syrian Arab Republic, Thailand, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, Venezuela, Zimbabwe.

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), ICMA, ICSF.

### Comments

*Brazil.* Survivors' benefit should only be granted where national legislation does not provide for unemployment or occupational injury/disease benefit.

*Costa Rica.* INS agrees with all items except unemployment benefit.

*Croatia.* PPDIV: Unemployment benefit depends on the time spent at sea.

*Egypt.* Given the gruelling nature of work on board fishing vessels and the potential for accidents, these workers and their families require assistance.

*Fiji.* Social security benefits should be similar to those enjoyed by other workers in the State where the vessel is registered.

*France.* In France, the social security system for seafarers covers different branches of insurance – accident, illness, maternity, invalidity, death, old age – and family benefits. Unemployment comes under a separate plan.

*Honduras.* COHEP: The worker should comply with the requirement to pay the contributions that give him/her access to social security. This should also be an option for self-employed persons.

*Ireland.* HSA does not agree with regard to medical care, old-age benefit, employment injury benefit and family benefit.

*Italy.* Confcooperative: To ensure equality with other maritime workers.

*Jamaica.* The old-age benefit should be based on the terms of employment. The guidelines should be general and should take account of conditions in developing countries.

*Japan.* The Convention should classify the benefits. The term "family benefit" is unclear.

*Lebanon.* FTUS: Workers in the fishing sector are deprived of earnings during the winter because of conditions at sea.

*Mauritius.* The Recommendation should only include sickness, maternity, unemployment and family benefit, while the others should be included in the Convention.

*Norway.* The hazardous nature of fishing means that death, sickness and injury benefits are particularly important for fishermen and their families. Norway has a special social security system for fishermen: a “product fee” finances most of their social costs. There is ongoing work in Norway to grant fishermen the social security benefits applicable to other workers.

*Oman.* The Ministry of Agriculture and Fisheries agrees with all the benefits.

*Philippines.* However, fishing vessels operating in area “E” should be excluded.

*Portugal.* Medical care could be provided under the national health services or in the framework of the social security system.

*Qatar.* Benefits other than those linked to occupational accidents and injuries cannot apply to workers on board fishing vessels, especially if they are non-nationals (e.g. migrant workers).

*Spain.* Supplementary benefits should be provided in cases of occupational accidents directly caused by the lack of OSH measures.

*United Kingdom.* The “employment injury benefit” would extend only to those fishermen who are employed earners and therefore covered in the same way as mariners. The United Kingdom industrial injuries scheme does not cover self-employed workers, and this restriction applies equally to share-fishermen.

*United States.* USCIB: Fishing workers who pay tax into the State’s social security fund should have access to the same benefits as non-fishing workers. In the United States, medical care is covered by the private insurance system and is not mandatory. Old-age benefit is provided based on each State’s eligibility and benefit formulas. The employment injury benefit should only address any job-related injury or occupational illness as provided for by national law and practice. Maternity benefit is not provided except under private disability insurance policies. Unemployment benefit is provided if the eligibility requirements are met under national law and practice. Sickness, invalidity and family benefits are not provided.

*ICMA.* As most fishing vessel crews are not required to possess merchant mariner documents and are thus not exposed to the formal training that many merchant mariners receive, they are generally unaware of their rights and benefits.

The vast majority of States (72) agreed that the Recommendation should include guidance on social security provisions for persons working on board fishing vessels. Some stated that this matter should be left to national laws and regulations of the flag State, that social security standards already applied to the fishing sector, or that fishing workers should be treated in the same way as other categories of employees. There were different degrees of support for guidance on medical care (63), sickness (61), old-age (57), employment injury (66), maternity (53), invalidity (62), survivors’ (55), unemployment (47) and family (49) benefits. Many replies commented in particular on the importance of employment injury, medical care and survivors’ benefit, bearing in mind the risks inherent in the fishing sector.

*Point 69* provides guidance on means by which member States might be able to measure progress achieved in the progressive extension of social security protection to all fishers. *Point 70* is drawn from Convention No. 102, Article 38, and Convention No. 121, Article 9(3)). *Point 71* is drawn from Convention No. 102, Article 70, and Convention No. 121, Article 23. *Point 72* provides guidance on the protection of the rights of foreign fishers working on vessels flying the flag of a member State.

## C10. REGISTER OF PERSONS WORKING ON BOARD FISHING VESSELS

**Qu. C10(a)** *Should the Recommendation include provisions concerning maintenance by the competent authority of a register of persons working on board fishing vessels?*

*Affirmative*

*Governments:* 67. Algeria, Argentina, Austria, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, China, Costa Rica, Croatia, Cuba, Cyprus, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, France, Germany, Greece, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malaysia, Mauritius, Mexico, Mozambique, Myanmar, Namibia, Nicaragua, Nigeria, Norway, Oman, Philippines, Poland, Portugal, Qatar, Russian Federation, Saint Vincent and the Grenadines, Saudi Arabia, Serbia and Montenegro, Spain, Switzerland, Syrian Arab Republic, Tunisia, Turkey, Ukraine, United Arab Emirates, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), MEDEF (France), COHEP (Honduras), LEC (Latvia), CCIAB, CCIAS (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union (Estonia), CSG (Gabon), MDU (Ghana), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), CDT (Morocco), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), ICMA, ICSF.

*Negative*

*Governments:* 10. Australia, Denmark, Finland, Japan, Netherlands, New Zealand, Romania, Sweden, Trinidad and Tobago, United Kingdom.

*Employers' organizations:* ECOT (Thailand), USCIB (United States).

*Workers' organizations:* Estonian Water Transport Workers Federation (Estonia), FTUS (Lebanon).

*Other:* PVIS (Netherlands).

*Other*

*Governments:* 5. Canada, Czech Republic, Panama, Thailand, United States.

*Workers' organizations:* SLIMAPG (Guinea), SWTUF (Sudan), USS (Switzerland).

*Comments*

*Brazil, Burundi, Fiji, COHEP (Honduras), Mozambique, Portugal, Qatar, Spain, TUC (United Kingdom)* consider this essential for the competent authorities in matters such as safety supervision, monitoring of work on fishing vessels or control of compliance with the legislation (e.g. health and social security).

*Brazil, Norway, Saudi Arabia, Venezuela* state that registers enable the collection of accurate statistics about the workforce in the fishing sector.

*Algeria.* In order to ensure better follow-up of the careers of registered maritime workers.

*Argentina.* It would be important to have the closest relationship possible between the authorities involved.

*CAPECA/CALAPA/CAPA:* This register should be managed on a tripartite basis.

*Bangladesh.* This is necessary for identifying fishing workers.

*Brazil.* There should be a national fishing register for the purpose of policies promoting the sector.

*Canada.* UFAWU-CAW: All too often, no one knows who is on board.

*Costa Rica.* INS considers that the register should be held by the port authority.

*Estonia.* A specific register for fishermen is not essential, as they could be included in the national seafarers' register.

*Ireland.* The Marine Survey Office and HSA disagree.

*Japan.* Registration is not the only method to protect workers on board fishing vessels. This provision is inappropriate, given that no Convention on commercial vessels contains such a requirement.

*Norway.* It would be useful to know the number and identity of fishers for developing policies.

*Oman.* The register helps to regulate the profession, and gather information about its problems and working conditions, and facilitates studies and surveys about legislation governing it.

*Panama.* This would be almost impossible, as the only monitoring that can be carried out is the number of licences issued by category.

*Portugal.* In order to have information about those on board in the event of serious accidents (e.g. shipwrecks).

*Russian Federation.* There should be a provision on the responsibility of the port maritime administration.

*Saudi Arabia.* In order to give due consideration to security aspects and to consult registers in the event of problems between fishermen and employers.

*Sri Lanka.* UFFC: Vessels of categories “D” and “E” should be excluded.

*Sudan.* SWTUF: Such registers are especially established for emergencies and medical care.

*United Kingdom.* A record of certificated persons should be maintained.

*Views shared by several workers’ organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), JSU (Japan), PSU (Poland), RPRRKh (Russian Federation), SALFU (Sierra Leone), TUC (United Kingdom): This will be essential for manpower planning.

*ICMA.* Fishing vessels often hire untrained and unqualified persons. This practice increases the risk of injury and death for them and their shipmates.

The majority of States (67) indicated that the Recommendation should include provisions concerning maintenance by the competent authority of a register of persons working on board fishing vessels. Reasons given for keeping such a register included: that it would allow better follow-up of the careers of registered maritime workers; that it could be used to promote the sector; to collect statistics and to monitor or supervise health and safety; for security purposes; to facilitate studies on work in the fishing sector; and to control the hiring of untrained and unqualified persons. Some replies said that such a register would be unnecessary, inappropriate or impossible to implement. Others indicated that fishers could be included in the national register for seafarers. It was pointed out that there should be information about those on board in the event of an accident.

The Office notes that there was majority support for a provision concerning the maintenance of a register of fishers. The Tripartite Meeting of Experts on Labour Standards for the Fishing Sector had also expressed qualified support for the inclusion of such a provision. However, concerns have been expressed regarding its purpose. The Office considered that there could be a number of reasons to maintain such a register, most of which were mentioned in the replies. After further consideration, it has not proposed a stand-alone provision on such registers, as this is more appropriately dealt with in separate parts of the proposed Convention or proposed Recommendation, but has included a provision (*Point 27*) in the Convention requiring that the vessel carry a list of the fishers on board, with a copy ashore. This would appear to be essential for purposes of safety and rescue and for contacting persons ashore (e.g. medical doctors or dependants) in the event of emergencies at sea.

## C11. FISHERIES OBSERVERS

**Qu. C11(a)** *Should the Recommendation provide guidance concerning the conditions of work of fisheries observers on board fishing vessels?*

*Affirmative*

*Governments:* 54. Algeria, Argentina, Bahrain, Bangladesh, Benin, Brazil, Bulgaria, Burundi, Canada, Croatia, Ecuador, Egypt, El Salvador, Eritrea, Estonia,

Greece, Guatemala, Hungary, Iceland, Indonesia, Islamic Republic of Iran, Ireland, Jamaica, Japan, Kuwait, Lebanon, Lithuania, Mauritius, Mozambique, Myanmar, Namibia, New Zealand, Nicaragua, Nigeria, Norway, Oman, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Serbia and Montenegro, Spain, Syrian Arab Republic, Thailand, Trinidad and Tobago, Tunisia, Ukraine, United Arab Emirates, United Kingdom, United States, Zimbabwe.

*Employers' organizations:* EFE (Eritrea), ESA/Estonian Fishermen's Association (Estonia), COHEP (Honduras), CCIAB (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, SOMU (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), PPDIV (Croatia), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), SLIMAPG (Guinea), CDT (Morocco), NUNW (Namibia), APOM (Panama), ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), RPRRKh (Russian Federation), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NATUC (Trinidad and Tobago).

*Others:* AGCI PESCA (Italy), ICMA.

### *Negative*

*Governments:* 22. Australia, Belarus, Belgium, China, Cuba, Fiji, Finland, France, Germany, Honduras, India, Italy, Republic of Korea, Latvia, Malaysia, Mexico, Netherlands, Saudi Arabia, Sweden, Switzerland, Turkey, Venezuela.

*Employers' organizations:* CAPECA/CALAPA/CAPA (Argentina), MEDEF (France), LEC (Latvia), CCIAS (Lebanon), ECOT (Thailand).

*Workers' organizations:* CGT, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), FTUS (Lebanon), KSM NSZZ Solidarnosc, PSU (Poland), CNS Cartel Alfa (Romania), SALFU (Sierra Leone), NCTL (Thailand), TUC (United Kingdom).

*Others:* CCE (Belgium), Confcooperative (Italy), PVIS (Netherlands), ICSF.

### *Other*

*Governments:* 6. Austria, Costa Rica, Cyprus, Czech Republic, Denmark, Panama.

### *Comments*

*Costa Rica.* INS agrees.

*Ireland.* The Marine Survey Office and HSA disagree.

*Lebanon.* Provided that the ship operates in the EEZ of another State.

*Panama.* First, the functions of “fisheries observers” would have to be defined, as this is a Convention dealing with owner and crew obligations with regard to work on fishing vessels.

**Qu. C11(b)** *If yes, what should be included in such guidance?*

*Algeria, Bahrain, Canada, Ecuador, India, Nigeria, ANDELAIPP (Panama), Russian Federation, SALFU (Sierra Leone), SWTUF (Sudan)* propose guidelines on rights, competencies and powers arising of their assignment and/or responsibilities and duties, so as to not to interfere with work on board fishing vessels.

*Algeria, Bulgaria, Oman, Portugal, Spain, Trinidad and Tobago* propose guidance on food and water.

*Algeria, CCUOMM (Argentina), Bulgaria, Egypt, GTUWA (Egypt), El Salvador, Jamaica, Japan, Oman, Philippines, Portugal, Qatar, Spain, SWTUF (Sudan), Trinidad and Tobago, ICMA* suggest guidance on accommodation.

*Bahrain, GTUWA (Egypt), EFE (Eritrea), CDT (Morocco), Oman, Qatar, Serbia and Montenegro, Spain, Thailand, Trinidad and Tobago, Zimbabwe* advocate guidance on OSH.

*Bahrain, Myanmar, Nigeria, Serbia and Montenegro, Trinidad and Tobago* recommend guidance concerning social security benefits and allowances.

*India, Philippines, Sierre Leone* suggest guidance on remuneration.

*Bahrain.* Medical examination, qualifications.

*Bulgaria.* Medical care.

*Eritrea.* EFE: Working hours, sick leave, annual leave, leave for family events, public holidays.

*Gabon.* CSG: Ensuring that observers do not carry any diseases and that their overalls are disinfected before embarkation.

*Guinea.* SLIMAPG: Hours of work, time and place of work.

*Mozambique.* Instruments and equipment enabling the observers to perform their duties successfully.

*New Zealand.* There should be no impediment to the work of observers and they should be treated with respect and courtesy.

*Oman.* Medical care.

*Panama.* APOM: Regular visual inspections by the competent authority.

*Portugal.* Suitable individual protective equipment.

*Serbia and Montenegro.* Contracts.

*Spain.* Medical care, rescue measures, safety, food and accommodation.

*Sudan.* SWTUF: Incentives, overtime and travel allowances.

*United Arab Emirates.* Extra wages for extra work.

*United States.* USCIB: Protection from interference or harassment by members of the crew in the conduct of their work.

*ICMA.* Familiarization with fishing operations on the type of vessel on which they will be working.

### *Comments*

CGT (Brazil), COHEP (Honduras), *Jamaica, Mauritius, New Zealand, Norway, Oman, Serbia and Montenegro, United Kingdom*, USCIB (United States): Fisheries observers should enjoy at least the same rights or working and living conditions as crew members on board fishing vessels.

*Brazil.* It should include similar provisions to those contained in the UNCLOS Convention.

*Ireland.* Observers should complete a safety checkbook recording the vessel's safety equipment, welfare facilities, emergency equipment, etc., so that over a period of time only vessels with good safety standards would be selected for surveys.

*Lebanon.* The guidance should take into account UNCLOS and the protection of the marine environment where fishing takes place. The coastal State should monitor events.

*Norway.* Persons working on board for shorter or longer periods should be covered by the safety regulations. The master and the crew should prepare for observers. The guidance should focus on ensuring the best possible working conditions for observers and their effective contribution to normal fishing operations.

*United States.* Any guidance should correspond to the duties of fisheries observers rather than fisheries workers.

The majority of States (54) indicated that the Recommendation should provide guidance concerning the conditions of work of fisheries observers on board fishing vessels. However, a substantial number of replies opposed this. It was suggested that such guidance could cover: rights and duties, accommodation, food and water, occupational safety and health, social security, medical examination, qualifications, working hours, leave, protection against interference in the performance of their duties, and familiarization with fishing operations.

At the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector, however, the Worker participants generally supported giving fisheries observers appropriate protection and safety training to ensure that they were not a danger to the crew, while the Employer participants emphasized that observers did not have links to the employers and should not be covered. Several Government participants also felt that there should be a clear definition of the term "fisheries observer". Bearing the above in mind, the Office has not included a separate provision on fisheries observers but has instead drafted the provisions on occupational safety and health to reflect the presence of other persons (which could include observers) (*Point 64*) and to provide them with the necessary protection. The Conference may wish to discuss this issue further.

## C12. APPLICATION WITHIN THE EXCLUSIVE ECONOMIC ZONE

**Qu. C12(a)** *Should the Recommendation provide that coastal States should require, when they grant licences for fishing in their exclusive economic zones, that fishing vessels conform with the standards of this Convention?*

*Affirmative*

*Governments:* 68. Algeria, Argentina, Bahrain, Bangladesh, Belarus, Belgium, Benin, Brazil, Bulgaria, Burundi, Canada, Costa Rica, Croatia, Cuba, Cyprus, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Fiji, France, Germany, Guatemala, Honduras, Hungary, Iceland, India, Indonesia, Islamic Republic of Iran, Ireland, Italy, Jamaica, Japan, Republic of Korea, Kuwait, Latvia, Lebanon, Lithuania, Malaysia, Mauritius, Myanmar, Namibia, Netherlands, New Zealand, Nicaragua, Norway, Oman, Panama, Philippines, Poland, Portugal, Qatar, Romania, Russian Federation, Saint Vincent and the Grenadines, Serbia and Montenegro, Spain, Sweden, Switzerland, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, United States, Venezuela, Zimbabwe.

*Employers' organizations:* CAPeCA/CALAPA/CAPA (Argentina), EFE (Eritrea), COHEP (Honduras), CCIAB (Lebanon), NEF (Namibia), ANDELAIPP (Panama), ECOT (Thailand), ECA (Trinidad and Tobago), USCIB (United States), EMCOZ (Zimbabwe).

*Workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), CGT (Brazil), CAW-Canada, UFAWU-CAW (Canada), UNIMPESCOL (Colombia), PPDIV (Croatia), SiD (Denmark), GTUWA (Egypt), Estonian Fishery Workers Trade Union/Estonian Water Transport Workers Federation (Estonia), CSG (Gabon), MDU (Ghana), SLIMAPG (Guinea), KPI (Indonesia), JSU (Japan), FKSU (Republic of Korea), NUNW (Namibia), APOM (Panama), KSM NSZZ Solidarnosc, PSU, ZZMiR (Poland), Federation of Fishing Sector Trade Unions (Portugal), CNS Cartel Alfa (Romania), RPRRKh (Russian Federation), SALFU (Sierra Leone), UFFC (Sri Lanka), SWTUF (Sudan), USS (Switzerland), NCTL (Thailand), NATUC (Trinidad and Tobago), TUC (United Kingdom).

*Others:* CCE (Belgium), AGCI PESCA, Confcooperative (Italy), PVIS (Netherlands), ICMA, ICSF.

*Negative*

*Governments:* 4. Australia, China, Mexico, Syrian Arab Republic.

*Employers' organizations:* ESA/Estonian Fishermen's Association (Estonia), LEC (Latvia), CCIAS (Lebanon).

*Workers' organization:* FTUS (Lebanon).

*Other*

*Governments:* 10. Austria, Czech Republic, Denmark, Finland, Greece, Mozambique, Nigeria, Saudi Arabia, Thailand, United Kingdom.

*Employers' organization:* MEDEF (France).

*Workers' organization:* CDT (Morocco).

*Comments*

*Algeria.* To ensure better enforcement of the provisions of the Convention.

*Argentina.* Special provisions should be included that do not prejudice the worker with regard to more favourable provisions.

*El Salvador.* States must guarantee compliance with international standards.

*Eritrea.* Such guidance is necessary to standardize the fishing vessels working in the EEZ.

*Gabon.* CSG: If a State has ratified a Convention, it is with the aim of enforcing it for fishing vessels within its waters.

*Guinea.* SLIMAPG: In order to oblige flag States to ratify and abide by international Conventions.

*Republic of Korea.* PSC should be enforced in order to ensure the effectiveness of the Convention and to exclude substandard fishing vessels such as FOC fishing vessels.

*Latvia.* The National Board of Fisheries disagrees.

*Lebanon.* Provided that the State and, in conformity with UNCLOS and other international instruments, the coastal State involved have ratified this Convention.

*Netherlands.* PVIS: However, those States should not deviate from the Convention.

*Nigeria.* There should be information on availability of stocks, methods of exploitation and existing national legislation.

*Norway.* This would ensure that the Convention is broadly ratified and implemented. The ILO is encouraged to evaluate whether this should be a requirement so that all foreign vessels will have to adapt to the Convention before being granted the right to fish, irrespective of their flag.

*Philippines.* This should apply to foreign-owned/based fishing vessels with workers who are not their own nationals.

*Russian Federation.* This is a prerequisite for preserving national maritime bioresources, ensuring safe operation of the vessel and guaranteeing normal working and living conditions on board.

*Spain.* This would be an optimal measure to control compliance with the standard and to harmonize working conditions in the different States.

*Sudan.* SWTUF: The coastal State, as signatory, should be bound by the Convention, as is any vessel operating in its waters.

*Thailand.* ECOT: In the case of fishing in the EEZ, there should rather be international sanctions, so that private ships do not suffer from conflicts between States.

*Views shared by several workers' organizations:* CCUOMM, CGT, SOMU, UMAFLUP (Argentina), UNIMPESCOL (Colombia), SiD (Denmark), MDU (Ghana), KPI (Indonesia), JSU (Japan), KSM NSZZ Solidarnosc, PSU (Poland), SALFU (Sierra Leone), TUC (United Kingdom): However, there should be an express provision to the effect that this should not result in fishers suffering any disadvantage through such a requirement preventing the application of more favourable national laws and regulations.

*ICMA.* This concept could also be part of the Convention.

A large majority of States (68) considered that the Recommendation should provide that coastal States should require, when they grant licences for fishing in their exclusive economic zones, that fishing vessels comply with the standards of the Convention. It was also pointed out that this should not prevent the application of more favourable national laws and regulations.

At the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector, some Employer experts expressed concern over the possible inclusion of such a provision, while the Worker experts and several Government experts supported it. The Office believes that *Point 73* does not conflict with provisions of UNCLOS. It will seek further clarification on this issue prior to the Conference.

### C13. OTHER ISSUES

**Qu. C13(a)** *Please indicate any other issues which should be addressed in the Recommendation.*

*Australia.* The Convention should complement existing IMO standards.

*Eritrea.* EFE: Benefits applied to employees on land equal to those at sea.

*Honduras.* COHEP: The Convention should harmonize the legislation of coastal States on port state control of national and foreign fishing vessels.

*Jamaica.* Specific fishing operations or gear, such as use of underwater breathing apparatus.

*Lebanon.* Prevention of exhaustion during fishing operations; fisher cooperatives; fisheries science institutes.

CCIAB: Environmental issues.

*New Zealand.* Drugs and alcohol.

*Oman.* Duty of the State to guarantee the workers' rights and to provide the necessary basic services to assist the implementation, follow-up and monitoring of the Convention.

*Panama.* Appropriate terminology for work on board fishing vessels.

*Spain.* Creation of a body of officials responsible for observing, advising and guiding States as regards the implementation of the new Convention.

*Thailand.* ECOT: International practice for fishing in international waters.

*Tunisia.* Paid leave and vocational training.

*ICMA*. Provision of social services, retraining, etc. for fishers who lose their jobs because of fisheries management measures, but not on fisheries management issues themselves.

Suggestions for other issues to be addressed in the Recommendation included: guidelines on specific fishing operations or gear, such as the use of underwater breathing equipment; avoidance of excessive fatigue; fisheries cooperatives; fisheries science institutes; drugs and alcohol; duty of the State to guarantee workers' rights and provide the necessary basic services to assist in the implementation of the new Convention; creation of a body of officials responsible for observing, advising and guiding States as regards the implementation of the Convention; paid leave; vocational training; and the provision of social services and retraining in the event of job loss due to fisheries management measures.

Bearing this in mind, the Office has attempted to reflect these issues, as appropriate, in the Recommendation.

## **PROPOSED CONCLUSIONS**

The following Proposed Conclusions have been prepared on the basis of the replies summarized and commented upon in this report. They take into account views expressed at the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector (2-4 September 2003). They have been drafted in the usual form and are intended to serve as a basis for discussion by the International Labour Conference at its 92nd Session in 2004 of the fifth item on the agenda – a comprehensive standard (a Convention supplemented by a Recommendation) on work in the fishing sector.

Some differences in drafting will be found between the Proposed Conclusions and the Office questionnaire that are not explained in the Office commentaries. These differences are due to concern both for concordance between the various languages and for the terminology to be adapted, as far as possible, to that already used in existing instruments. Where possible, the Office has also sought to ensure that the language used is consistent with that used in the preliminary second draft of the consolidated maritime labour Convention (CMLC), bearing in mind that differences might cause difficulties for some States.

The Proposed Conclusions do not necessarily follow the format of the questionnaire, as their structure was decided in light of the replies from member States and taking into account the views expressed by the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector. The various elements of the questionnaire have been arranged in comprehensive points and paragraphs to be included in the Proposed Conclusions with a view to a Convention and its accompanying Recommendation.

### **A. Form of the international instruments**

1. The International Labour Conference should adopt international standards concerning work in the fishing sector.
2. These standards should take the form of a Convention supplemented by a Recommendation.

### **B. Proposed Conclusions with a view to a Convention and a Recommendation**

#### *Preamble*

3. The Preamble should provide that the objective of the proposed instruments is to help ensure that fishers have decent conditions for work on board fishing vessels with regard to: minimum requirements for work on board; conditions of service; accommodation and food; health protection, medical care and social security.

### **C. Proposed Conclusions with a view to a Convention**

4. The Proposed Conclusions with a view to a Convention should contain the following provisions.

#### PART I. DEFINITIONS AND SCOPE

##### *Definitions*

5. For the purposes of the Convention:

- (a) “competent authority” means any authority having power to issue regulations, orders or other instructions having the force of law in respect of the subject matter of the provision concerned or entrusted with responsibility under the Convention;
- (b) “consultation” means consultation by the competent authority with the representative organizations of employers and workers concerned, and in particular the representative organizations of fishing vessel owners and fishers, where they exist, on the measures to be taken to give effect to the provisions of the Convention and with respect to any derogation, exemption or other flexible application of the Convention; [modified: C. 159, Art. 5; C. 161, Art. 4; C. 160, Art. 3; preliminary second draft of the CMLC, Art. VII]
- (c) “fisher” means every person employed or engaged in any capacity on board any fishing vessel, including persons working on board who are paid on the basis of a share of the catch. It excludes pilots, naval personnel and other persons in the permanent service of a government; [modified C. 114, Art. 2]
- (d) “fisher’s work agreement” means a contract of employment, articles of agreement or other similar arrangements and any other contract governing the terms of a fisher’s work on board a vessel;
- (e) “fishing vessel” or “vessel” means any ship or boat, of any nature whatsoever, whether publicly or privately owned, used or intended to be used for the purposes of commercial fishing; [modified: C. 112, Art. 1(1); C. 113, Art. 1(1); C. 114, Art. 1(1)]
- (f) “gross tonnage” means the gross tonnage calculated in accordance with the tonnage measurement regulations contained in Annex 1 to the International Convention on Tonnage Measurement of Ships, 1969, or any successor Convention;
- (g) “recruitment and placement service” means any person, company, institution, agency or other organization, in the public or the private sector, which is engaged in recruiting fishers on behalf of employers or placing fishers with employers; [modified C. 179, Art. 1(1)(b)]
- (h) “skipper” means any person having command or charge of a fishing vessel. [C. 125, Art. 3(a)]

*Scope*

6. The Convention applies to all vessels engaged in commercial fishing operations.

7. In the event of doubt as to whether a vessel is engaged in commercial fishing, the question should be determined by the competent authority in each Member after consultation.

8. (1) The competent authority might, after consultation, exclude from the application of the Convention:

- (a) fishing vessels engaged in fishing operations in rivers and inland waters; and
- (b) limited categories of fishers or fishing vessels in respect of which special and substantial problems relating to application arise in the light of particular conditions of service of the fishers or the fishing vessel's operations.

(2) In the case of exclusions under the preceding paragraph the competent authority should take measures to progressively extend the protections under the Convention to those categories of fishers and fishing vessels. [modified: C. 138, Art. 4(1); C. 158, Art. 2(5); C. 184, Art. 3(1)(b)]

9. Each Member which ratifies the Convention should list, in the first report on the application of the Convention submitted under article 22 of the Constitution of the International Labour Organization, any categories of fishers or fishing vessels which might have been excluded in pursuance of *Point 8(1)*, and should give the reasons for such exclusion, stating the respective positions of the representative organizations of employers and workers concerned, in particular the representative organizations of fishing vessel owners and fishers, where they exist, and describing the measures taken to give adequate protection to the excluded categories. [modified: C. 155, Art. 2(3); C. 172, Art. 1(4)]

10. Each Member which ratifies the Convention should describe in subsequent reports on the application of the Convention submitted under article 22 of the Constitution of the International Labour Organization the measures taken with a view to extending progressively the provisions of the Convention to the excluded fishers and fishing vessels. [modified C. 184, Art. 3(2)]

PART II. GENERAL PRINCIPLES

*Implementation*

11. Each Member should implement and enforce laws or regulations or other measures that it has adopted to fulfil its commitments under the Convention with respect to fishers and fishing vessels under its jurisdiction [preliminary second draft CMLC, Art. V(1)]. Other measures might include collective agreements, court decisions, arbitration awards or other means consistent with national law and practice.

*Competent authority and coordination*

12. Each Member should:

- (a) designate the competent authority or authorities; and
- (b) establish mechanisms for coordination among relevant authorities for the fishing sector at the national and local level, as appropriate, and define their functions and responsibilities, taking into account their complementarities and national conditions and practice.

PART III. MINIMUM REQUIREMENTS FOR WORK ON BOARD FISHING VESSELS

*III.1. Minimum age*

13. No person under the minimum age should work on board a fishing vessel.

14. The minimum age at the time of the initial entry into force of this Convention is 16 years. [modified: C. 180, Art. 12; C. 138]

15. The minimum age for assignment to activities on board fishing vessels, which by their nature or the circumstances in which they are carried out are likely to jeopardize the health and safety of young persons, should not be less than 18 years. [modified: C. 184, Art. 16; C. 138, Art. 3]

16. The types of employment or work to which *Point 15* applies should be determined through consultation, taking into account the risks concerned and the applicable international standards. [modified C. 184, Art. 16]

17. The competent authority might, after consultation, authorize the performance of work referred to in *Point 15* as from 16 years of age, on condition that the health and safety of the young persons concerned are fully protected and that the young persons concerned have received adequate specific instruction or vocational training. [modified: C. 184, Art. 16; C. 138, Art. 3]

*III.2. Medical examination*

18. No person should work on board a fishing vessel unless they have valid medical certificates attesting that they are medically fit to perform their duties. [modified C. 113, Art. 2].

19. The competent authority might, after consultation, grant exemptions from the application of the preceding point in respect of vessels which do not normally undertake voyages of more than [ ] days. [modified C. 113, Art. 1(2)]

20. Members should adopt laws or regulations or other measures providing for the following: [main concepts of C. 113]

- (a) nature of medical examinations;
- (b) form and content of medical certificates;
- (c) qualifications of the medical practitioner who signs the medical certificate;

- (d) frequency of medical examinations and the period of validity of medical certificates;
- (e) appeal procedures in the event that a person has been refused a certificate or has had limitations imposed on the work he or she might do; and
- (f) other relevant requirements.

#### PART IV. CONDITIONS OF SERVICE

##### *IV.1. Manning and hours of rest*

21. Members should adopt laws or regulations or other measures requiring that owners of fishing vessels flying their flag ensure that their vessels are sufficiently and safely manned and under the control of a competent skipper.

22. Members should adopt laws or regulations or other measures requiring that owners of fishing vessels that fly their flag ensure that fishers are given rest periods of sufficient frequency and duration for the safe and healthy performance of their duties.

##### *IV.2. Fishers' work agreements and list of persons on board*

23. Each Member should adopt laws or regulations or other measures requiring that fishers working on vessels flying their flag have a fisher's work agreement that is consistent with the provisions of this Convention. [modified preliminary second draft of CMLC]

24. Each Member should adopt laws or regulations or other measures regarding:
- (a) procedures for ensuring that a fisher has an opportunity to review and seek advice on the terms of the fisher's work agreement before it is concluded;
  - (b) maintenance of records concerning the fisher's work under such an agreement;
  - (c) the means of settling disputes in connection with such an agreement. [modified C. 114]

25. Each Member should adopt laws or regulations or other measures specifying the minimum particulars to be included in fishers' work agreements in accordance with the provisions contained in Annex I. [main principle of C. 114]

26. A copy of the fisher's work agreement should be carried on board and should be available for review by the fisher and other concerned personnel. [modified C. 114, Art. 7]

27. Every fishing vessel should carry a list of the fishers on board, a copy of which should be provided to appropriate persons ashore prior to or shortly after departure of the vessel. [new provision]

##### *IV.3. Identity documents, repatriation rights and recruitment and placement services*

28. Fishers working on board fishing vessels that undertake international voyages should enjoy treatment no less favourable than that provided to seafarers working on

board vessels flying the flag of the Member and ordinarily engaged in commercial activities with respect to:

- (a) identity documents;
- (b) repatriation conditions;
- (c) recruitment and placement services.

#### PART V. ACCOMMODATION AND FOOD

29. Members should adopt laws or regulations or other measures with respect to accommodation, food and potable water on board for fishing vessels that fly their flag.

30. Members should adopt laws or regulations or other measures requiring that accommodation on board fishing vessels that fly their flag should be of sufficient size and quality and should be appropriately equipped for the service of the vessel and the length of time fishers live on board. In particular, such measures should address, as appropriate, the following issues: [main concepts of C. 126]

- (a) approval of plans for the construction or modification of fishing vessels in respect of accommodation;
- (b) maintenance of accommodation and galley spaces with due regard to hygiene and overall safe, healthy and comfortable conditions;
- (c) ventilation, heating, cooling and lighting;
- (d) mitigation of excessive noise and vibration;
- (e) location, size, construction materials, furnishing and equipping of sleeping rooms, mess rooms and other accommodation spaces;
- (f) sanitary facilities, including water closets and washing facilities, and supply of sufficient hot and cold water; and
- (g) procedures for responding to complaints concerning sub-standard accommodation.

31. The food carried and served on board fishing vessels should be of an appropriate quantity, nutritional value and quality for the service of the vessel and potable water should be of sufficient quantity and quality.

#### PART VI. HEALTH PROTECTION, MEDICAL CARE AND SOCIAL SECURITY

##### *VI.1. Medical care*

32. Members should adopt laws or regulations or other measures requiring that: [concepts drawn from C. 126 and C. 164]

- (a) fishing vessels should carry appropriate medical equipment and medical supplies for the service of the vessel, taking into account the number of fishers on board, the area of operation and the length of the voyage;

- (b) medical equipment and supplies carried on board should be accompanied by instructions or other information in a language and format understood by the fishers concerned;
- (c) fishing vessels should have at least one person on board who is qualified or trained in first aid and other forms of medical care, taking into account the number of fishers on board, the area of operation and the length of the voyage;
- (d) fishing vessels should be equipped for radio or satellite communication with persons or services ashore that can provide medical advice;
- (e) fishers should have the right to medical treatment ashore and to be taken ashore in a timely manner for treatment in the event of serious injuries or illnesses.

33. The standards for medical care on board fishing vessels undertaking international voyages or remaining away from land for a period prescribed by the competent authority should be no less favourable than those provided to seafarers on ships of a similar size ordinarily engaged in commercial activities.

*VI.2. Occupational safety, health and accident prevention [parts taken from the second preliminary draft CMLC]*

34. Each Member should adopt laws or regulations or other measures concerning:

- (a) the measures to be taken for the prevention of occupational accidents on board fishing vessels, including risk evaluation and management, training and on-board instruction of fishers;
- (b) the obligations of fishing vessel owners, fishers and others concerned, due account being taken of safety and health of fishers under 18 years of age;
- (c) the reporting and investigation of accidents on board fishing vessels flying its flag.

*VI.3. Social security*

35. Each Member should ensure that fishers are entitled to benefit from social security protection on conditions no less favourable than those applicable to other workers.

36. With regard to the principles of equality of treatment and the maintenance of social protection rights, Members should adopt measures that take into account the situation of non-national fishers.

*VI.4. Protection in the case of work-related sickness, injury, or death*

37. Each Member should take measures to provide fishers with protection for work-related sickness, injury or death determined in accordance with national laws or regulations or practice.

38. Taking into account the characteristics within the fishing sector, the protection referred to in the preceding point might be ensured through:

- (a) a system for fishing vessel owners' liability; or
- (b) compulsory insurance, workers' compensation or other schemes.

PART VII. COMPLIANCE AND ENFORCEMENT

39. Each Member should exercise effective jurisdiction and control over vessels that fly its flag by establishing a system for ensuring compliance with the standards of the Convention including, as appropriate: inspections; reporting; monitoring; appropriate penalties and corrective measures, in accordance with national laws or regulations. [modified preliminary second draft CMLC, Art. V(2)]

40. Fishing vessels that operate internationally should be required to undergo a documented periodic inspection of living and working conditions on board the vessel.

41. (1) The competent authority of the Member should appoint a sufficient number of qualified inspectors to fulfil its responsibilities under *Point 39*.

(2) Each Member should be responsible for inspection of the on-board living and working conditions of fishers on ships that fly its flag, whether such inspections are carried out by public institutions or other competent bodies.

42. A Member that has ratified the Convention might inspect a fishing vessel flying the flag of another State when the vessel is in its port in order to determine whether the vessel is in compliance with the standards of the Convention relating to living and working conditions of fishers on board.

43. Members should apply the Convention in such a way as to ensure that the fishing vessels of States that have not ratified the Convention do not receive more favourable treatment than the ships that fly the flag of Members that have ratified it.

ANNEX I [TO THE PROPOSED CONVENTION]

*Fisher's work agreement [based on C. 114, Art. 6, with additions]*

The fisher's work agreement should contain the following particulars, except in so far as the inclusion of one or more of them is rendered unnecessary by the fact that the matter is regulated in another manner by national laws or regulations:

- (a) the fisher's family name and other names, date of birth or age and birthplace;
- (b) the place at which and date on which the agreement was concluded;
- (c) the name of the fishing vessel or vessels on board which the fisher undertakes to serve;
- (d) the voyage or voyages to be undertaken, if this can be determined at the time of making the agreement;
- (e) the capacity in which the fisher is to be employed or engaged;
- (f) if possible, the place at which and date on which the fisher is required to report on board for service;
- (g) the scale of provisions to be supplied to the fisher, unless some alternative system is provided for by national law;

- (h) the amount of wages, or the amount of the share and the method of calculating such share if remuneration is to be on a share basis, or the amount of the wage and share and the method of calculating the latter if remuneration is to be on a combined basis, and any agreed minimum wage;
- (i) the termination of the agreement and the conditions thereof, that is to say:
  - if the agreement has been made for a definite period, the date fixed for its expiry;
  - if the agreement has been made for a voyage, the port of destination and the time which has to expire after arrival before the fisher should be discharged;
  - if the agreement has been made for an indefinite period, the conditions which should entitle either party to rescind it, as well as the required period of notice for rescission; provided that such period should not be less for the owner of the fishing vessel than for the fisher;
- (j) the insurance that will cover the fisher in the event of death, injury or illness in connection with their work on board the vessel; and [new provision]
- (k) any other particulars which national law might require. [new provision]

## **D. Proposed Conclusions with a view to a Recommendation**

### **PART I. CONDITIONS FOR WORK ON BOARD FISHING VESSELS**

#### *1.1. Protection of young persons*

44. Members should establish the requirements for the prior training of persons between 16 and 18 years of age working on board fishing vessels, taking into account international instruments concerning training for work on board fishing vessels, including occupational safety and health issues such as: night work, hazardous tasks, work with dangerous machinery, manual handling and transport of heavy loads, work in high latitudes, work for excessive periods of time and other relevant issues identified after an assessment of the risks concerned.

45. The training of persons between 16 and 18 years of age might be provided through participation in an apprenticeship or approved training programme, which should operate under established rules and be monitored by the competent authority and should not interfere with the person's general education. [drawn from a concept in C. 112]

46. Members should take measures to ensure that the safety, lifesaving and survival equipment carried on board fishing vessels carrying persons under the age of 18 is appropriate for the young persons concerned.

#### *1.2. Medical examination*

Nature of medical examination and content of medical certificate

47. When prescribing the nature of the examination, Members should pay due regard to the age of the person to be examined and the nature of the duties to be performed.

48. In particular, the medical certificate should attest that the person is not suffering from any disease likely to be aggravated by or to render them unfit for service on board a fishing vessel or likely to endanger the health of other persons on board.

#### Medical certificate

49. The certificate should be signed by a medical practitioner approved by the competent authority.

#### Period of validity of the medical certificate

50. In the case of young persons of less than 21 years of age, the medical certificate should remain in force for a period not exceeding one year from the date on which it was granted.

51. In the case of persons who have attained the age of 21 years, the competent authority should determine the period for which the medical certificate should remain in force.

52. If the period of validity of a certificate expires in the course of a voyage, the certificate should continue in force until the end of that voyage.

#### Right to administrative appeal

53. Arrangements should be made to enable a person who, after examination, is determined to be unfit for work on board fishing vessels, or on board certain types of vessels, or for certain types of work on board vessels, to apply for a further examination by a medical referee or referees who should be independent of any fishing vessel owner or of any organization of fishing vessel owners or fishers.

#### International guidance

54. Competent authorities should take into account international guidance on medical examination and certification of persons working at sea, such as the ILO/WHO *Guidelines for Conducting Pre-sea and Periodic Medical Fitness Examinations for Seafarers*.

#### Special measures

55. For fishers exempted from the application of the provisions concerning medical examination in the Convention, the competent authority should take alternative adequate measures to provide health surveillance for the purpose of occupational safety and health.

### *1.3. Competency and training*

56. Members should:

- (a) ensure that competencies required for skippers, mates, engineers and other persons working on board fishing vessels take into account generally accepted international standards concerning training and competencies of fishers;

- (b) address, with regard to the vocational training of fishers, the issues of: national planning and administration, including coordination; financing and training standards; training programmes, including pre-vocational training and short courses for working fishers; methods of training; and international cooperation;
- (c) ensure that there is no discrimination with regard to access to training.

## PART II. CONDITIONS OF SERVICE

### *Record of service*

57. At the end of each voyage, a record of service in regard to that voyage should be available to the fisher concerned or entered in their service book.

### *Special measures*

58. For fishers excluded from the scope of the Convention, the competent authority should take measures to provide them with adequate protection with respect to their conditions of work and with means of dispute settlement.

## PART III. HEALTH PROTECTION, MEDICAL CARE AND SOCIAL SECURITY

### *III.1. Medical care on board*

59. The competent authority should establish the list of medical supplies and equipment to be carried on fishing vessels appropriate to the risks concerned.

60. Fishing vessels carrying 100 or more fishers and ordinarily engaged in international voyages of more than three days' duration should carry a qualified medical doctor.

61. Fishers should receive training in basic first aid in accordance with national laws and regulations, taking into account applicable international instruments.

62. There should be a standard medical report form specially designed to facilitate the confidential exchange of medical and related information concerning individual fishers between the fishing vessel and the shore in cases of illness or injury.

### *III.2. Occupational safety and health*

63. In order to contribute to the continuous improvement of safety and health of fishers, member States should have in place programmes for the prevention of accidents on board fishing vessels which should, inter alia, provide for the gathering and dissemination of occupational health and safety materials, research and analysis.

64. Information concerning particular hazards should be brought to the attention of all fishers and other persons on board through official notices containing instructions or guidance on such hazards or other appropriate means.

65. When establishing methods and programmes concerning safety and health of fishers, the competent authority should take into consideration technological progress and knowledge in the field of occupational safety and health, as well as relevant international instruments.

Technical specifications

66. Members should, to the extent practicable and as appropriate to the conditions in the fishing sector, address the following:

- (a) seaworthiness and stability of fishing vessels;
- (b) radio communications;
- (c) temperature, ventilation and lighting of working areas;
- (d) mitigation of the slipperiness of deck surfaces;
- (e) machinery safety, including guarding of machinery;
- (f) vessel familiarization for fishers or fisheries observers new to the vessel;
- (g) personal protective equipment;
- (h) fire-fighting and lifesaving;
- (i) loading and unloading of the vessel;
- (j) lifting gear;
- (k) anchoring and mooring equipment;
- (l) safety and health in living quarters;
- (m) noise and vibration in work areas;
- (n) ergonomics, including in relation to the layout of workstations and manual lifting and handling;
- (o) equipment and procedures for the catching, handling, storage and processing of fish and other marine resources;
- (p) vessel design, construction and modification relevant to occupational safety and health;
- (q) navigation and vessel handling;
- (r) hazardous materials used on board the vessel;
- (s) safe means of access to and exit from fishing vessels in port;
- (t) special safety and health requirements for young persons;
- (u) prevention of fatigue;
- (v) other issues related to safety and health.

### Occupational safety and health management systems

67. (1) When establishing methods and programmes concerning safety and health in the fishing sector, competent authorities should take into account any relevant international guidelines concerning occupational safety and health management systems, including the ILO's *Guidelines on occupational safety and health management systems*.

(2) Risk evaluation in relation to fishing should be conducted as appropriate, with the participation of fishers or their representatives.

68. Members should establish a list of diseases known to arise out of exposure to substances or dangerous conditions in the fishing sector.

### *III.3. Social security*

69. (1) Members should take measures to extend social protection progressively to all fishers.

(2) To this end, Members should maintain up-to-date information on the:

- (a) percentage of fishers covered;
- (b) range of contingencies covered; and
- (c) level of benefits.

70. The benefits referred to in *Point 37* of the Convention should be granted throughout the contingency. [drawn from C. 102, Art. 38 and C. 121, Art. 9(3)]

### Common provisions

71. Every claimant should have a right of appeal in the case of refusal of the benefit or complaint as to quality and quantity of the benefit.

72. Members should take steps to secure the protection of foreign fishers, including by entering into agreements to that effect.

## PART IV. OTHER PROVISIONS

73. In its capacity as a coastal State, a Member might require, when it grants licences for fishing in its exclusive economic zone, that fishing vessels comply with the standards of the Convention.

**Annex II**  
**[not currently attached to either the Convention or Recommendation]**

**Accommodation on board fishing vessels [modified from C. 126]**

PART I. GENERAL PROVISIONS

1. The provisions of this annex should apply to fishing vessels [of more than 24.4 m in length].

2. This annex might be applied to vessels of [between 13.7 and 24.4 m] in length where the competent authority determines, after consultation, that this is reasonable and practicable.

3. In respect of vessels which normally remain away from their home ports for periods of less than 36 hours and in which the crew does not live permanently on board when in port, the provisions concerning the following do not apply:

- (a) lighting in paragraph 35 below;
- (b) sleeping rooms;
- (c) mess rooms;
- (d) sanitary accommodation;
- (e) sick bay;
- (f) space to hang oilskins;
- (g) cooking equipment and galley.

4. In the case of vessels referred to in paragraph 3 above, adequate sanitary installations as well as messing and cooking facilities and accommodation for resting are provided.

5. The provisions of Part III of this annex might be varied in the case of any vessel if the competent authority is satisfied, after consultation, that the variations to be made provide corresponding advantages as a result of which the overall conditions are no less favourable than those that would result from the full application of the provisions of the annex.

PART II. PLANNING AND CONTROL OF CREW ACCOMMODATION

6. Before the construction of a fishing vessel is begun, and before the crew accommodation of an existing vessel is substantially altered or reconstructed, detailed plans of, and information concerning, the accommodation should be submitted to the competent authority for approval.

7. The competent authority should inspect the vessel and satisfy itself that the crew accommodation complies with the requirements of the laws or regulations or other measures, on every occasion when:

- (a) a fishing vessel is registered or re-registered;
- (b) the crew accommodation of a vessel has been substantially altered or reconstructed; or
- (c) a complaint that the crew accommodation is not in compliance with the terms of this annex has been made to the competent authority in the prescribed manner and in time to prevent any delay to the vessel, by a recognized fishers' organization representing all or part of the crew or by a prescribed number or proportion of the members of the crew of the vessel.

### PART III. CREW ACCOMMODATION REQUIREMENTS

#### *General accommodation standards [based on C. 126, Art. 6]*

8. The location, means of access, structure and arrangement of crew accommodation in relation to other spaces should be such as to ensure adequate security, protection against weather and sea and insulation from heat or cold, undue noise or effluvia from other spaces.

9. Emergency escapes should be provided from all crew accommodation spaces as necessary.

10. Every effort should be made to exclude direct openings into sleeping rooms from fish holds and fish meal rooms, from spaces for machinery, from galleys, lamp and paint rooms or from engine, deck and other bulk store rooms, drying rooms, communal wash places or water closets. That part of the bulkhead separating such places from sleeping rooms and external bulkheads should be efficiently constructed of steel or other approved substance and should be watertight and gastight.

11. External bulkheads of sleeping rooms and mess rooms should be adequately insulated. All machinery casings and all boundary bulkheads of galleys and other spaces in which heat is produced should be adequately insulated when there is a possibility of resulting heat effects in adjoining accommodation or passageways. Care should also be taken to provide protection from heat effects of steam and/or hot-water service pipes.

12. Internal bulkheads should be of approved material which is not likely to harbour vermin.

13. Sleeping rooms, mess rooms, recreation rooms and passageways in the crew accommodation space should be adequately insulated to prevent condensation or over-heating.

14. Main steam and exhaust pipes for winches and similar gear should, whenever technically possible, not pass through crew accommodation or through passageways leading to crew accommodation; where they do pass through such accommodation or passageways they should be adequately insulated and encased.

15. Inside panelling or sheeting should be of material with a surface easily kept clean. Tongued and grooved boarding or any other form of construction likely to harbour vermin should not be used.

16. The competent authority should decide to what extent fire prevention or fire retarding measures should be required to be taken in the construction of the accommodation.

17. The wall surface and deck heads in sleeping rooms and mess rooms should be easily kept clean and, if painted, should be light in colour; lime wash should not be used.

18. The wall surfaces should be renewed or restored as necessary.

19. The decks in all crew accommodation should be of approved material and construction and should provide a surface impervious to damp and easily kept clean.

20. Overhead exposed decks over crew accommodation should be sheathed with wood or equivalent insulation.

21. Where the floorings are of composition the joining with sides should be rounded to avoid crevices.

22. Sufficient drainage should be provided.

23. All practicable measures should be taken to protect crew accommodation against the admission of flies and other insects.

*Noise and vibration [new provision, not from C. 126]*

24. Noise and vibration in accommodation spaces should not exceed limits established by the competent authority taking into account international instruments.

*Ventilation [based on C. 126, Art. 7]*

25. Sleeping rooms and mess rooms should be adequately ventilated taking into account climatic conditions.

26. The system of ventilation should be controlled so as to maintain the air in a satisfactory condition and to ensure a sufficiency of air movement in all conditions of weather and climate.

27. Vessels regularly engaged on voyages in the tropics and other areas with similar climatic conditions should, as required by such conditions, be equipped both with mechanical means of ventilation and with electric fans, provided that one only of these means need be adopted in spaces where this ensures satisfactory ventilation.

28. Vessels engaged elsewhere should be equipped either with mechanical means of ventilation or with electric fans. The competent authority might exempt vessels normally employed in the cold waters of the northern or southern hemispheres from this requirement.

29. Power for the operation of the aids to ventilation required should, when practicable, be available at all times when the crew is living or working on board and conditions so require.

*Heating [based on C. 126, Art. 8]*

30. An adequate system of heating the crew accommodation should be provided taking into account climatic conditions.

31. The heating system should, when practicable, be in operation at all times when the crew is living or working on board and conditions so require.

32. The heating system should be capable of maintaining the temperature in crew accommodation at a satisfactory level under normal conditions of weather and climate likely to be met with on service; the competent authority should prescribe the standard to be provided.

33. Radiators and other heating apparatus should be so placed and, where necessary, shielded and fitted with safety devices so as to avoid risk of fire or danger or discomfort to the occupants.

*Lighting [based on C. 126, Art. 9]*

34. All crew spaces should be adequately lighted. The minimum standard for natural lighting in living rooms should be such as to permit a person with normal vision to read on a clear day an ordinary newspaper in any part of the space available for free movement. When it is not possible to provide adequate natural lighting, artificial lighting of the above minimum standard should be provided.

35. In all vessels electric lights should, as far as practicable, be provided in the crew accommodation. If there are not two independent sources of electricity for lighting, additional lighting should be provided by properly constructed lamps or lighting apparatus for emergency use.

36. Artificial lighting should be so disposed as to give maximum benefit to the occupants of the room.

37. Adequate reading light should be provided for every berth in addition to the normal lighting of the cabin.

38. A permanent blue light should, in addition, be provided in the sleeping room during the night.

*Sleeping rooms [based on C. 126, Art. 10, reduced text]*

39. Sleeping rooms should be situated amidships or aft; the competent authority might, in particular cases, if the size, type or intended service of the vessel renders any other location unreasonable or impracticable, permit the location of sleeping rooms in the fore part of the vessel but in no case forward of the collision bulkhead.

40. The floor area per person of sleeping rooms, excluding space occupied by berths and lockers, should not be less than:

- (a) in vessels of [13.7] metres but below [19.8] metres in length: [0.5] square metre;
- (b) in vessels of [19.8] metres but below [26.8] metres in length: [0.75] square metre;
- (c) in vessels of [26.8] metres but below [35.1] metres in length: [0.9] square metre;
- (d) in vessels of [35.1] metres in length or over: [1.0] square metre.

41. The clear head room in the crew sleeping room should, wherever possible, be not less than 1.90 m.

42. There should be a sufficient number of sleeping rooms to provide a separate room or rooms for each department.

43. The number of persons allowed to occupy sleeping rooms should not exceed the following maxima:

- (a) officers: one person per room wherever possible, and in no case more than two;
- (b) ratings: two or three persons per room wherever possible, and in no case more than the following:
  - (i) in vessels of [35.1] metres in length and over, four persons;
  - (ii) in vessels under [35.1] metres in length, six persons.

44. The competent authority might permit exceptions to the requirements of the preceding two paragraphs in particular cases if the size, type or intended service of the vessel make these requirements unreasonable or impracticable.

45. The maximum number of persons to be accommodated in any sleeping room should be legibly and indelibly marked in some place in the room where it can conveniently be seen.

46. Members of the crew should be provided with individual berths of adequate dimensions. Berths should not be placed side by side in such a way that access to one berth can be obtained only over another.

47. Berths should not be arranged in tiers of more than two; in the case of berths placed along the vessel's side, there should be only a single tier where a sidelight is situated above a berth.

48. The lower berth in a double tier should not be less than [0.30] metres above the floor; the upper berth should be placed approximately midway between the bottom of the lower berth and the lower side of the deck head beams.

49. The minimum inside dimensions of a berth should, wherever practicable, be 1.90 m by 0.68 m.

50. The framework and the lee-board, if any, of a berth should be of approved material, hard, smooth and not likely to corrode or to harbour vermin.

51. If tubular frames are used for the construction of berths, they should be completely sealed and without perforations which would give access to vermin.

52. Each berth should be fitted with a spring mattress of approved material or with a spring bottom and a mattress of approved material. Stuffing of straw or other material likely to harbour vermin should not be used.

53. When one berth is placed over another, a dust-proof bottom of wood, canvas or other suitable material should be fitted beneath the upper berth.

54. Sleeping rooms should be so planned and equipped as to ensure reasonable comfort for the occupants and to facilitate tidiness.

55. The furniture should include a clothes locker for each occupant, fitted with a hasp for a padlock and a rod for holding clothes on hangers. The competent authority should ensure that the locker is as commodious as practicable.

56. Each sleeping room should be provided with a table or desk which might be of the fixed, drop-leaf or slide-out type, and with comfortable seating accommodation as necessary.

57. The furniture should be of smooth, hard material not liable to warp or corrode or to harbour vermin.

58. The furniture should include a drawer or equivalent space for each occupant which should, wherever practicable, be not less than 0.056 cubic metre.

59. Sleeping rooms should be fitted with curtains for the sidelights.

60. Sleeping rooms should be fitted with a mirror, small cabinets for toilet requisites, a book rack and a sufficient number of coat hooks.

61. As far as practicable, berthing of crew members should be so arranged that watches are separated and that no day-worker share a room with watch keepers.

*Mess rooms [based on C. 126, Art. 11]*

62. Mess room accommodation separate from sleeping quarters should be provided in all vessels carrying a crew of more than ten persons. Wherever possible it should be provided also in vessels carrying a smaller crew. If, however, this is impracticable, the mess room might be combined with the sleeping accommodation.

63. In vessels engaged in fishing on the high seas and carrying a crew of more than 20, separate mess room accommodation might be provided for the skipper and officers.

64. The dimensions and equipment of each mess room should be sufficient for the number of persons likely to use it at any one time.

65. Mess rooms should be equipped with tables and approved seats sufficient for the number of persons likely to use them at any one time.

66. Mess rooms should be as close as practicable to the galley.

67. Where pantries are not accessible to mess rooms, adequate lockers for mess utensils and proper facilities for washing them should be provided.

68. The tops of tables and seats should be of damp-resisting material without cracks and easily kept clean.

69. Wherever practicable mess rooms should be planned, furnished and equipped to give recreational facilities.

*Sanitary accommodation [based on C. 126, Art. 12]*

70. Sufficient sanitary accommodation, including washbasins and tub or shower, should be provided in all vessels.

71. Sanitary facilities for all members of the crew who do not occupy rooms to which private facilities are attached should, wherever practicable, be provided for each department of the crew on the following scale:

(a) one tub or shower for every eight persons or less;

(b) one water closet for every eight persons or less;

(c) one washbasin for every six persons or less.

72. Cold fresh water and hot fresh water or means of heating water should be available in all communal wash places. The competent authority, after consultation, might fix the minimum amount of fresh water which should be supplied per person per day.

73. Washbasins and tub baths should be of adequate size and constructed of approved material with a smooth surface not liable to crack, flake or corrode.

74. All water closets should have ventilation to the open air, independently of any other part of the accommodation.

75. The sanitary equipment to be placed in water closets should be of an approved pattern and provided with an ample flush of water, available at all times and independently controllable.

76. Soil pipes and waste pipes should be of adequate dimensions and should be constructed so as to minimize the risk of obstruction and to facilitate cleaning. They should not pass through fresh water or drinking water tanks; neither should they, if practicable, pass overhead in mess rooms or sleeping accommodation.

77. Sanitary accommodation intended for the use of more than one person should comply with the following requirements:

(a) floors should be of approved durable material, easily cleaned and impervious to damp and should be properly drained;

(b) bulkheads should be of steel or other approved material and should be watertight up to at least 0.23 m above the level of the deck;

(c) the accommodation should be sufficiently lighted, heated and ventilated.

78. Water closets should be situated convenient to, but separate from, sleeping rooms and washrooms, without direct access from the sleeping rooms or from a passage between sleeping rooms and water closets to which there is no other access, provided that this requirement should not apply where a water closet is located between two sleeping rooms having a total of not more than four persons. Where there is more than one water closet in a compartment they should be sufficiently screened to ensure privacy.

79. Facilities for washing and drying clothes should be provided on a scale appropriate to the size of the crew and the normal duration of the voyage.

80. The facilities for washing clothes should include suitable sinks equipped with drainage, which might be installed in washrooms if separate laundry accommodation is not reasonably practicable. The sinks should be provided with an adequate supply of cold fresh water and hot fresh water or means of heating water.

81. The facilities for drying clothes should be provided in a compartment separate from sleeping rooms, mess rooms and water closets, adequately ventilated and heated and equipped with lines or other fittings for hanging clothes.

*Sick bay [based on C. 126, Art. 13]*

82. Whenever possible, an isolated cabin should be provided for a member of the crew who suffers from illness or injury. On vessels of 45.7 m or over in length, there should be a sick bay.

*Space to hang oilskins [based on C. 126, Art. 14]*

83. Sufficient and adequately ventilated accommodation for the hanging of oilskins should be provided outside but convenient to the sleeping rooms.

*Clean and habitable condition [based on C. 126, Art. 15]*

84. Crew accommodation should be maintained in a clean and decently habitable condition and should be kept free of goods and stores which are not the personal property of the occupants.

*Cooking equipment and galley [based on C. 126, Art. 16]*

85. Satisfactory cooking equipment should be provided on board and should, wherever practicable, be fitted in a separate galley.

86. The galley should be of adequate dimensions for the purpose and should be well lit and ventilated.

87. The galley should be equipped with cooking utensils, the necessary number of cupboards and shelves, and sinks and dish racks of rust-proof material and with satisfactory drainage. Drinking water should be supplied to the galley by means of pipes. Where it is supplied under pressure, the system should contain protection against backflow. Where hot water is not supplied to the galley, an apparatus for heating water should be provided.

88. The galley should be provided with suitable facilities for the preparation of hot drinks for the crew at all times.

89. A provision storeroom of adequate capacity should be provided which can be kept dry, cool and well ventilated in order to avoid deterioration of the stores. Where necessary, refrigerators or other low-temperature storage space should be provided.

90. Where butane or propane gas is used for cooking purposes in the galley the gas containers should be kept on the open deck.

PART IV. APPLICATION TO EXISTING SHIPS [BASED ON C. 126, ART. 17]

91. The requirements of this annex should apply to fishing vessels constructed subsequent to the coming into force of the proposed Convention for the Member concerned.

## ANNEX II

### Relevant European Union directives

Council Directive 91/533/EEC	Council Directive 91/533/EEC of 14 October 1991 on an employer's obligation to inform employees of the conditions applicable to the contract or employment relationship
Council Directive 92/29/EEC	Council Directive 92/29/EEC of 31 March 1992 on the minimum safety and health requirements for improved medical treatment on board vessels
Council Directive 93/103/EC	Council Directive 93/103/EC of 23 November 1993 concerning the minimum safety and health requirements for work on board fishing vessels
Council Directive 93/104/EC	Council Directive 93/104/EC of 23 November 1993 concerning certain aspects of the organization of working time
Council Directive 94/33/EC	Council Directive 94/33/EC of 22 June 1994 on the protection of young people at work
Council Directive 97/70/EC	Council Directive 97/70/EC of 11 December 1997 setting up a harmonized safety regime for fishing vessels of 24 m in length and over
Commission Directive 1999/19/EC	Commission Directive 1999/19/EC of 18 March 1999 amending Council Directive 97/70/EC setting up a harmonized safety regime for fishing vessels of 24 m in length and over
Council Directive 1999/63/EC	Council Directive 1999/63/EC of 21 June 1999 concerning the agreement on the organization of working time of seafarers concluded by the European Community Shipowners' Association (ECSA) and the Federation of Transport Workers' Unions in the European Union (FST)
Directive 2000/34/EC	Directive 2000/34/EC of the European Parliament and of the Council of 22 June 2000

amending Council Directive 93/104/EC concerning certain aspects of the organization of working time to cover sectors and activities excluded from that Directive

**Fifth item on the agenda: Work in the fishing sector – A discussion with a view to the adoption of a comprehensive standard (a Convention supplemented by a Recommendation)**  
(first discussion)

**Report of the Committee on the Fishing Sector**

1. The Committee on the Fishing Sector held its first sitting on 1 June 2004. It was originally composed of 117 members (59 Government members, 22 Employer members and 36 Worker members). To achieve equality of voting strength, each Government member entitled to vote was allotted 396 votes, each Employer member 1,062 votes and each Worker member 649 votes. The composition of the Committee was modified 11 times during the session and the number of votes attributed to each member adjusted accordingly.<sup>1</sup>

<sup>1</sup> The modifications were as follows:

- (a) 2 June: 136 members (71 Government members entitled to vote with 200 votes each, 25 Employer members with 568 votes each and 40 Worker members with 355 votes each);
- (b) 3 June: 129 members (78 Government members entitled to vote with 35 votes each, 21 Employer members with 130 votes each and 30 Worker members with 91 votes each);
- (c) 4 June: 126 members (80 Government members entitled to vote with 105 votes each, 21 Employer members with 400 votes each and 25 Worker members with 336 votes each);
- (d) 5 June: 127 members (82 Government members entitled to vote with 253 votes each, 22 Employer members with 943 votes each and 23 Worker members with 902 votes each);
- (e) 7 June (morning): 126 members (82 Government members entitled to vote with 483 votes each, 21 Employer members with 1,886 votes each and 23 Worker members with 1,722 votes each);
- (f) 7 June (afternoon): 126 members (84 Government members entitled to vote with 6 votes each, 18 Employer members with 28 votes each and 24 Worker members with 21 votes each);
- (g) 8 June: 126 members (84 Government members entitled to vote with 6 votes each, 18 Employer members with 28 votes each and 24 Worker members with 21 votes each);
- (h) 9 June: 118 members (85 Government members entitled to vote with 18 votes each, 15 Employer members with 102 votes each and 18 Worker members with 85 votes each);
- (i) 10 June: 114 members (85 Government members entitled to vote with 42 votes each, 15 Employer members with 238 votes each and 14 Worker members with 255 votes each);

---

2. The Committee elected its Officers as follows:

*Chairperson:* Mr. F. Ribeiro Lopes (Government member, Portugal) at its first sitting

*Vice-Chairpersons:* Ms. R. Karikari Anang (Employer member, Ghana); and Mr. O. Irabor (Worker member, Nigeria) at its first sitting, Mr. P. Mortensen (Worker member, Denmark) as of the third sitting

*Reporter:* Mr. G. Boumbopoulos (Government member, Greece) at its fourth sitting

3. At its 15th sitting the Committee appointed a Drafting Committee composed of the following members: Ms. M. Martyn (Government member, United Kingdom), Mr. A. Moussat (Government member, France) and Mr. M. Peron (adviser, France); Ms. R. Karikari Anang (Employer member, Ghana), Mr. A. Piggott (Employer member, United Kingdom), Mr. J. Dejardin (adviser, International Organisation of Employers); and Ms. B. Perkins (adviser, International Organisation of Employers), Mr. M. Claes (Worker member, Belgium), Ms. P. Schantz (Worker member, United States), Mr. J. Whitlow (adviser, International Transport Workers Federation), Mr. R. Karavatchev (adviser, International Transport Workers Federation); and the Reporter, Mr. G. Boumbopoulos (Government member, Greece) (*ex officio*).

4. The Committee held 20 sittings. The Committee had before it Reports V(1) and V(2), prepared by the Office on the fifth item of the agenda of the Conference: Conditions of work in the fishing sector.

## Introduction

5. The Chairperson thanked the Committee for his election and recalled that the purpose of this first consideration of a new comprehensive standard was to strengthen decent work in the fishing sector, to promote opportunities for women and men to obtain decent and productive work, in conditions of freedom, equity, security and humanity. While many fishers were working under conditions consistent with that goal, there were also many who might be considered to be among the more vulnerable groups of workers. It would be a challenge to prepare a standard that did justice to the great diversity of the sector, the many types and sizes of vessels, the variety of fishing operations, and the different levels of development in the States concerned. That standard should provide protection for a good portion of the world's fishing population. It should be able to attract wide ratification in order to have a real impact on the lives of fishers. Finally, it must complement the work of other United Nations system agencies without losing sight of ILO's decent work objectives. The Chairperson stressed the time constraints facing the Committee and the objective of preparing for the second discussion at the International Labour Conference in 2005.

- (j) 11 June: 114 members (85 Government members entitled to vote with 42 votes each, 15 Employer members with 238 votes each and 14 Worker members with 255 votes each);
- (k) 14 June: 108 members (85 Government members entitled to vote with 132 votes each, 12 Employer members with 935 votes each and 11 Worker members with 1020 votes each).

- 
6. The representative of the Secretary-General introduced the Office reports, which would serve as the basis of the Committee's work. Report V(1) provided an overview of law and practice in ILO member States concerning labour conditions in the fishing sector. It contained a questionnaire concerning the possible structure and content of a comprehensive standard for work in the sector. Responses to the questionnaire had been received from 83 Governments, 35 workers' and 13 employers' organizations in time to be summarized in Report V(2). On the basis of those replies and the additional guidance provided by the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector held in 2003, the Office had formulated the proposed Conclusions, which were also found in Report V(2).
  7. The Committee was called upon to revise seven fishing instruments (five Conventions and two Recommendations), which dealt with minimum age, medical examination, articles of agreement, accommodation and food and training. New issues that were not covered by existing instruments included identity documents, repatriation, recruitment, medical care at sea, occupational safety and health, social security protection and compliance and enforcement. The structure of the proposed Conclusions reflected the decision by the Governing Body that the instrument should take the form of a Convention supplemented by a Recommendation. However, the possibility had been raised of drafting an instrument in the form of a consolidated framework Convention, similar to that under consideration in the draft consolidated maritime labour Convention for seafarers. The Committee might wish to further consider this matter.
  8. Highlighting some of the issues to be discussed, the speaker noted that the scope provisions were broadly formulated, but with flexibility as to possible exclusions. They covered all fishers, types of vessels and areas where fishing operations took place. The aim was to provide protection for fishers working on small vessels close to shore, as well as for those working on distant-water vessels that remained at sea for extended periods. Finding the appropriate balance of protection for different categories of fishers was an important challenge. The proposed Conclusions contained two Annexes. Annex I contained the particulars to be included in fishers' work agreements and, as currently proposed, would have the same legal status as the Convention text. Annex II contained specifications concerning accommodation and thus complemented Part V of the proposed Conclusions. Finding the appropriate balance between mandatory and non-mandatory requirements regarding accommodation would be important.
  9. Although fishing operations differed substantially from shipping operations, fishers working on larger vessels that operated internationally often faced problems similar to those experienced by seafarers on merchant ships. Many of the ILO standards for seafarers were, or could be, applied to fishers. Broadly speaking, fishers were normally not excluded from the legislation applying to seafarers. In some cases, however, legislation for seafarers was supplemented with provisions that specifically applied to fishers. With these considerations in mind, the Committee would also need to take account of the relationship between the proposed maritime labour Convention, which would exclude fishers, and the Conclusions this Committee would adopt.
  10. The speaker urged the Committee to bear in mind the mandates, activities and standards of other United Nations agencies, in particular the International Maritime Organization and the Food and Agriculture Organization, in order to avoid conflict or overlap with other international instruments. The proposed Conclusions also sought to avoid duplication of up-to-date standards relevant to fishing, whether the instruments were ILO standards or those of other bodies. She concluded by expressing the hope that Committee members would work together to develop Conclusions that would pave the way for the adoption of a

---

practical, balanced, widely-ratifiable and forward-looking standard – one that would provide effective protection for the world’s 35 million fishers and their dependants.

## General discussion

11. The Employer Vice-Chairperson noted that a new instrument for the fishing sector was being discussed despite the existence of five earlier Conventions and two Recommendations. The Committee should be guided in its deliberations by an understanding of the reasons why few governments could ratify the existing instruments. Widespread ratification of the new instrument was an important goal. About 90 per cent of employment in the fishing sector was on micro- and small fishing vessels; only 5 per cent was on large fishing vessels. Micro- and small enterprises were common in both developed and developing countries. The Conclusions should aim for flexibility and balance so as to provide basic protection for all fishers, without eroding the standards enjoyed by some. Forty years had elapsed since the adoption of the last standard for the fishing sector and many changes had affected the industry. The primary goal of the ILO was to promote opportunities for men and women to obtain decent and productive work, and that meant the creation and maintenance of decent jobs. Improvements in the living and working conditions of fishers would undoubtedly lead to greater productivity as well. Her group was willing to engage in frank discussions for the purpose of developing a Convention accompanied by a Recommendation, with a view to maintaining jobs, promoting economic development and providing basic protection for all fishers.
12. The Worker spokesperson pointed out that the fishing industry had been designated by the ILO as being hazardous and had a substantial decent work deficit. The Workers’ group was disappointed with the proposed Conclusions. A “one-size fits all” approach could not work, since there were vast differences in operations, conditions of employment and types of vessels. The adoption of a new ILO Convention should not compromise or conflict with the standards of other international organizations, in particular the FAO/ILO/IMO Code of Safety for Fishermen and Fishing Vessels currently being finalized. The Workers’ group appreciated the fact that the preparations for the meeting had promoted consultations with the social partners and hoped that its fundamental concerns would be addressed. A working group should be established with suitable terms of reference and the capacity to work in a flexible manner in order to build on the existing text and provide a framework for the production of meaningful standards.
13. The Government member of Ireland, whose country currently held the European Union presidency, expressed full support for the development of comprehensive standards. His delegation looked forward to engaging in discussions with the social partners.
14. The Government member of Namibia commended the Office for its excellent documents, which provided a strong basis for informed decision-making. His delegation supported the establishment of a working party.
15. The Government member of Norway was pleased to see new standards for the fishing sector on the agenda of the International Labour Conference. The challenge was to develop a standard that would be widely applicable, relevant and enforceable. A primary focus should be on occupational safety and health in order to reduce accidents in this hazardous occupation. Standards of accommodation needed to be updated and upgraded. Annex II should be made mandatory. Current European Union (EU) legislation could provide guidance on hours of rest. The format of the instrument could be similar to that of the Seafarers’ Identity Documents Convention (Revised), 2003 (No. 185), and the consolidated maritime labour Convention now under consideration. That is, one section

---

could be made mandatory, but in addition, ratifying States would have an obligation to give due consideration to the guidance provided in the non-mandatory section of the instrument. A simplified amendment procedure could be included to keep the standard up to date. Finally, port state control should be given careful consideration, and enforcement should be improved.

- 16.** The Government member of Australia welcomed the rationalization of ILO standards in the fishing industry. Any new Convention should cover vessels carrying out international voyages. Fishing vessels engaged in local and coastal voyages should be covered by national legislation. A size limit should be adopted. Guidance in this regard could be sought from the Accommodation of Crews (Fishermen) Convention, 1966 (No. 126). The Convention should specify broad principles regarding goals and protection, but be flexible enough to accommodate different national situations. Port state control provisions should be mandatory, with the primary responsibility lying with the flag State. In view of the upcoming Maritime Session of the International Labour Conference in 2005, it was important for the future discussion on seafarers that delegates be aware of the deliberations of this Committee.
- 17.** The Government member of Lebanon wanted to see a flexible instrument, similar to a framework Convention, that could cover all types of vessels, be applicable to widely varying conditions and include provisions on occupational safety and health. The Recommendation should be clear and concise and contain guidance on sustainable fishing. Codes of practice and guidelines also had a role to play. It might be useful to recall the main principles of other relevant instruments in the Preamble.
- 18.** The Government member of the United Kingdom stated that the proposed Conclusions provided an excellent basis for discussion and provided the basis for a widely ratifiable Convention. The main principles were set out clearly and concisely, but took account of the diverse nature of the fishing industry. The main responsibility for ensuring that standards were implemented and enforced was placed on member States in relation to their flag fishing vessels, which was entirely appropriate given the predominance of small vessels and operations in the sector.
- 19.** The Government member of South Africa said that a new comprehensive instrument relating to the fishing sector would be an important building block in the struggle for decent work. The outcome would be measured by the improvement in the quality of life for all. His delegation would be guided by the following principles: (i) an integrated approach to standard setting, (ii) non-erosion of existing protection, (iii) style, language and drafting consistent with existing instruments, and (iv) sufficient flexibility to enable wide ratification.
- 20.** The Government member of China declared that his country was ready to improve living and working conditions of fishers and help to promote decent work. Raising productivity was essential to achieving this. There should be more job opportunities in the sector in order to increase income and ensure food supply. His delegation supported including provisions on social security, occupational safety and health and working conditions.
- 21.** The Government member of Mozambique welcomed the development of a Convention and a Recommendation on fishing, as the guidance that these instruments would provide would simplify procedures and the way in which fishing issues were dealt with at the national level.

- 
- 22.** The Government member of Canada remarked that normally his country did not support sector-specific ILO instruments. However, the fishing sector was unique, and most member States that ratified the maritime Conventions did not avail themselves of the possibility of extending protection to fishers. It was, therefore, necessary to develop a sector-specific international labour standard relating to the fishing sector with particular focus on occupational safety and health. The text should provide strong protection for fishers and be flexible enough to accommodate diverse operations, conditions and employment relationships. Furthermore, it should not be overly prescriptive since this would pose obstacles to ratification.
  - 23.** The Government members of Denmark, India, Nigeria, Portugal, and Thailand echoed the call for a Convention, which could be widely ratified. To ensure ratification by as many member States as possible, the Government member of Japan urged the Committee to follow the approach taken with the consolidated maritime labour Convention and introduce the concept of “substantial equivalence” to avoid over-prescription while ensuring desired outcomes. The Government member of China stated that the new Convention should take into account different economic levels as well as the national laws and regulations of member States.
  - 24.** The Government members of Argentina, Brazil, Chile, Denmark, India and Portugal all stressed that the new instrument should be flexible in order to achieve widespread ratification. The Government member of India hoped that the new Convention and Recommendation would provide protection for fishers at sea and define the responsibilities of governments, employers and workers.
  - 25.** The Government member of Japan stated that lack of realism had prevented the earlier Conventions on working conditions in the fishing sector from achieving wide ratification. The proposal of the Office to consolidate the existing instruments into a new comprehensive standard more acceptable to member States was significant. To achieve this, the text would need to take into account more fully national law and practice as well as the reality of fishing operations, particularly in small-scale family-run enterprises.
  - 26.** The Government member of Greece stated that his delegation was ready to contribute to the development of a realistic and pragmatic new instrument, which reflected the conditions in the modern fishing industry.
  - 27.** The Government member of France highlighted the need for consistency between the new instrument on the fishing sector and the consolidated maritime labour Convention, which was under discussion. To this end, it would be reasonable to look at the text of the consolidated maritime labour Convention before concluding the discussions on the fishing instruments. As the proposed Conclusions suggested, certain topics of concern to seafarers, such as repatriation, should also be covered in the new standard relating to the fishing sector.
  - 28.** The Employer Vice-Chairperson reminded the Committee that the instrument under discussion was on fishing and not the maritime sector as a whole. The two were quite distinct. The notion that the issue of repatriation was the same for fishers as it was for seafarers was unacceptable to the Employers’ group. In most countries a clear distinction was made between merchant shipping and fishing. It was important to keep this in mind since this instrument concerned the working conditions of fishers.

- 
29. With regard to the scope of the instrument, the Government member of Nigeria noted that the length of a fishing vessel should not matter, since all fishers were exposed to the same occupational dangers. Recreational fishers could be exempted, but all fishing workers needed to be covered.
  30. In light of the high level of injuries in the fishing sector, the Government member of Spain did not support the exclusion of any groups of workers from safety and health provisions.
  31. The representative of the Secretary-General stated that the current formulation of the scope provision did not refer to vessels' lengths. The intention of the Office had been that the text should apply to all vessels, while certain exclusions would be possible after consultation with representative organizations of employers and workers, as foreseen in Point 8, paragraph 1, of the proposed Conclusions.
  32. The Government member of South Africa supported the scope of the Office text, but noted that it excluded land-based fishers. In addition, the latitude given to the competent authority to exclude certain vessels should be limited so as not to dilute protection provided in other standards, such as the elimination of the worst forms of child labour.
  33. With regard to minimum age for employment, the Government member of Japan referred to the Minimum Age Convention, 1973 (No. 138), which provided that minimum age should be stipulated in accordance with the conclusion of mandatory education and, in any case, not be lower than 15 years. This seemed appropriate for the fishing sector.
  34. The Government member of Chile, also speaking on behalf of the Government members of Argentina and Brazil, expressed concern that the current definition of fisher, which was limited to fishers on board vessels, could create an obstacle to ratification. It could be desirable to incorporate a gender dimension as well.
  35. The Government member of Germany noted that the proposed Conclusions would permit exclusions as a whole and this should not be the case. Only partial exclusions should be allowed. Some flexibility was required, however, to cope with particular situations. The Convention should not apply to inland fishers, who were considered part of the agricultural sector in his country.
  36. Various issues were raised by a number of delegations concerning small-scale family-run fishing operations, which accounted for most workers in the sector. The Government member of El Salvador described the progress in occupational safety and health in his country and asked the Committee to take these advances into account as it considered the situation of small-scale and artisanal fishers. The Government member of the Bahamas added that undue financial pressures on family-operated small-scale fishing boats should be avoided. The Government member of Greece highlighted the need to ensure the ongoing operation of traditional fishing vessels.
  37. The Government members of Canada, China, France, Germany, Nigeria, Spain and Thailand were among those who emphasized the importance of occupational safety and health. The Government member of France observed that even if in practice working hours were difficult to regulate in the fishing sector, minimum periods of rest should be provided. The Convention should also guarantee a minimum level of social protection based on simple criteria. France used the number of days at sea as the basis for calculating social security benefits, as well as working time.

- 
38. The Government member of Denmark suggested that risk assessment be introduced on board each vessel in order to directly involve fishers in the implementation of the Convention. This would minimize occupational accidents on board. Chapter III of the International Convention on Standards of Training, Certification and Watchkeeping for Fishing Vessel Personnel, 1995 (STCW-F), contained excellent guidance on basic training. He urged other countries to ratify this instrument, as Denmark had recently done.
  39. The Government member of India cited the FAO Code of Conduct for Responsible Fisheries (1995), which recognized the importance of safety issues, including working and living conditions, occupational safety and health standards, education and training, safety of fishing vessels, search and rescue, and accident reporting. There was a need for awareness raising, proper training and the provision of life-saving appliances, but the lack of resources most affected small-scale fishers who depended on fishing for their livelihoods.
  40. Turning to accommodation, the Government member of Brazil observed that the status of Annex II was unclear.
  41. The representative of the Secretary-General responded that Annex II was currently attached neither to the proposed Convention, nor to the proposed Recommendation. The Office had suggested on pages 69 and 70 of Report V(2) that, due to the complexity and importance of the matter, the Committee should determine the content of Annex II and decide whether it should be mandatory or recommendatory.
  42. The Employer Vice-Chairperson suggested that the ILO might wish to convene a meeting of experts to address the rather complex issue of accommodation.
  43. The Government member of Canada suggested that Annex II should not be attached to the Convention since it was overly detailed.
  44. The Government member of Japan suggested that the provisions on accommodation on board fishing vessels be moved to the Recommendation.
  45. Concerning the issue of compliance and enforcement, the Government member of France stated that the issue was fundamental. Port state control was important, but the primary responsibility should be borne by the flag State.
  46. The Government member of Japan agreed, noting that port state control was an exception to the concept of flag state control. There were insufficient grounds for changing the principle of flag state control and member States should carefully consider whether this was necessary.
  47. A representative from the International Collective in Support of Fishworkers (ICSF) referred to his organization's work on behalf of artisanal and small-scale fishers and fishworkers. ICSF welcomed the proposal to broaden the definition of "commercial fishing" to include all but subsistence and recreational fishing in marine and inland waters. Small-scale fishing occurred in all waters. Fishing operations were changing rapidly around the world. Working and living conditions on board small-scale fishing vessels were being radically redefined with implications for employment, income, safety, health and social security of fishers. ICSF welcomed the ILO's efforts to develop new inclusive, yet flexible standards for the fishing sector, as these would facilitate the development of relevant and meaningful national legislation for both large and small-scale fishing vessels. It was important, however, to avoid dilution of existing standards for industrial fishing vessels.

- 
48. The Employer Vice-Chairperson had listened with interest to the various comments from Government members, especially those concerning a desire for an instrument that would be flexible, not too prescriptive and thus more easily ratifiable. The instrument should tackle broad issues in the fishing sector. The speaker expressed a note of caution with regard to the categories of vessels. There was no desire to erode the standards attained on larger vessels, but it was important to avoid an overly prescriptive instrument for small vessels, which accounted for 90 per cent of employment in the sector. The proposed Conclusions referred to social security protection on conditions no less favourable than for other categories of workers, but in most developing countries there was no unemployment insurance and little social security. This highlighted the need to consider the applicability of the text at the national level. Another example was that of medical examinations: in some countries they were mandatory, in others they were not. The Employers' group would prefer not to set up a working party, since the loss of expertise of Committee members would dilute the plenary discussions.
49. The Worker spokesperson restated some of his group's fundamental concerns. In their view, there had to be different requirements for vessels under 15 metres in length from those for longer vessels. The Convention should provide fishers with the same entitlement to social security protection as shore-based workers, yet the Office text did not solve the problem of fishers being excluded from coverage by article 77 of the Social Security (Minimum Standards) Convention, 1952 (No. 102). Occupational health and safety was of critical importance, yet the proposed Conclusions contained few requirements. He therefore raised four questions for consideration by the Committee as a whole. These, he felt, were fundamental for the course of future debate. (i) How should larger vessels be addressed? Should the Committee develop additional sections for vessels over 15 metres and for those over 24 metres involved in international operations? Or should the scope of application of the Convention be limited to vessels under 15 metres and an express provision be added that vessels over this threshold be covered by the consolidated maritime labour Convention which was currently being developed? Or should the Committee agree a conclusion that the Office should develop such additional sections for the next International Labour Conference? (ii) The Meeting of Experts (September 2003) agreed that fishers should be entitled to the same social security provisions as shore-based workers. However, as Convention No. 102 expressly excluded seafishermen (through Article 77), how could this be achieved? Should the Committee make Convention No. 102 applicable through an express provision, or ask the Office to further develop the social security provisions ahead of the next International Labour Conference? (iii) Existing seafarers' Conventions contained provisions to include the fishing sector. This coverage would no longer exist with the adoption of the consolidated maritime labour Convention. How was the Committee to address the removal of this coverage? and (iv) how could the Committee address occupational safety and health, since the Occupational Safety and Health Convention, 1981 (No. 155), contained a provision which encouraged the exclusion of fishing? Should the Committee insert an express provision, which removed the possibility of excluding fishing?
50. The Government member of Denmark asked the Office for some further clarification of the questions raised by the Workers' group, since some related to the proposed Conclusions and others referred to earlier ILO Conventions.
51. The representative of the Secretary-General provided the following clarification. The first question raised by the Workers' group seemed to imply that the proposed Conclusions were considered to be generally adequate for vessels under 15 metres in length, but that additional provisions might need to be envisaged for fishers working on larger vessels. Three possible options were outlined. First, the Committee might wish to develop additional provisions to address the situation of fishers on vessels between 15 and

---

24 metres in length and for those over 24 metres long. Second, the scope of the instruments could be limited to fishers on vessels under 15 metres in length. In such a case, there could be a requirement that fishers on vessels of over 15 metres be covered by the provisions of the consolidated maritime labour Convention. The third option was for the Committee to request that the Office develop further provisions for the second discussion of the fishing Convention at the International Labour Conference. As for the second question on the issue of the entitlement of fishers to the same social security coverage as that enjoyed by shore-based workers, the speaker cited Article 77, paragraph 1, of the Social Security (Minimum Standards) Convention, 1952 (No. 102), which stated that the Convention did not apply to seafarers or seafishermen and referred to the Social Security (Seafarers) Convention, 1946 (No. 70), and the Seafarers' Pensions Convention, 1946 (No. 71), which had provided for social security for those workers. Convention No. 70 had been revised by the Social Security (Seafarers) Convention (Revised), 1987 (No. 165), which had been ratified by only two countries. The scope of that Convention included all seafarers, and Article 2, paragraph 2, provided that the application could be extended to commercial maritime fishing following consultation by the competent authority with the representative organizations of fishing vessel owners and fishermen. Clearly, the issue was complex and broad legal questions had been raised by the Workers' suggestion of extending the application of Convention No. 102 to fishers. The Legal Adviser would be able to provide the Committee with further clarification. The third question asked the Committee how it would address the loss of protection afforded to fishers under existing seafarers' Conventions, once the consolidated maritime labour Convention was adopted. As regards the fourth question, Article 1, paragraph 1, of the Occupational Safety and Health Convention, 1981 (No. 155), stated that the Convention applied to all branches of economic activity and was therefore broad. However, paragraph 2 provided the possibility for excluding "in part or in whole, particular branches of economic activity, such as maritime shipping or fishing, in respect of which special problems of a substantial nature arise". The Workers had asked whether a provision could be adopted to remove the possibility of excluding fishing. Once again, because of the wider legal issues involved, the Legal Adviser could provide an opinion.

- 52.** The Legal Adviser addressed the Committee regarding the questions raised by the Workers' group. Questions 2 and 4 were examined together. Both raised points that were not just legal in nature, but included considerations of fact that could have a major impact on the possibility or the will of the Members to ratify the future instrument or that could affect the organization of the work of the Office. Those considerations should be kept in mind in light of their potential influence on the success of the future instruments. The question was how to achieve the objective whereby fishers would: (a) benefit from the same provisions relating to social security as those that apply to workers on land, taking into account the exclusion of seafishermen contained in Article 77 of the Social Security (Minimum Standards) Convention, 1952 (No. 102); and (b) be covered by the provisions of the Occupational Safety and Health Convention, 1981 (No. 155), Article 1, paragraph 2 of which makes it possible to exclude fishing from its scope of application when "special problems of a substantial nature arise".
- 53.** From a strictly legal point of view, there were several ways in which to achieve this result. One possibility would be to include some or all of the provisions of those instruments in the future Convention. An example of an inclusion of this kind was provided in Articles 9 and 10 of the Social Security (Seafarers) Convention (Revised), 1987 (No. 165). The legal consequences of an inclusion of this sort would be that the Member who ratified the new Convention would be obliged, even if it had not ratified Convention No. 102, to apply its provisions to the persons covered by the new Convention. The same would be true for any provisions of Convention No. 155 that might be included in the future Convention on fishing. It would be a matter of establishing new obligations for Members, based on their

---

ratification of the new proposed Convention. These obligations would duplicate those contained in Conventions Nos. 102 and 155, except for their scope of application, which in this case would be the fishing sector. A second possibility would be to provide that the Members who ratified the future Convention and to which Conventions Nos. 102 and 155 applied would be under the obligation to extend the protection granted to the workers covered by those Conventions to the fishing sector, notwithstanding the provisions of Article 77 of Convention No. 102 and the possibilities of exclusion stipulated in Article 1, paragraph 2, of Convention No. 155. The legal consequences of a provision of this sort would be to make it possible to extend to workers in the fishing sector, by way of the ratification of the new instrument, the protection already guaranteed to other workers through the ratification of Conventions Nos. 102 and 155. It would not, however, be possible in this manner to cover fishers from countries that had not ratified the relevant Convention or Conventions. The question would then arise as to what the social security and occupational safety and health obligations would be for Members who had not ratified those Conventions. They could be required to comply with the type of obligations set out in the Office text. An additional set of legal problems was raised by the Workers' group's third question, which related to the possible link between the proposed Convention on the fishing sector and the possible future consolidated maritime labour Convention. To the extent that it had been suggested that this future maritime Convention would be made applicable to certain categories of fishers, the Committee was faced with a problem of timing. It was certainly not desirable, and probably not even possible, for a Convention to refer to an instrument that did not yet exist and for which the text had not yet been finalized. According to the timetable as it currently stood, at the time of the adoption of the Convention on the fishing sector at the next session of the International Labour Conference, the consolidated maritime labour Convention would not yet have been adopted. There would be no reason, however, not to include a provision whereby Members would be obliged to apply to certain categories of fishers, a level of protection no less favourable than that applied to seafarers according to national legislation.

- 54.** The Government members of Denmark, Germany, Namibia and the United Kingdom understood that the proposed Conclusions covered all types of vessels regardless of their size and suggested that the Workers provide clarification of their suggestion that the instrument's scope be restricted to vessels under 15 metres long. In what way were the proposed Conclusions deficient as to larger vessels? The Government member of Namibia suggested that the Workers' group should propose the solutions it deemed fit to address these issues.
- 55.** The Government member of Germany stressed the great importance of the questions raised by the Workers' group. The exclusion of fishers from Conventions Nos. 102 and 155 had given rise to the need for a specific Convention for fishers. In order to deal with this issue appropriately, reference to these exclusions should be inserted in the Preamble of the Conclusions.
- 56.** The secretary of the Workers' group pointed out that the questions on scope and social security had already been raised by his group during the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector, 2003. He asked the Office to explain the reasons behind the exclusion of fisheries foreseen under the Social Security (Minimum Standards) Convention, 1952 (No. 102), and the Occupational Safety and Health Convention, 1981 (No. 155), and to suggest a possible solution. He reminded the Committee of the specificities of fishing and the resulting high level of risk. As to the scope, his group suggested breaking down the provisions according to different types of vessels to allow a balanced approach. Outlining the different needs in respect of medical care for different types of vessels, the speaker stressed that a balance needed to be found that would allow these differing needs to be adequately addressed. He agreed – in spirit – with the provision

---

on “no more favourable treatment” foreseen in the proposed Conclusions (Point 43), but argued that the enforcement of the instrument should expressly provide for a higher degree of port state control. The current approach was not sufficient for fishing vessels that operated in waters distant from their flag State. The Workers’ questions had been raised to encourage much needed discussion on these issues, which would enable the Committee to develop a structure for the new instrument, which could be further refined during the second discussion. A relevant standard for all fishers on all types of vessels in all areas of operation was the goal.

- 57.** The Government member of Ireland, speaking on behalf of the Government members of the Committee Member States of the European Union, announced that a tragic accident had occurred in stormy weather on board a Spanish tuna-fishing vessel off the coast of Galicia resulting in the loss of life of two crew members. The remaining eight crew members were unaccounted for. On behalf of the Committee Member States of the European Union, he extended sincere condolences to the families concerned as well as to the Spanish delegation.
- 58.** The Chairperson paid tribute to the victims and called on the Committee to ensure through its work that such accidents would become less frequent. The Employer Vice-Chairperson and the Worker spokesperson joined the Chairperson in extending their condolences to those who had lost family members and reaffirmed the importance of improving the working lives of fishers.
- 59.** The Government member of Spain expressed his sincere gratitude to the Committee for their sympathy. This sad event demonstrated just how dangerous fishing was and why protection was necessary at both the international and national levels.
- 60.** The secretary of the Workers’ group then announced that due to major industrial events in his country, the Worker Vice-Chairperson had had to return to Nigeria. The Workers’ group had therefore invited the Worker spokesperson to accept the additional responsibilities of serving as Worker Vice-Chairperson as well.
- 61.** The Government member of Norway made a statement on behalf of the Government members of Belgium, Canada, Denmark, Estonia, Finland, France, Germany, Greece, Guatemala, Iceland, Ireland, Japan, Kuwait, Namibia (and on behalf of the African group including Algeria, Angola and Tunisia), Netherlands, Portugal, Saudi Arabia, Spain, Sweden, Thailand, United Kingdom and the United States. Those governments favoured the adoption of a general instrument of broad application that would deal comprehensively with conditions of work in the fishing sector regardless of vessel size. The Convention should not affect existing laws, customs or agreements that provided more favourable conditions for workers than those contained in the new instrument. It should provide that member States might exclude certain categories of fishers or fishing vessels, where the competent authority determined that special and substantial problems would arise with respect to the application of the Convention.
- 62.** The Government member of Ireland, speaking also on behalf of the Government members of Belgium, Denmark, Estonia, Finland, France, Germany, Greece, Netherlands, Portugal, Spain, Sweden and the United Kingdom, explained that the statement above had been the subject of long reflection. Governments were mindful of the concerns raised by the Workers’ group and had sought to address them. A strong Convention should be adopted without undue delay to address the specific needs of the fishing sector. The standard should apply to fishers in general, regardless of vessel size. Nothing in the new Convention should undermine existing standards, but some measure of flexibility was needed. The intention was not to create loopholes, but rather to encourage wide ratification. The aim

---

was to create a Convention that could stand in its own right and apply specifically to the fishing sector.

- 63.** The Government member of Chile, speaking also on behalf of the Government members of Argentina, Brazil and Mexico, also expressed support for a widely ratifiable Convention that would apply to all fishers independent of vessel size.
- 64.** The Employer Vice-Chairperson stressed that her group was interested in developing a general instrument of broad application, which would deal comprehensively with conditions of work in the fishing sector, regardless of vessel size. No erosion of standards attained by certain fishers on larger vessels was intended, but there was a clear need to provide basic protection to other fishers as well. There was no need to refer to the consolidated maritime labour Convention, which was still under discussion. The Committee needed to focus on the issues specific to the fishing sector, not on shipping. As to the position of self-employed fishers, the Office was requested to provide clarification.
- 65.** The Legal Adviser explained that the new Convention would, in accordance with Point 6 of the proposed Conclusions, apply to “all vessels engaged in commercial fishing operations”. The term “fisher” was defined under clause 5(c). The current definition did not only cover wage earners, but also included persons working on board who were paid on the basis of a share of the catch as well as the self-employed. Pilots, naval personnel and other persons in the permanent service of a government were expressly excluded.
- 66.** The Government member of Greece asked the Office to clarify whether a self-employed person was required to have a contract of employment in accordance with Point 23.
- 67.** The representative of the Secretary-General explained that Point 23 required a “work agreement” in accordance with clause 5(d). This broad expression had been used to reflect the wide scope of “fishers” under clause 5(c) and was not to be confused with a contract of employment.
- 68.** The secretary of the Employers’ group asked the Office whether the instrument would apply to a person who owned and operated his own small boat, that is, a truly self-employed person, not a contract worker.
- 69.** The representative of the Secretary-General confirmed that all self-employed persons were covered.
- 70.** The Government member of Brazil clarified the point that only those self-employed persons engaged in commercial fishing were covered by the Convention.
- 71.** The Government member of Nigeria associated her Government with the statement read by the Government member of Norway. It was important not to lose sight of the reasons for a comprehensive instrument for the fishing sector. Conventions and Recommendations were drafted to accommodate the needs of all member States, developing and developed, in order to encourage ratification and application. In her country and in many other developing countries, the vast majority of fishers worked in the informal economy. All vessels should be covered. An all-embracing scope would provide wider coverage and protection. A comprehensive standard on work in the fishing sector could not be extricated from the consolidated maritime labour Convention, because certain aspects were interrelated. Regarding the Workers’ second question, exclusions would be counter-productive to the mandate of the Committee. An article or section on social security should be all-embracing and provide wider coverage for employees. Occupational safety and health must be addressed. Implementation, compliance and enforcement were made more

---

difficult by restrictive application. This would, in turn, be detrimental to the welfare of the workers the Convention was expected to protect. Wide coverage was therefore preferable.

- 72.** The Government member of India expressed concern for small-scale fishers in his country, whose economic condition and limited education prevented them from acquiring, operating and maintaining costly communications equipment and other appliances that would be mandatory under some provisions of the current text. Because provisions should not be detrimental to the livelihoods of these fishers and their families, exclusions should be possible for vessels operating within territorial waters. Finally, a definition of “commercial fishing” should be included in the text.
- 73.** The Government member of the Syrian Arab Republic expressed support for the statement made by the Government member of Norway on behalf of other Government members of the Committee. He asked the Office whether artisanal fishers whose family members worked on their boats were considered to be self-employed fishers.
- 74.** The representative of the Secretary-General suggested that the definitions, scope and exclusions in the proposed Conclusions were all extremely broad and must be read together. The Office text had been framed to reflect the majority of the responses received. It was now up to the Committee to determine through the amendment process the nature and content of the instrument.
- 75.** The secretary of the Workers’ group expressed gratitude to those Governments that did not wish to reduce existing protection, but reminded the Committee that adoption of the new Convention would replace previous instruments and close the door to their further ratification. The Workers’ group had been placed in the difficult position of having to choose between offering coverage to small fishers, but possibly abandoning the protection currently provided by existing Conventions. This would be a matter for the most serious deliberation by the Workers’ group.

## **Examination of the proposed Conclusions contained in Report V(2)**

### **A. *Form of the international instruments***

Points 1 and 2

- 76.** Points 1 and 2 were not discussed.

### **B. *Proposed Conclusions with a view to a Convention and a Recommendation***

*Preamble*

Point 3

- 77.** Point 3 was not discussed.

---

**C. Proposed Conclusions with a view to a Convention**

Point 4

**78.** Point 4 was not discussed.

Part I. Definitions and scope

*Definitions*

Point 5

**79.** An amendment submitted by the Government member of Venezuela, was not seconded and was not discussed.

New clause before clause (a)

**80.** The Employer Vice-Chairperson introduced an amendment to insert the following additional clause, before clause (a): “‘commercial fishing’ means all fishing operations with the exception of subsistence fishing and recreational fishing.” Her group wanted to define the term “commercial fishing”, since this was the subject matter of the instrument. She referred to the explanations of the Office on “commercial fishing” on page 24 of the English text of Report V(2).

**81.** The secretary of the Workers’ group stated that no definition was needed, since the explanations of the Office were sufficient. Should the amendment be accepted, “subsistence fishing” as well as “recreational fishing” needed to be clearly defined. The Workers’ group did not, therefore, support the amendment.

**82.** The Government member of the Bahamas did not support the amendment either, since it created practical problems. He was not sure whether vessels engaged in training fishers would be covered by its text.

**83.** The Government member of Guatemala proposed a subamendment adding, after “fishing operations”, “for purposes of economic gain”. He supported the concept behind the Employers’ original proposal, but preferred a further refinement of “commercial fishing”.

**84.** The Government member of the Bahamas supported the subamendment.

**85.** The Government member of Spain agreed with the Workers’ position and stressed that if “subsistence fishing” needed to be defined, considerations regarding vessel size, number of fishers on board and range of operations would be relevant.

**86.** The Government member of Portugal stated that a definition of “commercial fishing” needed to be included. Referring to the explanations contained on page 24 of the English version of Report V(2), she subamended the text through the insertion of “including fishing operations on inland lakes and rivers” after “fishing operations”.

**87.** The Employer and Worker Vice-Chairpersons supported this subamendment.

**88.** The Government member of Brazil pointed out that Point 7 allowed Members to determine whether a specific activity constituted “commercial fishing”. Every Member could therefore decide such matters, if doubts arose.

- 
- 89.** The Government member of Chile did not support the inclusion of a definition. She agreed with the explanation originally given by the Workers' group and preferred the Office text. Any further definitions of "recreational fishing" and "sport fishing" should be avoided.
  - 90.** The Employer Vice-Chairperson pointed out that the subamendment by the Government member of Guatemala was not needed. The term "commercial" already included "economic gain".
  - 91.** The Worker Vice-Chairperson did not support the subamendment.
  - 92.** The subamendment suggested by the Government member of Guatemala therefore was not adopted.
  - 93.** The amendment submitted by the Employers' group, as subamended by the Government member of Portugal, was therefore adopted.

#### Clause 5(a)

- 94.** The Government members of Norway and the United Kingdom submitted an amendment to delete clause (a) and replace it with: "competent authority' means the minister, government department or other authority having power to issue and enforce regulations, orders or other instructions having the force of law in respect of the subject matter of the provision concerned;". The Government member of the United Kingdom stated that its purpose was to replace the definition of "competent authority" in the proposed Conclusions with that in the draft consolidated maritime labour Convention. She preferred the latter as the reference to "minister, government department or other authority having power to issue and enforce regulations" made it more explicit. Another advantage would be consistency between the consolidated maritime labour Convention and the new Convention relating to the fishing sector.
- 95.** The Government member of Ireland, speaking also on behalf of the Government members of Belgium, Denmark, Estonia, Finland, France, Germany, Greece, Netherlands, Portugal, Spain and Sweden, supported the amendment as did the Government member of Japan and both the Employer and Worker Vice-Chairpersons.
- 96.** The amendment was adopted.

#### Clause 5(b)

- 97.** The Government members of Norway and the United Kingdom submitted an amendment to move clause 5(b) to after Point 11, as a new Point. The Government member of Norway explained that the rationale of the amendment was that, the current Point 5, clause (b) dealing with consultation did not represent a real definition but was of a more substantial nature. While he supported it as regards intent and text, he felt that it was not in the appropriate place and that it should be a separate provision in the Convention.
- 98.** The Employer Vice-Chairperson said that consultation was a subject for definition because of the importance of social dialogue in the ILO. She opposed moving the clause and thus did not support the amendment.
- 99.** The Worker Vice-Chairperson agreed, adding that the meaning of the clause would become different if moved away from the section on definitions.
- 100.** The Government member of Namibia disagreed with the amendment for the same reasons.

- 
101. The Government member of Norway withdrew the amendment.
  102. The Committee considered four amendments together concerning possible new clauses.
  103. The Worker members submitted an amendment to add a new clause after clause (b) reading as follows: “‘owner of a fishing vessel’ means the owner of the vessel or any other organization or person, such as the manager, agent or bareboat charterer, who has assumed the responsibility for the operation of the vessel from the owner or other organization or person and who, on assuming such responsibility, has agreed to take over the duties and responsibilities imposed on the owner of the fishing vessel in accordance with this Convention.” The secretary of the Workers’ group introduced the amendment by declaring that the “owner of a fishing vessel” needed to be defined. The Workers’ group had taken advantage of other ILO Conventions and had tried to be consistent with the definitions used therein.
  104. The Employer Vice-Chairperson opposed the amendment and supported clause (b) as in the proposed Conclusions.
  105. She drew the Committee’s attention to the fact that the Workers’ group had originally had a spokesperson and a Vice-Chairperson of the Committee. The latter had had to leave and the spokesperson was now also the Vice-Chairperson of the Committee. While the spokesperson could turn to the secretary of the Workers’ group for advice, the secretary of the group, who was neither a delegate nor an adviser, could only address the Committee with the approval in advance of the officers of the Committee.
  106. The Worker Vice-Chairperson regretted the Employers’ refusal to accept the intervention by the secretary of the Workers’ group on behalf of the group. This refusal was not helpful and certainly not in accordance with the spirit in which the Committee should work. The Workers’ group was obliged, however, to accept this decision.
  107. The Government member of Guatemala, seconded by the Government member of Brazil, submitted an amendment to insert a new clause after clause 5(h): “‘shipowner’ means the natural person or legal entity that owns or has some other legal title to one or more fishing vessels.” The Government member of Guatemala explained the purpose of his amendment, expressing doubts as regards the use of “*capitán o patrón*” in the Spanish version of clause (h), since his national legislation used the term “*armador*”. Moreover, the amendment suggested by his delegation was simpler and thus clearer.
  108. The Government member of Japan submitted an amendment, seconded by the Government member of Thailand, to add after clause (h): “‘fishing vessel owner’ means the owner of the fishing vessel or any other organization or person, such as the manager, agent or bareboat charterer, who has assumed the responsibility for the operation of the vessel from the owner or other organization or person and who, on assuming such responsibility, has agreed to take over the duties and responsibilities imposed on fishing vessel owners in accordance with this Convention.” The Government member of Japan wished to avoid a loophole and cover all stakeholders instead of limiting the scope of the Convention to fishing vessel owners. That was the reason for the enumeration of the examples of manager, agent or bareboat charterer. As for the rationale of its insertion after clause (h) instead of clause (b), the Government member of Japan explained that it would follow the definition of “fishing vessel” in clause (e). However, his delegation was flexible in the event that the Workers’ group had strong views on the placement of the definition.
  109. The Government members of Denmark, Germany and the United Kingdom submitted the following amendment to insert a new clause after clause (h): “‘owner’ means the registered

---

owner of a vessel, unless that vessel has been chartered by demise or is managed, either wholly or in part, by a natural or legal person other than the registered owner under the terms of a management agreement; in that case, the owner shall be construed as the demise charterer or natural or legal person managing the vessel, as appropriate;”. The Government member of Denmark stated that the purpose of the amendment was to emphasize the need for a definition of the term “fishing vessel owner”, as Points 21 and 22 of the proposed Conclusions set out specific obligations for fishing vessel owners. However, he would withdraw it in favour of similar amendments submitted by the Workers’ group and the Government member of Japan.

- 110.** The Workers withdrew their amendment in favour of that of the Government member of Japan.
- 111.** The Government members of Canada, China, Norway and Sweden supported the amendment submitted by the Government member of Japan.
- 112.** The Government member of Brazil confirmed his support for the amendment submitted by the Government member of Guatemala because he wanted to cover, not only bareboat charterers, but also other types of chartering, such as charterers of vessels with crew.
- 113.** The Government member of Guatemala withdrew his amendment in view of the majority support for the Japanese proposal. However, he agreed with the concerns expressed by the Government member of Brazil.
- 114.** The Government member of Brazil, seconded by the Government member of Mexico, introduced a subamendment to the amendment submitted by the Government member of Japan. He suggested adding after “manager” the words “or any charterer including bareboat charterer”. Foreign crewed vessels were often chartered by Brazilian companies. Additional Brazilian crew members were placed on board. Any problems affecting the Brazilian crew members, including non-payment of wages, would have to be solved by the charterer.
- 115.** The Worker Vice-Chairperson and the Government members of Argentina, Chile, Uruguay and Venezuela supported the subamendment.
- 116.** The Employer member of Germany wanted to clarify why the proposed definition only referred to the bareboat charterer. With the conclusion of the chartering contract, only the bareboat charterer would become the employer of the fishers, whereas any other charterer would have no such responsibility since the fishing vessel owner would remain the employer and would thus remain responsible. That was the rationale of the definition borrowed from the draft consolidated maritime labour Convention.
- 117.** The Government members of Ireland and Norway, as well as the Employer Vice-Chairperson, also opposed the subamendment submitted by the Government member of Brazil although they supported the amendment submitted by the Government member of Japan.
- 118.** The Government member of the United Kingdom observed that the amendment submitted by the Government member of Japan contained a “such as” clause containing examples. He introduced a subamendment deleting the words “such as the manager, agent or bareboat charterer”. If examples were avoided, the amendment submitted by the Government member of Japan would clearly refer to all persons who had assumed the responsibility for the operation of the vessel from the owner or other organization or person and who, on assuming such responsibility, had agreed to take over the duties and responsibilities

---

imposed on fishing vessel owners in accordance with this Convention. The Employers' group seconded this subamendment.

- 119.** The Government member of Brazil also agreed and withdrew his subamendment.
- 120.** The subamendment submitted by the Government member of the United Kingdom was also supported by the Workers' group and by the Government members of Denmark, Germany, Japan, Namibia (also on behalf of the Government members of Kenya, Malawi and Mozambique), Norway and Spain.
- 121.** The amendment submitted by the Government member of Japan was adopted as subamended. Its placement in the text was referred to the Drafting Committee.

#### Clause 5(c)

- 122.** The Government member of Greece, speaking also on behalf of the Government member of France, withdrew an amendment since a subsequent amendment would achieve the same result. There was no intention to exclude self-employed fishers from the whole of the instrument.
- 123.** The Government members of Ireland and the United Kingdom submitted an amendment to replace clause 5(c) with the following: “fisher’ means any person carrying out an occupation on board a vessel, including trainees and apprentices but excluding shore-based personnel carrying out work on board a vessel at the quayside and port pilots.” The Government member of Ireland, speaking also on behalf of the Government members of Belgium, Denmark, Estonia, Finland, France, Germany, Greece, Netherlands, Portugal, Spain, Sweden and the United Kingdom, stated that they wanted to ensure that the definition was broad enough to provide protection to all on board. Any qualifying exclusions would be in the appropriate parts of the text.
- 124.** The Government member of Brazil, referring to an amendment he had co-sponsored with the Government member of Chile, suggested adding at the beginning of clause (c), the following phrase: “without prejudice to the provisions of national legislation, for the purposes of this Convention,”. This would protect many fishers who do not work aboard a vessel, for example, the numerous fish farmers and swamp fishers in his country.
- 125.** The Worker Vice-Chairperson did not support the amendment as he was concerned about the fishers who were remunerated through a share system.
- 126.** The Employer Vice-Chairperson and the Government member of Thailand did not support the amendment.
- 127.** The Government member of the United Kingdom sought to clarify the reasons behind the amendment. The Office text, by referring to “employed or engaged” did not protect many self-employed fishers. A comprehensive instrument should contain as broad a definition of “fishers” as possible. She asked the Employers’ group to state their reasons for not accepting the amendment.
- 128.** The Employer Vice-Chairperson noted that she had submitted an amendment to this paragraph that would take care of her concerns.
- 129.** The Worker Vice-Chairperson suggested a subamendment that would include the words “employed or engaged in” in between “person” and “carrying out”. He further added the

---

words “persons working on board who are paid on the basis of a share of the catch,” after the word “including” in the first line.

- 130.** The Government member of the United Kingdom could not support this subamendment as she felt it would exclude more than 90 per cent of fishers in her country. However, after discussions with a number of members of the Committee, she introduced a new subamendment to the original Office text that would maintain the essence of the amendment, while satisfying the concerns of Workers and of other Government members. She suggested adding the words “or carrying out an occupation” after “in any capacity”.
- 131.** The Government member of Norway, speaking also on behalf of the Government members of Canada, Iceland, Japan and the United States, and the Government member of Ireland, speaking also on behalf of the Government members of Belgium, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Netherlands, Portugal, and Sweden, supported the subamendment introduced by the Government member of the United Kingdom.
- 132.** The Employer Vice-Chairperson supported the subamendment submitted by the Government member of the United Kingdom and introduced another subamendment to add at the end of the clause “and shore-based persons carrying out work aboard a fishing vessel” in order to include shore-based persons who were not government employees and went on board for specific work, for example to repair equipment or to load or discharge fish. She also used the example of private surveyors who might serve on board a fishing vessel, but were neither in permanent service of the government nor pilots nor naval personnel. They could not be considered fishers.
- 133.** The Worker Vice-Chairperson supported the subamendment submitted by the Government member of the United Kingdom and opposed the further subamendment submitted by the Employers’ group.
- 134.** The subamendment submitted by the Government member of the United Kingdom was adopted.
- 135.** The Government member of Namibia, also speaking on behalf of the Government members of Botswana, Kenya, Malawi, Mozambique, Nigeria, South Africa and Zimbabwe, as well as the Government member of Chile, supported the Employers’ subamendment.
- 136.** The Government member of Germany indicated that, according to national legislation, persons who did not belong to the crew were not subject to the provisions governing crew members. Therefore, the subamendment submitted by the Employers’ group was not necessary, and his delegation could not support it.
- 137.** The Government member of Brazil asked whether the Employers’ subamendment would only apply when the fishing vessel was in port or whether it also applied when the fishing vessel was at sea. Persons on board while the fishing vessel was at sea should also benefit from lodging, food, etc.
- 138.** The Employer Vice-Chairperson responded that normally surveyors and other shore-based personnel worked on board fishing vessels while they were in ports or harbours and not on voyages.

- 
139. The Worker Vice-Chairperson stated that, after considering the intervention of the Employer Vice-Chairperson, his group wished to further amend the Employers' proposal by adding the words "while the vessel is in port" at the end of the clause.
  140. The Government member of Mozambique expressed doubts as to whether the distinction of the vessel being in port or at sea would really solve the problem. Although observers sometimes surveyed while the fishing vessel was at sea, they could not appear on the crew list as fishers.
  141. The Government member of Namibia agreed that the proposal of the Workers' group did not help and rather confused the discussion. For instance, an electronics expert who came on board to carry out specific work (for example, minor repairs) could not be regarded as a fisher, no matter whether the fishing vessel was in port or at sea at that time.
  142. The Government member of Tunisia believed that persons working on land were excluded from the Convention according to Point 23 of the proposed Conclusions, which specifically required that persons on board a fishing vessel should have a working contract. Thus, he could neither support the subamendment introduced by the Employers' group, nor the one introduced by the Workers' group.
  143. The Employer Vice-Chairperson had difficulties with the subamendment introduced by the Workers' group. A person supposed to repair the equipment of a fishing vessel could remain on board while the fishing vessel was at sea, in order to verify whether the equipment was working. The restriction "while in port" could entail that those persons became fishers.
  144. The Worker Vice-Chairperson decided to withdraw his group's subamendment and stick to the initial subamendment introduced by the Government member of the United Kingdom, since the subamendment introduced by the Employers' group seemed too wide.
  145. The Government member of the United Kingdom stated that she understood the concerns of the Employers' group. Since it was difficult to foresee all implications of this subamendment, she suggested that it be reconsidered at a later stage. Until consensus could be reached, the subamendment should remain in square brackets.
  146. The representative of the Secretary-General explained the implications of the Government member of the United Kingdom's proposal. By leaving the text in square brackets, it would be possible to revisit the Employers' proposed text later. It would not be lost. Its implications could be more fully considered and a final position agreed, while allowing the Committee to continue its work.
  147. The Employer and Worker Vice-Chairpersons supported the subamendment introduced by the Government member of the United Kingdom.
  148. The amendment was adopted as subamended with the words "and shore-based persons carrying out work aboard a fishing vessel" left in square brackets.
  149. The Government member of Brazil, speaking also on behalf of the Government member of Chile, introduced an amendment to add, at the beginning of clause (c), the following phrase: "without prejudice to the provisions of national legislation, for the purposes of this Convention,,". This amendment addressed a possible exclusion from protection of fishers, who were not working aboard ships. According to Brazilian legislation, workers working in aqua farming, as well as persons catching crabs in swamps or picking oysters were also considered fishers. These were currently not covered by the Office text, since presence

---

aboard a fishing vessel was a strict requirement. The amendment's goal was not to provide an automatic extension of cover, but to allow member States to fill gaps resulting from too strict a definition of fishers, thus giving discretion to member States to extend the cover of the Convention to other groups of workers they considered fishers.

- 150.** The Government member of Norway understood the concerns of the Government members of Brazil and Chile, but pointed out that Norwegian legislation did not treat workers involved in fish harvesting as fishers. They were covered by regulations for shore-based workers. Since the amendment created two alternative definitions of fisher, Norway did not support it. Member States could, in any case, extend the protection to other types of workers, if they so wished.
- 151.** The Government member of Greece appreciated the concerns of the Government member of Brazil, but reminded the Committee that ILO Conventions set out minimum standards. The speaker agreed with the Government member of Norway and did not support the amendment.
- 152.** The Government member of Germany pointed out that German national legislation was in line with that of Norway and agreed with the Norwegian position.
- 153.** The Government member of Chile pointed out that this amendment was proposed to address a specific issue in Brazil and she requested the Committee to be more understanding of a position on an issue that an individual member State might have with regard to the Convention.
- 154.** The Employer and Worker Vice-Chairpersons sympathized with the reasons for the proposed amendment, but could not support it.
- 155.** The representative of the Secretary-General addressed the concern of the Government member of Brazil. She referred the Committee to article 19, paragraph 8, of the ILO Constitution, which allowed governments to apply more favourable conditions than those provided for in a Convention or Recommendation.
- 156.** On that basis, the Government member of Brazil withdrew the amendment.
- 157.** The Government member of South Africa, speaking also on behalf of the Government members of Botswana, Kenya, Malawi, Mozambique, Namibia, Nigeria, and Zimbabwe, introduced an amendment to replace the word "fisher" in clause (c) by "crew member". Their aim was to bring the terminology used in line with that used in the instruments of other United Nations agencies, such as FAO.
- 158.** The Employer Vice-Chairperson was against the amendment for reasons of clarity. The subject under discussion was "fishers", not crew members in the shipping industry.
- 159.** The Worker Vice-Chairperson also opposed the amendment. Although the Workers' group did not particularly like the term "fishers", it was the term that had been accepted.
- 160.** The amendment was withdrawn due to lack of support.
- 161.** The Government member of Argentina submitted an amendment, seconded by the Government member of Brazil, to insert the words "man or woman" after the word "person" in clause (c). This was done because the concept of gender did not appear anywhere, and they felt it important for issues such as accommodation, to consider that the vessel could be carrying women as well as men.

- 
- 162.** The Government member of Brazil added that, besides the question of arrangements on board, very real problems, such as sexual harassment on board fishing vessels, needed to be addressed.
- 163.** The Government member of Denmark spoke against the amendment, on the basis of the lengthy discussions that had led to the choice of “fisher” as a term that would cover both men and women.
- 164.** The Employer and Worker Vice-Chairpersons opposed the amendment for the same reason.
- 165.** The Government member of Namibia, speaking also on behalf of the Government members of Botswana, Kenya, Malawi, Mozambique, Nigeria, South Africa and Zimbabwe, also opposed the amendment as unnecessary.
- 166.** The Government member of Germany also opposed the amendment, noting that specific issues related to the situation of women could be taken into account elsewhere in the text.
- 167.** The amendment was withdrawn.
- 168.** The Employer members introduced an amendment to insert in the third line of Point 5, clause (c), after the word “excludes”, the words “independent owner-operators as well as”. The Employer Vice-Chairperson explained that the new instrument should regulate the employment relationship, whereas persons who were owners and operators of their own vessels were not working within an employment relationship. While a few subject areas, such as the safety of fishing vessels, might apply to this category of fishers, most others, such as minimum wages, did not. For these reasons, independent owner-operators should be excluded from the Convention.
- 169.** The Government member of Germany believed that the purpose of the Convention was to cover the whole fishing sector, i.e. as many fishers as possible. In particular as regards the area of occupational safety and health, independent owner-operators should also be covered, not only employed fishers. If this amendment were adopted, 90 per cent of German fishers would not be covered by the Convention since they were independent. His delegation, therefore, could not support this amendment.
- 170.** The Worker Vice-Chairperson agreed with the Government member of Germany and strongly opposed the amendment submitted by the Employers’ group.
- 171.** The Government member of Ireland also concurred with the Government member of Germany. The concerns of the Employers’ group could be taken into account in the appropriate places in the Convention.
- 172.** The Government members of Argentina, Botswana, Brazil, Canada, Chile, Guatemala, Kenya, Lebanon, Malawi, Mozambique, Namibia, Nigeria, South Africa, Venezuela and Zimbabwe also opposed the amendment submitted by the Employers’ group.
- 173.** The Employer Vice-Chairperson withdrew the amendment.
- 174.** The Government member of South Africa, speaking also on behalf of the Government members of Botswana, Kenya, Malawi, Mozambique, Namibia, Nigeria and Zimbabwe tabled a motion to defer the debate on this amendment, in the light of the outcome of discussions on the amendment to Point 5, clause (c), as subamended by the Government member of the United Kingdom dealing with the definition of “fisher”. The phrase “and

---

shore-based persons carrying out work aboard a fishing vessel” had been left in square brackets.

**175.** The Committee so decided.

Clause 5(d)

**176.** The Government member of South Africa, speaking also on behalf of the Government members of Botswana, Kenya, Malawi, Mozambique, Namibia, Nigeria and Zimbabwe, withdrew an amendment in the light of the withdrawal of a related amendment dealing with the replacement of the term “fisher’s” with the term “crew member’s”.

**177.** The Worker Vice-Chairperson introduced an amendment to add after “fisher’s work” in the last line of the clause the words “and conditions”. “Terms of work” related to the duties to be performed on the vessel. A work agreement should also specify the conditions under which work would be carried out. These included leave, vacations and sick pay, for example.

**178.** The Employer Vice-Chairperson opposed the amendment, stating that the term “fisher’s work” included “conditions”. There was, therefore, no need for additional wording.

**179.** The Government member of Venezuela expressed understanding for the Workers’ concern that the definition did not sufficiently reflect conditions for those on board the vessel. He proposed a subamendment to add the words “living conditions and” after the words “the terms of a fisher’s”, and this was accepted by the Workers’ group.

**180.** The Government member of Brazil pointed to an inconsistency between the English and Spanish versions of the text. The English text referred to “fisher’s work” whereas the Spanish text referred to “conditions of work”, which was in accordance with the Workers’ amendment.

**181.** The Government member of Greece opposed the subamendment because “living conditions” covered accommodation and provision of food, which were covered by national legislation in Greece. It was not proper to leave these matters to work agreements.

**182.** The Employer Vice-Chairperson rejected the subamendment, as it was inadvisable to extend terms of work to include living conditions.

**183.** The Government member of Guatemala supported the subamendment. Although many work agreements did not stipulate living and working conditions, it was important that they did so in order to ensure that fishers work in a safe and clean environment.

**184.** The Government member of Germany also supported the subamendment, because working and living conditions on board could not be separated.

**185.** The Government member of Portugal considered safety, health and accommodation to be included within working conditions.

**186.** The Government member of Mexico, in supporting the subamendment, stated that Mexican legislation defined “terms of work” to include living conditions on board. It was important to specify living conditions so as to ensure standards for workers on board ships.

- 
- 187.** The Government member of Chile noted that in some countries “working conditions” did not include “living conditions”. If these were to be stipulated, they should appear in the work agreement. Perhaps the problem lay in the English text.
- 188.** The Government member of Spain supported the subamendment. Because a vessel could be at sea for months at a time, the obligations of both parties should be clearly defined. Work agreements should specify working conditions, living conditions, rest periods and leisure time. The goal was to improve standards in the sector.
- 189.** The Government member of Guatemala observed that, because some countries did not have comprehensive legislation, it was necessary to specify “working conditions and living conditions” to extend this practice to as large a number of countries as possible.
- 190.** The amendment was adopted.

Clause 5(e)

- 191.** The Government member of Denmark, speaking also on behalf of the Government member of Germany, withdrew an amendment, which was no longer relevant following the decision to extend the scope of the instrument to inland waters and lakes.
- 192.** The Government member of Venezuela introduced an amendment, seconded by the Government member of Guatemala, to delete the words “or ‘vessel’” in the first line.
- 193.** The Government member of France opposed the amendment. The deletion of “vessel”, would consequently lead to cumbersome wording throughout the text, since only the term “fishing vessel” could then be used.
- 194.** The Employer Vice-Chairperson and the Government member of Namibia, speaking also on behalf of the Government members of Botswana, Kenya, Malawi, Mozambique, Nigeria, South Africa and Zimbabwe, agreed with the Government member of France and therefore did not support the amendment.
- 195.** The Government member of Guatemala acknowledged the concerns raised, but explained that, in the Spanish version, the word “*buque*” was used three times in the same line.
- 196.** The Chairperson concluded that the problem was only of a linguistic nature and could be dealt with by the Drafting Committee.
- 197.** The amendment was not adopted.

New clauses to follow clause 5(e)

- 198.** The Government member of Denmark, also speaking on behalf of the Government members of Germany and the United Kingdom, introduced an amendment to insert a new clause after clause (e), as follows:

“new fishing vessel” means a fishing vessel for which:

- (1) on or after the date of the entry into force of this Convention, the building or major conversion contract is placed; or
- (2) the building or major conversion contract has been placed before the date of the entry into force of this Convention, and which is delivered three years or more after that date; or

---

(3) in the absence of a building contract, on or after the date of the entry into force of this Convention:

- the keel is laid, or
- construction identifiable with a specific ship begins, or
- assembly has commenced comprising at least [50 tonnes] or 1 per cent of the estimated mass of all structural material, whichever is less.

**199.** This amendment allowed for the distinction between new and existing vessels. It was in line with the Torremolinos Protocol of 1993 relating to the Torremolinos International Convention for the Safety of Fishing Vessels, 1977, and other international instruments. For the sake of consistency, a second amendment was proposed which suggested that after clause (e), a second new clause as follows should be inserted: “‘existing vessel’ is a vessel that is not a new vessel.”

**200.** The Government member of Germany added that the new Convention would contain provisions regarding social conditions that would affect the construction of vessels. Therefore, definitions were needed that would allow distinctions between existing vessels and new ones.

**201.** The Worker Vice-Chairperson supported both amendments.

**202.** The Employer Vice-Chairperson rejected the proposed amendment as far too detailed. The Convention should only contain a basic set of principles that focused on social conditions. There was no need to include physical conditions in the definition. Those could be discussed at a later time.

**203.** The Government members of Canada, France, Ireland, Norway, Portugal, Spain and Sweden expressed their support for both amendments.

**204.** The amendments were adopted.

#### Clause 5(f)

**205.** The Government member of Denmark, speaking on behalf of the Government members of Germany and the United Kingdom, introduced an amendment to replace clause (f) with the following text:

- (f) “length” (L) shall be taken as 96 per cent of the total length on a waterline at 85 per cent of the least moulded depth measured from the keel line, or as the length from the foreside of the stern to the axis of the rudder stock on that waterline, if that be greater. In vessels designed with rake of keel the waterline on which this length is measured shall be parallel to the designed waterline. The competent authority of a Member of this Convention may after consultation with the representative organizations of employers and workers concerned decide to use other units of measurement as e.g. “gross tonnage”. Such a decision shall be communicated to the International Labour Office. The communication shall include the reasons for the decision, the possible comments from the consultation and the definition for the decided unit of measurement.

The term “gross tonnage” should be removed from the definitions, since the term did not appear elsewhere in the text. “Length” was the term to be defined. The proposed definition of length was well known as it had been taken from other international instruments. However, an additional section had been added to provide the competent authority with the option of using gross tonnage. Many governments had been unable to ratify the STCW(F) because vessel size limitations were not expressed in terms of gross tonnage. Therefore,

---

providing the option of using either length or gross tonnage would remove a potential obstacle to ratification.

- 206.** The Worker Vice-Chairperson supported the amendment.
- 207.** The Government member of Norway supported including the length of vessels in the definitions, but not the second part of the proposed amendment, which started with the words “the competent authority”. He proposed a subamendment to leave the definition of “gross tonnage” in clause 5(f), to add as a new clause following clause 5(f) the proposed definition of length, and to delete the remainder of the proposed text from the phrase “the competent authority”. A definition of gross tonnage would need to be included, if the option were to be offered of using either gross tonnage or length. The Government member of Namibia seconded the proposed subamendment.
- 208.** The Government members of Greece and Japan supported the subamendment.
- 209.** The Government member of the United States expressed concern that the Convention could have definitions of terms that were not found elsewhere in the text.
- 210.** The Government member of Denmark believed that the objectives of the amendment and the subamendment were the same and suggested that the Governments concerned propose a joint text to meet their common goal.
- 211.** The Government member of Denmark indicated that consultations had resulted in a proposal supported by the Government members of Botswana, Denmark, Germany, Greece, Japan, Kenya, Mozambique, Namibia, Nigeria, Norway, South Africa and the United Kingdom. The definition of gross tonnage should be kept as Point 5, clause (f) of the Convention. A new clause should be inserted after clause (f) with the following wording: “‘length’ (L) shall be taken as 96 per cent of the total length on a waterline at 85 per cent of the least moulded depth measured from the keel line, or as the length from the foreside of the stern to the axis of the rudder stock on that waterline, if that be greater. In vessels designed with rake of keel, the waterline on which this length is measured shall be parallel to the designed waterline.” In addition, in Point 9, a new second paragraph should be inserted with the following wording: “The competent authority might, after consultation, decide to use other units of measurement as may be defined in this Convention. In the case of such a decision, the competent authority should in its first report on the application of the Convention submitted under article 22 of the ILO Constitution communicate the reasons for the decision and the possible comments arising from the consultation.”
- 212.** The Worker Vice-Chairperson supported this amendment.
- 213.** The Employer Vice-Chairperson opposed the amendment and preferred to keep clause (f) of the proposed Conclusions without change. The instrument should govern conditions on all fishing vessels regardless of vessel size. A definition of length would only give credence to a discussion on categorization of fishing vessels according to vessel size.
- 214.** The Government member of Lebanon agreed with the Employer Vice-Chairperson and stressed that the Convention should address the problems of all fishers. Differences as to the length of a vessel or its tonnage should not be included in the proposed Conclusions.
- 215.** A show of hands indicated that a majority of Governments supported the proposed text. The amendment was therefore adopted as subamended.

---

**216.** The Government member of Guatemala introduced an amendment which was not seconded and therefore not discussed.

Clause 5(g)

**217.** No amendments were submitted to clause 5(g).

Clause 5(h)

**218.** The Government member of Denmark, also speaking on behalf of the Government members of Germany and the United Kingdom, introduced an amendment to replace clause (h) with the following text: “‘skipper’ means the person having command of a fishing vessel”. He explained that this wording was used in the STCW-F Convention, thus bringing the new Convention in line with already existing international instruments.

**219.** The Worker Vice-Chairperson expressed support for the amendment as did the Government member of China.

**220.** A long discussion ensued among Spanish-speaking Committee members with regard to the Spanish equivalent of the term “skipper”.

**221.** The representative of the Secretary-General explained that the Spanish translation of the STCW-F Convention, used the word “*patrón*” for “skipper”. If the Committee wanted to ensure consistency with this Convention, this might be worth considering.

**222.** The Chairperson asked the Spanish-speaking Committee members to agree on the term to be used in the Spanish text and to report back to the Committee on the term chosen. On that basis, the amendment was adopted.

New clause after clause 5(h)

**223.** An amendment submitted by the Government member of Guatemala to add a new clause was not seconded and therefore not discussed.

**224.** An amendment submitted by the Government member of Guatemala was not seconded and therefore not discussed.

**225.** The Government member of Guatemala submitted an amendment, seconded by the Government member of Mexico, to add a new clause after clause (h): “‘employer’ means any natural person or legal entity that uses the services of one or more workers under an employment contract or relationship.”

**226.** The Government member of Mexico pointed out that the problem was related to the discussions regarding the definition of “*patrón*” in the Spanish text.

**227.** The Government member of Germany stated that there was no need to define “employer” and therefore did not support the amendment.

**228.** The Employer and Worker Vice-Chairpersons rejected the amendment for the same reason.

**229.** The Government member of Guatemala withdrew the amendment.

**230.** Point 5 was adopted, as amended.

---

Scope

Point 6

**231.** An amendment submitted by the Government members of Denmark and the United Kingdom proposed to replace Point 6 with the following text:

- 6(a) The Convention applies to all new fishing vessels and fishers engaged in commercial fishing operations;
- (b) Notwithstanding clause (a), to the extent it deems practicable, and after consultation with representative organizations of vessel owners and fishers, the competent authority may apply the provisions of the Convention to existing vessels, provided that such application need not require physical changes to the structure of the vessel;
- (c) Nothing in this Convention should affect any law, award, custom or any agreement between vessel owners and fishers which ensures more favourable conditions or provisions than those provided for by this Convention.

**232.** The Government member of the United Kingdom said that a “grandfather clause” was necessary as some parts of the Convention could not reasonably be imposed on owners of existing vessels. He immediately proposed a subamendment to proposed clause 6(a) to read: “The Convention applies to all fishers and all new fishing vessels engaged in commercial fishing operations.” This would not change the meaning, but make it easier to understand.

**233.** The Government member of Chile, speaking also on behalf of the Government members of Argentina, Brazil, Guatemala and Venezuela, felt that there should be no exclusion of existing vessels. It would be unfortunate to distinguish between old and new vessels, in particular with regard to issues such as minimum age, medical care and social protection, which should apply to all fishers whether on old or new vessels.

**234.** The Worker Vice-Chairperson agreed with the idea of a “grandfather clause”, but did not feel that Point 6 was the right place for it. He therefore submitted a subamendment, whereby the original wording of Point 6 would be retained, and clause (c) of the proposed amendment would be added.

**235.** The Employer Vice-Chairperson agreed with the subamendment proposed by the Worker Vice-Chairperson.

**236.** The Government member of Namibia also speaking on behalf of the Government members of Botswana, Kenya, Malawi, Mozambique, Nigeria, South Africa and Zimbabwe noted that they had reluctantly agreed to the definition of a new fishing vessel. He asked the proposers of the amendment to clarify its underlying rationale and implications.

**237.** The Government member of the United Kingdom observed that the original text of Point 6 applied only to vessels, not to fishers. In order to avoid further confusion, he proposed a further subamendment, whereby clause 6(a) would read as follows: “Except as provided otherwise, this Convention applies to all fishers and all fishing vessels engaged in commercial fishing operations.” Clause 6(c) in the proposed amendment, that is “Nothing in this Convention should affect any law, award, custom or any other agreement between vessel owners and fishers which ensures more favourable conditions or provisions than those provided for by this Convention” would become clause 6(b) in the subamended text.

**238.** The Government members of Chile and Ireland supported this subamendment.

- 
- 239.** The Government member of Greece also expressed support for the first part of the subamendment, but asked whether clause (b) was needed, since it related to article 19 of the ILO Constitution.
- 240.** The representative of the Secretary-General agreed with the point made by the Government member of Greece that clause (b) was already covered by article 19 of the ILO Constitution, but saw no harm in its inclusion to address a number of specific issues. A number of other ILO Conventions contained that text. Its placement might, however, be referred to the Drafting Committee.
- 241.** The Employer and Worker Vice-Chairpersons both endorsed the subamendment.
- 242.** The Government member of the United Kingdom, responding to a request for clarification from the Government member of Norway, who otherwise supported the subamendment, indicated that a minor difference in the definition of a fishing vessel from earlier texts was unintentional. He suggested leaving it to the Drafting Committee to ensure consistency between the two texts.
- 243.** Noting no objections, the Chairperson declared the adoption of the text proposed by the Government members of Denmark and the United Kingdom.
- 244.** The amendment was adopted as subamended.
- 245.** An amendment submitted by the Government member of Japan was not seconded and was, therefore, not discussed.
- 246.** An amendment submitted by the Government member of Algeria was not supported and was, therefore, not discussed.
- 247.** Point 6 was adopted as amended.

#### Point 7

- 248.** Point 7 was adopted.

#### Point 8

- 249.** An amendment submitted by the Government member of Japan was not seconded and therefore was not discussed.
- 250.** An amendment submitted by the Government member of Venezuela was withdrawn.
- 251.** An amendment was submitted by the Government members of Greece and the United Kingdom proposing the replacement of “from the application of the Convention” by “from the requirements of the Convention, where the application is considered to be impracticable”.
- 252.** The Government member of the United Kingdom explained that this text was intended to ensure that exclusions from full application should be allowed in the event of the impracticability of coverage.
- 253.** The Employer Vice-Chairperson introduced an amendment, which proposed the insertion of “or certain provisions thereof” after “Convention”. She supported the amendment submitted by the Government members of Greece and the United Kingdom.

- 
- 254.** The Worker Vice-Chairperson supported both amendments.
- 255.** The Government member of Spain suggested that the two amendments were complementary and proposed a subamendment that merged them into a single text.
- 256.** The Government member of Denmark supported the amendment submitted by the Government members of Greece and the United Kingdom. As for the Employers' amendment, if it were possible to exclude a category of fishing vessels from the whole of the Convention, the right to exclude a category from certain parts of the Convention was necessarily implied.
- 257.** The Government member of Norway supported the combined text suggested by the Government member of Spain. Although he agreed with the Government member of Denmark, he felt that the inclusion of the Employers' proposal would encourage member States not to exclude any category from the entire Convention, but rather to limit exclusions to certain provisions of the Convention.
- 258.** The Government member of Tunisia preferred to retain the wording of the proposed Conclusions. However, it would be preferable to bring in wording from other Conventions and add "after consultation with representative workers' and employers' organizations". His remark concerned both Points 8 and 9.
- 259.** The Government member of the United States could support neither the amendment submitted by the Government members of Greece and the United Kingdom nor the subamendment introduced by the Government member of Spain. The inclusion of the subjective term "impracticable" made the exceptions in Point 8, paragraph 1, less flexible and thus defeated the efforts to elaborate a widely ratifiable and flexible instrument.
- 260.** The Government member of Ireland stated that the Committee's intention in adopting broad definitions earlier was to provide an opportunity for exclusions later in the Convention. Although the subamendment introduced by the Government member of Spain appeared to be the right mechanism to achieve this, he was mindful of the arguments of the Government member of the United States and reserved his delegation's position on the matter.
- 261.** The Government member of Germany supported the subamendment.
- 262.** The Government member of the United Kingdom stated that exclusion on the basis of impracticability was a standard formulation. She supported the views expressed by the Government member of Norway as well as the subamendment.
- 263.** The Government member of Lebanon supported the subamendment as well as the proposal of the Government member of Tunisia.
- 264.** The Employer Vice-Chairperson also supported the subamendment.
- 265.** Having received broad agreement, the amendment submitted by the Government members of Greece and the United Kingdom was adopted as subamended. The Employers' amendment was considered withdrawn in view of the fact that its substance had been included in the text adopted.
- 266.** An amendment submitted by the Government member of Japan was not seconded and therefore not discussed.

- 
- 267.** The Government members of Botswana, Kenya, Malawi, Mozambique, Namibia, Nigeria, South Africa and Zimbabwe introduced an amendment to insert a new paragraph after paragraph (1) to read as follows: “In the case of exclusions by the competent authority in the preceding paragraph, the competent authority may not exclude any vessel or person from the provisions of the core ILO Conventions, including, but not limited to, child labour, forced labour or occupational health and safety”. The Government member of South Africa recognized the right of every member State to exempt fishing vessels, but expressed concern about the wide latitude for exemptions. These should not be allowed with regard to issues covered by core ILO Conventions, such as child labour, forced labour, and occupational safety and health.
- 268.** The representative of the Secretary-General indicated that the reference to core ILO Conventions was problematic. Fundamental Conventions were those mentioned in the Declaration on Fundamental Principles and Rights at Work. The ILO also had a list of so-called priority Conventions. However, occupational safety and health Conventions were neither fundamental nor priority Conventions. All Members were bound to respect the fundamental principles by virtue of their membership in the ILO, but full compliance with the detailed provisions of Conventions was mandatory only for those Conventions that had been ratified. To avoid confusion as to the extent of Members’ obligations, she suggested that a reference to the Declaration on Fundamental Principles and Rights at Work could be made in the Preamble, rather than in the main body of the Convention.
- 269.** The Government member of the United Kingdom felt that the amendment was not necessary, since the ratification of the new Convention would not affect the obligations resulting from the core and other Conventions mentioned in the amendment.
- 270.** The Employer Vice-Chairperson supported the inclusion of a reference to the Declaration on Fundamental Principles and Rights at Work in the Preamble, rather than the text of the Convention.
- 271.** The Worker Vice-Chairperson pointed out that the amendment might have far-reaching legal implications and therefore requested a legal opinion.
- 272.** The Legal Adviser, in responding to the query of the Worker Vice-Chairperson, stated that the text of the amendment to Point 8(1) proposed by a number of African Governments raised two sets of legal questions. First, to which Conventions did the amendment refer? Second, what would be the obligations with regard to those Conventions of a Member that ratified the future Convention on the fishing sector? The term “core Conventions” had been used since the Copenhagen World Summit for Social Development in 1995 to refer to fundamental ILO Conventions. The 1998 Declaration on Fundamental Principles and Rights at Work had, however, not opted for this term and referred to “fundamental” Conventions, that is, the eight ILO Conventions on freedom of association, the right to collective bargaining, non-discrimination, equal remuneration, forced labour, and child labour. ILO Conventions on occupational health and safety were not among these. For the above reasons, the text of the proposed amendment created two types of uncertainty. The first concerned the Conventions being referred to: did the authors intend to make reference to all eight fundamental Conventions, to just some of them or to Conventions on occupational safety and health as well and, if so, which ones? Consequently, uncertainty also arose as to Members’ obligations. The Legal Adviser concluded by stating that the text of the Convention should lay down clear obligations and leave no uncertainty with regard to the instrument’s intentions.
- 273.** The Government member of South Africa recalled the purpose of the proposed amendment, which was to prevent an erosion of the rights and protection of fishers.

---

Currently, the proposed Conclusions offered wide latitude for the competent authority to exclude whole categories of vessels. The exemption of vessels necessarily exempted those working on board. For the African region, certain issues were of fundamental importance. These included the protection conferred by the fundamental Conventions as well as standards of occupational safety and health. The protection of workers in any of those areas should not be compromised, either through the exclusion of certain categories of vessels or by other means.

- 274.** The Government member of Norway asked whether it was possible for a Convention on the fishing sector that referred to the fundamental Conventions to offer the possibility for a Member to make exemptions with regard to the fundamental Conventions. It might be inadvisable to introduce the notion of exemption to fundamental principles, even by way of prohibition of such exemptions.
- 275.** In a similar vein, the Employer Vice-Chairperson asked whether an exclusion by a competent authority would allow a Member to be exempt from its obligations under fundamental Conventions it had ratified.
- 276.** The Legal Adviser responded that two possible situations could be envisaged according to whether or not the Member had ratified the fundamental Convention(s) concerned. Ratified fundamental Conventions would apply to all persons on board, regardless of any exemptions that the competent authority might have declared under the Convention on the fishing sector. If the fundamental Convention(s) had not been ratified by the Member concerned, the situation was more delicate. The only protection afforded to those persons would derive from the Declaration on Fundamental Principles and Rights at Work. The Declaration did not require compliance with fundamental Conventions that had not been ratified, but imposed a requirement on Members to report on measures taken to respect, promote and realize the fundamental principles and rights, which were their subject. The practical consequences of this were that if Point 9 remained in its current form, governments taking exemptions as provided under Point 8 would be required to explain the reasons for any exclusions, state the positions of the representative organizations of employers and workers concerned, and describe the measures taken to give adequate protection to the excluded categories, not merely for the Convention on fishing, but for a much broader group of Conventions. It was advisable to reduce the degree of uncertainty of Members with regard to their obligations. Hence, references to child labour, forced labour and occupational safety and health would be preferable to references to unspecified other Conventions.
- 277.** The Worker Vice-Chairperson thanked the Legal Adviser for the useful advice. He supported the placement of a reference to the fundamental Conventions in the Preamble and would work with Government members of the African group to develop an appropriate text.
- 278.** The Employer Vice-Chairperson reiterated her support for this approach.
- 279.** It was decided that the Employers and Workers would work with the Government members of the African group to prepare a preambular text.
- 280.** The Government members of Greece and the United Kingdom withdrew an amendment.
- 281.** The Government member of the United Kingdom, also speaking on behalf of the Government member of Greece, introduced an amendment to add, “and where practicable,” in the first line, after the word “paragraph” to complement the text adopted in Point 8(1).

- 
- 282.** The Worker Vice-Chairperson did not support the amendment, because the inclusion of “impracticable” in paragraph (1) made it unnecessary.
- 283.** The Employer Vice-Chairperson as well as a large number of Government members expressed support for the amendment.
- 284.** The amendment was therefore adopted.
- 285.** The Government member of Japan submitted an amendment, seconded by the Government member of Ireland, to add the words “, as appropriate,” after the words “take measures”.
- 286.** The Employer Vice-Chairperson supported the amendment.
- 287.** The Worker Vice-Chairperson opposed the amendment, because it would weaken the whole instrument.
- 288.** The Government member of Norway wondered whether the amendment was needed. In his opinion, the competent authority would always consider whether something was appropriate before implementation. He therefore suggested that the Government member of Japan should explain the considerations behind the amendment, so that his delegation could reach an opinion on its merits.
- 289.** The Government member of Japan explained that the amendment aimed to ensure that countries could take into account their national situations. This flexibility would encourage Members to gradually extend the protection of the Convention.
- 290.** The Government member of Ireland added that the amendment offered a time frame for the gradual extension of protection.
- 291.** The Government member of the United Kingdom supported the amendment, since it would further clarify the text.
- 292.** The Government member of Argentina, also speaking on behalf of the Government members of Chile, Guatemala and Venezuela opposed the amendment.
- 293.** The amendment was adopted with the support of the Employers’ group and a majority of Governments.
- 294.** Point 8 was adopted as amended.

#### Point 9

- 295.** An amendment submitted by the Government member of Japan was not seconded and, therefore, was not discussed.
- 296.** The Government member of the United Kingdom, speaking also on behalf of the Government member of Greece, introduced an amendment to replace the words at the end of Point 9, “the measures taken to give adequate” with “any measures which may have been taken to provide equivalent”. The provision would be strengthened by making protection equivalent, rather than just adequate.
- 297.** The Employer and Worker Vice-Chairpersons as well as numerous Government members supported the amendment.

---

**298.** The amendment was adopted.

**299.** Point 9 was adopted as amended.

Point 10

**300.** The Government member of the United Kingdom, also speaking on behalf of the Government member of Greece, withdrew an amendment.

**301.** An amendment submitted by the Government member of Japan was not seconded and therefore not discussed.

**302.** Point 10 was adopted.

Part II. General principles

*Implementation*

Point 11

**303.** The Government member of Guatemala withdrew an amendment on the understanding that the Drafting Committee would be asked to review the proper Spanish terms for “implement” and “enforce”.

**304.** Point 11 was adopted.

*Competent authority and coordination*

Point 12

**305.** An amendment submitted by the Government member of Guatemala was withdrawn.

**306.** Point 12 was adopted.

New points after Point 12

**307.** The Worker Vice-Chairperson introduced an amendment to insert the following new Point after Point 12:

The skipper has the overall responsibility for the safety of the fishers on board and the safe operation of the vessel, including but not limited to the following areas:

- (i) provide such supervision as will ensure that as far as possible crew members perform their work in the best conditions of safety and health;
- (ii) manage the fishers on board in a manner which respects the issue of safety and health, including fatigue;
- (iii) facilitate occupational safety and safety awareness training on board the vessel.

The owner of the fishing vessel should ensure that the skipper is provided with the necessary resources and facilities for the purpose of compliance with the obligations of this Convention.

**308.** The Worker Vice-Chairperson introduced this amendment to clarify the respective responsibilities of the owner and the skipper. Occupational health and safety was an important aspect of the ILO’s mandate and should be reflected in this Convention. The text

---

was drawn from the proposed revised FAO/ILO/IMO Code of Safety for Fishermen and Fishing Vessels and should not be controversial.

- 309.** The Government member of South Africa, speaking also on behalf of the Government members of Algeria, Angola, Botswana, Cameroon, Kenya, Malawi, Mozambique, Namibia, Nigeria, Tunisia and Zimbabwe supported the amendment, but added a subamendment to replace the term “crew members” with “fishers” in order to conform to the rest of the text.
- 310.** The Government member of the Syrian Arab Republic supported the Workers’ amendment.
- 311.** The Government member of Denmark sought clarification on what type of training was being sought in sub-clause (iii) of the amendment.
- 312.** The Government member of Argentina, also speaking on behalf of the Government members of Brazil, Chile, Guatemala and Venezuela, sought to simplify the amendment and proposed a subamendment that read: “The skipper should be responsible for ensuring that fishing operations are carried out in a manner that guarantees the health and safety of fishers at work, and for this purpose shipowners should provide the resources and facilities to ensure compliance with the requirements of this Convention.”
- 313.** The Government members of Canada, Germany and Norway did not support the subamendment proposed by the Latin American Government members, but did support the Workers’ amendment as subamended by the Government member of South Africa. The Government member of the Bahamas also supported the amendment, noting that the Workers’ proposal closely meshed with Point 34 of the proposed Conclusions.
- 314.** The Government member of the United Kingdom pointed out that the word “guarantee” in the text proposed by Latin American Government members was problematic. In a strict sense, it was impossible to guarantee the safety and health of fishers: one could only mitigate problems.
- 315.** The Government member of France understood the rationale behind the Workers’ amendment, but thought that it introduced a lack of transparency as to the responsibilities of the owner and the skipper. If text could be proposed that would stress the owner’s overall responsibility, he would support the amendment.
- 316.** The Government member of the United States did not oppose the spirit of the amendment, but did not believe the substance of the amendment could be dealt with in a section entitled “Competent authority and coordination” as there was no mention of the competent authority in the text. The wording of the last sub-clause was too broad. Reference to “the obligations of this Convention” was too far-reaching and should be replaced by “this provision”. He asked for clarification from the Workers’ group regarding the meaning of “training”.
- 317.** The Employer Vice-Chairperson agreed that the text did not fit under the heading of Point 12 and suggested that the Drafting Committee find an appropriate place for the text. Safety and health was an important subject for Employers. She therefore proposed to subamend the text in the following manner: the first paragraph would read: “The skipper has the responsibility for the safe operation of the vessel and the safety and health of the fishers on board.” The last paragraph of the Workers’ amendment would be retained and a new paragraph added at the end: “Fishers should have the duty to comply with the

---

prescribed safety and health measures and to cooperate with the skipper to help the latter to comply with his own duties and responsibilities.”

- 318.** The Government member of Ireland was concerned that the amendment diluted the overall responsibility of the owner and assigned too much responsibility to the skipper. He introduced a subamendment to the Workers’ amendment to delete the word “overall” from the first line and to replace the words “shall ensure” in the last paragraph with “has the overall responsibility to ensure”.
- 319.** The Government member of France seconded the subamendment and stressed the need to ensure that owners had overall responsibility.
- 320.** The Government member of Germany reminded the Committee that the text before it had resulted from the joint work of IMO, FAO and ILO. Changes to this text should be avoided so as not to dilute the text.
- 321.** The Government member of Brazil, also speaking on behalf of the Government members of Argentina, Chile, Guatemala and Venezuela, supported the Irish proposal and withdrew their own proposed subamendment. He asked the Workers’ group to explain what they meant by “training”.
- 322.** The Worker Vice-Chairperson stated that training was often conducted on board. In order to properly train personnel, good facilities aboard vessels needed to be available. He expressed his full support for the subamendment proposed by the Government member of Ireland, which had taken into account the concerns he had raised.
- 323.** The Employer Vice-Chairperson withdrew the Employers’ subamendment and introduced a subamendment to add the following sentence at the end of the Workers’ amendment, as subamended by the Government members of France and Ireland: “Fishers should comply with established applicable safety and health measures.” The purpose was to make clear that workers also had responsibilities with regard to safety and health.
- 324.** The Worker Vice-Chairperson accepted the Employers’ subamendment.
- 325.** The amendment was adopted and referred to the Drafting Committee regarding its placement.
- 326.** The new Point after Point 12 was adopted as amended.
- 327.** The Workers’ group proposed an amendment to add the following new point after Point 12: “The skipper should not be constrained by the owner of the fishing vessel from taking any decision which, in the professional judgement of the skipper, is necessary for the safety of the vessel and its safe navigation, safe operation or the safety of the fishers on board.” The Worker Vice-Chairperson emphasized that the owner should not put undue pressure on the skipper with regard to any decision as to safety on board the vessel, for example, whether or not to put to sea in heavy weather conditions.
- 328.** The Employer Vice-Chairperson supported the amendment.
- 329.** The Government member of Brazil also expressed his support for the amendment, but asked that the Drafting Committee bring the Spanish translation more closely into line with the English.
- 330.** The amendment was adopted.

- 
- 331.** The new Point after Point 12 was adopted.
- 332.** The Worker Vice-Chairperson submitted an amendment to add, a new heading, “Compliance and enforcement” with the following new Point:
- (1) Each Member should implement and enforce laws or regulations or other measures that it has adopted to fulfil its commitments under this Convention with respect to fishing vessels and fishers under its jurisdiction.
  - (2) Each Member should accordingly exercise effective jurisdiction and control over vessels that fly its flag by establishing a system for ensuring compliance with the requirements of this Convention, including regular inspections, reporting, monitoring and legal proceedings under the applicable laws.
  - (3) A vessel to which this Convention applies might, in accordance with international law, be inspected by Members other than the flag State, when the vessel is in their ports or operating in an area within its jurisdiction, to determine whether the vessel is in compliance with the requirements of this Convention.
  - (4) Each Member should exercise effective jurisdiction and control over fishers’ recruitment and placement services, if these are established, in its territory.
  - (5) Members should prohibit violations of the requirements of this Convention and should, in accordance with international law, establish sanctions or require the adoption of corrective measures under their laws that are adequate to discourage such violations wherever they occur.
  - (6) Members should implement their responsibilities under this Convention in such a way as to ensure that the fishing vessels of States that have not ratified this Convention do not receive more favourable treatment than the vessels that fly the flag of States that have ratified it.
  - (7) Every foreign vessel calling, in the normal course of its business or for operational reasons, in the port of a Member might be the subject of inspection for the purpose of reviewing compliance with the requirements of this Convention relating to the working and living conditions of fishers on the vessel.
- 333.** The Worker Vice-Chairperson explained that compliance and enforcement were so important that these principles on inspection, monitoring and sanctions should be inserted among General Principles. The proposal reflected content found in the draft consolidated maritime labour instrument and should be relevant to fishing vessels as well.
- 334.** The Employer Vice-Chairperson and the Government members of Brazil, Japan, Lebanon, and Namibia opposed the amendment, stating that compliance and enforcement had their place in Part VII of the Convention.
- 335.** The Worker Vice-Chairperson agreed to postpone the consideration of the amendment with the understanding that the proposal would be discussed in Part VII.
- 336.** An amendment submitted by the Government member of Japan was not seconded and therefore was not discussed.
- 337.** Part II. General principles was adopted as amended.

---

Part III. Minimum requirements for work on board fishing vessels

*III.1. Minimum age*

- 338.** The Employers' group submitted an amendment to replace the title "Minimum age" with "Young workers and hazardous work". The heading should be consistent with other ILO Conventions dealing with the protection of young persons.
- 339.** The Worker's group and the Government members of Algeria, Angola, Botswana, Cameroon, Kenya, Lebanon, Malawi, Mozambique, Namibia, Nigeria, South Africa, Thailand, Tunisia and Zimbabwe preferred the term "Minimum age" as used in the Minimum Age Convention, 1973 (No. 138), and opposed the amendment.
- 340.** The Employer Vice-Chairperson withdrew the amendment.

Point 13

- 341.** The Employer members submitted an amendment to delete Point 13. The Employer Vice-Chairperson stated that, while all other provisions dealt with minimum age in connection with the specific conditions of the fishing sector, this general provision should be deleted.
- 342.** The Worker Vice-Chairperson recalled that fishing was hazardous work and strongly opposed the amendment.
- 343.** The Government members of France and Thailand felt that it was essential to reaffirm the principle of minimum age. This was supported by the Government member of the Bahamas, speaking on behalf of the Government members of the Committee Member States of CARICOM, as well as by the Government members of Algeria, Angola, Botswana, Cameroon, Kenya, Malawi, Mozambique, Namibia, Nigeria, South Africa, Tunisia and Zimbabwe.
- 344.** The Employer Vice-Chairperson withdrew the amendment.
- 345.** Point 13 was adopted.

Point 14

- 346.** The Government member of Japan introduced an amendment to add the following sentence at the end of Point 14: "However, the minimum age should be 15 years when the person has completed compulsory education."
- 347.** The Government member of Lebanon seconded the amendment, noting that some countries set the minimum age at 14. It would be preferable to set the minimum age at 15 rather than 16.
- 348.** The Worker Vice-Chairperson indicated that his group had initially supported a minimum age of 18 years unless a contract of apprenticeship was signed. Understanding the need for flexibility, they had accepted a minimum age of 16 years but were unwilling to go any further. He vigorously rejected the amendment.
- 349.** The Employer Vice-Chairperson also opposed the amendment.

---

**350.** The Government member of Japan urged the Committee to reconsider his amendment. In principle, his delegation could support a minimum age of 16. However, account should be taken of persons who had already finished compulsory education, but had not yet attained 16 years of age.

**351.** The Government member of Bahamas, speaking on behalf of the Government members of the Committee Member States of CARICOM, understood the concerns of the Government member of Japan, but could not support the amendment. In his region, legislation set the school-leaving age at 16.

**352.** The Government members of Belgium and France did not support the amendment, although they were sensitive to the concerns of the Government member of Japan. There were cases when young persons should be offered the possibility to work, but clear safeguards were needed.

**353.** In view of the broad opposition, the amendment was not adopted.

**354.** Point 14 was adopted.

#### New Point after Point 14

**355.** The Government members of France and Greece submitted an amendment to insert after Point 14 the following new Point:

(1) The minimum age might be 15 years for persons who are no longer subject to compulsory schooling as imposed by national legislation, and who are engaged in maritime vocational training.

(2) Persons of 15 years of age might also be authorized, in accordance with national laws and practice, to perform light work during school holidays; in this case they should be granted a rest of a duration equal to at least half of each holiday period.

**356.** The Government member of France recalled the difficulties with the recruitment and training of young persons in cases where compulsory schooling ended before the age of 16. Those young persons should be able to begin maritime vocational training right after completion of their compulsory schooling. Furthermore, young persons should be allowed to perform non-hazardous light work on board. It was difficult to envisage an absolute minimum age of 18 years. Apprenticeship was a gradual learning process. The proposed Conclusions suggested a minimum age of 18 for dangerous work and an absolute minimum age of 16 years, to which the amendment proposed derogations in clearly defined circumstances.

**357.** The Worker Vice-Chairperson considered the proposal to be in line with the Minimum Age Convention, 1973 (No. 138), and expressed his support.

**358.** The Employer Vice-Chairperson introduced a subamendment to add in paragraph 2 of the amendment after the words "light work" the words "with adequate rest during school holidays" and to delete the rest.

**359.** The Government member of Namibia understood the concerns of the Government members of France and Greece. However, he asked whether a new Convention could undermine the principles set out in the fundamental Conventions, of which the Minimum Age Convention, 1973 (No. 138), was one.

- 
- 360.** The representative of the Secretary-General read out Article 7, paragraphs 1 and 2, of Convention No. 138, which defined the circumstances under which young persons below the age of 16 could enter employment. The work should not be harmful to their health or development, nor interfere with school attendance or participation in vocational training programmes.
- 361.** The Employer Vice-Chairperson noted that the amendment had wording that met the conditions set out in Article 7, paragraph 1, of Convention No. 138. It addressed persons who were no longer subject to compulsory schooling according to national legislation and for whom light work was permitted in accordance with national laws and practice. She proposed a subamendment to paragraph 2 in order to avoid an overly prescriptive provision. After the words “light work”, she suggested adding “with adequate rest” and deleting the rest of the text.
- 362.** The Government member of France accepted the subamendment and pointed out that the amendment was in conformity not only with the conditions of Article 7, paragraph 1, of Convention No. 138, but also with Article 6, which referred to vocational education and training.
- 363.** The Government member of Lebanon supported the amendment as subamended.
- 364.** The Government member of Brazil had some misgivings about paragraph (1) concerning young persons undergoing vocational training. He also sought clarification on what “light work” meant in the fishing sector.
- 365.** The Worker Vice-Chairperson and the Government member of the Syrian Arab Republic supported the amendment, but not the Employers’ subamendment. Fishing was hazardous work.
- 366.** After a show of hands, the amendment was adopted without change.
- 367.** The new Point after Point 14 was adopted.

Point 15

- 368.** Point 15 was adopted.

Point 16

- 369.** The Government member of Denmark, speaking also on behalf of the Government members of Ireland and the United Kingdom, introduced an amendment to replace the word “through” with the word “after”.
- 370.** The Employer Vice-Chairperson supported the amendment.
- 371.** The Worker Vice-Chairperson preferred using “in consultation with”, but agreed with the amendment.
- 372.** The amendment was adopted.
- 373.** Point 16 was adopted as amended

---

Point 17

- 374.** The Government member of Venezuela proposed an amendment, seconded by the Government member of Guatemala, to add, “that schooling is guaranteed” after “protected”. A further change of words would affect only the Spanish text.
- 375.** The Worker Vice-Chairperson did not support the amendment, which detracted from the main purpose of ensuring full protection of young fishers.
- 376.** The Employer Vice-Chairperson agreed, adding that many countries were struggling to provide even basic education and were in no position to guarantee schooling for those over 16.
- 377.** The Government member of the United Kingdom also opposed the amendment.
- 378.** The first part of the amendment was not adopted, while the linguistic point in question was deferred to the Drafting Committee.
- 379.** The Worker members submitted an amendment to replace “received adequate specific instruction or vocational training” with “completed mandatory specific vocational training”. Training prior to going to sea should be compulsory.
- 380.** The Government members of Argentina, Brazil and Chile proposed an amendment to replace “and” with a comma and in the fourth line to add “, that they have completed their compulsory education and that they have the authorization of whoever, in accordance with national legislation, should provide it”. The purpose was to ensure that young persons as from 16 years of age should have appropriate training before beginning work as fishers.
- 381.** The Government member of Lebanon found the amendment vague as the type of vocational training being proposed had not been specified.
- 382.** The Government member of South Africa proposed a subamendment to the Workers’ proposal, whereby the words “completed mandatory specific vocational training” would be replaced by “completed basic pre-sea safety training”. This was accepted by the Worker Vice-Chairperson.
- 383.** The Government members of Belgium, France and Spain supported the subamended proposal as did the Employers’ group.
- 384.** The Government member of Greece observed that the subamendment only covered persons less than 18 years of age and was concerned that it should apply to all fishers, irrespective of age.
- 385.** The Government member of South Africa agreed that all fishers should have such training, but that the point needed reinforcing in the case of young workers.
- 386.** The Government member of Norway noted that mandatory safety training for fishers was enshrined in Chapter III of the STCW-F Convention. The present instrument should not overlap with other Conventions. He therefore preferred the original text, recommending that the Committee should not try to incorporate substantive matters already dealt with by other organizations and instruments.
- 387.** The Workers’ amendment was adopted as subamended.

---

**388.** The amendment submitted by the Government members of Argentina, Brazil and Chile was withdrawn.

**389.** Point 17 was adopted as amended.

**390.** Part III.1. Minimum age was adopted as amended.

### *III.2. Medical examination*

**391.** The Government member of Venezuela introduced an amendment, seconded by the Government member of Argentina, to add the word “Occupational” to the heading “Medical examination”. The word “occupational” was necessary, since the type of medical examination needed was not of a general kind, but focused on the individual’s physical and mental capacity to carry out the work of a fisher.

**392.** The Government member of Guatemala added that an occupational medical examination would take into account the time spent on board and other specificities of the fishing profession in determining a person’s physical and mental fitness for the job.

**393.** The Employer and Worker Vice-Chairpersons asked for further clarification of the term “occupational medical examination”.

**394.** The Government member of Germany explained that the reference to fitness hinted at the nature of the examination. Standards on such examinations existed and needed to be followed. She therefore supported the amendment of the Government member of Venezuela.

**395.** The representative of the Secretary-General explained that headings were generic and provided orientation only. They had no legal status and implied no obligations.

**396.** The Government member of Nigeria stated that clause 20(a) of the proposed Conclusions gave Members the right and obligation to determine the nature of the medical examination.

**397.** The amendment was withdrawn for lack of support.

**398.** The title of section III.2 was adopted.

### Point 18

**399.** The Employer Vice-Chairperson withdrew one amendment and introduced another to replace Point 18 with the following text: “No new entrant fishers should work on board a fishing vessel unless they are medically fit to perform their duties.” She subamended it to read: “(1) No fishers should work on board a fishing vessel unless they are fit to perform their normal duties. (2) New entrant fishers should provide a general medical certificate attesting to their physical health.” This amendment took into consideration fishers who were currently working, but did not have such certificates. Their employment opportunities should not be eroded by new requirements. Only new entrants should be required to provide a medical certificate.

**400.** The Worker Vice-Chairperson pointed out that the STCW-F Convention required such a certificate. The Workers therefore did not support the amendment.

**401.** The Government member of Germany said that individuals should be examined medically in relation to the job they would have to perform. Regular occupational medical

---

examinations should be undertaken, not just at the time of entry into employment. For these reasons, her delegation could not support the Employers' proposal.

- 402.** The Government member of Norway said that each person on board should have a medical certificate, not just those in first-time employment. He therefore rejected the proposal.
- 403.** The Government member of France strongly opposed the text, pointing out that the results of a medical examination at the time of entry into the profession should not be considered a lifetime certificate.
- 404.** The Government member of Lebanon also opposed the amendment on the basis that everyone on board should be subject to regular medical examinations.
- 405.** The Government member of the United Kingdom also rejected the amendment, stating that the fitness required should be of the same level as that in STCW-F Convention.
- 406.** The Employers withdrew their amendment.
- 407.** An amendment submitted by the Government members of Belgium and France, which only concerned the French text, was referred to the Drafting Committee.
- 408.** Point 18 was adopted.

#### Point 19

- 409.** Two amendments submitted by the Employer members were withdrawn.
- 410.** The Workers' group submitted an amendment to replace the words "in respect of vessels which do not normally undertake voyages of more than [ ] days" with "taking into account the health and safety of fishers, size of the vessel, availability of medical assistance and evacuation, duration of the voyage, area of operation, type of fishing operation and national traditions". The Worker Vice-Chairperson stated that this amendment recognized the need for flexibility, which was not the case if the only permitted variation was the number of days of a voyage. The competent authorities should take all relevant factors into consideration when deciding on exemptions.
- 411.** The Government member of the United Kingdom supported this proposed amendment and withdrew a similar amendment submitted by her delegation and the Government member of Ireland.
- 412.** The Government members of Argentina, Brazil, Canada, Chile, Denmark, France, Germany, Greece, Guatemala, Ireland, Lebanon, Netherlands, Norway, Portugal, Spain, and Venezuela supported the amendment.
- 413.** The Employer Vice-Chairperson recalled that it had been agreed at the beginning of the discussion that the instrument would apply to all fishing vessels, regardless of vessel size, yet in the Workers' amendment, vessel size was one of the criteria listed.
- 414.** The Worker Vice-Chairperson responded that the amendment was intended to enhance flexibility, allowing more latitude with regard to criteria for exemption.
- 415.** The Government member of Germany remarked that the agreement on vessel size was in relation to the scope of the instrument. Here, an exception based on size could well be justified.

---

**416.** The Government member of South Africa, speaking also on behalf of the Government members of Algeria, Angola, Botswana, Cameroon, Kenya, Malawi, Mozambique, Namibia, Nigeria and Zimbabwe, supported the amendment. It would enable the competent authority to take a number of factors into consideration when making exceptions.

**417.** The Government member of Tunisia also supported the amendment.

**418.** The amendment was adopted.

**419.** Point 19 was adopted as amended.

#### Point 20

**420.** The Employer members withdrew an amendment and submitted another to reword Point 20 as follows and insert it in the proposed Conclusions with a view to a Recommendation under the heading “I.2. Medical examination”:

When a medical certificate is required, the competent authority should stipulate:

- (a) the nature of the medical examination;
- (b) the form and content of the medical certificate;
- (c) the qualifications of the medical practitioner who signs the medical certificate;
- (d) the frequency of medical examinations and the period of validity of medical certificates;
- (e) the appeals procedures in the event that a person has been refused a certificate or has had limitations imposed on the work he or she might do; and
- (f) other relevant requirements.

**421.** The Employer Vice-Chairperson explained that, in view of the adoption of Points 18 and 19, the measures to be taken in connection with medical examination should be moved to the Recommendation.

**422.** The Worker Vice-Chairperson strongly opposed this amendment as did numerous Government members.

**423.** The Employer Vice-Chairperson withdrew the amendment.

**424.** The Government members of Argentina, Brazil and Chile submitted an amendment to Point 20, clause (a), to add after the word “examinations” the words, “also considering gender issues”. The Government member of Chile explained that provisions on medical examinations should take into account gender issues.

**425.** The Worker Vice-Chairperson expressed support for the amendment.

**426.** The Employer Vice-Chairperson rejected the amendment. The Committee had earlier agreed that “fisher” comprised men and women.

**427.** The Government member of Namibia, speaking also on behalf of the Government members of Algeria, Angola, Botswana, Cameroon, Kenya, Malawi, Mozambique, Nigeria, South Africa, Tunisia and Zimbabwe, rejected the amendment, as did the Government member of Ireland.

- 
- 428.** The Government member of France considered the amendment unjustified. It was up to the doctor to check the aptitude for work of both men and women. Furthermore, such an amendment would set a precedent for every ILO Convention concerning aptitude for work.
- 429.** The Worker Vice-Chairperson withdrew his support for the amendment.
- 430.** The Government member of Chile withdrew the amendment.
- 431.** The Government members of Denmark and Norway submitted an amendment to replace clause (c) with the following: “the medical certificate should be issued by a duly qualified medical practitioner or, in the case of a certificate solely concerning eyesight, by a person recognized by the competent authority as qualified to issue such a medical certificate. Practitioners should enjoy full professional independence exercising their medical judgement in terms of the medical examination procedures.”
- 432.** The Government member of Norway explained that there was a need to strengthen the provisions of the proposed Conclusions with regard to medical examination by duly qualified practitioners. The text of the amendment had been taken from the draft consolidated maritime labour Convention, since the two Conventions should be harmonized on this point.
- 433.** The Worker and Employer Vice-Chairpersons strongly supported the amendment, which was adopted.
- 434.** The Government members of Botswana, Kenya, Malawi, Mozambique, Namibia, Nigeria, South Africa and Zimbabwe submitted an amendment to insert the following text at the end of clause (c): “; for the purpose of this standard a medical practitioner is deemed to be a doctor, or health-care provider, approved by the competent authority”. The Government member of Namibia said that the purpose of this amendment was to highlight the fact that the term “medical practitioner” did not only mean doctor. There were other persons in the medical profession with the qualifications to issue medical certificates.
- 435.** The Committee understood that the term “medical practitioner” did not only mean medical doctor but included other qualified persons, such as a health-care provider approved by the competent authority. On that basis, the Government member of Namibia withdrew the amendment.
- 436.** The Government members of Denmark and Norway submitted an amendment to delete in clause (d) “and the period of validity of medical certificates” and after clause (d) insert the following text:

*Period of validity of the medical certificate*

- (i) In the case of young persons of less than 18 years of age, the medical certificate should remain in force for a period not exceeding one year from the date on which it was granted;
  - (ii) In the case of persons who have attained the age of 18 years, the validity of the medical certificate should be two years;
  - (iii) If the period of validity of a certificate expires in the course of a voyage, the certificate should continue in force until the end of that voyage.
- 437.** The Government member of Norway stated that there was a need to specify the period of validity of medical certificates. The wording had been taken from the proposed Conclusions with a view to a Recommendation. However, the age had been reduced from

---

21 to 18 in order to keep it in line with requirements for seafarers and current practice in many countries.

- 438.** The Government member of Spain proposed a subamendment, seconded by the Government member of Germany, to add in (i) “and over 50” before the word “years”. More frequent medical examinations were required for older persons as was the case for younger persons.
- 439.** The Government member of Namibia preferred the Office text.
- 440.** The Employer Vice-Chairperson preferred the original text as well. Each member State had its own laws regarding these matters.
- 441.** The Worker Vice-Chairperson supported the amendment, but not the subamendment.
- 442.** The Government member of the United States did not support the proposed changes. There was a need to maintain flexibility in the Convention. Too much detail would impair ratification.
- 443.** The Government member of Canada also rejected the amendment as overly prescriptive.
- 444.** The amendment was not adopted.
- 445.** The Government members of Norway and Denmark submitted an amendment to replace clause (e) with the following text:

*Right to administrative appeal*

- (e) Arrangements should be made to enable a person who, after examination, is determined to be unfit for work on board fishing vessels, or on board certain types of vessels, or for certain types of work on board vessels, to apply for a further examination by a medical referee or referees who should be independent of any fishing vessel owner or of any organization of fishing vessel owners or fishers.
- 446.** The Government member of Norway stated that the amendment aimed at reinforcing the right of fishermen to have their case revisited in case of failure of a medical examination. A right to administrative appeal was important.
- 447.** The Employer and Worker Vice-Chairpersons did not support the amendment, nor did the Government member of Lebanon.
- 448.** The Government member of Japan agreed that arrangements should be made for further examination of a person who had failed a medical examination, as was provided for in Article 8 of the Medical Examination (Seafarers) Convention, 1946 (No. 73), but did not support administrative appeal in this context. He proposed a subamendment, which was seconded by the Government member of France to replace “administrative appeal” with “apply for a further examination”.
- 449.** The subamendment and the amendment were not adopted.
- 450.** The Government member of Japan submitted an amendment, seconded by the Government member of France, to replace “appeal procedures” by “the opportunity to have a further examination by another independent medical practitioner or referee”. The opportunity to have a further examination by another independent medical practitioner or referee provided adequate protection for fishers if they were refused a medical certificate.

- 
- 451.** The Worker Vice-Chairperson did not support this amendment.
- 452.** The Employer Vice-Chairperson could support the amendment, if subamended to delete the words “or referee”.
- 453.** After further discussion, the Worker Vice-Chairperson stated that he could agree to the amendment, if it were further subamended so that clause 20 (e) would read as follows: “the right to a further examination by another independent medical practitioner in the event a person has been refused a certificate or has had limitations imposed on the work he or she might do;”. He withdrew an amendment that was no longer applicable.
- 454.** The Government member of Japan thanked the Workers’ group for its flexibility and wisdom and stressed that he fully supported the subamendment.
- 455.** The Government member of Japan and the Employer Vice-Chairperson supported this subamendment.
- 456.** The Government member of the United States, noting that a compromise had been reached, observed that the language offering an opportunity to appeal a decision of the competent authority had now disappeared from the text.
- 457.** The amendment was adopted, as subamended.
- 458.** Point 20 was adopted as amended.

#### Part IV. Conditions of service

##### *IV.1. Manning and hours of rest*

- 459.** An amendment was submitted by the Worker members to replace the title “Manning” with “Crewing/manning”. A Worker member from Denmark stated that the intention of the text was to provide a more gender-neutral terminology. The proposal was to use “crewing/manning”, a more inclusive term, in the title while keeping “manning” in the substantive provisions, because of its legal significance.
- 460.** The Employer Vice-Chairperson considered that “manning” meant “resourcing the vessel” and opposed the amendment. Furthermore, the Committee had already decided not to use the term “crew member” for fisher.
- 461.** The Government members of Lebanon and Thailand also expressed opposition to the amendment, which was withdrawn.
- 462.** Title IV.1 was adopted.

##### Point 21

- 463.** The Worker members submitted an amendment to replace Point 21 by the following text:

21. Members should require that all fishing vessels that fly their flag have a sufficient number of adequately trained fishers on board to ensure that the vessel is operated safely, efficiently and with due regard to security under all conditions, taking into account concerns about fatigue and the particular nature and conditions of the fishing operations and any processing of the catch.

---

22. When determining, approving or revising manning levels, the competent authority should take into account the principles in applicable international instruments on manning levels as well as the need to avoid or minimize excessive hours of work to ensure sufficient rest and to limit fatigue.

- 464.** A Worker member from Denmark stated that the proposed Conclusions referred to safe manning without providing specific guidance on how to achieve it. The amendment was intended to clarify and complete the provision by highlighting the human factors that contributed to accidents, such as fatigue. He introduced a subamendment to replace the word “security” by “safety”.
- 465.** The Employer Vice-Chairperson preferred the Office text, which already catered to the Workers’ concerns. Safety and training were covered elsewhere in the instrument and there was no need for repetition.
- 466.** The Government members of Brazil, Indonesia and Thailand opposed the amendment.
- 467.** The Government member of Norway had no problem with Point 21 of the amendment, but found the notion in paragraph 22 that the competent authority should be “determining, approving or revising manning levels” impractical and unrealistic. The competent authority could do this for merchant vessels, but not for fishing vessels, because of the large number of vessels and the variations in the size of the crew from one day or season to the next. Manning was also tied to arrangements for hours of rest in the fishing industry. It was up to the vessel owner to have sufficient crew to cover requirements for rest periods.
- 468.** The Worker members withdrew the amendment.
- 469.** The Government member of Denmark also on behalf of the Government member of Greece introduced an amendment to insert “with a crew necessary for the safe navigation of the vessel” after the word “manned”. The word “manned” should only refer to the crew necessary for safe navigation, for example, the skipper, mates and engineering officers, in keeping with the STCW-F Convention.
- 470.** A Worker member from Denmark supported the amendment and proposed to add the words “and operation” after “navigation”.
- 471.** The Employer Vice-Chairperson supported the amendment as subamended.
- 472.** The Government member of Ireland, considering the role of the crew in terms of operations such as life saving and fire-fighting, also supported the proposal.
- 473.** The Government member of the United Kingdom observed that the text seemed to suggest that the competent authorities should be fixing manning levels for vessels, including those needed for fishing operations. He did not support this.
- 474.** The Government member of Norway agreed in principle with the amendment, and did not believe that it required governments to fix manning levels. The Government would legislate to require vessel owners to ensure that adequate crew would be on board. The Workers’ subamendment was unnecessary, since the notion of “at all times” was implicit in “safe navigation”.
- 475.** The representative of the Secretary-General advised the Committee that the text as it was originally written, imposed an obligation on member States to adopt laws, regulations or other measures to require fishing vessel owners to ensure that their vessels were

---

sufficiently manned and under the control of a competent skipper. It did not require member States to determine manning levels, but only to provide a regulatory framework.

- 476.** The Employer Vice-Chairperson had supported the amendment on the understanding that member States would not be required to prescribe manning levels. The Employer members endorsed “safe navigation and operation”.
- 477.** The Government member of Lebanon expressed support for the proposal.
- 478.** The amendment was adopted as subamended.
- 479.** An amendment submitted by the Government members of Argentina, Brazil and Chile was withdrawn.
- 480.** Point 21 was adopted as amended.

#### Point 22

- 481.** The Employer Vice-Chairperson submitted an amendment to replace “should” by “might” in order to retain flexibility. She proposed a subamendment to insert the words “after consultation” before “Members” at the beginning of Point 22.
- 482.** The Worker Vice-Chairperson rejected the proposal, since rest periods should be mandatory.
- 483.** Numerous Government members opposed the amendment, which was withdrawn.
- 484.** The Government members of Denmark and Germany submitted an amendment to replace “ensure” by “make sure that the skipper ensures”. The intention was to highlight the responsibility of the skipper for ensuring that rest periods on board were adhered to. Amended Point 12 had clarified the responsibilities of skipper and owner and the amendment proposed was in line with that decision.
- 485.** The Government member of Lebanon asked for clarification as to why the skipper should be made responsible for ensuring safety and health when the prime responsibility lay with the owner.
- 486.** The Government member of Germany explained that the skipper was on board and could therefore ensure that rest periods were provided, whereas the owner was not.
- 487.** The Government member of Brazil pointed out that the skipper should not be seen as solely responsible for ensuring that rest periods were adhered to. According to the definitions agreed to earlier, the skipper was the representative of the owner. By mentioning the skipper only, this joint responsibility was undermined. At sea the skipper was responsible, but the owner needed to provide instructions. The suggested amendment appeared to diminish the responsibility of the owner, and Brazil did not support it.
- 488.** The Government member of Denmark, also speaking on behalf of Germany, agreed and withdrew the amendment.
- 489.** The Government members of Argentina, Brazil and Chile submitted an amendment to insert the words “each day” after “rest periods”. The Government member of Brazil said that the amendment was to ensure that rest periods were given on a daily basis but without being over prescriptive.

---

**490.** An amendment submitted by the Workers' group proposed to add the following new point after Point 22:

(1) The minimum hours of rest should not be less than:

- (a) ten hours in any 24-hour period; and
- (b) 77 hours in any seven-day period.

(2) Hours of rest may be divided into no more than two periods, one of which should be at least six hours in length, and the interval between consecutive periods of rest should not exceed 14 hours.

**491.** A Worker member from Denmark, speaking on behalf of his group, recalled that various Government members had expressed the desire for a comprehensive standard within a single instrument. The proposed amendment was based on Article 5 of the Seafarers' Hours of Work and the Manning of Ships Convention, 1996 (No. 180), and similar provisions in the STCW and the STCW-F Conventions. Convention No. 180 would become redundant with the adoption of the consolidated maritime labour Convention, so it was necessary to retain the minimum standards applicable to fishing vessels in the proposed fishing Convention.

**492.** The Government members of Botswana, Cameroon, Côte d'Ivoire, Indonesia, Kenya, Malawi, Mozambique, Namibia, Nigeria, South Africa, United Republic of Tanzania, Thailand, Zambia and Zimbabwe opposed both amendments.

**493.** The Government member of Ireland, speaking also on behalf of the Government members of Belgium, Denmark, Finland, France, Germany, Greece, Hungary, Italy, Netherlands, Portugal, Spain, Sweden and the United Kingdom, observed that the Workers' amendment was in conformity with part of a European Union Directive, Directive 2000/34/EC of the European Union Parliament and of the Council of 22 June 2000. However, he recognized that some countries might experience problems with the detailed provisions on rest periods. Rest periods were adequately dealt with in the Office text.

**494.** The Worker member from Denmark withdrew the Workers' amendment, recalling the pledges made by Government members not to weaken existing standards.

**495.** The Government members of Argentina, Brazil and Chile withdrew their amendment.

**496.** Point 22 was adopted.

#### *IV.2. Fishers' work agreements and list of persons on board*

##### **New Point before Point 23**

**497.** The Government members of Greece and the United Kingdom submitted an amendment to insert a new Point before Point 23 reading as follows: "Points 23 to 26 inclusive, and Annex I, do not apply to self-employed fishers." The Government member of Greece had earlier stated that he had no intention to exclude self-employed fishers from the whole of the Convention, but only from certain parts thereof. Points 23 to 26 were among those.

**498.** The Worker Vice-Chairperson submitted a subamendment to delete the words "self-employed fishers" and to replace them by "a vessel's owner who is also single-handedly operating the vessel."

- 
- 499.** The Employer Vice-Chairperson supported the amendment but not the Workers' subamendment. The term "self-employed fisher" clearly referred to independent owner-operators.
- 500.** The Government members of Botswana, Cameroon, Côte d'Ivoire, Kenya, Malawi, Mozambique, Namibia, Nigeria, South Africa, United Republic of Tanzania, Zambia and Zimbabwe supported the subamendment because a self-employed fisher might at times require the services of other people and those persons would need to be covered.
- 501.** The Government member of Brazil opposed both proposals, preferring that such questions be resolved by national legislation.
- 502.** The Government member of Norway supported the subamendment, arguing that many fishers on large vessels were officially defined as "self-employed" and he did not want them to be excluded from having a work agreement with the vessel owner.
- 503.** The Government members of France, Germany, Greece, Kuwait, Lebanon, Saudi Arabia, Syrian Arab Republic and the United Kingdom supported the subamendment.
- 504.** The Employer Vice-Chairperson, having remarked that a self-employed fisher could not enter into an agreement with himself, supported the subamendment.
- 505.** The amendment was adopted as subamended.
- 506.** The new Point before Point 23 was adopted as amended.

#### Point 23

- 507.** The Worker members submitted an amendment to insert " , comprehensible in their language," after "work agreement". A Worker member from Denmark, speaking on behalf of his group, explained that this text was devised to cater for the situation of fishers employed on board a ship who spoke a language different from that of the owner. Every fisher on board should have a contract in his or her own language.
- 508.** The Employer Vice-Chairperson questioned the practicability of this approach and proposed adding at the end of the Office text: "drawn up in a language or languages as determined by the competent authority after consultation".
- 509.** The Government member of the United Kingdom said that it could be difficult for the competent authority to decide on such matters. She proposed a further subamendment to insert the words "in a language comprehensible to them" after "work agreement" and this proposal was accepted by the Workers.
- 510.** The Employer Vice-Chairperson and the Government member of France also expressed support.
- 511.** The amendment was adopted as subamended.
- 512.** Point 23 was adopted as amended.

#### Point 24

- 513.** An amendment submitted by the Employer members was withdrawn.

---

**514.** Point 24 was adopted.

Point 25

**515.** The Employer members submitted an amendment to delete the words “in accordance with the provisions contained in Annex I”. The Employer Vice-Chairperson stated that there was no need to allude to Annex I since the paragraph referred to minimum requirements.

**516.** The Worker Vice-Chairperson observed that there was a need to maintain the link between this paragraph and Annex I, which was taken from the Fishermen’s Articles of Agreement Convention, 1959 (No. 114). His group rejected the amendment.

**517.** The Government members of Germany, Indonesia, Norway, Saudi Arabia, Syrian Arab Republic and the United Kingdom preferred the Office text, and the Employer Vice-Chairperson withdrew the amendment.

**518.** Point 25 was adopted.

Point 26

**519.** An amendment submitted by the Employer members was withdrawn.

**520.** The Government members of Denmark and Norway proposed to replace Point 26 with the following text: “The fisher’s work agreement or a copy should be carried on board and be available to the fisher on request.” The Government member of Denmark stated that the amendment covered two considerations: First that either an original or a copy of the work agreement should be on board. Second, under Danish law, work agreements were considered to be private contracts. Therefore, “other ... personnel” did not have the right to review them.

**521.** A Worker member from Denmark stressed that it was important that a fisher had a copy of the work agreement and suggested subamending the proposal by inserting “and the fisher should be given a copy” after “request”. Should this be accepted, the Workers’ group would withdraw a similar amendment.

**522.** The Employer Vice-Chairperson said that it was normal that when a work agreement was signed, the worker should receive a copy. She, therefore, supported the Workers’ subamendment as did the Government member from Lebanon.

**523.** In response to queries regarding the Office text, a member of the Secretariat explained that the intended meaning of “review” was to allow the fisher to look at the agreement, not re-negotiate it and “other concerned personnel” referred, inter alia, to trade union representatives or government officials, as appropriate.

**524.** The Government member of Thailand suggested a subamendment, seconded by the Government member of Indonesia, to add the words “and other concerned personnel” after “available to the fisher”.

**525.** A Worker member from Denmark said that in the light to the Office’s interpretation of “other concerned personnel”, his group supported the subamendment.

**526.** The Government member of Denmark suggested that “competent authority” should replace “concerned personnel”, a proposal seconded by the Government member of France.

- 
- 527.** A Worker member from Denmark pointed out that the Danish subamendment was a departure from the original meaning of “other concerned personnel” as explained by the Office. The new subamendment would exclude trade union representatives. Moreover, a direct reference to the competent authority might not be in line with existing legislation in countries where work agreements were considered private. His group could, therefore, not support this proposal.
- 528.** The Employer Vice-Chairperson stated that in most countries copies of private contracts (in this case, work agreements) normally did not need to be placed with a competent authority. If a fisher was an union member, the work agreement would be sent to the union in any case. For these reasons, the Employers did not support the Danish subamendment.
- 529.** The Government member of Lebanon supported the Workers’ position and saw a role for competent authorities to ensure that work agreements were in conformity with existing legal requirements.
- 530.** The Government member of Germany stressed that work contracts and agreements were a private matter between a worker and an employer. A worker must receive a copy of the agreement and, if doubts arose as to its legality, it could be presented to trade unions or to the courts. He therefore supported the Workers’ position.
- 531.** The Government member of Chile explained that work agreements and collective agreements were documents of a public nature. The authorities needed to be able to check them, as did workers, who could turn to trade unions to enquire as to a contract’s legality.
- 532.** The Government member of Canada observed that there were two types of work agreements. The first were collective agreements freely negotiated between trade unions representing fishers and the employer, which should be available to the fisher but not necessarily to the competent authority. The second type of work agreements were private contracts between a fishing vessel owner and fisher, both of whom presumably were aware of their provisions. There was no need for the competent authority to have access to these, unless there were allegations of violations of national legislation. He also supported the Workers’ position.
- 533.** The Government member of Venezuela felt that the competent authority should have some control over work agreements. He cited the example of inspection of conditions on board fishing vessels, noting that work agreements often fell below the requirements of national legislation.
- 534.** The representative of the Secretary-General noted that the competent authority had an important role to play in ensuring that national legislation was applied, for example, through labour inspection. Because Members approached the issues under discussion in a number of ways, she suggested that wording such as “as appropriate” or “in accordance with national law and practice” could accommodate the various concerns.
- 535.** The Government member of South Africa proposed a subamendment to add after “available to the fisher” the words “and other concerned parties” and the Workers supported the proposal.
- 536.** The Employer Vice-Chairperson proposed, in the light of the latest intervention of the representative of the Secretary-General, that the words “in accordance with national law and practice” be added after “other concerned parties on request”.

- 
- 537.** A Worker member from Denmark, speaking on behalf of the Workers' group, found that the Employers' subamendment applied to the whole sentence, making everything subject to national law and practice. If this was the case, his group could not accept it.
- 538.** The Employer Vice-Chairperson replied that it had not been her intent to subject the content of the whole phrase to national law and practice. The addition of "in accordance with national law and practice" should only refer to making agreements available to "other concerned parties".
- 539.** The deputy representative of the Secretary-General suggested that the words "in accordance with national law and practice" proposed by the Employers' group should be inserted before the words "to other concerned parties on request". This would make clear that the addition merely related to the part of the sentence dealing with the other concerned parties.
- 540.** The Employer and Worker members agreed.
- 541.** The Government member of Denmark asked for clarification on the present meaning of the term "other concerned parties". The representative of the Secretary-General responded that the meaning of this term would be determined at the national level.
- 542.** The amendment was adopted as subamended.
- 543.** Amendments submitted by the Worker members and by the Government member of Venezuela were withdrawn.
- 544.** Point 26 was adopted as amended.

Point 27

- 545.** The Government members of Denmark and Norway submitted an amendment to insert after the words "fishing vessel" the words "with a length of 24 metres or above". The Government member of Denmark explained that the current text covered all fishing vessels and would introduce a very bureaucratic system for small fishing vessels. The proposal sought to introduce a limit so that very small fishing vessels would not be covered by this requirement.
- 546.** The Worker Vice-Chairperson felt that the 24-metre limit was far too high. The reason for a crew list was to know, where appropriate, how many fishers were on board and missing in case of accident. The Office text should be retained since the amendment could cost lives.
- 547.** The Government members of Botswana, Cameroon, Côte d'Ivoire, Kenya, Malawi, Mozambique, Namibia, Nigeria, South Africa, United Republic of Tanzania, Zambia and Zimbabwe agreed with the Workers.
- 548.** The Employer Vice-Chairperson rejected the amendment. The Committee had earlier agreed on the principle that there would be no categorization of fishing vessels. The important point was to know the number of fishers on board. She reminded the Committee that 90 per cent of fishers worked on small vessels.
- 549.** The Government member of Denmark withdrew the amendment.
- 550.** An amendment submitted by the Government member of Guatemala was withdrawn.

---

**551.** Point 27 was adopted.

*IV.3. Identity documents, repatriation rights and recruitment and placement services*

Point 28

**552.** The Employer members submitted an amendment to replace Point 28 with the following text:

28. Fishers working on board fishing vessels that undertake international voyages should:

- (a) be in possession of identity documents meeting the specifications provided by the International Labour Organization;
- (b) have a right in situations of abandonment or substantial maritime casualty to be repatriated to their port of engagement at no cost to themselves, subject to national laws and regulations;
- (c) have access to an efficient, adequate and accountable system for finding employment on board a vessel without cost to themselves.

**553.** The Employer Vice-Chairperson explained that the amendment provided greater flexibility with regard to three issues of importance to fishers who worked internationally, that is, identity documents, repatriation, and recruitment and placement.

**554.** The Worker member from Denmark said that the Workers preferred the Office text, which was more closely linked to Conventions Nos. 166 and 179. It was important to retain “no less favourable treatment”, which was not present in the Employers’ amendment. Existing standards should not be lowered.

**555.** No Government member expressed support for the amendment.

**556.** The amendment was not adopted.

**557.** An amendment submitted by the Government member of Guatemala was withdrawn.

**558.** An amendment submitted by the Government members of Greece, Ireland, United Kingdom and the United States proposed to delete clause (a) of Point 28. The Government member of Greece gave two reasons for the amendment. The first related to the fact that the vast majority of those taking part in the development of the new consolidated maritime labour Convention preferred not to include seafarers’ identity documents in that Convention. The second was that inclusion of the proposed clause 28(a) in the present Convention could be seen as a back-door way of forcing the application of a Convention, which was not yet in force. Greece had ratified Convention No. 108, but did not apply it to fishers.

**559.** A Worker member from Denmark, speaking on behalf of his group, stated that fishers, who also required identity documents, suffered severe hardship when they could not go ashore for long periods. Clause (a) should remain. Convention No. 185 could apply to fishers.

**560.** The Government member from France, whose Government had ratified Convention No. 185 on seafarers’ identity documents, supported the reasoning of the Government member of Greece. As drafted, the proposed amendment stipulated that no less favourable treatment be extended to fishers. It should be left to each Member to decide whether to

---

extend the provisions of Convention No. 185 to all fishers as provided for in that Convention.

- 561.** The Government members of Kiribati, Lebanon and the Syrian Arab Republic preferred the Office text.
- 562.** The Government member of Japan supported the amendment.
- 563.** The Employer Vice-Chairperson expressed support for the amendment. Convention No. 185 was not yet in force and a fisher having to travel would require a travel document.
- 564.** If member States wanted to issue such documents to fishers, they could ratify Convention No. 185.
- 565.** The Government member of Norway found the Office text sufficiently flexible. He saw no inherent link between identity documents for fishers and Convention No. 185. Inclusion of any mention of Convention No. 185 in this Convention would pose a major obstacle to ratification. He did not support the Workers' amendment on the subject either.
- 566.** The Government member of Ireland, as one of the co-sponsors of the amendment, asked for clarification from the Office regarding the Convention(s) under which Members might potentially issue a fisher with an identity document.
- 567.** The representative of the Secretary-General observed that a number of countries were presently considering the ratification of Convention No. 185, and that it was probable that this instrument would enter into force before the future Fishing Convention. Article 1, paragraph 3, of Convention No. 185 provided for the optional extension of the seafarers' identity document to fishers. She referred the Committee to the legal opinion provided with regard to Conventions Nos. 102 and 155. Because many Members did not extend the provisions of maritime Conventions to fishers, it would be preferable to include the appropriate provisions in the fishing Convention. A direct reference to Convention No. 185 could pose an obstacle to ratification.
- 568.** The Government member of Greece then proposed a subamendment to place square brackets around paragraph 28(a) until next year, when a clearer view of the situation with regard to Convention No. 185 would be available.
- 569.** The Worker member of Denmark, speaking on behalf of the Workers' group, supported the proposal, if the Workers' amendment was also placed in square brackets. Although not formally introduced, the Workers' amendment sought to insert a new text after clause (a) to read as follows: "if a fisher is employed or engaged on a vessel which visits third countries, the fisher should be entitled to an identity document, as provided in ILO Convention No. 185;".
- 570.** The Employer Vice-Chairperson agreed with the subamendment. Identification documents for fishers should be discussed independently from Convention No. 185. Fishers were not automatically covered, and the fishing industry had not been represented when that Convention was adopted. There was no need to place the Workers' amendment between square brackets.
- 571.** Several Government members supported placing both clause (a) and the Workers' amendment in square brackets; others saw no need to include the Workers' amendment.

- 
- 572.** The Government member of Lebanon suggested that the Committee should not create a link between this Convention and Convention No. 185. He suggested removing the phrase “no less favourable” from the original text to solve the issue, but the proposal was not seconded.
- 573.** The Government member of Nigeria said that the Committee needed to decide whether fishers had a need for identity documents and, if so, whether they be provided in accordance with Convention No. 185 or through a separate provision in this Convention. The issue should be left for later discussion.
- 574.** After further discussion, it was agreed to place clause (a) in square brackets for reconsideration at the second discussion.
- 575.** The Workers’ amendment was withdrawn.
- 576.** The Worker member from Denmark, speaking on behalf of the Workers’ group, recalled previous comments from Committee members that sought to have a comprehensive instrument that did not weaken existing standards. If previous maritime Conventions, such as the Repatriation of Seafarers Convention (Revised), 1987 (No. 166), and the Recruitment and Placement of Seafarers Convention, 1996, (No. 179), which also applied to fishers under some conditions, became redundant, then fishers would lose the protection afforded to them under these instruments. The Workers were gravely concerned over losing this protection. Considering, however that there was also a desire to retain flexibility and not be overly prescriptive, they withdrew two amendments that related to repatriation and recruitment and placement of fishers. These issues were of great importance and would be revisited.
- 577.** The Government members of Argentina, Brazil and Chile submitted an amendment to add a new clause to follow clause (c) to read: “occupational safety and health”. The Government member of Brazil stated that this would ensure that fishers had no less favourable treatment with regard to occupational safety and health on international voyages as in national waters.
- 578.** The Worker Vice-Chairperson supported this amendment.
- 579.** The Employer Vice-Chairperson did not support the amendment. Safety and health would be covered in section VI.2 and did not belong with identity documents, repatriation and recruitment.
- 580.** The Government members of Greece, Lebanon and Namibia agreed.
- 581.** The Government member of Brazil pointed out that Section VI.2 did not deal with occupational safety and health on international voyages. The amendment was withdrawn for lack of support.
- 582.** Point 28 was adopted as amended.

---

New Point after Point 28

- 583.** The Government members of Canada and Denmark submitted an amendment to insert after Point 28 a new heading and a new Point as follows:

*IV.4. Payment of wages*

29. Each Member should adopt laws or regulations or other measures providing that fishers who through their work agreement are ensured a monthly or regular wage should be entitled to be paid monthly or at some regular interval.

- 584.** The Government member of Denmark described in detail the unfortunate incident, which had given rise to his proposal. It involved non-payment of wages to fishers on a foreign fishing vessel, which spent several months in a Danish port. He then introduced a subamendment, which read as follows:

*IV.4. Payment of fishers*

29. Each Member should, after consultation, adopt laws, regulations or other measures providing that fishers are ensured a monthly or regular payment. The competent authority should, after consultation, define the fishers who should be covered by this provision, and the maximum interval of payment.

- 585.** The Worker Vice-Chairperson seconded the subamendment.
- 586.** The Government members of France, Ireland, Lebanon, Spain and the Syrian Arab Republic expressed support.
- 587.** The Government member of Greece shared their concerns, but introduced a further subsubamendment, seconded by the Government member of Hungary, to delete the words “and the maximum interval of payment”. In his country, this question was regulated by collective agreements and not by the competent authority. Such a provision would be interpreted as interference of the Government in collective bargaining. He added that the issue could also be dealt with in Annex I.
- 588.** The Employer Vice-Chairperson asked what would happen to fishers who received payment on the basis of the share of the catch. If they had caught nothing, they could not receive a regular payment. Why could this issue not be left to the fisher’s work agreement, which stipulated the basis of payment? This would avoid over-prescription in the instrument.
- 589.** The Government member of Denmark answered that the language of his subamendment was very broad. Its first part provided a general principle that applied to all fishers. Its second part allowed the competent authority to address various situations. The intention was to establish the right of fishers to be paid on a regular basis.
- 590.** The Employer Vice-Chairperson countered that because the overriding clause of the subamendment mentioned a monthly or regular payment, it still set out an obligation to pay share fishers regularly, which was not realistic.
- 591.** The Government member of Denmark replied that if regularity of payment posed a problem, for example with regard to share fishers, the competent authority could, after consultations, exclude share fishers. He accepted the further subamendment introduced by the Government member of Greece.

- 
- 592.** The Government member of Turkey lent her support to the amendment, as did the Government member of Namibia, also speaking on behalf of Algeria, Botswana, Cameroon, Kenya, Mozambique, Nigeria, South Africa and Zambia.
- 593.** The Government member of Brazil cautioned that the amendment seemed to interfere with clause (h) of Annex I. It would be preferable for the proposal to be considered as an amendment to clause (h) of Annex I.
- 594.** The Employer Vice-Chairperson agreed and suggested that the Drafting Committee deal with it. She introduced a further subamendment to replace “a monthly or regular payment” with “according to the work agreement”.
- 595.** The Government members of Germany, Norway and the United Kingdom also supported the text subamended by the Government member of Greece. A fisher’s right to regular payment should be mandatory. Exact details could be dealt with in the Annex. The Government member of Norway added that this provision would protect fishers within the flag State concerned, but some further provision might be needed to cover fishers in foreign ports.
- 596.** The Government member of Denmark agreed. In the case he had described, the articles of agreement stipulated payment at the end of the voyage and had led to a long period of non-payment of wages. The Employers’ proposal would not address the issue.
- 597.** The amendment as subamended by the Government of Greece was adopted.
- 598.** The new heading and new Point after Point 28 were adopted.
- 599.** The representative of the Secretary-General pointed out that it was ILO practice to introduce reporting requirements if exclusions were allowed. Standard clauses for reporting existed and could be considered in the Drafting Committee.

## Part V. Accommodation and food

### Points 29-31

- 600.** The Worker Vice-Chairperson stated that the issue of accommodation was fundamental to decent work for fishers. The Workers did not want to see any weakening in existing standards. This was particularly important when vessels were being built and for fishers working on board fishing vessels for long periods away from home. The Workers’ group had submitted an amendment that would make Annex II on Accommodation mandatory for vessels of a certain size. This was in keeping with the spirit of another amendment submitted by the Government members of Denmark and Norway. Accommodation provisions should be mandatory for certain types of vessels. The provisions of the Accommodation of Crews (Fishermen) Convention, No. 126, (1966), applied to vessels of more than 75 tons or more than 24 metres with certain exemptions for those at sea for less than 36 hours. The Workers recognized the highly technical nature of this issue and the fact that not all Members of the Committee might feel that they had the required expertise. They suggested as a way forward: (a) the Committee should agree that certain standards on accommodation should be mandatory for certain types of vessels and recommended for others, or that specific provisions would not apply to certain types of vessels. This would be discussed further in 2005; (b) if this were agreed upon, Annex II could be placed in square brackets, and the Office would be requested to review the text to achieve an appropriate balance for the second discussion; and (c) a working party on accommodation should be set up at next year’s Conference to consider all the provisions on the subject.

---

This would give delegations ample time to come prepared to discuss and agree on the required standards.

- 601.** The Government members of Denmark and Norway submitted an amendment to insert a new Point after Point 30 as follows: “Fishing vessels to which Annex II applies should as a minimum comply with the standards contained therein.” The Government member of Norway argued for some mandatory standards. Fishers needed good accommodation, competent authorities needed clear standards for control purposes and owners and builders also needed such standards for the construction of vessels and their resale.
- 602.** The Government member of Japan objected to the amendment. He recognized the importance of Annex II, but it was too detailed to be accepted as mandatory. Individual countries’ situations needed to be taken into account.
- 603.** The Government member of Ireland, also speaking on behalf of the Government members of Belgium, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Italy, Netherlands, Portugal, Spain, Sweden and the United Kingdom noted the two previous views and noted the discussion was at a critical point. To rush it might mean an unratifiable instrument, but there was insufficient time for a detailed discussion now that could achieve the delicate balance necessary to ensure that essential standards for fishers were maintained. Certain provisions of Annex II should be mandatory and others included in the Recommendation. He proposed that consultations be held on the accommodation issue before the next session of the Conference in 2005 on the basis that the Office devise a mechanism to facilitate the process, the three parties commit to participate in consultations, and a working party be set up by the Committee next year. This could be achieved by way of a subamendment to put the entire sentence of the amendment in square brackets and also the words “Annex II” in square brackets.
- 604.** The Employer Vice-Chairperson supported the subamendment. Employers were mindful of the importance of decent accommodation for fishers who, after all, worked with employers to achieve productivity. They were also mindful of the need for balance between what would be mandatory and what would be recommended, in order for the Convention to be widely ratified. Expertise was needed in order to discuss this issue. She agreed that this issue should be discussed further before the next session of the Conference, keeping in mind the desired content of Annex II and the need to achieve consensus on it.
- 605.** The Worker Vice-Chairperson supported the proposal. He appreciated the willingness on the part of Committee members to establish a mechanism to review the crucial issue of accommodation of fishers on board vessels and to set up a working party on the issue during the next Conference. The resources required for the mechanism should not, however, be taken from activities that were already planned. All the amendments tabled to Part V and Annex II should be made available for the consultations.
- 606.** The Government members of Algeria, Botswana, Cameroon, Canada, Kenya, Lebanon, Mozambique, Namibia, Nigeria, Norway, South Africa, Syrian Arab Republic, United States and Zambia also fully supported the proposal and applauded the spirit of cooperation, which had led to this compromise.
- 607.** The amendment was adopted as subamended.
- 608.** The representative of the Secretary-General stated that the Committee’s adoption of the amendment as subamended could be deemed to have the following results: First, all amendments to Annex II would not be considered further. Second, it would also be appropriate, in the light of the consensus reached in the previous sitting, for the Committee

---

not to consider further the amendments that had been submitted to Part V, i.e. Points 29-31. Third, the Committee, in agreeing to this, could include in the record its understanding that the secretariat would ensure that the consultation on Part V and Annex II, which would take place, through an appropriate mechanism, between the end of this session of the International Labour Conference and its next session, should have before it all relevant information, including the content of the various amendments on Part V and Annex II that had been submitted, although not considered, at the present session. Fourth, this procedure would enable the Committee, when meeting in June 2005, to have before it as a basis for its discussions a set of proposals that would seek to achieve an appropriate balance between the mandatory and non-mandatory provisions on accommodation and food, covered in Part V and Annex II.

- 609.** The Worker Vice-Chairperson and the Employer Vice-Chairperson fully agreed with the proposal, which was also approved by Governments.

## Part VI. Health protection, medical care and social security

### *VI.1. Medical care*

#### Point 32

- 610.** The Worker member from the United Kingdom introduced an amendment to replace in clause (a) the word “appropriate” by “specified”; add “, including women’s sanitary protection and discreet and environmentally friendly disposal units,” after the word “supplies”; and to add “and applicable international standards” after the word “voyage” to be proactive in protecting the health of women fishers.
- 611.** The Employer Vice-Chairperson proposed a subamendment to add the words “and gender” to the original text of the paragraph, as follows: “taking into account the number and gender of fishers on board”. This would adequately address the issue.
- 612.** The Government member of Germany did not support the Employers’ proposed subamendment as it narrowed the scope of the text too much. This was not an occasional medical problem, but a regular day-to-day issue of personal hygiene. She therefore fully supported the Workers’ amendment.
- 613.** The Government members of Argentina, Brazil, Chile, France, Guatemala, Mexico, Spain and Venezuela also supported the amendment.
- 614.** The Government member of Greece considered the second part of the amendment too detailed and subamended it to have it placed in the Recommendation, the position to be recommended by the Drafting Committee. It was a health not a medical issue. The Government member of the United Kingdom seconded this.
- 615.** The Worker member from the United Kingdom rejected any subamendment that would dilute the original amendment.
- 616.** The Worker Vice-Chairperson requested the Government member of Greece to clarify whether he intended to delete the third part of the Workers’ amendment in his subamendment. The Government member of Greece replied that he wanted to move only the second part and delete the rest.
- 617.** The Employer Vice-Chairperson agreed to the proposal and withdrew her subamendment.

- 
- 618.** The Worker Vice-Chairperson replied that their amendment concerned health protection for women and that was their reason for submitting it.
- 619.** Following an indicative show of hands of Government members, the amendment was adopted as subamended by the Government member of Greece.
- 620.** The Worker members submitted an amendment to replace clause (b) as follows: “medical supplies and facilities, and fishers’ competencies concerning medical treatment, should be sufficient to allow the provision of treatment of illnesses and injuries over several days or until the fishers can be transferred to medical care ashore;”. The aim was to ensure that equipment and supplies were adequate and that the people using them were properly trained.
- 621.** The Government members of Algeria, Lebanon, Namibia, Spain and the Syrian Arab Republic recognized that the Workers’ group sought more detail but did not support the amendment.
- 622.** The Workers’ group withdrew the amendment.
- 623.** The Government member of Denmark, speaking also on behalf of the Government member of Greece, introduced an amendment to insert, after the words “medical care”, “including the necessary knowledge in using the medical equipment for the vessel concerned”. Specific knowledge and skills were required in order to use medical equipment.
- 624.** The Worker members submitted a subamendment to insert the words “and supplies” after “medical equipment”, which was supported by the Employers, and withdrew their amendment.
- 625.** The Government members of Argentina, Guatemala, South Africa and Thailand preferred the Office text.
- 626.** The Government members of Algeria, Canada, Ireland, Lebanon, Syrian Arab Republic and the United Kingdom supported the amendment as subamended, as did the Employers.
- 627.** The amendment was adopted as subamended.
- 628.** The Worker members submitted an amendment to insert the following text, after clause (d):
- “all fishers should, before being assigned to any duties on board the vessel, have received basic safety training approved by the competent authority which takes into account applicable international instruments. This should include, but not be limited to: (i) personal survival techniques, including donning of life jackets and, as appropriate, immersion suits; (ii) fire prevention and fire-fighting; (iii) emergency procedures; (iv) elementary first aid; (v) prevention of maritime pollution; and (vi) prevention of accidents on board a vessel;”.
- 629.** The Worker Vice-Chairperson stressed the importance of the amendment. Its wording had been taken from the STCW-F Convention. The Drafting Committee could be asked to find a more suitable location, if the substance of the amendment was supported.
- 630.** The Government member of Venezuela, also speaking on behalf of Argentina, Brazil and Guatemala, supported the amendment.

- 
- 631.** The Government members of South Africa, Spain and Thailand and the Employer members did not support the amendment, which should be discussed under VI.2 which dealt with occupational safety and health.
- 632.** The Worker members withdrew the amendment.
- 633.** The Employer members submitted an amendment to add the words “, taking into account the area of operation and the length of the voyage”, after the word “advice”. Small vessels, operating close to the coast might not need such communication equipment. The Government member of Denmark withdrew an identical amendment.
- 634.** The Government members of Algeria, Botswana, Côte d’Ivoire, Germany, Greece, Ireland, Kenya, Lebanon, Namibia and Mozambique as well as the Worker members supported the Employers’ amendment.
- 635.** The Government member of Kiribati stated that some sort of communication was always needed on the open sea, regardless of how far away the shore was. The amendment could pose a problem.
- 636.** The Government member of Ireland added that every vessel should have at least a radio. The text provided some flexibility.
- 637.** The amendment was adopted.
- 638.** Point 32 was adopted as amended

#### Point 33

- 639.** The Employer members submitted an amendment to replace all the text after “from land for a”, by “prolonged period should be prescribed by the competent authority”. The instrument was to cover fishers and should make no reference to seafarers on ships plying international waters. The proposal introduced a degree of flexibility while avoiding unwanted reference to an instrument for seafarers, which had not yet been finalized and whose contents were as yet unknown.
- 640.** The Worker Vice-Chairperson said the Point referred to Article 1(2) of Convention No. 164 was important when fishers were far from shore facilities and opposed the amendment.
- 641.** The Government members of Botswana, Cameroon, Canada, Cote d’Ivoire, Denmark, France, Germany, Guatemala, Kiribati, Kenya, Lebanon, Mozambique, Nigeria, Norway, South Africa, Spain, Sweden, United Kingdom, Zambia and Zimbabwe preferred the Office text. It had gone a long way in addressing the need for flexibility by linking the requirement for no less favourable treatment for fishers as compared to seafarers only in cases of ships of similar size. The Government member of South Africa signalled a slight problem with the wording that should be rectified before the next session of the Conference. The Government member of Guatemala supported the amendment because it avoided mentioning a Convention which some countries had not yet ratified.
- 642.** The representative of the Secretary-General considered that the debate reflected some misunderstanding with regard to the objectives of Point 33, which made no reference to any Convention, including the proposed consolidated maritime labour Convention. The Point proposed that fishers would be treated in the same way as seafarers as far as medical care was concerned.

- 
- 643.** The amendment was not adopted.
- 644.** As a consequence, amendments submitted by the Government member of Guatemala and the Worker members were withdrawn.
- 645.** An amendment submitted by the Worker members was withdrawn.
- 646.** Point 33 was adopted.

*V1.2. Occupational safety, health and accident prevention  
[parts taken from the second preliminary draft CMLC]*

Point 34

- 647.** The Employer Vice-Chairperson proposed an amendment to replace clauses (a) and (b) with “the measures to be taken by government, fishing vessel owners, fishers and others concerned for the prevention of occupational accidents and diseases on board fishing vessels, including risk evaluation and management, training and on-board instruction of fishers, with due account being taken of the safety and health of young fishers;”. This combined the two paragraphs but also included a reference to occupational diseases.
- 648.** The Government member of Ireland did not support the amendment since the wording was not acceptable as far as the measures to be taken by the government were concerned.
- 649.** The Employer Vice-Chairperson proposed to subamend it by replacing “government” with “competent authority”.
- 650.** The Worker Vice-Chairperson and the Government members of Japan and Thailand did not support the amendment or the subamendment.
- 651.** The Employer Vice-Chairperson withdrew the amendment.
- 652.** The Government member of Germany, also speaking on behalf of the Government members of Denmark, Ireland, Netherlands and the United Kingdom, introduced an amendment to insert “, occupational diseases and work-related risks” after the word “accidents”. Both concepts existed in other international agreements and European Union legislation.
- 653.** The Employer and Worker Vice-Chairpersons agreed and the amendment was adopted.
- 654.** The Government member of Denmark, also speaking on behalf of the Government members of Canada, Germany, Iceland and Norway, sought to amend clause 34(a) by replacing “including risk evaluation and management, training and on-board instruction of fishers” by:

which should include:

- (i) risk evaluation and management in accordance with the following provisions:
- the Member should adopt, after consultation, laws or regulations or other measures requiring that:
  - all members of the crew are regularly, actively involved in improving safety and health for the means of continually identifying hazards, assessing risks and taking action to address the risks through safety management;

- 
- an occupational safety and health management system, that may include an occupational safety and health policy, provisions for worker participation and provisions concerning organizing, planning, implementing and evaluating the system and taking action to improve the system, is established;
  - a system for the purpose of assisting in the implementation of the fishing vessel owner's or the organization's safety and health policy and programme and to provide crew members with a forum to influence safety and health matters is established;
  - when developing the provisions mentioned under (i), the Member should take into account the possible and relevant international instruments developed on safety assessment and management;
- (ii) training taking into consideration the relevant provisions of Chapter III of the STCW-F Convention; and
- (iii) on-board instruction of fishers.

**655.** This would establish an occupational safety and health management system and permit fishers to be involved in risk assessment. He recalled the final report of the Tripartite Meeting of Experts on Labour Standards for the Fishing Sector (September 2003), which recorded support for this.

**656.** The Worker Vice-Chairperson supported the amendment as there were many fatal accidents on board fishing vessels.

**657.** The Employer Vice-Chairperson said that employers were equally concerned about risks on board fishing vessels and the dangers inherent in fishers' jobs. But she doubted that independent operators and small vessel owners could implement such a management system. The amendment was too prescriptive for the Convention.

**658.** The Government member of Greece submitted a subamendment, seconded by the Government member of the United Kingdom, to move the text to an appropriate place in the Recommendation and left as it was, it could jeopardize broad ratification. The Government members of Japan, Mexico, Namibia and Thailand agreed.

**659.** The Employer Vice-Chairperson supported the subamendment and proposed that the term "members of the crew" should be replaced by "fishers" and "worker" by "fisher" for consistency. This proposal was referred to the Drafting Committee.

**660.** In response to a query, the representative of the Secretary-General advised that reference to the STCW-F Convention only took into consideration the relevant provisions and did not require that member States ratify it. Further, if the Committee sought to place the reference in the Recommendation, it would merely provide guidance.

**661.** The Government members of France, Germany and Spain did not support the subamendment. The safety and health of fishers on board was a matter of principle and these provisions should be in a central part of a binding instrument. The improvement of safety and health could only be achieved through the involvement of fishers themselves.

**662.** The Government member of Argentina agreed and added that cost should not hinder the prevention of accidents and fatalities. Workers should be involved and they required training. The amendment was not necessary, however as Points 61, 63, 64 and 65 adequately covered these issues. They could be moved from the Recommendation into Point 34(a).

- 
- 663.** The Government member of Canada said there was an urgent need to address health and safety issues for fishers in a Convention. When this issue was raised at the Tripartite Meeting of Experts in September 2003, it was very clear that illness, accidents, and death among fishers were a global epidemic. This amendment should be in the Convention and nothing it contained should be an impediment to ratification.
- 664.** The Government members of Mexico and Namibia supported the subamendment. Countries that did not have such provisions in their legislation could find guidance from the Recommendation. The Government member of Mexico pointed out that his country had legislation that regulated safety and health risks in the workplace.
- 665.** The amendment was adopted as subamended.
- 666.** An amendment was withdrawn by the Worker members.
- 667.** The Worker members submitted an amendment to insert after clause (a) a new clause to read as follows:
- (...) training for fishers in the handling of the types of fishing gear they will use and in the knowledge of the fishing operations in which they will be engaged. After having successfully completed pre-sea training in basic safety and fishing operations, a certificate of competency should be issued by the competent authority including information on the type of fishing gear the fisher is competent to use and fishing operations the fisher is competent to perform.
- 668.** The Worker Vice-Chairperson stated that training was required in order for fishers to know how to handle fishing gear and to prevent accidents.
- 669.** The Government member of the United Kingdom asked how the competent authority would establish what gear the fisher was competent to use.
- 670.** The Worker member of Denmark explained that some countries had fishing schools. He then proposed a subamendment to delete the text after the word “engaged” in the second line.
- 671.** The Government members of Ireland and the United Kingdom supported the subamendment, as did the Employers.
- 672.** The amendment was adopted as subamended.
- 673.** The Government member of Venezuela, seconded by the Government member of Norway, introduced an amendment to add a new clause in Point 34 to read as follows: “the setting up of joint committees on occupational safety and health;”. It was essential for fishers to be involved in committees on occupational safety and health.
- 674.** In response to a query, the Chairperson clarified that a joint committee would comprise representatives of Employers and Workers.
- 675.** The Employer and Worker Vice-Chairpersons supported the amendment as did the Government members of Argentina, Brazil and Spain.
- 676.** The amendment was adopted.
- 677.** Point 34 was adopted as amended.

---

### VI.3. Social security

#### Point 35

- 678.** The Government members of France, Germany, Netherlands and the United Kingdom submitted an amendment to insert after the words “ensure that fishers” the words “resident in its territory”, and to insert after the words “applicable to other workers” the words “in accordance with national laws or regulations or practice”.
- 679.** The Government member of United Kingdom introduced a subamendment to revert to the Office text of Point 35 with the addition of square brackets around the whole text. The purpose was to defer consideration of social protection to 2005. This subject was very complex, and many delegations did not have the necessary expertise available at the present meeting. Furthermore, the Preparatory Technical Maritime Conference in September 2004 would discuss social protection of seafarers in detail and the Committee could learn from those deliberations. In view of the time constraints facing the Committee, deferral was the right option.
- 680.** The Worker member from Denmark supported the subamendment. He stressed, however, that the situation of fishers, especially with regard to social security, could not be compared with that of seafarers. The consolidated maritime labour Convention would, therefore, not be relevant to the discussion. He requested that the amendment submitted by the Workers on this Point also be placed in square brackets.
- 681.** The Employer Vice-Chairperson also supported the subamendment and likewise asked that the amendment submitted by the Employers on this Point be put in square brackets along with the others. Social security was a critical issue that required expertise.
- 682.** The Government members of Greece, Japan and Thailand also supported the subamendment.
- 683.** The amendment was adopted as subamended.
- 684.** The Government member of Venezuela submitted an amendment, seconded by the Government member of Mexico, which was also deferred.
- 685.** The amendment was adopted as subamended.
- 686.** An amendment submitted by the Government member of Guatemala was withdrawn.
- 687.** The representative of the Secretary-General indicated that, in addition to the square-bracketed text in the report for the next session of the Conference, the Office would include the deferred amendments with their present wording in the report that was to be sent to member States. The Office Commentary would refer to the amendments. This would enable governments to take account of the deferred amendments in their preparation for the Conference in 2005.
- 688.** Point 35 was adopted as amended.
- 689.** The Government member of Venezuela submitted an amendment, seconded by the Government member of Guatemala, to replace the title of Part VI.4 with the following: “Protection in the event of injury or death due to occupational diseases or accidents”.

- 
- 690.** The Employer members also submitted an amendment to change the title of Part VI.4 to “Protection in the case of occupational injuries and diseases”. The Employer Vice-Chairperson stated that the term “occupational injury” included death, and asked the Office for confirmation.
- 691.** A representative of the Office responded that the Protocol of 2002 of the Occupational Safety and Health Convention, 1981 (No. 155) defined “occupational accident” as “an occurrence arising out of, or in the course of, work which results in fatal or non-fatal injury”. The term “occupational disease” was defined as “any disease contracted as a result of an exposure to risk factors arising from work activity”.
- 692.** The Worker Vice-Chairperson opposed the amendment submitted by the Government member of Venezuela, since it had removed the term “sickness”. He also rejected the Employers’ amendment, as it had removed the terms “sickness” and “death”. The Workers preferred the Office text.
- 693.** The Government member of United Kingdom found that a change in the title made no difference as regards the substance of the requirements. Therefore, the Committee should stick to the Office text.
- 694.** The Government member of Venezuela and the Employer members withdrew their respective amendments.

Point 36

- 695.** Point 36 was adopted.

*VI.4. Protection in the case of work-related sickness, injury, or death*

Points 37 and 38

- 696.** The Employer members withdrew an amendment to replace the title and submitted an amendment to replace Points 37 and 38 by the following: “In accordance with national laws, regulations or practice each Member, after consultation, should take measures to provide fishers with insurance or other protection against occupational injuries and diseases.” The Employer Vice-Chairperson, recalling earlier discussions, introduced a subamendment to replace “occupational injuries and diseases.” with “work-related injuries and death.”.
- 697.** The Worker Vice-Chairperson noted that the proposal removed reference to the shipowner’s liability. The Workers wanted this principle to be retained and therefore rejected the amendment.
- 698.** The Government members of Botswana, Cameroon, China, Côte d’Ivoire, Mozambique, Namibia, Nigeria, South Africa, Thailand, Zambia and Zimbabwe preferred the Office text.
- 699.** The Government members of France, Germany and Norway also rejected the amendment. Protection in the case of work-related sickness, injury or death was an element of social security. It would be preferable to address this matter at the next sitting of the Conference.
- 700.** The Employer Vice-Chairperson withdrew the amendment, noting that a number of countries preferred to deal with these issues in the context of social security.

---

Point 37

- 701.** The Worker members submitted an amendment to delete the text of Point 37, after “death”. The Worker Vice-Chairperson said that given the nature of the fishing industry, fishers needed special protection. Reference to national law was therefore unhelpful.
- 702.** The Employer Vice-Chairperson stressed that measures of protection for fishers were to be required by the new Convention. Therefore the reference to national laws and regulations was necessary for implementation. She therefore opposed the proposed deletion.
- 703.** The Worker Vice-Chairperson withdrew the amendment.
- 704.** Point 37 was adopted.

New Point after Point 37

- 705.** The Government member of Venezuela submitted an amendment, seconded by the Workers, to add the following new Point after Point 37: “In the event of injury due to occupational accident or disease, the fisher should have access to: (a) specialized medical attention; (b) physical and psychological rehabilitation; (c) retraining and vocational training; (d) labour reintegration; (e) the corresponding compensation in accordance with national laws.” The Government member of Venezuela gave examples of the complex care and treatment needed by workers who had been victims of occupational accidents. In Venezuela, coverage for all these items had proved helpful.
- 706.** The Government member of Guatemala welcomed the amendment and pointed out that when a fisher lost a limb that was vital for work, the psychosocial impact on the victim, the family and the community were great. The measures suggested were, therefore, appropriate, since fishers were subject to serious occupational risks.
- 707.** The Government member of Argentina also supported the amendment, since the issues presented here required specialized care and reintegration. The vast majority of fishing accidents were serious. Therefore, psychological rehabilitation as well as vocational training to allow fishers to rejoin the labour force was important.
- 708.** The Government member of Ireland agreed that the elements included in the amendment were desirable. However, since there was no reference to the degree of injury, the amendment would make all the items listed compulsory, even for a minor injury, and he opposed it.
- 709.** The Worker Vice-Chairperson suggested a subamendment to insert “as required” after “should” in the first line.
- 710.** The Government member of Greece also proposed a subamendment, seconded by the Employers, to replace “specialized” with “appropriate” and to delete clauses (b), (c) and (d).
- 711.** The Government member of Thailand did not support the amendment or any of the subamendments, since accident insurance provided cover for these measures.
- 712.** The amendment as subamended by the Government member of Greece was supported by a substantial majority of Government members.
- 713.** The Workers withdrew their subamendment.

---

**714.** The amendment was adopted as subamended.

**715.** The new Point after Point 37 was adopted.

Point 38

**716.** A Worker member of Denmark introduced an amendment to replace clause (a) with the following text: “(a) an effective insurance cover or other financial security provided by the fishing vessel owner; and” and subamended it by adding, “liability including” before “an effective” and by replacing “or” with “and”. While different schemes existed at the national level, some owners did not meet their obligations. Therefore, mechanisms needed to be put in place that would provide sufficient security.

**717.** The Employer Vice-Chairperson opposed the amendment. Insurance systems and mechanisms differed considerably between States as did levels of protection, alternative mechanisms and exact legal requirements. The Office text, which was all encompassing, should be retained.

**718.** The Government members of Lebanon, Syrian Arab Republic and the United Kingdom did not support the amendment as subamended.

**719.** The Workers withdrew their amendment.

**720.** Point 38 was adopted.

New Point after Point 38

**721.** The Worker members introduced two amendments. The first one was to insert a new Part after Part VI as follows:

ADDITIONAL REQUIREMENTS FOR VESSELS OF 15 METRES IN LENGTH OR MORE:

*Minimum age* (text to be developed by the Office prior to second discussion), *Medical examination* (text to be developed by the Office prior to second discussion), *Certification and training* (text to be developed by the Office prior to second discussion), *Crewing/Manning* (text to be developed by the Office prior to second discussion), *Hours of rest* (text to be developed by the Office prior to second discussion), *Fishers' work agreement* (text to be developed by the Office prior to second discussion), *Accommodation and food* (text to be developed by the Office prior to second discussion), *Health protection, medical care and social security* (text to be developed by the Office prior to second discussion).

**722.** The second amendment was to insert a new Part before Part VII as follows:

ADDITIONAL REQUIREMENTS FOR VESSELS OF 24 METRES IN LENGTH OR MORE  
OPERATING IN DISTANT WATERS OUT OF FOREIGN PORTS:

*Training* (text to be developed by the Office prior to second discussion), *Health protection, medical care and social security* (text to be developed by the Office prior to second discussion), *Welfare facilities on the vessel* (text to be developed by the Office prior to second discussion).

**723.** The Worker Vice-Chairperson said that these amendments were proposed to address the complexities and differences within the fishing sector, specifically the need for additional requirements for larger vessels, as the current text might be overly restrictive for smaller

---

vessels, while setting too low a standard for larger vessels. He stated that the Workers' group could not agree to the reduction of existing standards and the removal of the protections provided for fishers. He agreed that the Convention should be global in scope, but special attention needed to be given to certain types of vessels. Other organizations made differences according to size. Ratification depended on getting the right balance but flexibility should not mean a reduction of standards. Non-prescriptive standards should not mean low standards for large vessels either. The proposed length limits could be discussed and some of the proposed headings might prove to be unnecessary. These amendments would give the Office to get the right balance in the texts to be submitted to the Conference in 2005.

- 724.** The Employer Vice-Chairperson said that her group was mindful of the concerns regarding large vessels, and it was the duty of the Committee to strike a balance. The texts agreed upon so far had achieved the objectives set at the beginning of the Committee's work. These texts struck the right balance and were not stratified according to the size of vessels. Fear that standards would be eroded was not founded. Small vessels should progressively apply global standards. Therefore the Committee should continue to strike the balance sought.
- 725.** The Government member of Canada, on behalf of all Governments present, declared that the Governments recognized the importance of the issue. The social partners had agreed that the one-size-fits-all approach was impractical. He advised the Committee that discussions had been held with the social partners by the Government member of Ireland on behalf of all Governments, being fully aware of the importance of the issues at stake for all fishers.
- 726.** The Government member of Ireland proposed a subamendment, which applied to both amendments under discussion and which read as follows:

ADDITIONAL REQUIREMENTS FOR VESSELS OF [ ] METRES IN LENGTH OR MORE

- (a) Taking into *account* the number of fishers on board, the area of operation and the length of the voyage, a Member may, after consultation, exclude additional requirements for the vessels concerned.

- 727.** He believed that this text struck a fair balance and would enable all concerned to continue the work in 2005 on the basis of provisions developed by the Office.
- 728.** The Worker Vice-Chairperson said the text offered too much flexibility. He did not want to take rights away from fishers, and wondered if there was anything that governments could further do to break the impasse.
- 729.** The Employer Vice-Chairperson believed that from the first day of discussion there had been an agreement that the Convention would set flexible standards regardless of vessel size. She reminded the Committee that the existing fishing instruments had a very low rate of ratification. The general spirit had been to come up with some protection for non-protected fishers, without eroding the existing protections for those who enjoyed them.
- 730.** If the subamendment proposed by the Government group were adopted, about 90 per cent of the fleet would have to apply for exclusions, through their Governments. The Employers did not understand the rationale behind it.
- 731.** The Employer member from Canada added that Government members had stated from the beginning that they did not want an overly prescriptive instrument, applicable across the

---

board. It did not seem to be the case any more. He knew that the Workers wanted some categorization, but his group could not accept it.

- 732.** The Worker member from Canada pointed out that his group could not accept the subamendment, which constituted a blank cheque for larger vessels. Significant rights were on the verge of being abandoned. A system whereby an authority could decide what to adopt and what not to adopt should not be possible. He recalled the problems encountered by fishers who sailed on vessels with substandard conditions, which were registered in States where there were no unions and where there would be no consultations.
- 733.** The Government member of Ireland suggested a subamendment on behalf of the Government members to put clause (a) in square brackets. He hoped that this would provide the opportunity to return next year to complete the work begun.
- 734.** The representative of the Secretary-General did not believe that the Employers' and Workers' positions were far apart. The document before the Committee was work in progress. There was ample time before the next Conference to permit consultation and to review the results of the Committee. She reminded the Committee that each Conference was autonomous and this Conference could not bind next year's Conference. The Office would put in place a concerted consultation process to produce a new document for the second discussion next year.
- 735.** The Worker Vice-Chairperson stated that although the Workers' group did not consider the subamendment submitted by the Government members satisfactory, they would support it in order for the issue to be carried over to the second discussion next year.
- 736.** The Employer Vice-Chairperson proposed to further subamend the Government group's subamendment by placing square brackets around the entire text, and to add “/adopt” after “exclude”. This would suspend everything until the next discussion.
- 737.** The Worker Vice-Chairperson asked the Employers' group to reconsider their position as their last proposal was not acceptable.
- 738.** The Employer Vice-Chairperson noted that the differences between the two groups' positions were obvious, but that everyone understood what the brackets meant and the Committee would have the ability to debate the issue at the next session of the Conference.
- 739.** The Government member of Canada submitted a further subamendment to replace the words “exclude/adopt” with “make the required adjustments to suit the”. However, after further discussions between Government members and the social partners, and in the light of a deadlock on the acceptability of this subamendment, he withdrew it.
- 740.** The Chairperson called for an indicative vote on the Employer members' subamendment. He concluded that the majority of the Government members did not support the proposal.
- 741.** Following the indicative vote, the Employer Vice-Chairperson called for a record vote on the subamendment which she had submitted earlier. The results of the vote were as follows: 3,570 votes in favour; 42 votes against; and 4,956 abstentions (the quorum being

---

4,284 votes). It was concluded that the quorum had not been reached.<sup>2</sup> The subamendment proposed by the Employer members was rejected.

**742.** The Government member of Ireland, speaking on behalf of the Government group, stated that their first subamendment had been offered by a unanimous Government group asking for the cooperation of the social partners so as to return to the issue at the 2005 Conference. He appealed to the Committee to consider this final position of the Government members.

**743.** Since the Workers' group had agreed with the subamendment offered by the Government group, it was deemed to have been supported by a majority of the Committee. However, the Employer Vice-Chairperson requested a record vote. The results of the vote were as follows: 5,124 votes in favour, 3,570 votes against and no abstentions (the quorum was 4,284 votes). The subamendment proposed by the Government group was adopted.<sup>3</sup>

<sup>2</sup> The Employer members requested that the details of the record vote with respect to the Government members be included in the report. The results were as follows:

For: 0

Against: Germany

Abstentions: Algeria, Argentina, Belgium, Botswana, Brazil, Cameroon, Canada, China, Costa Rica, France, Greece, Guatemala, Ireland, Islamic Republic of Iran, Japan, Kenya, Malawi, Mexico, Mozambique, Namibia, Netherlands, Norway, Republic of Korea, South Africa, Spain, Sweden, Thailand, Tunisia, United Kingdom, United States, Venezuela, Zambia, Zimbabwe.

Absent: Albania, Angola, Bahamas, Bahrain, Bangladesh, Cape Verde, Central African Republic, Chile, Congo, Côte d'Ivoire, Croatia, Democratic Republic of Timor-Leste, Denmark, Dominican Republic, El Salvador, Eritrea, Estonia, Fiji, Finland, Gabon, Ghana, Guinea, Hungary, India, Indonesia, Italy, Kiribati, Kuwait, Lebanon, Liberia, Lithuania, Madagascar, Malaysia, Mali, Malta, Morocco, Nicaragua, Nigeria, Panama, Philippines, Portugal, Romania, Russian Federation, Saudi Arabia, Sri Lanka, Syrian Arab Republic, Turkey, United Arab Emirates, United Republic of Tanzania, Uruguay, Yemen.

<sup>3</sup> The Employer members requested that the details of the record vote with respect to the Government members be included in the report. The results were as follows:

For: Algeria, Argentina, Belgium, Botswana, Brazil, Cameroon, Canada, China, Costa Rica, Estonia, Finland, France, Germany, Greece, Guatemala, Islamic Republic of Iran, Ireland, Italy, Kenya, Kuwait, Malawi, Mexico, Mozambique, Namibia, Norway, Netherlands, Republic of Korea, South Africa, Spain, Sweden, Thailand, Tunisia, United Kingdom, United States, Venezuela, Zambia, Zimbabwe.

Against: 0

Abstentions: 0

Absent: Albania, Angola, Bahamas, Bahrain, Bangladesh, Cape Verde, Central African Republic, Chile, Congo, Côte d'Ivoire, Croatia, Democratic Republic of Timor-Leste, Denmark, Dominican Republic, El Salvador, Eritrea, Fiji, Gabon, Ghana, Guinea, Hungary, India, Indonesia, Japan, Kiribati, Lebanon, Liberia, Lithuania, Madagascar, Malaysia, Mali, Malta, Morocco, Nicaragua, Nigeria, Panama, Philippines, Portugal, Romania, Russian Federation, Saudi Arabia, Sri Lanka, Syrian Arab Republic, Turkey, United Arab Emirates, United Republic of Tanzania, Uruguay, Yemen.

---

**744.** A new Point after Point 38 was adopted as amended.

**745.** The Employer Vice-Chairperson assured the meeting that her group had come to the Conference with the commitment to complete the work before the Committee. Procedures had to be followed. Her group was committed to shaping a Convention that would improve the working life of fishers.

## Part VII. Compliance and enforcement

### Point 39

**746.** Point 39 was adopted.

### Point 40

**747.** An amendment submitted by the Employer members was withdrawn.

**748.** Point 40 was adopted.

### Point 41

**749.** Point 41 was adopted.

### Point 42

**750.** An amendment submitted by the Government member of Japan was not seconded and therefore not discussed.

**751.** An amendment submitted by the Employer members proposed the deletion of Point 42. The Employer Vice-Chairperson stated that the issue of inspection was already covered by Point 39.

**752.** The Worker members, as well as the Government members of Argentina, Brazil, Guatemala, South Africa and Venezuela, did not support the amendment.

**753.** The Government member of the United Kingdom also rejected the amendment. He explained that Point 42 allowed for port state control, while Point 39 referred to flag State inspections. These were two different issues.

**754.** The Government member of Japan supported the amendment and stated that the law to be applied on board a vessel was the law of its flag State. Thus, flag States should have control, rather than port States.

**755.** The amendment was not adopted.

**756.** An amendment submitted by the Worker members was withdrawn.

**757.** The Government member of Norway also on behalf of the Government members of Greece, submitted an amendment to replace the text in Point 42 by the following:

(1) If a Member which has ratified this Convention and in whose port a fishing vessel calls in the normal course of its business or for operational reasons, receives a complaint or obtains evidence that the fishing vessel does not conform to the standards of this Convention, after it has come into force, it might prepare a report addressed to the government of the country in which the fishing vessel is registered, with a copy to the Director-General of the

---

International Labour Office, and might take measures necessary to rectify any conditions on board which are clearly hazardous to safety or health.

(2) In taking such measures, the Member should forthwith notify the nearest representative of the flag State and should, if possible, have such representative present. It should not unreasonably detain or delay the fishing vessel.

(3) For the purpose of this Point “complaint” means information submitted by a member of the crew, a professional body, an association, a trade union or, generally, any person with an interest in the safety of the ship, including an interest in safety or health hazards to its crew.

He said that the time had come for port state control of fishing vessels. The purpose of port state control was to improve flag State performance. It was important to proceed carefully when introducing the concept of port state control of fishing vessels. The amendment was identical to the text found in the Merchant Shipping (Minimum Standards) Convention, 1976 (No. 147).

**758.** The Worker Vice-Chairperson supported the amendment and suggested editorial changes to replace the word “crew” by “fishers”.

**759.** The Employer Vice-Chairperson proposed a subamendment to delete the words “receives a complaint or” and insert the words, “following an expeditious procedure”, after “it might” and the deletion of (3). The deletion of a reference to complaints was proposed to prevent unnecessary and costly detentions of ships after malicious complaints.

**760.** The Government member of Brazil and Mexico preferred the Office text. Many ships, manned with workers from the ship’s original country, were flying other flags for economic reasons. If there were too many obstacles for the exercise of port state control, the impact of the Convention could be seriously lessened.

**761.** The Government members of France, Ireland, Namibia and Spain supported the amendment as subamended by the Workers’ group.

**762.** The Employer Vice-Chairperson withdrew her group’s subamendment.

**763.** The amendment was adopted.

**764.** Point 42 was adopted as amended.

#### New Point after Point 42

**765.** An amendment submitted by the Worker members was withdrawn.

#### Point 43

**766.** An amendment submitted by the Government member of Japan was not seconded.

**767.** The Employer members submitted an amendment to delete Point 43. The Employer Vice-Chairperson explained that port States would be able to use international labour standards for the purpose of discrimination, since it offered them the opportunity to penalize fishing vessels from member States that had not ratified the Convention.

**768.** The Worker Vice-Chairperson believed that Point 43 applied a well-established maritime concept, which had nothing to do with discrimination. His group could not support the amendment.

- 
769. The Government member of the United Kingdom noted a slight confusion. While Point 42 allowed member States to check fishing vessels of member States that had ratified the Convention, Point 43 asked member States when implementing the Convention to provide no more favourable treatment to member States that had not ratified the Convention. In fact, the latter provision encouraged member States which had not ratified the Convention but called at ports of member States that had ratified the Convention to have standards similar to those required by the Convention. These were, therefore, two different issues. The Government member of the United Kingdom rejected the amendment.
770. The Government members of Argentina, Botswana, Brazil, France, Guatemala, Mexico, Namibia, South Africa, Venezuela and Zimbabwe did not support the amendment.
771. The Government member of Norway stated that port state control was a form of positive discrimination. Port state control prevented member States that had not ratified the Convention from gaining undue advantage from the non-ratification of an internationally accepted Convention.
772. The Government members of Canada and Greece endorsed the statement of the Government member of Norway.
773. The amendment was not adopted.
774. Point 43 was adopted.

Annex I [to the proposed Convention]

775. Annex I was not discussed.

**D. *Proposed Conclusions with a view to a Recommendation***

776. The proposed Conclusions with a view to a Recommendation were not discussed.
777. The representative of the Secretary-General indicated that all amendments that had been tabled but had not been considered at the first discussion would fall and would not be reflected in the report. The only amendments to be reflected in the report would be those on which decisions had been taken with regard to Annex II and Part V of the proposed Conclusions.

**Adoption of the report**

778. The Reporter introduced the Committee's report, which faithfully summarized the Committee members' deliberations on numerous issues that were complex, sensitive and often highly technical. The Committee had produced a solid basis for the second, crucial discussion at the next International Labour Conference. Their spirit of tripartism, their high level of expertise and their commitment to work were the guarantors for the development and adoption of realistic, modern, cohesive and comprehensive new international standards for work in the fishing sector that would benefit all fishers. Committee members had proposed 210 amendments and many subamendments. Although not all of these had been discussed, they would provide guidance over the coming year. The report was an excellent reflection of the Committee's discussions, the positions of various delegations and the way in which compromises were reached on difficult issues. He commended the report to the Committee for its adoption.

---

**779.** The Secretary-General of the Conference extended his heartfelt thanks to Committee members for the important work that they had accomplished towards building a consolidated standard for the protection of fishers in a highly globalized industry. The Committee had recognized the need to find the appropriate balance in order to protect the vast majority of small-scale fishers, without diluting the existing protection afforded to fishers on large ocean-going fishing vessels. No fisher should slip through the protective net of the Convention. To achieve this, the mesh must be neither so wide as to allow extensive exemptions, nor so narrow that it would stifle ratification and implementation. The discussions had taken place in the shadow of the new, consolidated maritime labour Convention still being developed and this had raised some concerns. Nonetheless, the Committee had adopted substantive Conclusions that were sufficiently flexible to ensure wide-scale ratification and implementation, yet provided broad coverage for all fishers, including the self-employed, and included specific safety and health provisions to reduce the high rate of fishing accidents as well as provisions on compliance and enforcement. The important issues of accommodation, social security and specific standards for larger vessels would have to be worked on and developed over the coming year. The Office would assist with this process and it counted on the expertise of Committee members, as well as financial assistance from all parties involved, to ensure an appropriate consultation process. In conclusion, he congratulated the Committee on its achievements and expressed the hope that the future Convention on work in the fishing sector would be quickly and widely ratified, and implemented, so that the world's 35 million fishers could have decent and safe work.

**780.** The report was adopted as amended.

### **Adoption of the proposed Conclusions**

**781.** The Reporter recalled that the Drafting Committee had met to ensure that the French and English versions, i.e. the two authentic languages, were consistent with each other. The Drafting Committee had identified four issues. The first concerned the exclusion clause added in Point 9(1) of the proposed Convention. The Legal Adviser indicated that it would be necessary to ensure that the possibility now provided to exclude certain provisions did not permit the exclusion of provisions that related to general principles, definitions and other standard provisions. Information concerning exclusions needed to be widely publicized, as member States would need to know which provisions a member State excluded. The second issue was the inconsistency in the reference to "inland lakes and rivers" in the definition of "commercial fishing" in Point 5 and the possibility given to exclude "rivers and inland waters" in Point 9. The third concerned the minimum age provisions and the need to ensure that the reference to "completed basic pre-sea safety training" was sufficient to meet the requirements of Article 7, paragraph 1, of the Minimum Age Convention, 1973 (No. 138). The fourth related to the consistency of wording in Point 53 of the Conclusions as regarded no more favourable treatment with the relevant provisions of SOLAS. The English version was thus aligned to the French version already in the text of the Office Report V(2). These issues would need to be addressed during the second discussion. With the Committee's agreement, he would request that the International Labour Conference adopt the report and the proposed Conclusions with a view to a Convention and a Recommendation concerning work in the fishing sector.

**782.** The proposed Conclusions with a view to a Convention and a Recommendation were unanimously adopted.

---

**Resolution to place on the agenda of the next ordinary session of the Conference an item entitled “Work in the fishing sector”**

- 783.** The Reporter introduced the resolution that had resulted from the Committee’s work. It called for the item “Work in the fishing sector” to be on the agenda of the 93rd Session of the International Labour Conference in 2005.
- 784.** The Committee unanimously adopted the resolution.

**Closing remarks**

- 785.** The Employer Vice-Chairperson noted that the report was a true reflection of the Committee’s discussions, which had been guided by the interests of all parties concerned. The consolidation of five Conventions and two Recommendations into one globally acceptable instrument to regulate working conditions in the fishing sector had not been expected to be an easy task. She expressed particular thanks to the Chairperson for having steered the Committee through stormy seas and thanked, as well the Worker Vice-Chairperson, Government delegations, her colleagues in the Employers’ group and the Office, for their unique contributions to the work.
- 786.** The Worker Vice-Chairperson stated that the Committee had reached the end of the first part of its journey. The voyage had been hard and difficult and, at times, his group had been unsure as to whether the Committee would reach its final destination. The Conclusions provided a foundation on which to build, but the task would not be easy, as many issues remained unresolved. He reminded all Committee members of the pledge not to erode existing standards for fishers. This principle should lead the future work on the new Convention. The speaker thanked all those who had facilitated the Committee’s work, particularly the Chairperson, the Government members and the Employer Vice-Chairperson.
- 787.** The representative of the Secretary-General pointed out that the Committee’s work was a testimony to social dialogue and tripartism at its best. The Committee had achieved considerable progress towards its ultimate goal of creating an instrument that would ensure safe and decent work for all fishers, everywhere in the world.
- 788.** The Chairperson thanked all the members of the Committee for their exemplary cooperation and active, constructive contributions to the work. He expressed confidence that next year’s Conference would address the serious issues still to be resolved and adopt an instrument that would bring the concept of decent, safe work to the fishing sector.

---

**789.** The report of the Committee, the proposed Conclusions and the resolution to place on the agenda of the next ordinary session of the Conference an item entitled “Work in the fishing sector” are submitted for consideration.

Geneva, 14 June 2004.

*(Signed)* F. Ribeiro Lopes,  
Chairperson.

G. Boumbopoulos,  
Reporter.

---

## Proposed Conclusions

### A. Form of the international instruments

1. The International Labour Conference should adopt international standards concerning work in the fishing sector.
2. These standards should take the form of a Convention supplemented by a Recommendation.

### B. Proposed Conclusions with a view to a Convention and a Recommendation

#### *Preamble*

3. The Preamble should provide that the objective of the proposed instruments is to help ensure that fishers have decent conditions for work on board fishing vessels with regard to: minimum requirements for work on board; conditions of service; accommodation and food; health protection, medical care and social security.

### C. Proposed Conclusions with a view to a Convention

4. The proposed Conclusions with a view to a Convention should contain the following provisions:

#### *Part I. Definitions and scope*

##### I.1. Definitions

5. For the purposes of the Convention:
  - (a) “commercial fishing” means all fishing operations, including fishing operations on rivers and inland waters, with the exception of subsistence fishing and recreational fishing;
  - (b) “competent authority” means the minister, government department or other authority having power to issue and enforce regulations, orders or other instructions having the force of law in respect of the subject matter of the provision concerned;
  - (c) “consultation” means consultation by the competent authority with the representative organizations of employers and workers concerned, and in particular the representative organizations of fishing vessel owners and fishers, where they exist, on the measures to be taken to give effect to the provisions of the Convention and with respect to any derogation, exemption or other flexible application of the Convention;
  - (d) “fishing vessel owner” means the owner of the fishing vessel or any other organization or person who has assumed the responsibility for the operation of the vessel from the owner or other organization or person and who, on assuming such

---

responsibility, has agreed to take over the duties and responsibilities imposed on fishing vessel owners in accordance with this Convention;

- (e) “fisher” means every person employed or engaged in any capacity or carrying out an occupation on board any fishing vessel, including persons working on board who are paid on the basis of a share of the catch. It excludes pilots, naval personnel, other persons in the permanent service of a government [and shore-based persons carrying out work aboard a fishing vessel];
- (f) “fisher’s work agreement” means a contract of employment, articles of agreement or other similar arrangements and any other contract governing the terms of a fisher’s living conditions and work on board a vessel;
- (g) “fishing vessel” or “vessel” means any ship or boat, of any nature whatsoever, whether publicly or privately owned, used or intended to be used for the purposes of commercial fishing;
- (h) “new fishing vessel” means a fishing vessel for which:
  - (i) on or after the date of the entry into force of this Convention, the building or major conversion contract is placed; or
  - (ii) the building or major conversion contract has been placed before the date of the entry into force of this Convention, and which is delivered three years or more after that date; or
  - (iii) in the absence of a building contract, on or after the date of the entry into force of this Convention:
    - the keel is laid, or
    - construction identifiable with a specific vessel begins, or
    - assembly has commenced comprising at least [50 tonnes] or 1 per cent of the estimated mass of all structural material, whichever is less;
- (i) “existing vessel” is a vessel that is not a new vessel;
- (j) “gross tonnage” means the gross tonnage calculated in accordance with the tonnage measurement regulations contained in Annex I to the International Convention on Tonnage Measurement of Ships, 1969, or any successor Convention;
- (k) “length” (L) should be taken as 96 per cent of the total length on a waterline at 85 per cent of the least moulded depth measured from the keel line, or as the length from the foreside of the stern to the axis of the rudder stock on that waterline, if that be greater. In vessels designed with rake of keel the waterline on which this length is measured should be parallel to the designed waterline;
- (l) “recruitment and placement service” means any person, company, institution, agency or other organization, in the public or the private sector, which is engaged in recruiting fishers on behalf of employers or placing fishers with employers;
- (m) “skipper” means the person having command of a fishing vessel.

---

## I.2. Scope

6. Except as provided otherwise, the Convention applies to all fishers and all fishing vessels engaged in commercial fishing operations.
7. Nothing in this Convention should affect any law, award, custom or any agreement between fishing vessel owners and fishers which ensures more favourable conditions or provisions than those provided for by this Convention.
8. In the event of doubt as to whether a vessel is engaged in commercial fishing, the question should be determined by the competent authority after consultation.
9. (1) The competent authority might, after consultation, exclude from the requirements of the Convention, or certain provisions thereof, where the application is considered to be impracticable:
  - (a) fishing vessels engaged in fishing operations in rivers and inland waters; and
  - (b) limited categories of fishers or fishing vessels in respect of which special and substantial problems relating to application arise in the light of particular conditions of service of the fishers or fishing vessels' operations.(2) In the case of exclusions under the preceding paragraph, and where practicable, the competent authority should take measures, as appropriate, to progressively extend the protections under the Convention to those categories of fishers and fishing vessels.
10. Each Member which ratifies the Convention should list, in the first report on the application of the Convention submitted under article 22 of the Constitution of the International Labour Organization, any categories of fishers or fishing vessels which might have been excluded in pursuance of *Point 9(1)*, and should give the reasons for such exclusion, stating the respective positions of the representative organizations of employers and workers concerned, in particular the representative organizations of fishing vessel owners and fishers, where they exist, and describing any measures which may be taken to provide equivalent protection to the excluded categories.
11. The competent authority might, after consultation, decide to use other units of measurement as defined in this Convention. In the case of such a decision, the competent authority should in the first report on the application of the Convention submitted under article 22 of the Constitution communicate the reasons for the decision and any comments arising from the consultation.
12. Each Member which ratifies the Convention should describe in subsequent reports on the application of the Convention submitted under article 22 of the Constitution the measures taken with a view to extending progressively the provisions of the Convention to the excluded fishers and fishing vessels.

## **Part II. General principles**

### II.1. Implementation

13. Members should implement and enforce laws or regulations or other measures that it has adopted to fulfil its commitments under the Convention with respect to fishers and fishing vessels under its jurisdiction. Other measures might include collective agreements, court decisions, arbitration awards or other means consistent with national law and practice.

---

## II.2. Competent authority and coordination

### 14. Members should:

- (a) designate the competent authority or authorities; and
- (b) establish mechanisms for coordination among relevant authorities for the fishing sector at the national and local level, as appropriate, and define their functions and responsibilities, taking into account their complementarities and national conditions and practice.

## II.3. Responsibilities of fishing vessel owners, skippers and fishers

15. The fishing vessel owner has the overall responsibility to ensure that the skipper is provided with the necessary resources and facilities for the purpose of compliance with the obligations of the Convention.

16. The skipper has the responsibility for the safety of the fishers on board and the safe operation of the vessel, including but not limited to the following areas:

- (a) providing such supervision as will ensure that as far as possible fishers perform their work in the best conditions of safety and health;
- (b) managing the fishers on board in a manner which respects the issue of safety and health, including fatigue;
- (c) facilitating occupational safety and safety awareness training on board the vessel.

17. The skipper should not be constrained by the fishing vessel owner from taking any decision which, in the professional judgement of the skipper, is necessary for the safety of the vessel and its safe navigation, safe operation or the safety of the fishers on board.

18. Fishers should comply with established applicable safety and health measures.

## ***Part III. Minimum requirements for work on board fishing vessels***

### III.1. Minimum age

19. No person under the minimum age should work on board a fishing vessel.

20. The minimum age at the time of the initial entry into force of the Convention is 16 years.

21. (1) The minimum age might be 15 years for persons who are no longer subject to compulsory schooling as imposed by national legislation, and who are engaged in maritime vocational training.

(2) Persons of 15 years of age might also be authorized, in accordance with national laws and practice, to perform light work during school holidays; in this case they should be granted a rest of a duration equal to at least half of each holiday period.

- 
22. The minimum age for assignment to activities on board fishing vessels, which by their nature or the circumstances in which they are carried out are likely to jeopardize the health and safety of young persons, should not be less than 18 years.
  23. The types of employment or work to which *Point 22* applies should be determined after consultation, taking into account the risks concerned and the applicable international standards.
  24. The competent authority might, after consultation, authorize the performance of work referred to in *Point 22* as from 16 years of age, on condition that the health and safety of the young persons concerned are fully protected and that the young persons concerned have completed basic pre-sea safety training.

### III.2. Medical examination

25. No person should work on board a fishing vessel unless they have a valid medical certificate attesting that they are medically fit to perform their duties.
26. The competent authority might, after consultation, grant exemptions from the application of the preceding point, taking into account the health and safety of fishers, size of the vessel, availability of medical assistance and evacuation, duration of the voyage, area of operation, type of fishing operation and national traditions.
27. Members should adopt laws or regulations or other measures providing for:
  - (a) the nature of medical examinations;
  - (b) the form and content of medical certificates;
  - (c) the medical certificate to be issued by a duly qualified medical practitioner or, in the case of a certificate solely concerning eyesight, by a person recognized by the competent authority as qualified to issue such a medical certificate. Practitioners should enjoy full professional independence exercising their medical judgement in terms of the medical examination procedures;
  - (d) the frequency of medical examinations and the period of validity of medical certificates;
  - (e) the right to a further examination by another independent medical practitioner in the event that a person has been refused a certificate or has had limitations imposed on the work he or she might do; and
  - (f) other relevant requirements.

## **Part IV. Conditions of service**

### IV.1. Manning and hours of rest

28. Members should adopt laws or regulations or other measures requiring that owners of fishing vessels flying their flag ensure that:
  - (a) their vessels are sufficiently and safely manned with a crew necessary for the safe navigation and operation of the vessel and under the control of a competent skipper; and

- 
- (b) fishers are given rest periods of sufficient frequency and duration for the safe and healthy performance of their duties.

#### IV.2. Fishers' work agreements and list of persons on board

- 29.** *Points 30 to 33* inclusive, and Annex I, do not apply to a fishing vessel owner who is also single-handedly operating the vessel.
- 30.** Members should adopt laws or regulations or other measures requiring that fishers working on vessels flying their flag have a fisher's work agreement comprehensible to them that is consistent with the provisions of the Convention.
- 31.** Members should adopt laws or regulations or other measures regarding:
  - (a) procedures for ensuring that a fisher has an opportunity to review and seek advice on the terms of the fisher's work agreement before it is concluded;
  - (b) maintenance of records concerning the fisher's work under such an agreement; and
  - (c) the means of settling disputes in connection with such an agreement.
- 32.** Members should adopt laws or regulations or other measures specifying the minimum particulars to be included in fishers' work agreements in accordance with the provisions contained in Annex I.
- 33.** The fisher's work agreement, a copy of which should be provided to the fisher, should be carried on board and be available to the fisher and, in accordance with national law and practice, to other concerned parties on request.
- 34.** Every fishing vessel should carry a list of the fishers on board, a copy of which should be provided to appropriate persons ashore prior to or shortly after departure of the vessel.

#### IV.3. Identity documents, repatriation rights and recruitment and placement services

- 35.** Fishers working on board fishing vessels that undertake international voyages should enjoy treatment no less favourable than that provided to seafarers working on board vessels flying the flag of the Member and ordinarily engaged in commercial activities with respect to:
  - [(a) identity documents;]
  - (b) repatriation conditions;
  - (c) recruitment and placement services.

#### IV.4. Payment of fishers

- 36.** Members should, after consultation, adopt laws, regulations or other measures providing that fishers are ensured a monthly or regular payment. The competent authority should, after consultation, define the fishers who should be covered by this provision.

---

## **Part V. Accommodation and food**

37. [Members should adopt laws or regulations or other measures with respect to accommodation, food and potable water on board for fishing vessels that fly their flag.]
38. Members should adopt laws or regulations or other measures requiring that accommodation on board fishing vessels that fly their flag should be of sufficient size and quality and should be appropriately equipped for the service of the vessel and the length of time fishers live on board. In particular, such measures should address, as appropriate, the following issues: [main concepts of C. 126]
- (a) approval of plans for the construction or modification of fishing vessels in respect of accommodation;
  - (b) maintenance of accommodation and galley spaces with due regard to hygiene and overall safe, healthy and comfortable conditions;
  - (c) ventilation, heating, cooling and lighting;
  - (d) mitigation of excessive noise and vibration;
  - (e) location, size, construction materials, furnishing and equipping of sleeping rooms, mess-rooms and other accommodation spaces;
  - (f) sanitary facilities, including water closets and washing facilities, and supply of sufficient hot and cold water; and
  - (g) procedures for responding to complaints concerning sub-standard accommodation.
39. [Fishing vessels to which [Annex II] applies should as a minimum comply with the standards contained therein.]
40. The food carried and served on board fishing vessels should be of an appropriate quantity, nutritional value and quality for the service of the vessel and potable water should be of sufficient quantity and quality.]

## **Part VI. Health protection, medical care and social security**

### VI.1. Medical care

41. Members should adopt laws or regulations or other measures requiring that:
- (a) fishing vessels should carry appropriate medical equipment and medical supplies for the service of the vessel, taking into account the number of fishers on board, the area of operation and the length of the voyage;
  - (b) medical equipment and supplies carried on board should be accompanied by instructions or other information in a language and format understood by the fishers concerned;
  - (c) fishing vessels should have at least one person on board who is qualified or trained in first aid and other forms of medical care, including the necessary knowledge in using the medical equipment and supplies for the vessel concerned, taking into account the number of fishers on board, the area of operation and the length of the voyage;

- 
- (d) fishing vessels should be equipped for radio or satellite communication with persons or services ashore that can provide medical advice, taking into account the area of the operation and the length of the voyage;
  - (e) fishers should have the right to medical treatment ashore and to be taken ashore in a timely manner for treatment in the event of serious injuries or illnesses.

**42.** The standards for medical care on board fishing vessels undertaking international voyages or remaining away from land for a period prescribed by the competent authority should be no less favourable than those provided to seafarers on vessels of a similar size ordinarily engaged in commercial activities.

## VI.2. Occupational safety, health and accident prevention

**43.** Members should adopt laws or regulations or other measures concerning:

- (a) the prevention of occupational accidents, occupational diseases and work-related risks on board fishing vessels, including risk evaluation and management, training and on-board instruction of fishers;
- (b) training for fishers in the handling of types of fishing gear they will use and in the knowledge of the fishing operations in which they will be engaged;
- (c) the obligations of fishing vessel owners, fishers and others concerned, due account being taken of the safety and health of fishers under 18 years of age;
- (d) the reporting and investigation of accidents on board fishing vessels flying their flag;
- (e) the setting up of joint committees on occupational safety and health.

## VI.3. Social security

**44.** [Members should ensure that fishers are entitled to benefit from social security protection on conditions no less favourable than those applicable to other workers.]

**45.** With regard to the principles of equality of treatment and the maintenance of social security protection rights, Members should adopt measures that take into account the situation of non-national fishers.

## VI.4. Protection in the case of work-related sickness, injury or death

**46.** Members should take measures to provide fishers with protection for work-related sickness, injury or death determined in accordance with national laws or regulations or practice.

**47.** In the event of injury due to occupational accident or disease, the fisher should have access to:

- (a) appropriate medical attention; and
- (b) the corresponding compensation in accordance with national laws.

**48.** Taking into account the characteristics within the fishing sector, the protection referred to in *Point 46* might be ensured through:

- 
- (a) a system for fishing vessel owners' liability; or
  - (b) compulsory insurance, workers' compensation or other schemes.

**Part VII. Additional requirements for vessels of [...] metres in length or more**

- [(a) taking into account the number of fishers on board, the area of operation and the length of the voyage, a Member may, after consultation, exclude additional requirements for the vessels concerned;] \*

**Part VIII. Compliance and enforcement**

- 49.** Members should exercise effective jurisdiction and control over vessels that fly their flag by establishing a system for ensuring compliance with the standards of the Convention including, as appropriate, inspections, reporting, monitoring, appropriate penalties and corrective measures, in accordance with national laws or regulations.
- 50.** Fishing vessels that operate internationally should be required to undergo a documented periodic inspection of living and working conditions on board the vessel.
- 51.** (1) The competent authority should appoint a sufficient number of qualified inspectors to fulfil its responsibilities under *Point 49*.  
  
(2) Members should be responsible for inspection of the on-board living and working conditions of fishers on vessels that fly their flag, whether such inspections are carried out by public institutions or other competent bodies.
- 52.** (1) If a Member which has ratified the Convention and in whose port a fishing vessel calls in the normal course of its business or for operational reasons receives a complaint or obtains evidence that the fishing vessel does not conform to the standards of the Convention, after it has come into force, it might prepare a report addressed to the government of the country in which the fishing vessel is registered, with a copy to the Director-General of the International Labour Office, and might take measures necessary to rectify any conditions on board which are clearly hazardous to safety or health.  
  
(2) In taking such measures, the Member should forthwith notify the nearest representative of the flag State and should, if possible, have such representative present. It should not unreasonably detain or delay the fishing vessel.  
  
(3) For the purpose of this Point, "complaint" means information submitted by a fisher, a professional body, an association, a trade union or, generally, any person with an interest in the safety of the vessel, including an interest in safety or health hazards to its fishers.
- 53.** Members should apply the Convention in such a way as to ensure that the fishing vessels flying the flag of States that have not ratified the Convention do not receive more favourable treatment than the fishing vessels that fly the flag of Members that have ratified it.

\* Text to be developed by the Office with a view to being examined by the Conference.

---

## Annex I to the proposed Convention

### Fisher's work agreement [based on C. 114, Art. 6, with additions]

The fisher's work agreement should contain the following particulars, except in so far as the inclusion of one or more of them is rendered unnecessary by the fact that the matter is regulated in another manner by national laws or regulations:

- (a) the fisher's family name and other names, date of birth or age and birthplace;
- (b) the place at which and date on which the agreement was concluded;
- (c) the name of the fishing vessel or vessels on board which the fisher undertakes to serve;
- (d) the voyage or voyages to be undertaken, if this can be determined at the time of making the agreement;
- (e) the capacity in which the fisher is to be employed or engaged;
- (f) if possible, the place at which and date on which the fisher is required to report on board for service;
- (g) the scale of provisions to be supplied to the fisher, unless some alternative system is provided for by national law;
- (h) the amount of wages, or the amount of the share and the method of calculating such share if remuneration is to be on a share basis, or the amount of the wage and share and the method of calculating the latter if remuneration is to be on a combined basis, and any agreed minimum wage;
- (i) the termination of the agreement and the conditions thereof, that is to say:
  - if the agreement has been made for a definite period, the date fixed for its expiry;
  - if the agreement has been made for a voyage, the port of destination and the time which has to expire after arrival before the fisher should be discharged;
  - if the agreement has been made for an indefinite period, the conditions which should entitle either party to rescind it, as well as the required period of notice for rescission; provided that such period should not be less for the owner of the fishing vessel than for the fisher;
- (j) the insurance that will cover the fisher in the event of death, injury or illness in connection with their work on board the vessel; and [new provision]
- (k) any other particulars which national law might require. [new provision]

---

**D. Proposed Conclusions with a view to a Recommendation**

***Part I. Conditions for work on board fishing vessels***

**I.1. Protection of young persons**

- 54.** Members should establish the requirements for the prior training of persons between 16 and 18 years of age working on board fishing vessels, taking into account international instruments concerning training for work on board fishing vessels, including occupational safety and health issues such as: night work, hazardous tasks, work with dangerous machinery, manual handling and transport of heavy loads, work in high latitudes, work for excessive periods of time and other relevant issues identified after an assessment of the risks concerned.
- 55.** The training of persons between 16 and 18 years of age might be provided through participation in an apprenticeship or approved training programme, which should operate under established rules and be monitored by the competent authority and should not interfere with the person's general education. [drawn from a concept in C. 112]
- 56.** Members should take measures to ensure that the safety, lifesaving and survival equipment carried on board fishing vessels carrying persons under the age of 18 is appropriate for the young persons concerned.

**I.2. Medical examination**

*Nature of medical examination and content of medical certificate*

- 57.** When prescribing the nature of the examination, Members should pay due regard to the age of the person to be examined and the nature of the duties to be performed.
- 58.** In particular, the medical certificate should attest that the person is not suffering from any disease likely to be aggravated by or to render them unfit for service on board a fishing vessel or likely to endanger the health of other persons on board.

*Medical certificate*

- 59.** The certificate should be signed by a medical practitioner approved by the competent authority.

*Period of validity of the medical certificate*

- 60.** In the case of young persons of less than 21 years of age, the medical certificate should remain in force for a period not exceeding one year from the date on which it was granted.
- 61.** In the case of persons who have attained the age of 21 years, the competent authority should determine the period for which the medical certificate should remain in force.
- 62.** If the period of validity of a certificate expires in the course of a voyage, the certificate should continue in force until the end of that voyage.

---

*Right to administrative appeal*

- 63.** Arrangements should be made to enable a person who, after examination, is determined to be unfit for work on board fishing vessels, or on board certain types of vessels, or for certain types of work on board vessels, to apply for a further examination by a medical referee or referees who should be independent of any fishing vessel owner or of any organization of fishing vessel owners or fishers.

*International guidance*

- 64.** Competent authorities should take into account international guidance on medical examination and certification of persons working at sea, such as the ILO/WHO Guidelines for Conducting Pre-sea and Periodic Medical Fitness Examinations for Seafarers.

*Special measures*

- 65.** For fishers exempted from the application of the provisions concerning medical examination in the Convention, the competent authority should take alternative adequate measures to provide health surveillance for the purpose of occupational safety and health.

I.3. Competency and training

**66.** Members should:

- (a) ensure that competencies required for skippers, mates, engineers and other persons working on board fishing vessels take into account generally accepted international standards concerning training and competencies of fishers;
- (b) address, with regard to the vocational training of fishers, the issues of: national planning and administration, including coordination; financing and training standards; training programmes, including pre-vocational training and short courses for working fishers; methods of training; and international cooperation;
- (c) ensure that there is no discrimination with regard to access to training.

**Part II. Conditions of service**

II.1. Record of service

- 67.** At the end of each voyage, a record of service in regard to that voyage should be available to the fisher concerned or entered in their service book.

II.2. Special measures

- 68.** For fishers excluded from the scope of the Convention, the competent authority should take measures to provide them with adequate protection with respect to their conditions of work and with means of dispute settlement.

---

### **Part III. Health protection, medical care and social security**

#### III.1. Medical care on board

69. The competent authority should establish the list of medical supplies, including women's sanitary protection and discreet environmentally friendly disposal units, and equipment to be carried on fishing vessels appropriate to the risks concerned.
70. Fishing vessels carrying 100 or more fishers and ordinarily engaged in international voyages of more than three days' duration should carry a qualified medical doctor.
71. Fishers should receive training in basic first aid in accordance with national laws and regulations, taking into account applicable international instruments.
72. There should be a standard medical report form specially designed to facilitate the confidential exchange of medical and related information concerning individual fishers between the fishing vessel and the shore in cases of illness or injury.

#### III.2. Occupational safety and health

73. In order to contribute to the continuous improvement of safety and health of fishers, member States should have in place programmes for the prevention of accidents on board fishing vessels which should, inter alia, provide for the gathering and dissemination of occupational health and safety materials, research and analysis.
74. Information concerning particular hazards should be brought to the attention of all fishers and other persons on board through official notices containing instructions or guidance on such hazards or other appropriate means.
75. When establishing methods and programmes concerning safety and health of fishers, the competent authority should take into consideration technological progress and knowledge in the field of occupational safety and health, as well as relevant international instruments.

#### *Technical specifications*

76. Members should, to the extent practicable and as appropriate to the conditions in the fishing sector, address the following:
  - (a) seaworthiness and stability of fishing vessels;
  - (b) radio communications;
  - (c) temperature, ventilation and lighting of working areas;
  - (d) mitigation of the slipperiness of deck surfaces;
  - (e) machinery safety, including guarding of machinery;
  - (f) vessel familiarization for fishers or fisheries observers new to the vessel;
  - (g) personal protective equipment;
  - (h) fire-fighting and lifesaving;

- 
- (i) loading and unloading of the vessel;
  - (j) lifting gear;
  - (k) anchoring and mooring equipment;
  - (l) safety and health in living quarters;
  - (m) noise and vibration in work areas;
  - (n) ergonomics, including in relation to the layout of workstations and manual lifting and handling;
  - (o) equipment and procedures for the catching, handling, storage and processing of fish and other marine resources;
  - (p) vessel design, construction and modification relevant to occupational safety and health;
  - (q) navigation and vessel handling;
  - (r) hazardous materials used on board the vessel;
  - (s) safe means of access to and exit from fishing vessels in port;
  - (t) special safety and health requirements for young persons;
  - (u) prevention of fatigue;
  - (v) other issues related to safety and health.

#### *Occupational safety and health management systems*

**77.** (1) When establishing methods and programmes concerning safety and health in the fishing sector, competent authorities should take into account any relevant international guidelines concerning occupational safety and health management systems, including the Guidelines on occupational safety and health management systems of the International Labour Office.

(2) Risk evaluation in relation to fishing should be conducted as appropriate, with the participation of fishers or their representatives and should include:

- (a) risk evaluation and management;
- (b) training, taking into consideration the relevant provisions of Chapter III of the STCW-F Convention;
- (c) on-board instruction of fishers.

(3) To give effect to the provision of subparagraph 2(a) above, Members should adopt, after consultation, laws, regulations or other measures requiring that:

- (a) all fishers are regularly, actively involved in improving safety and health through continually identifying hazards, assessing risks and taking action to address the risks through safety management;

- 
- (b) an occupational safety and health management system is established that may include an occupational safety and health policy, provisions for fisher participation and provisions concerning organizing, planning, implementing and evaluating the system and taking action to improve the system;
  - (c) a system is established for the purpose of assisting in the implementation of the fishing vessel owner's or the organization's safety and health policy and programme and to provide fishers with a forum to influence safety and health matters.
- (4) When developing the provisions referred to in subparagraph 2(a), Members should take into account the possible and relevant international instruments developed on risk assessment and management.

**78.** Members should establish a list of diseases known to arise out of exposure to substances or dangerous conditions in the fishing sector.

### III.3. Social security

**79.** (1) Members should take measures to extend social protection progressively to all fishers.

(2) To this end, Members should maintain up-to-date information on the:

- (a) percentage of fishers covered;
- (b) range of contingencies covered; and
- (c) level of benefits.

**80.** The benefits referred to in *Point 37* of the Convention should be granted throughout the contingency. [drawn from C. 102, Art. 38 and C. 121, Art. 9(3)]

#### *Common provisions*

**81.** Every claimant should have a right of appeal in the case of refusal of the benefit or complaint as to quality and quantity of the benefit.

**82.** Members should take steps to secure the protection of foreign fishers, including by entering into agreements to that effect.

#### **Part IV. Other provisions**

**83.** In its capacity as a coastal State, a Member might require, when it grants licences for fishing in its exclusive economic zone, that fishing vessels comply with the standards of the Convention.

---

## [Annex II

[Not currently attached to either the Convention or Recommendation]

### **Accommodation on board fishing vessels [modified from C. 126]**

#### ***Part I. General provisions***

1. The provisions of this annex should apply to fishing vessels [of more than 24.4 m in length].
2. This annex might be applied to vessels of [between 13.7 and 24.4 m] in length where the competent authority determines, after consultation, that this is reasonable and practicable.
3. In respect of vessels which normally remain away from their home ports for periods of less than 36 hours and in which the crew does not live permanently on board when in port, the provisions concerning the following do not apply:
  - (a) lighting in paragraph 35 below;
  - (b) sleeping rooms;
  - (c) mess-rooms;
  - (d) sanitary accommodation;
  - (e) sick bay;
  - (f) space to hang oilskins;
  - (g) cooking equipment and galley.
4. In the case of vessels referred to in paragraph 3 above, adequate sanitary installations as well as messing and cooking facilities and accommodation for resting are provided.
5. The provisions of Part III of this annex might be varied in the case of any vessel if the competent authority is satisfied, after consultation, that the variations to be made provide corresponding advantages as a result of which the overall conditions are no less favourable than those that would result from the full application of the provisions of the annex.

#### ***Part II. Planning and control of crew accommodation***

6. Before the construction of a fishing vessel is begun, and before the crew accommodation of an existing vessel is substantially altered or reconstructed, detailed plans of, and information concerning, the accommodation should be submitted to the competent authority for approval.
7. The competent authority should inspect the vessel and satisfy itself that the crew accommodation complies with the requirements of the laws or regulations or other measures, on every occasion when:
  - (a) a fishing vessel is registered or re-registered;
  - (b) the crew accommodation of a vessel has been substantially altered or reconstructed; or
  - (c) a complaint that the crew accommodation is not in compliance with the terms of this annex has been made to the competent authority in the prescribed manner and in time to prevent any delay to the vessel, by a recognized fishers' organization representing all or part of the crew or by a prescribed number or proportion of the members of the crew of the vessel.

---

### **Part III. Crew accommodation requirements**

#### General accommodation standards [based on C. 126, Art. 6]

8. The location, means of access, structure and arrangement of crew accommodation in relation to other spaces should be such as to ensure adequate security, protection against weather and sea and insulation from heat or cold, undue noise or effluvia from other spaces.
9. Emergency escapes should be provided from all crew accommodation spaces as necessary.
10. Every effort should be made to exclude direct openings into sleeping rooms from fish holds and fish meal rooms, from spaces for machinery, from galleys, lamp and paint rooms or from engine, deck and other bulk store rooms, drying rooms, communal wash places or water closets. That part of the bulkhead separating such places from sleeping rooms and external bulkheads should be efficiently constructed of steel or other approved substance and should be watertight and gastight.
11. External bulkheads of sleeping rooms and mess-rooms should be adequately insulated. All machinery casings and all boundary bulkheads of galleys and other spaces in which heat is produced should be adequately insulated when there is a possibility of resulting heat effects in adjoining accommodation or passageways. Care should also be taken to provide protection from heat effects of steam and/or hot-water service pipes.
12. Internal bulkheads should be of approved material which is not likely to harbour vermin.
13. Sleeping rooms, mess-rooms, recreation rooms and passageways in the crew accommodation space should be adequately insulated to prevent condensation or over-heating.
14. Main steam and exhaust pipes for winches and similar gear should, whenever technically possible, not pass through crew accommodation or through passageways leading to crew accommodation; where they do pass through such accommodation or passageways they should be adequately insulated and encased.
15. Inside panelling or sheeting should be of material with a surface easily kept clean. Tongued and grooved boarding or any other form of construction likely to harbour vermin should not be used.
16. The competent authority should decide to what extent fire prevention or fire retarding measures should be required to be taken in the construction of the accommodation.
17. The wall surface and deck heads in sleeping rooms and mess-rooms should be easily kept clean and, if painted, should be light in colour; lime wash should not be used.
18. The wall surfaces should be renewed or restored as necessary.
19. The decks in all crew accommodation should be of approved material and construction and should provide a surface impervious to damp and easily kept clean.
20. Overhead exposed decks over crew accommodation should be sheathed with wood or equivalent insulation.
21. Where the floorings are of composition the joining with sides should be rounded to avoid crevices.
22. Sufficient drainage should be provided.
23. All practicable measures should be taken to protect crew accommodation against the admission of flies and other insects.

#### Noise and vibration [new provision, not from C. 126]

24. Noise and vibration in accommodation spaces should not exceed limits established by the competent authority taking into account international instruments.

#### Ventilation [based on C. 126, Art. 7]

25. Sleeping rooms and mess-rooms should be adequately ventilated taking into account climatic conditions.

- 
26. The system of ventilation should be controlled so as to maintain the air in a satisfactory condition and to ensure a sufficiency of air movement in all conditions of weather and climate.
  27. Vessels regularly engaged on voyages in the tropics and other areas with similar climatic conditions should, as required by such conditions, be equipped both with mechanical means of ventilation and with electric fans, provided that one only of these means need be adopted in spaces where this ensures satisfactory ventilation.
  28. Vessels engaged elsewhere should be equipped either with mechanical means of ventilation or with electric fans. The competent authority might exempt vessels normally employed in the cold waters of the northern or southern hemispheres from this requirement.
  29. Power for the operation of the aids to ventilation required should, when practicable, be available at all times when the crew is living or working on board and conditions so require.

#### Heating [based on C. 126, Art. 8]

30. An adequate system of heating the crew accommodation should be provided taking into account climatic conditions.
31. The heating system should, when practicable, be in operation at all times when the crew is living or working on board and conditions so require.
32. The heating system should be capable of maintaining the temperature in crew accommodation at a satisfactory level under normal conditions of weather and climate likely to be met with on service; the competent authority should prescribe the standard to be provided.
33. Radiators and other heating apparatus should be so placed and, where necessary, shielded and fitted with safety devices so as to avoid risk of fire or danger or discomfort to the occupants.

#### Lighting [based on C. 126, Art. 9]

34. All crew spaces should be adequately lighted. The minimum standard for natural lighting in living rooms should be such as to permit a person with normal vision to read on a clear day an ordinary newspaper in any part of the space available for free movement. When it is not possible to provide adequate natural lighting, artificial lighting of the above minimum standard should be provided.
35. In all vessels electric lights should, as far as practicable, be provided in the crew accommodation. If there are not two independent sources of electricity for lighting, additional lighting should be provided by properly constructed lamps or lighting apparatus for emergency use.
36. Artificial lighting should be so disposed as to give maximum benefit to the occupants of the room.
37. Adequate reading light should be provided for every berth in addition to the normal lighting of the cabin.
38. A permanent blue light should, in addition, be provided in the sleeping room during the night.

#### Sleeping rooms [based on C. 126, Art. 10, reduced text]

39. Sleeping rooms should be situated amidships or aft; the competent authority might, in particular cases, if the size, type or intended service of the vessel renders any other location unreasonable or impracticable, permit the location of sleeping rooms in the fore part of the vessel but in no case forward of the collision bulkhead.
40. The floor area per person of sleeping rooms, excluding space occupied by berths and lockers, should not be less than:
  - (a) in vessels of [13.7] metres but below [19.8] metres in length: [0.5] square metre;
  - (b) in vessels of [19.8] metres but below [26.8] metres in length: [0.75] square metre;
  - (c) in vessels of [26.8] metres but below [35.1] metres in length: [0.9] square metre;
  - (d) in vessels of [35.1] metres in length or over: [1.0] square metre.
41. The clear head room in the crew sleeping room should, wherever possible, be not less than 1.90 m.

- 
42. There should be a sufficient number of sleeping rooms to provide a separate room or rooms for each department.
  43. The number of persons allowed to occupy sleeping rooms should not exceed the following maxima:
    - (a) officers: one person per room wherever possible, and in no case more than two;
    - (b) ratings: two or three persons per room wherever possible, and in no case more than the following:
      - (i) in vessels of [35.1] metres in length and over, four persons;
      - (ii) in vessels under [35.1] metres in length, six persons.
  44. The competent authority might permit exceptions to the requirements of the preceding two paragraphs in particular cases if the size, type or intended service of the vessel make these requirements unreasonable or impracticable.
  45. The maximum number of persons to be accommodated in any sleeping room should be legibly and indelibly marked in some place in the room where it can conveniently be seen.
  46. Members of the crew should be provided with individual berths of adequate dimensions. Berths should not be placed side by side in such a way that access to one berth can be obtained only over another.
  47. Berths should not be arranged in tiers of more than two; in the case of berths placed along the vessel's side, there should be only a single tier where a sidelight is situated above a berth.
  48. The lower berth in a double tier should not be less than [0.30] metres above the floor; the upper berth should be placed approximately midway between the bottom of the lower berth and the lower side of the deck head beams.
  49. The minimum inside dimensions of a berth should, wherever practicable, be 1.90 m by 0.68 m.
  50. The framework and the lee-board, if any, of a berth should be of approved material, hard, smooth and not likely to corrode or to harbour vermin.
  51. If tubular frames are used for the construction of berths, they should be completely sealed and without perforations which would give access to vermin.
  52. Each berth should be fitted with a spring mattress of approved material or with a spring bottom and a mattress of approved material. Stuffing of straw or other material likely to harbour vermin should not be used.
  53. When one berth is placed over another, a dust-proof bottom of wood, canvas or other suitable material should be fitted beneath the upper berth.
  54. Sleeping rooms should be so planned and equipped as to ensure reasonable comfort for the occupants and to facilitate tidiness.
  55. The furniture should include a clothes locker for each occupant, fitted with a hasp for a padlock and a rod for holding clothes on hangers. The competent authority should ensure that the locker is as commodious as practicable.
  56. Each sleeping room should be provided with a table or desk which might be of the fixed, drop-leaf or slide-out type, and with comfortable seating accommodation as necessary.
  57. The furniture should be of smooth, hard material not liable to warp or corrode or to harbour vermin.
  58. The furniture should include a drawer or equivalent space for each occupant which should, wherever practicable, be not less than 0.056 cubic metre.
  59. Sleeping rooms should be fitted with curtains for the sidelights.
  60. Sleeping rooms should be fitted with a mirror, small cabinets for toilet requisites, a book rack and a sufficient number of coat hooks.
  61. As far as practicable, berthing of crew members should be so arranged that watches are separated and that no day-worker share a room with watch keepers.

---

## Mess-rooms [based on C. 126, Art. 11]

62. Mess-room accommodation separate from sleeping quarters should be provided in all vessels carrying a crew of more than ten persons. Wherever possible it should be provided also in vessels carrying a smaller crew. If, however, this is impracticable, the mess-room might be combined with the sleeping accommodation.
63. In vessels engaged in fishing on the high seas and carrying a crew of more than 20, separate mess-room accommodation might be provided for the skipper and officers.
64. The dimensions and equipment of each mess-room should be sufficient for the number of persons likely to use it at any one time.
65. Mess-rooms should be equipped with tables and approved seats sufficient for the number of persons likely to use them at any one time.
66. Mess-rooms should be as close as practicable to the galley.
67. Where pantries are not accessible to mess-rooms, adequate lockers for mess utensils and proper facilities for washing them should be provided.
68. The tops of tables and seats should be of damp-resisting material without cracks and easily kept clean.
69. Wherever practicable mess-rooms should be planned, furnished and equipped to give recreational facilities.

## Sanitary accommodation [based on C. 126, Art. 12]

70. Sufficient sanitary accommodation, including washbasins and tub or shower, should be provided in all vessels.
71. Sanitary facilities for all members of the crew who do not occupy rooms to which private facilities are attached should, wherever practicable, be provided for each department of the crew on the following scale:
  - (a) one tub or shower for every eight persons or less;
  - (b) one water closet for every eight persons or less;
  - (c) one washbasin for every six persons or less.
72. Cold fresh water and hot fresh water or means of heating water should be available in all communal wash places. The competent authority, after consultation, might fix the minimum amount of fresh water which should be supplied per person per day.
73. Washbasins and tub baths should be of adequate size and constructed of approved material with a smooth surface not liable to crack, flake or corrode.
74. All water closets should have ventilation to the open air, independently of any other part of the accommodation.
75. The sanitary equipment to be placed in water closets should be of an approved pattern and provided with an ample flush of water, available at all times and independently controllable.
76. Soil pipes and waste pipes should be of adequate dimensions and should be constructed so as to minimize the risk of obstruction and to facilitate cleaning. They should not pass through fresh water or drinking water tanks; neither should they, if practicable, pass overhead in mess-rooms or sleeping accommodation.
77. Sanitary accommodation intended for the use of more than one person should comply with the following requirements:
  - (a) floors should be of approved durable material, easily cleaned and impervious to damp and should be properly drained;
  - (b) bulkheads should be of steel or other approved material and should be watertight up to at least 0.23 m above the level of the deck;

- 
- (c) the accommodation should be sufficiently lighted, heated and ventilated.
78. Water closets should be situated convenient to, but separate from, sleeping rooms and washrooms, without direct access from the sleeping rooms or from a passage between sleeping rooms and water closets to which there is no other access, provided that this requirement should not apply where a water closet is located between two sleeping rooms having a total of not more than four persons. Where there is more than one water closet in a compartment they should be sufficiently screened to ensure privacy.
79. Facilities for washing and drying clothes should be provided on a scale appropriate to the size of the crew and the normal duration of the voyage.
80. The facilities for washing clothes should include suitable sinks equipped with drainage, which might be installed in washrooms if separate laundry accommodation is not reasonably practicable. The sinks should be provided with an adequate supply of cold fresh water and hot fresh water or means of heating water.
81. The facilities for drying clothes should be provided in a compartment separate from sleeping rooms, mess-rooms and water closets, adequately ventilated and heated and equipped with lines or other fittings for hanging clothes.

#### Sick bay [based on C. 126, Art. 13]

82. Whenever possible, an isolated cabin should be provided for a member of the crew who suffers from illness or injury. On vessels of 45.7 m or over in length, there should be a sick bay.

#### Space to hang oilskins [based on C. 126, Art. 14]

83. Sufficient and adequately ventilated accommodation for the hanging of oilskins should be provided outside but convenient to the sleeping rooms.

#### Clean and habitable condition [based on C. 126, Art. 15]

84. Crew accommodation should be maintained in a clean and decently habitable condition and should be kept free of goods and stores which are not the personal property of the occupants.

#### Cooking equipment and galley [based on C. 126, Art. 16]

85. Satisfactory cooking equipment should be provided on board and should, wherever practicable, be fitted in a separate galley.
86. The galley should be of adequate dimensions for the purpose and should be well lit and ventilated.
87. The galley should be equipped with cooking utensils, the necessary number of cupboards and shelves, and sinks and dish racks of rust-proof material and with satisfactory drainage. Drinking water should be supplied to the galley by means of pipes. Where it is supplied under pressure, the system should contain protection against backflow. Where hot water is not supplied to the galley, an apparatus for heating water should be provided.
88. The galley should be provided with suitable facilities for the preparation of hot drinks for the crew at all times.
89. A provision storeroom of adequate capacity should be provided which can be kept dry, cool and well ventilated in order to avoid deterioration of the stores. Where necessary, refrigerators or other low-temperature storage space should be provided.
90. Where butane or propane gas is used for cooking purposes in the galley the gas containers should be kept on the open deck.

---

**Part IV. Application to existing ships**  
**[based on C. 126, Art. 17]**

91. The requirements of this annex should apply to fishing vessels constructed subsequent to the coming into force of the proposed Convention for the Member concerned.]

## INTRODUCTION

On 16 June 2004, the International Labour Conference, meeting in Geneva at its 92nd Session, adopted the following resolution:

The General Conference of the International Labour Organization,

Having adopted the report of the Committee appointed to consider the fifth item on the agenda,

Having in particular approved as general conclusions, with a view to the consultation of Governments, proposals for a comprehensive standard (a Convention supplemented by a Recommendation) concerning work in the fishing sector,

Decides that an item entitled “Work in the fishing sector” shall be included in the agenda of its next ordinary session for second discussion with a view to the adoption of a comprehensive standard (a Convention supplemented by a Recommendation).

By virtue of this resolution and in accordance with article 39, paragraph 6, of the Standing Orders of the Conference, the Office is required to prepare, on the basis of the first discussion by the Conference, the texts of the proposed Convention and Recommendation. These texts are to be sent to governments and are to reach them not later than two months from the closing of the 92nd Session of the Conference. The purpose of this report is to transmit to governments the proposed texts.

Governments are asked to reply within three months, after consulting the most representative organizations of employers and workers, and to state whether they have any amendments to suggest or comments to make. Under the Standing Orders of the Conference, any amendments or comments on the proposed texts should be sent as soon as possible and in any case so as to reach the Office in Geneva not later than 15 November 2004.

Governments that have no amendments or comments to put forward are asked to inform the Office by the same date whether they consider that the proposed texts are a satisfactory basis for discussion by the Conference at its 93rd Session in June 2005.

Governments are requested to indicate which organizations of employers and workers they consulted before they finalized their replies pursuant to article 39, paragraph 6, of the Standing Orders. Such consultation is also required by Article 5(1)(a) of the Tripartite Consultation (International Labour Standards) Convention, 1976 (No. 144), for countries that have ratified this Convention. The results of the consultation should be reflected in the governments’ replies.

## PROPOSED TEXTS

The texts of the proposed Convention and Recommendation concerning work in the fishing sector are given below. These texts are based on the Conclusions adopted by the International Labour Conference following the first discussion at its 92nd Session (hereinafter “the Conclusions”).

In accordance with the practice established in 1988, the report of the Committee on the Fishing Sector, appointed by the Conference to consider this item (hereinafter “the Committee”), is being sent to member States in its entirety, together with the record of the discussion in plenary session (see *Provisional Record* Nos. 21 and 26).<sup>1</sup>

A number of drafting changes have been incorporated in the proposed instruments in the interest of greater clarity, to bring the two official language versions of the texts into line with one another and to harmonize certain provisions.

The Office notes that, at the 92nd Session of the Conference, the Committee on the Fishing Sector did not consider all of the Proposed Conclusions with a view to a Convention and a Recommendation as contained in Report V(2), *Conditions of work in the fishing sector: The constituents' views*. This is the case for: Part V. Accommodation and food; the provisions concerning social security; Annex I: Fisher's work agreement; D. Proposed Conclusions with a view to a Recommendation; and Annex II: Accommodation on board fishing vessels. In addition, certain texts were included in square brackets by the Conference. The Committee either intended to revert to a discussion of these texts at a later time during its sittings, but time did not permit, or postponed consideration to the next session of the Conference.

The Committee, in reviewing and adopting the Conclusions concerning work in the fishing sector, agreed that the Office should ensure that consultation on Part V and Annex II, both of which concern accommodation on board fishing vessels, should take place, through an appropriate mechanism, between the end of the 92nd Session of the Conference and its next session. This consultation should have before it all relevant information, including the content of the various amendments to Part V and Annex II that were submitted to, although not considered at, the 92nd Session.

At its 290th (June 2004) Session, the Governing Body agreed that the ILO should hold a Tripartite Meeting of Experts on the Fishing Sector from 13 to 17 December 2004. The purpose of the Meeting of Experts, which will be composed of six Govern-

---

<sup>1</sup> These texts are reproduced in the *Record of Proceedings* of the 92nd Session of the International Labour Conference. They can also be consulted on the web site of the International Labour Office: [www.ilo.org](http://www.ilo.org) under “International Labour Conference”. Copies will be sent on application to the Distribution Unit, ILO, CH-1211 Geneva 22.

ment experts,<sup>2</sup> six Employer experts and six Worker experts, will be to review and formulate provisions on accommodation and deal with any other pending issues identified by the Committee on the Fishing Sector.

The Committee also agreed that the Office should develop in the Convention a new Part concerning “Additional requirements for vessels of [...] metres in length or more” in order to address the specific needs of fishers working on larger vessels. The size of vessels to which these requirements would apply has not yet been agreed. The Office would therefore find it particularly helpful if the replies to the present report would address this matter.

The Office notes that in several of the Articles of the proposed Convention it has used the term “fishing vessels that undertake international voyages”. This is meant to refer to those vessels that remain at sea for more than a few days at one time, and that engage in fishing operations in the waters of other States or visit the ports of other States. Many aspects of the conditions of such fishers are comparable to those of seafarers (e.g. the need for repatriation if stranded in a foreign port, the need for an identity document that would facilitate shore leave and the transit and transfer of fishers, the need for stronger enforcement and compliance measures bearing in mind the remoteness from direct oversight by competent authorities). Governments may wish to consider whether “fishing vessels that undertake international voyages” is sufficiently clear or whether a definition, or perhaps alternative term, is necessary.

## Proposed Convention

### PREAMBLE

#### *(Point 3 of the Conclusions)*

The Office has established a standard preambular text that incorporates Point 3 of the Conclusions. The Preamble includes references to the *ILO Declaration on Fundamental Principles and Rights at Work and its Follow-up*, to two of the most relevant ILO Conventions concerning occupational safety and health, and to the current seven ILO standards (five Conventions and two Recommendations) concerning the fishing sector, which are being revised. The Preamble also draws attention to the impact of globalization on the sector, and to the objective the new ILO standards seek to achieve. The final line of the Preamble states that the Convention to be adopted may be cited as the Work in Fishing Convention, 2005.

## PART I. DEFINITIONS AND SCOPE

### DEFINITIONS

#### *Article 1*

#### *(Point 5 of the Conclusions)*

The Office notes that, in the English text, subparagraph (a) provides that “‘commercial fishing’ means all fishing operations, including fishing operations on rivers

<sup>2</sup> The following Governments will be invited to send experts: Canada, Chile, Japan, Norway, South Africa and Spain. The following Governments will be on a reserve list: Denmark, France, Germany, India, Namibia, Portugal, Russian Federation, Thailand, the United Kingdom and the United States.

and inland waters, with the exception of subsistence fishing and recreational fishing”. When the term “inland waters” is used, it is meant in its most limited sense (i.e. lakes, canals) but not in the sense of “internal waters”, as used in the United Nations Convention on the Law of the Sea.<sup>3</sup> See also the discussion of “inland waters” under Article 3.

In Point 5, clause (e) of the Conclusions (now Article 1, subparagraph (e)), the words “and shore-based persons carrying out work aboard a fishing vessel” remain in square brackets. Governments are invited to comment on whether these persons should be excluded from the definition of “fishers” and on whom the category of exclusions would cover. Please refer to paragraphs 132 to 175 of the Report of the Committee on the Fishing Sector.

#### SCOPE

#### *Articles 2 to 5*

#### *(Points 6 to 12 of the Conclusions)*

The Office has transferred Point 7 of the Conclusions from Part I. Definitions and scope, to Part II. General principles, of the Convention, as it considered this to be a more appropriate placement. The provision now appears as the second paragraph of Article 6.

Point 9 of the Conclusions (now Article 3) has been reformulated to take account of the reference in the chapeau which had provided for exclusions “where the application is considered to be impracticable” and the phrase in clause (b) which had provided for exclusions “in respect of which special and substantial problems relating to application arise in the light of particular conditions of service of the fishers or fishing vessels’ operations”. The reformulated text has simplified the Article by using the formulation in clause (b) in the chapeau instead.

The Office also wishes to draw attention to the need for coherence between Article 3, which as far as exclusions are concerned applies to the entire Convention or specific provisions thereof, and the specific exclusions contained in Point 26 (now Article 10, paragraph 2) and Point 29 (now Article 16). It would also be necessary to ensure that provisions containing general principles (for example, scope, definitions and final clauses) should not be subject to such exclusions.

Point 12 of the Conclusions has been moved to immediately after the text contained in Point 10 to re-order the reporting requirements. It has become paragraph 2 of Article 4.

Point 11 of the Conclusions (now Article 5) concerns the units of measurement that may be used by a competent authority when determining to which vessels certain Parts or provisions of the Convention are to be applied. This provision has to be read in the light of definitions of “gross tonnage” and “length” contained in what are now Article 1(j) and (k). However, whether or not such an Article is needed will depend on how the 93rd Session of the Conference decides to deal with the issue of additional requirements for larger fishing vessels.

---

<sup>3</sup> United Nations Convention on the Law of the Sea, Article 8: “*Internal waters* 1. Except as provided in Part IV, waters on the landward side of the baseline of the territorial sea form part of the internal waters of the State. 2. Where the establishment of a straight baseline in accordance with the method set forth in article 7 has the effect of enclosing as internal waters areas which had not previously been considered as such, a right of innocent passage as provided in this Convention shall exist in those waters.”

## PART II. GENERAL PRINCIPLES

*Articles 6 to 8**(Points 13 to 18 of the Conclusions)*

As noted above, the provision found in Point 7 of the Conclusions has been moved to after Point 13. It is now the second paragraph of Article 6.

## PART III. MINIMUM REQUIREMENTS FOR WORK ON BOARD FISHING VESSELS

*Article 9**(Points 19 to 24 of the Conclusions)*

The Committee discussed whether Points 19 to 24 of the Conclusions (now Article 9) are consistent with the Minimum Age Convention, 1973 (No. 138) (see paragraphs 338 to 390 of the Report of the Committee on the Fishing Sector). The Office has reviewed the provisions of Article 9 of the proposed Convention and considers that some of them, namely paragraphs 3 and 6, paraphrase the provisions of Convention No. 138, omitting certain important points. The Office wishes to draw the attention of governments to the possible consequences of having provisions relating to the same subject – child labour – drafted in appreciably different terms when it comes to the application of ratified Conventions, particularly in the case of fundamental Conventions. In this respect, it would seem that an explicit reference to the provisions of Convention No. 138 would avoid weakening the obligations stipulated in the general Conventions. The Office would like to receive views on this, without, however, proposing a drafting change at this stage.

## PART IV. CONDITIONS OF SERVICE

*Articles 13 to 17**(Points 29 to 34 of the Conclusions)*

Point 29 of the Conclusions (now Article 16) has been moved to become the last Article under fishers' work agreements, as it provides an exception to the general requirements concerning this issue.

Points 30 and 32 of the Conclusions have been combined and appear as Article 13. This has been done to streamline the text.

The Office recalls that Annex I is based on Article 6 of the Fishermen's Articles of Agreement Convention, 1959 (No. 114), with some additions.

*Article 18**(Point 35 of the Conclusions)*

Point 35, clause (a) of the Conclusions (now Article 18, subparagraph (a)), which concerns identity documents, has been left in square brackets (see paragraphs 552 to 582 of the report of the Committee on the Fishing Sector). Governments are

requested to indicate whether fishers covered by Article 18 should have an identity document.

## PART V. ACCOMMODATION AND FOOD

### *Articles 20 to 23, and Annex II*

#### *(Points 37 to 40 of the Conclusions, and Annex II)*

Points 37 to 40 of the Conclusions (now Articles 20 to 23) have been left in square brackets. Additional square brackets appear around Point 39 (now Article 22) and around the words “Annex II” within that Point. With regard to Part V and to Annex II: Accommodation on board fishing vessels, the Office refers to the discussion of this issue in paragraphs 600 to 609 of the report of the Committee on the Fishing Sector.

The Office notes that Annex II is drawn almost entirely from the requirements contained in the existing Accommodation of Crews (Fishermen) Convention, 1966 (No. 126).

Particular attention is drawn to Point 39 of the Conclusions (now Article 22) and to the text of Annex II. The Committee on the Fishing Sector agreed, inter alia, that, as noted in the Introduction, the Office would ensure that the consultation on Part V and Annex II, which would take place, through an appropriate mechanism, between the end of the 92nd Session of the Conference and its next session, would have before it all relevant information, including the content of the various amendments on Part V and Annex II that were submitted to, although not considered at, the 92nd Session. This would enable the Committee, when meeting in June 2005, to have before it, as a basis for its discussion, a set of proposals that would seek to achieve an appropriate balance between the mandatory and non-mandatory provisions on accommodation and food, covered in Part V and Annex II (see paragraphs 608 and 609 of the report).

The Office has not made any changes to Annex II. Therefore, the word “should” in Annex II does not prejudice in any way the status that would need to be given in this Annex.

As concerns the present report, attention is drawn to the importance for the Office to receive comments on the present text concerning accommodation. In this regard, it would be very useful if member States could provide guidance on how to achieve a balance between the mandatory provisions which could be included in Annex II and the non-mandatory provisions which could be included as part of the Recommendation. This would greatly facilitate the work of the Tripartite Meeting of Experts on the Fishing Sector that, as noted above in the Introduction, will meet in December 2004.

## PART VI. HEALTH PROTECTION, MEDICAL CARE AND SOCIAL SECURITY

### *Article 24*

#### *(Point 41 of the Conclusions)*

In Article 24, subparagraph (c) (formerly Point 41, clause (c) of the Conclusions), the words “including the necessary knowledge in using” have been replaced with “and has the necessary knowledge to use”.

*Article 26**(Point 43 of the Conclusions)*

With reference to Point 43, clause (e) (now Article 26, subparagraph (e)), the Office believes it would be useful to consider specifying whether the joint committees are to meet on board vessels, ashore, or both.

*Article 27**(Point 44 of the Conclusions)*

Point 44 of the Conclusions (now Article 27) remains in square brackets, as the Committee on the Fishing Sector had agreed that it would be best to defer consideration of social security protection to 2005 because: (1) the subject was very complex, and many delegations did not have the necessary expertise available at the present meeting, and (2) the Preparatory Technical Maritime Conference in September 2004 would discuss social security protection of seafarers in detail and the Committee could learn from those deliberations (see paragraphs 678 to 694 of the Committee's report). It would also assist the Tripartite Meeting of Experts in December if governments could indicate whether (a) certain categories of fishers enjoy the same level of social security protection as seafarers and, if so, which ones, and (b) if bilateral agreements exist with other countries in this regard.

PART VII. ADDITIONAL REQUIREMENTS FOR VESSELS OF [...] METRES IN LENGTH  
OR MORE

*Article 30*

The Committee on the Fishing Sector had extensive discussions on the issue of additional requirements for larger fishing vessels (see paragraphs 721 to 745 of the Committee's report). Following a debate and record vote on this matter, it was agreed that a new Part, Part VII. Additional requirements for vessels of [...] metres in length or more, should be developed by the Office with a view to being examined by the Conference. It was further agreed that the following text should appear under this Part:

Taking into account the number of fishers on board, the area of operation and the length of the voyage, a Member may, after consultation, exclude additional requirements for the vessels concerned.

As noted in the Introduction to the present report, it would be very useful if governments, in their replies, expressed their views on what should be included in such requirements and, where appropriate, to which vessel sizes they should apply.

PART VIII. COMPLIANCE AND ENFORCEMENT

*Article 32**(Point 50 of the Conclusions)*

The words "operate internationally" have been replaced with "undertake international voyages" to ensure consistency with other Articles of the Convention.

## **Proposed Recommendation**

With the exception of the provisions described below, the text is identical in content to the text of the Proposed Conclusions with a view to a Recommendation provided by the Office in Report V(2), *Conditions of work in the fishing sector: The constituents' views*, as prepared for the 92nd Session of the Conference.

### **PREAMBLE**

The Office has prepared a text that refers to the need to revise the existing two ILO Recommendations specifically concerned with the fishing sector, that notes that the Recommendation supplements the [proposed] Convention concerning work in the fishing sector, and that sets out that the Recommendation may be cited as the Work in Fishing Recommendation, 2005.

#### *Paragraph 16*

*(Point 69 of the Conclusions)*

The Committee on the Fishing Sector considered an amendment to the Proposed Conclusions with a view to a Convention that concerned medical supplies for women fishers. It was agreed that this amendment should be reflected in Point 69 of the Proposed Conclusions with a view to a Recommendation. This provision is now reflected in Paragraph 16.

#### *Paragraph 24*

*(Point 77 of the Conclusions)*

The Committee on the Fishing Sector considered an amendment to the Proposed Conclusions with a view to a Convention that had dealt with, inter alia, risk evaluation and management (see paragraphs 647 to 677 of its report). The Committee agreed to the amendment but referred it to the Recommendation. Point 77 of the Conclusions is now reflected in Paragraph 24.

## **Proposed Convention concerning work in the fishing sector**

The General Conference of the International Labour Organization,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its 93rd Session on 31 May 2005, and

Recognizing that globalization has had a profound impact on the fishing sector, and

Noting the ILO Declaration on Fundamental Principles and Rights at Work adopted by the International Labour Conference at its 86th Session (1998), and

Noting the relevant instruments of the International Labour Organization, in particular the Occupational Safety and Health Convention and Recommendation, 1981, and the Occupational Health Services Convention and Recommendation, 1985, and

Taking into account the need to revise the seven international standards adopted by the International Labour Conference specifically concerning the fishing sector, namely the Hours of Work (Fishing) Recommendation, 1920, the Minimum Age (Fishermen) Convention, 1959, the Medical Examination (Fishermen) Convention, 1959, the Fishermen's Articles of Agreement Convention, 1959, the Fishermen's Competency Certificates Convention, 1966, the Accommodation of Crews (Fishermen) Convention, 1966, and the Vocational Training (Fishermen) Recommendation, 1966, to bring these instruments up to date and to reach a greater portion of the world's fishers, particularly those working on board smaller vessels, and

Noting that the objective of these international standards is to help ensure that fishers have decent conditions for work on board fishing vessels with regard to: minimum requirements for work on board; conditions of service; accommodation and food; health protection, medical care and social security, and

Having decided upon the adoption of certain proposals with regard to work in the fishing sector, which is the fifth item on the agenda of the session, and

Having determined that these proposals shall take the form of an international Convention;

adopts this day                      of June of the year two thousand and five the following Convention, which may be cited as the Work in Fishing Convention, 2005:

## PART I. DEFINITIONS AND SCOPE

### DEFINITIONS

#### *Article 1*

For the purposes of the Convention:

- (a) "commercial fishing" means all fishing operations, including fishing operations on rivers and inland waters, with the exception of subsistence fishing and recreational fishing;
- (b) "competent authority" means the minister, government department or other authority having power to issue and enforce regulations, orders or other instructions having the force of law in respect of the subject matter of the provision concerned;
- (c) "consultation" means consultation by the competent authority with the representative organizations of employers and workers concerned, and in particular the representative organizations of fishing vessel owners and fishers, where they exist, on the measures to be taken to give effect to the provisions of the Convention and with respect to any derogation, exemption or other flexible application of the Convention;
- (d) "fishing vessel owner" means the owner of the fishing vessel or any other organization or person who has assumed the responsibility for the operation of the vessel from the owner or other organization or person and who, on assuming such responsibility, has agreed to take over the duties and responsibilities imposed on fishing vessel owners in accordance with the Convention;

- 
- (e) “fisher” means every person employed or engaged in any capacity or carrying out an occupation on board any fishing vessel, including persons working on board who are paid on the basis of a share of the catch; it excludes pilots, naval personnel, other persons in the permanent service of a government [and shore-based persons carrying out work aboard a fishing vessel];
- (f) “fisher’s work agreement” means a contract of employment, articles of agreement or other similar arrangements and any other contract governing the terms of a fisher’s living conditions and work on board a vessel;
- (g) “fishing vessel” or “vessel” means any ship or boat, of any nature whatsoever, whether publicly or privately owned, used or intended to be used for the purposes of commercial fishing;
- (h) “new fishing vessel” means a fishing vessel for which:
- (i) on or after the date of the entry into force of the Convention, the building or major conversion contract is placed; or
  - (ii) the building or major conversion contract has been placed before the date of the entry into force of the Convention, and which is delivered three years or more after that date; or
  - (iii) in the absence of a building contract, on or after the date of the entry into force of the Convention:
    - the keel is laid, or
    - construction identifiable with a specific vessel begins, or
    - assembly has commenced comprising at least [50 tonnes] or 1 per cent of the estimated mass of all structural material, whichever is less;
- (i) “existing vessel” is a vessel that is not a new fishing vessel;
- (j) “gross tonnage” means the gross tonnage calculated in accordance with the tonnage measurement regulations contained in Annex I to the International Convention on Tonnage Measurement of Ships, 1969, or any successor Convention;
- (k) “length” (L) shall be taken as 96 per cent of the total length on a waterline at 85 per cent of the least moulded depth measured from the keel line, or as the length from the foreside of the stern to the axis of the rudder stock on that waterline, if that be greater. In vessels designed with rake of keel the waterline on which this length is measured shall be parallel to the designed waterline;
- (l) “recruitment and placement service” means any person, company, institution, agency or other organization, in the public or the private sector, which is engaged in recruiting fishers on behalf of employers or placing fishers with employers;
- (m) “skipper” means the person having command of a fishing vessel.

#### SCOPE

#### *Article 2*

1. Except as provided otherwise, the Convention applies to all fishers and all fishing vessels engaged in commercial fishing operations.

2. In the event of doubt as to whether a vessel is engaged in commercial fishing, the question shall be determined by the competent authority after consultation.

### *Article 3*

1. The competent authority may, after consultation, exclude from the requirements of the Convention, or certain provisions thereof, where the application raises special and substantial problems in the light of particular conditions of service of the fishers or fishing vessels' operations:

- (a) fishing vessels engaged in fishing operations in rivers and inland waters; and
- (b) limited categories of fishers or fishing vessels.

2. In the case of exclusions under the preceding paragraph, and where practicable, the competent authority shall take measures, as appropriate, to progressively extend the protections under the Convention to those categories of fishers and fishing vessels.

### *Article 4*

1. Each Member which ratifies the Convention shall, in the first report on the application of the Convention submitted under article 22 of the Constitution of the International Labour Organisation:

- (a) list any categories of fishers or fishing vessels which may have been excluded in pursuance of Article 3, paragraph 1, above;
- (b) give the reasons for such exclusion, stating the respective positions of the representative organizations of employers and workers concerned, in particular the representative organizations of fishing vessel owners and fishers, where they exist; and
- (c) describe any measures taken to provide equivalent protection to the excluded categories.

2. Each Member shall describe in subsequent reports submitted under article 22 of the Constitution, the measures taken with a view to extending progressively the provisions of the Convention to the excluded fishers and fishing vessels.

### *Article 5*

The competent authority may, after consultation, decide to use other units of measurement as defined in the Convention and shall, in the first report submitted under article 22 of the Constitution, communicate the reasons for the decision and any comments arising from the consultation.

## PART II. GENERAL PRINCIPLES

### IMPLEMENTATION

### *Article 6*

1. Each Member shall implement and enforce laws, regulations or other measures that it has adopted to fulfil its commitments under the Convention with respect to

fishers and fishing vessels under its jurisdiction. Other measures may include collective agreements, court decisions, arbitration awards or other means consistent with national law and practice.

2. Nothing in this Convention shall affect any law, award, custom or any agreement between fishing vessel owners and fishers which ensures more favourable conditions or provisions than those provided for by the Convention.

#### COMPETENT AUTHORITY AND COORDINATION

##### *Article 7*

Each Member shall:

- (a) designate the competent authority or authorities; and
- (b) establish mechanisms for coordination among relevant authorities for the fishing sector at the national and local level, as appropriate, and define their functions and responsibilities, taking into account their complementarities and national conditions and practice.

#### RESPONSIBILITIES OF FISHING VESSEL OWNERS, SKIPPERS AND FISHERS

##### *Article 8*

1. The fishing vessel owner has the overall responsibility to ensure that the skipper is provided with the necessary resources and facilities for the purpose of compliance with the obligations of the Convention.

2. The skipper has the responsibility for the safety of the fishers on board and the safe operation of the vessel, including but not limited to the following areas:

- (a) providing such supervision as will ensure that as far as possible fishers perform their work in the best conditions of safety and health;
- (b) managing the fishers on board in a manner which respects safety and health, including fatigue;
- (c) facilitating occupational safety and safety awareness training on board the vessel.

3. The skipper shall not be constrained by the fishing vessel owner from taking any decision which, in the professional judgement of the skipper, is necessary for the safety of the vessel and its safe navigation, safe operation or the safety of the fishers on board.

4. Fishers shall comply with established applicable safety and health measures.

#### PART III. MINIMUM REQUIREMENTS FOR WORK ON BOARD FISHING VESSELS

##### MINIMUM AGE

##### *Article 9*

1. No person under the minimum age shall work on board a fishing vessel.

2. The minimum age at the time of the initial entry into force of the Convention is 16 years.

3. (a) The minimum age may be 15 years for persons who are no longer subject to compulsory schooling as imposed by national legislation, and who are engaged in maritime vocational training.

(b) Persons of 15 years of age may also be authorized, in accordance with national law and practice, to perform light work during school holidays; in this case they shall be granted a rest of a duration equal to at least half of each holiday period.

4. The minimum age for assignment to activities on board fishing vessels, which by their nature or the circumstances in which they are carried out are likely to jeopardize the health and safety of young persons, shall not be less than 18 years.

5. The types of employment or work to which paragraph 4 above applies shall be determined after consultation, taking into account the risks concerned and the applicable international standards.

6. The competent authority may, after consultation, authorize the performance of work referred to in paragraph 4 above as from 16 years of age, on condition that the health and safety of the young persons concerned are fully protected and that the young persons concerned have completed basic pre-sea safety training.

#### MEDICAL EXAMINATION

##### *Article 10*

1. No person shall work on board a fishing vessel unless they have a valid medical certificate attesting that they are medically fit to perform their duties.

2. The competent authority may, after consultation, grant exemptions from the application of the preceding paragraph, taking into account the health and safety of fishers, size of the vessel, availability of medical assistance and evacuation, duration of the voyage, area of operation, type of fishing operation and national traditions.

##### *Article 11*

Each Member shall adopt laws, regulations or other measures providing for:

- (a) the nature of medical examinations;
- (b) the form and content of medical certificates;
- (c) the medical certificate to be issued by a duly qualified medical practitioner or, in the case of a certificate solely concerning eyesight, by a person recognized by the competent authority as qualified to issue such a medical certificate; practitioners shall enjoy full professional independence in exercising their medical judgement in terms of the medical examination procedures;
- (d) the frequency of medical examinations and the period of validity of medical certificates;

- (e) the right to a further examination by another independent medical practitioner in the event that a person has been refused a certificate or has had limitations imposed on the work he or she may perform; and
- (f) other relevant requirements.

#### PART IV. CONDITIONS OF SERVICE

##### MANNING AND HOURS OF REST

###### *Article 12*

Each Member shall adopt laws, regulations or other measures requiring that owners of fishing vessels flying its flag ensure that:

- (a) their vessels are sufficiently and safely manned with a crew necessary for the safe navigation and operation of the vessel and under the control of a competent skipper; and
- (b) fishers are given rest periods of sufficient frequency and duration for the safe and healthy performance of their duties.

##### FISHERS' WORK AGREEMENTS AND LIST OF PERSONS ON BOARD

###### *Article 13*

Each Member shall adopt laws, regulations or other measures:

- (a) requiring that fishers working on vessels flying its flag have a fisher's work agreement comprehensible to them that is consistent with the provisions of the Convention;
- (b) specifying the minimum particulars to be included in fishers' work agreements in accordance with the provisions contained in Annex I.

###### *Article 14*

Each Member shall adopt laws, regulations or other measures regarding:

- (a) procedures for ensuring that a fisher has an opportunity to review and seek advice on the terms of the fisher's work agreement before it is concluded;
- (b) maintenance of records concerning the fisher's work under such an agreement; and
- (c) the means of settling disputes in connection with such an agreement.

###### *Article 15*

The fisher's work agreement, a copy of which shall be provided to the fisher, shall be carried on board and be available to the fisher and, in accordance with national law and practice, to other concerned parties on request.

*Article 16*

Articles 13 to 15 inclusive, and Annex I, do not apply to a fishing vessel owner who is also single-handedly operating the vessel.

*Article 17*

Every fishing vessel shall carry a list of the fishers on board, a copy of which shall be provided to appropriate persons ashore prior to or shortly after departure of the vessel.

IDENTITY DOCUMENTS, REPATRIATION RIGHTS AND RECRUITMENT AND PLACEMENT SERVICES

*Article 18*

Fishers working on board fishing vessels that undertake international voyages shall enjoy treatment no less favourable than that provided to seafarers working on board vessels flying the flag of the Member and ordinarily engaged in commercial activities, with respect to:

- [(a) identity documents;]
- (b) repatriation conditions;
- (c) recruitment and placement services.

PAYMENT OF FISHERS

*Article 19*

Each Member shall, after consultation, adopt laws, regulations or other measures providing that fishers are ensured a monthly or regular payment. The competent authority shall, after consultation, define the fishers to be covered by this provision.

PART V. ACCOMMODATION AND FOOD

*Article 20*

[Each Member shall adopt laws, regulations or other measures with respect to accommodation, food and potable water on board for fishing vessels that fly its flag.

*Article 21*

Each Member shall adopt laws, regulations or other measures requiring that accommodation on board fishing vessels that fly its flag shall be of sufficient size and quality and shall be appropriately equipped for the service of the vessel and the length of time fishers live on board. In particular, such measures shall address, as appropriate, the following issues:

- 
- (a) approval of plans for the construction or modification of fishing vessels in respect of accommodation;
  - (b) maintenance of accommodation and galley spaces with due regard to hygiene and overall safe, healthy and comfortable conditions;
  - (c) ventilation, heating, cooling and lighting;
  - (d) mitigation of excessive noise and vibration;
  - (e) location, size, construction materials, furnishing and equipping of sleeping rooms, mess-rooms and other accommodation spaces;
  - (f) sanitary facilities, including water closets and washing facilities, and supply of sufficient hot and cold water; and
  - (g) procedures for responding to complaints concerning substandard accommodation.

#### *Article 22*

[Fishing vessels to which [Annex II] applies shall as a minimum comply with the standards contained therein.]

#### *Article 23*

The food carried and served on board fishing vessels shall be of an appropriate quantity, nutritional value and quality for the service of the vessel and potable water shall be of sufficient quantity and quality.]

### PART VI. HEALTH PROTECTION, MEDICAL CARE AND SOCIAL SECURITY

#### MEDICAL CARE

#### *Article 24*

Each Member shall adopt laws, regulations or other measures requiring that:

- (a) fishing vessels shall carry appropriate medical equipment and medical supplies for the service of the vessel, taking into account the number of fishers on board, the area of operation and the length of the voyage;
- (b) medical equipment and supplies carried on board shall be accompanied by instructions or other information in a language and format understood by the fishers concerned;
- (c) fishing vessels shall have at least one person on board who is qualified or trained in first aid and other forms of medical care, and has the necessary knowledge to use the medical equipment and supplies for the vessel concerned, taking into account the number of fishers on board, the area of operation and the length of the voyage;
- (d) fishing vessels shall be equipped for radio or satellite communication with persons or services ashore that can provide medical advice, taking into account the area of operation and the length of the voyage;

- (e) fishers shall have the right to medical treatment ashore and to be taken ashore in a timely manner for treatment in the event of serious injuries or illnesses.

*Article 25*

The standards for medical care on board fishing vessels that undertake international voyages or remain away from land for a period prescribed by the competent authority shall be no less favourable than those provided to seafarers on vessels of a similar size ordinarily engaged in commercial activities.

OCCUPATIONAL SAFETY, HEALTH AND ACCIDENT PREVENTION

*Article 26*

Each Member shall adopt laws, regulations or other measures concerning:

- (a) the prevention of occupational accidents, occupational diseases and work-related risks on board fishing vessels, including risk evaluation and management, training and on-board instruction of fishers;
- (b) training for fishers in the handling of types of fishing gear they will use and in the knowledge of the fishing operations in which they will be engaged;
- (c) the obligations of fishing vessel owners, fishers and others concerned, due account being taken of the safety and health of fishers under 18 years of age;
- (d) the reporting and investigation of accidents on board fishing vessels flying its flag;
- (e) the setting up of joint committees on occupational safety and health.

SOCIAL SECURITY

*Article 27*

[Each Member shall ensure that fishers are entitled to benefit from social security protection on conditions no less favourable than those applicable to other workers.]

*Article 28*

Each Member shall, with regard to the principles of equality of treatment and the maintenance of social security protection rights, adopt measures that take into account the situation of non-national fishers.

PROTECTION IN THE CASE OF WORK-RELATED SICKNESS, INJURY OR DEATH

*Article 29*

1. Each Member shall take measures to provide fishers with protection for work-related sickness, injury or death determined in accordance with national laws or regulations or practice.

2. In the event of injury due to occupational accident or disease, the fisher shall have access to:

- (a) appropriate medical attention; and
- (b) the corresponding compensation in accordance with national laws.

3. Taking into account the characteristics within the fishing sector, the protection referred to in paragraph 1 above may be ensured through:

- (a) a system for fishing vessel owners' liability; or
- (b) compulsory insurance, workers' compensation or other schemes.

PART VII. ADDITIONAL REQUIREMENTS FOR VESSELS OF [...] METRES IN LENGTH  
OR MORE

*Article 30*

[Taking into account the number of fishers on board, the area of operation and the length of the voyage, a Member may, after consultation, exclude additional requirements for the vessels concerned.]\*

PART VIII. COMPLIANCE AND ENFORCEMENT

*Article 31*

Each Member shall exercise effective jurisdiction and control over vessels that fly its flag by establishing a system for ensuring compliance with the standards of the Convention including, as appropriate, inspections, reporting, monitoring, appropriate penalties and corrective measures, in accordance with national laws or regulations.

*Article 32*

Fishing vessels that undertake international voyages shall be required to undergo a documented periodic inspection of living and working conditions on board.

*Article 33*

1. The competent authority shall appoint a sufficient number of qualified inspectors to fulfil its responsibilities under Article 31.

2. Each Member shall be responsible for inspection of the on-board living and working conditions of fishers on vessels that fly its flag, whether such inspections are carried out by public institutions or other competent bodies.

---

\* Text to be developed by the Office with a view to being examined by the Conference.

*Article 34*

1. If a Member which has ratified the Convention and in whose port a fishing vessel calls in the normal course of its business or for operational reasons receives a complaint or obtains evidence that the fishing vessel does not conform to the standards of the Convention, after it has come into force, it may prepare a report addressed to the government of the country in which the fishing vessel is registered, with a copy to the Director-General of the International Labour Office, and may take measures necessary to rectify any conditions on board which are clearly hazardous to safety or health.

2. In taking such measures, the Member shall forthwith notify the nearest representative of the flag State and shall, if possible, have such representative present. It shall not unreasonably detain or delay the vessel.

3. For the purpose of this Article, "complaint" means information submitted by a fisher, a professional body, an association, a trade union or, generally, any person with an interest in the safety of the vessel, including an interest in safety or health hazards to its fishers.

*Article 35*

Each Member shall apply the Convention in such a way as to ensure that the fishing vessels flying the flag of States that have not ratified the Convention do not receive more favourable treatment than the fishing vessels that fly the flag of Members that have ratified it.

## ANNEX I [TO THE CONVENTION]

## FISHER'S WORK AGREEMENT

The fisher's work agreement shall contain the following particulars, except in so far as the inclusion of one or more of them is rendered unnecessary by the fact that the matter is regulated in another manner by national laws or regulations:

- (a) the fisher's family name and other names, date of birth or age and birthplace;
- (b) the place at which and date on which the agreement was concluded;
- (c) the name of the fishing vessel or vessels on board which the fisher undertakes to serve;
- (d) the voyage or voyages to be undertaken, if this can be determined at the time of making the agreement;
- (e) the capacity in which the fisher is to be employed or engaged;
- (f) if possible, the place at which and date on which the fisher is required to report on board for service;
- (g) the scale of provisions to be supplied to the fisher, unless some alternative system is provided for by national law;

- (h) the amount of wages, or the amount of the share and the method of calculating such share if remuneration is to be on a share basis, or the amount of the wage and share and the method of calculating the latter if remuneration is to be on a combined basis, and any agreed minimum wage;
- (i) the termination of the agreement and the conditions thereof, namely:
  - if the agreement has been made for a definite period, the date fixed for its expiry;
  - if the agreement has been made for a voyage, the port of destination and the time which has to expire after arrival before the fisher shall be discharged;
  - if the agreement has been made for an indefinite period, the conditions which shall entitle either party to rescind it, as well as the required period of notice for rescission; provided that such period shall not be less for the owner of the fishing vessel than for the fisher;
- (j) the insurance that will cover the fisher in the event of death, injury or illness in connection with their work on board the vessel; and
- (k) any other particulars which national law may require.

### **Proposed Recommendation concerning work in the fishing sector**

The General Conference of the International Labour Organization,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its 93rd Session on 31 May 2005, and

Taking into account the need to revise the Hours of Work (Fishing) Recommendation, 1920, and the Vocational Training (Fishermen) Recommendation, 1966, and

Having decided upon the adoption of certain proposals with regard to work in the fishing sector, which is the fifth item on the agenda of the session, and

Having determined that these proposals shall take the form of a Recommendation supplementing the Work in Fishing Convention, 2005 (hereinafter referred to as “the Convention”);

adopts this                    day of June of the year two thousand and five the following Recommendation, which may be cited as the Work in Fishing Recommendation, 2005:

#### **PART I. CONDITIONS FOR WORK ON BOARD FISHING VESSELS**

##### **PROTECTION OF YOUNG PERSONS**

1. Members should establish the requirements for the prior training of persons between 16 and 18 years of age working on board fishing vessels, taking into account international instruments concerning training for work on board fishing vessels, including occupational safety and health issues such as: night work, hazardous tasks, work with dangerous machinery, manual handling and transport of heavy loads, work in high latitudes, work for excessive periods of time and other relevant issues identified after an assessment of the risks concerned.

2. The training of persons between 16 and 18 years of age might be provided through participation in an apprenticeship or approved training programme, which should operate under established rules and be monitored by the competent authority and should not interfere with the person's general education.

3. Members should take measures to ensure that the safety, lifesaving and survival equipment carried on board fishing vessels carrying persons under the age of 18 is appropriate for the young persons concerned.

#### MEDICAL EXAMINATION

##### *Nature of medical examination and content of medical certificate*

4. When prescribing the nature of the examination, Members should pay due regard to the age of the person to be examined and the nature of the duties to be performed.

5. In particular, the medical certificate should attest that the person is not suffering from any disease likely to be aggravated by or to render them unfit for service on board a fishing vessel or likely to endanger the health of other persons on board.

##### *Medical certificate*

6. The certificate should be signed by a medical practitioner approved by the competent authority.

##### *Period of validity of the medical certificate*

7. In the case of young persons of less than 21 years of age, the medical certificate should remain in force for a period not exceeding one year from the date on which it was granted.

8. In the case of persons who have attained the age of 21 years, the competent authority should determine the period for which the medical certificate should remain in force.

9. If the period of validity of a certificate expires in the course of a voyage, the certificate should continue in force until the end of that voyage.

##### *Right to administrative appeal*

10. Arrangements should be made to enable a person who, after examination, is determined to be unfit for work on board fishing vessels, or on board certain types of vessels, or for certain types of work on board vessels, to apply for a further examination by a medical referee or referees who should be independent of any fishing vessel owner or of any organization of fishing vessel owners or fishers.

##### *International guidance*

11. Competent authorities should take into account international guidance on medical examination and certification of persons working at sea, such as the ILO/

---

WHO Guidelines for Conducting Pre-sea and Periodic Medical Fitness Examinations for Seafarers.

*Special measures*

12. For fishers exempted from the application of the provisions concerning medical examination in the Convention, the competent authority should take alternative adequate measures to provide health surveillance for the purpose of occupational safety and health.

COMPETENCY AND TRAINING

13. Members should:

- (a) ensure that competencies required for skippers, mates, engineers and other persons working on board fishing vessels take into account generally accepted international standards concerning training and competencies of fishers;
- (b) address, with regard to the vocational training of fishers, the issues of: national planning and administration, including coordination; financing and training standards; training programmes, including pre-vocational training and short courses for working fishers; methods of training; and international cooperation;
- (c) ensure that there is no discrimination with regard to access to training.

PART II. CONDITIONS OF SERVICE

RECORD OF SERVICE

14. At the end of each voyage, a record of service in regard to that voyage should be available to the fisher concerned or entered in their service book.

SPECIAL MEASURES

15. For fishers excluded from the scope of the Convention, the competent authority should take measures to provide them with adequate protection with respect to their conditions of work and with means of dispute settlement.

PART III. HEALTH PROTECTION, MEDICAL CARE AND SOCIAL SECURITY

MEDICAL CARE ON BOARD

16. The competent authority should establish the list of medical supplies, including women's sanitary protection and discreet environmentally friendly disposal units, and equipment to be carried on fishing vessels appropriate to the risks concerned.

17. Fishing vessels carrying 100 or more fishers and ordinarily engaged in international voyages of more than three days' duration should carry a qualified medical doctor.

18. Fishers should receive training in basic first aid in accordance with national laws and regulations, taking into account applicable international instruments.

19. There should be a standard medical report form specially designed to facilitate the confidential exchange of medical and related information concerning individual fishers between the fishing vessel and the shore in cases of illness or injury.

#### OCCUPATIONAL SAFETY AND HEALTH

20. In order to contribute to the continuous improvement of safety and health of fishers, member States should have in place programmes for the prevention of accidents on board fishing vessels which should, inter alia, provide for the gathering and dissemination of occupational health and safety materials, research and analysis.

21. Information concerning particular hazards should be brought to the attention of all fishers and other persons on board through official notices containing instructions or guidance on such hazards or other appropriate means.

22. When establishing methods and programmes concerning safety and health of fishers, the competent authority should take into consideration technological progress and knowledge in the field of occupational safety and health, as well as relevant international instruments.

#### *Technical specifications*

23. Members should, to the extent practicable and as appropriate to the conditions in the fishing sector, address the following:

- (a) seaworthiness and stability of fishing vessels;
- (b) radio communications;
- (c) temperature, ventilation and lighting of working areas;
- (d) mitigation of the slipperiness of deck surfaces;
- (e) machinery safety, including guarding of machinery;
- (f) vessel familiarization for fishers or fisheries observers new to the vessel;
- (g) personal protective equipment;
- (h) fire-fighting and lifesaving;
- (i) loading and unloading of the vessel;
- (j) lifting gear;
- (k) anchoring and mooring equipment;
- (l) safety and health in living quarters;
- (m) noise and vibration in work areas;
- (n) ergonomics, including in relation to the layout of workstations and manual lifting and handling;

- (o) equipment and procedures for the catching, handling, storage and processing of fish and other marine resources;
- (p) vessel design, construction and modification relevant to occupational safety and health;
- (q) navigation and vessel handling;
- (r) hazardous materials used on board the vessel;
- (s) safe means of access to and exit from fishing vessels in port;
- (t) special safety and health requirements for young persons;
- (u) prevention of fatigue;
- (v) other issues related to safety and health.

#### *Occupational safety and health management systems*

24. (1) When establishing methods and programmes concerning safety and health in the fishing sector, competent authorities should take into account any relevant international guidelines concerning occupational safety and health management systems, including the Guidelines on occupational safety and health management systems of the International Labour Office.

(2) Risk evaluation in relation to fishing should be conducted as appropriate, with the participation of fishers or their representatives and should include:

- (a) risk evaluation and management;
- (b) training, taking into consideration the relevant provisions of Chapter III of the International Convention on Standards of Training, Certification and Watch-keeping for Fishing Vessel Personnel (STCW-F Convention);
- (c) on-board instruction of fishers.

(3) To give effect to the provision of subparagraph 2(a) above, Members should adopt, after consultation, laws, regulations or other measures requiring that:

- (a) all fishers are regularly actively involved in improving safety and health through continually identifying hazards, assessing risks and taking action to address the risks through safety management;
- (b) an occupational safety and health management system is established that may include an occupational safety and health policy, provisions for fisher participation and provisions concerning organizing, planning, implementing and evaluating the system and taking action to improve the system;
- (c) a system is established for the purpose of assisting in the implementation of the fishing vessel owner's or the organization's safety and health policy and programme and to provide fishers with a forum to influence safety and health matters.

(4) When developing the provisions referred to in subparagraph 2(a), Members should take into account the possible and relevant international instruments developed on risk assessment and management.

25. Members should establish a list of diseases known to arise out of exposure to substances or dangerous conditions in the fishing sector.

#### SOCIAL SECURITY

26. (1) Members should take measures to extend social security protection progressively to all fishers.

(2) To this end, Members should maintain up-to-date information on the:

- (a) percentage of fishers covered;
- (b) range of contingencies covered; and
- (c) level of benefits.

27. The benefits referred to in Article 29 of the Convention should be granted throughout the contingency.

#### *Common provisions*

28. Every claimant should have a right of appeal in the case of refusal of the benefit or complaint as to quality and quantity of the benefit.

29. Members should take steps to secure the protection of foreign fishers, including by entering into agreements to that effect.

#### PART IV. OTHER PROVISIONS

30. In its capacity as a coastal State, a Member might require, when it grants licences for fishing in its exclusive economic zone, that fishing vessels comply with the standards of the Convention.

#### [ANNEX II

[Not currently attached to either the Convention or Recommendation]

#### ACCOMMODATION ON BOARD FISHING VESSELS [MODIFIED FROM C. 126]

#### PART I. GENERAL PROVISIONS

1. The provisions of this annex should apply to fishing vessels [of more than 24.4 m in length].

2. This annex might be applied to vessels of [between 13.7 and 24.4 m] in length where the competent authority determines, after consultation, that this is reasonable and practicable.

3. In respect of vessels which normally remain away from their home ports for periods of less than 36 hours and in which the crew does not live permanently on board when in port, the provisions concerning the following do not apply:

- (a) lighting in paragraph 35 below;
- (b) sleeping rooms;
- (c) mess-rooms;
- (d) sanitary accommodation;
- (e) sick bay;
- (f) space to hang oilskins;
- (g) cooking equipment and galley.

4. In the case of vessels referred to in paragraph 3 above, adequate sanitary installations as well as messing and cooking facilities and accommodation for resting are provided.

5. The provisions of Part III of this annex might be varied in the case of any vessel if the competent authority is satisfied, after consultation, that the variations to be made provide corresponding advantages as a result of which the overall conditions are no less favourable than those that would result from the full application of the provisions of the annex.

## PART II. PLANNING AND CONTROL OF CREW ACCOMMODATION

6. Before the construction of a fishing vessel is begun, and before the crew accommodation of an existing vessel is substantially altered or reconstructed, detailed plans of, and information concerning, the accommodation should be submitted to the competent authority for approval.

7. The competent authority should inspect the vessel and satisfy itself that the crew accommodation complies with the requirements of the laws or regulations or other measures, on every occasion when:

- (a) a fishing vessel is registered or re-registered;
- (b) the crew accommodation of a vessel has been substantially altered or reconstructed; or
- (c) a complaint that the crew accommodation is not in compliance with the terms of this annex has been made to the competent authority in the prescribed manner and in time to prevent any delay to the vessel, by a recognized fishers' organization representing all or part of the crew or by a prescribed number or proportion of the members of the crew of the vessel.

## PART III. CREW ACCOMMODATION REQUIREMENTS

### GENERAL ACCOMMODATION STANDARDS [BASED ON C. 126, ART. 6]

8. The location, means of access, structure and arrangement of crew accommodation in relation to other spaces should be such as to ensure adequate security,

protection against weather and sea and insulation from heat or cold, undue noise or effluvia from other spaces.

9. Emergency escapes should be provided from all crew accommodation spaces as necessary.

10. Every effort should be made to exclude direct openings into sleeping rooms from fish holds and fish meal rooms, from spaces for machinery, from galleys, lamp and paint rooms or from engine, deck and other bulk store rooms, drying rooms, communal wash places or water closets. That part of the bulkhead separating such places from sleeping rooms and external bulkheads should be efficiently constructed of steel or other approved substance and should be watertight and gastight.

11. External bulkheads of sleeping rooms and mess-rooms should be adequately insulated. All machinery casings and all boundary bulkheads of galleys and other spaces in which heat is produced should be adequately insulated when there is a possibility of resulting heat effects in adjoining accommodation or passageways. Care should also be taken to provide protection from heat effects of steam and/or hot-water service pipes.

12. Internal bulkheads should be of approved material which is not likely to harbour vermin.

13. Sleeping rooms, mess-rooms, recreation rooms and passageways in the crew accommodation space should be adequately insulated to prevent condensation or overheating.

14. Main steam and exhaust pipes for winches and similar gear should, whenever technically possible, not pass through crew accommodation or through passageways leading to crew accommodation; where they do pass through such accommodation or passageways they should be adequately insulated and encased.

15. Inside panelling or sheeting should be of material with a surface easily kept clean. Tongued and grooved boarding or any other form of construction likely to harbour vermin should not be used.

16. The competent authority should decide to what extent fire prevention or fire-retarding measures should be required to be taken in the construction of the accommodation.

17. The wall surface and deck heads in sleeping rooms and mess-rooms should be easily kept clean and, if painted, should be light in colour; lime wash should not be used.

18. The wall surfaces should be renewed or restored as necessary.

19. The decks in all crew accommodation should be of approved material and construction and should provide a surface impervious to damp and easily kept clean.

20. Overhead exposed decks over crew accommodation should be sheathed with wood or equivalent insulation.

21. Where the floorings are of composition the joining with sides should be rounded to avoid crevices.

22. Sufficient drainage should be provided.

23. All practicable measures should be taken to protect crew accommodation against the admission of flies and other insects.

NOISE AND VIBRATION [NEW PROVISION, NOT FROM C. 126]

24. Noise and vibration in accommodation spaces should not exceed limits established by the competent authority taking into account international instruments.

VENTILATION [BASED ON C. 126, ART. 7]

25. Sleeping rooms and mess-rooms should be adequately ventilated taking into account climatic conditions.

26. The system of ventilation should be controlled so as to maintain the air in a satisfactory condition and to ensure a sufficiency of air movement in all conditions of weather and climate.

27. Vessels regularly engaged on voyages in the tropics and other areas with similar climatic conditions should, as required by such conditions, be equipped both with mechanical means of ventilation and with electric fans, provided that one only of these means need be adopted in spaces where this ensures satisfactory ventilation.

28. Vessels engaged elsewhere should be equipped either with mechanical means of ventilation or with electric fans. The competent authority might exempt vessels normally employed in the cold waters of the northern or southern hemispheres from this requirement.

29. Power for the operation of the aids to ventilation required should, when practicable, be available at all times when the crew is living or working on board and conditions so require.

HEATING [BASED ON C. 126, ART. 8]

30. An adequate system of heating the crew accommodation should be provided taking into account climatic conditions.

31. The heating system should, when practicable, be in operation at all times when the crew is living or working on board and conditions so require.

32. The heating system should be capable of maintaining the temperature in crew accommodation at a satisfactory level under normal conditions of weather and climate likely to be met with on service; the competent authority should prescribe the standard to be provided.

33. Radiators and other heating apparatus should be so placed and, where necessary, shielded and fitted with safety devices so as to avoid risk of fire or danger or discomfort to the occupants.

## LIGHTING [BASED ON C. 126, ART. 9]

34. All crew spaces should be adequately lighted. The minimum standard for natural lighting in living rooms should be such as to permit a person with normal vision to read on a clear day an ordinary newspaper in any part of the space available for free movement. When it is not possible to provide adequate natural lighting, artificial lighting of the above minimum standard should be provided.

35. In all vessels electric lights should, as far as practicable, be provided in the crew accommodation. If there are not two independent sources of electricity for lighting, additional lighting should be provided by properly constructed lamps or lighting apparatus for emergency use.

36. Artificial lighting should be so disposed as to give maximum benefit to the occupants of the room.

37. Adequate reading light should be provided for every berth in addition to the normal lighting of the cabin.

38. A permanent blue light should, in addition, be provided in the sleeping room during the night.

## SLEEPING ROOMS [BASED ON C. 126, ART. 10, REDUCED TEXT]

39. Sleeping rooms should be situated amidships or aft; the competent authority might, in particular cases, if the size, type or intended service of the vessel renders any other location unreasonable or impracticable, permit the location of sleeping rooms in the fore part of the vessel but in no case forward of the collision bulkhead.

40. The floor area per person of sleeping rooms, excluding space occupied by berths and lockers, should not be less than:

- (a) in vessels of [13.7] metres but below [19.8] metres in length: [0.5] square metre;
- (b) in vessels of [19.8] metres but below [26.8] metres in length: [0.75] square metre;
- (c) in vessels of [26.8] metres but below [35.1] metres in length: [0.9] square metre;
- (d) in vessels of [35.1] metres in length or over: [1.0] square metre.

41. The clear headroom in the crew sleeping room should, wherever possible, be not less than 1.90 m.

42. There should be a sufficient number of sleeping rooms to provide a separate room or rooms for each department.

43. The number of persons allowed to occupy sleeping rooms should not exceed the following maxima:

- (a) officers: one person per room wherever possible, and in no case more than two;
- (b) ratings: two or three persons per room wherever possible, and in no case more than the following:
  - (i) in vessels of [35.1] metres in length and over, four persons;
  - (ii) in vessels under [35.1] metres in length, six persons.

44. The competent authority might permit exceptions to the requirements of the preceding two paragraphs in particular cases if the size, type or intended service of the vessel make these requirements unreasonable or impracticable.

45. The maximum number of persons to be accommodated in any sleeping room should be legibly and indelibly marked in some place in the room where it can conveniently be seen.

46. Members of the crew should be provided with individual berths of adequate dimensions. Berths should not be placed side by side in such a way that access to one berth can be obtained only over another.

47. Berths should not be arranged in tiers of more than two; in the case of berths placed along the vessel's side, there should be only a single tier where a sidelight is situated above a berth.

48. The lower berth in a double tier should not be less than [0.30] metres above the floor; the upper berth should be placed approximately midway between the bottom of the lower berth and the lower side of the deck head beams.

49. The minimum inside dimensions of a berth should, wherever practicable, be 1.90 m by 0.68 m.

50. The framework and the leeboard, if any, of a berth should be of approved material, hard, smooth and not likely to corrode or to harbour vermin.

51. If tubular frames are used for the construction of berths, they should be completely sealed and without perforations which would give access to vermin.

52. Each berth should be fitted with a spring mattress of approved material or with a spring bottom and a mattress of approved material. Stuffing of straw or other material likely to harbour vermin should not be used.

53. When one berth is placed over another, a dust-proof bottom of wood, canvas or other suitable material should be fitted beneath the upper berth.

54. Sleeping rooms should be so planned and equipped as to ensure reasonable comfort for the occupants and to facilitate tidiness.

55. The furniture should include a clothes locker for each occupant, fitted with a hasp for a padlock and a rod for holding clothes on hangers. The competent authority should ensure that the locker is as commodious as practicable.

56. Each sleeping room should be provided with a table or desk which might be of the fixed, drop-leaf or slide-out type, and with comfortable seating accommodation as necessary.

57. The furniture should be of smooth, hard material not liable to warp or corrode or to harbour vermin.

58. The furniture should include a drawer or equivalent space for each occupant which should, wherever practicable, be not less than 0.056 cubic metre.

59. Sleeping rooms should be fitted with curtains for the sidelights.

60. Sleeping rooms should be fitted with a mirror, small cabinets for toilet requisites, a book rack and a sufficient number of coat hooks.

61. As far as practicable, berthing of crew members should be so arranged that watches are separated and that no day worker share a room with watchkeepers.

MESS-ROOMS [BASED ON C. 126, ART. 11]

62. Mess-room accommodation separate from sleeping quarters should be provided in all vessels carrying a crew of more than ten persons. Wherever possible it should be provided also in vessels carrying a smaller crew. If, however, this is impracticable, the mess-room might be combined with the sleeping accommodation.

63. In vessels engaged in fishing on the high seas and carrying a crew of more than 20, separate mess-room accommodation might be provided for the skipper and officers.

64. The dimensions and equipment of each mess-room should be sufficient for the number of persons likely to use it at any one time.

65. Mess-rooms should be equipped with tables and approved seats sufficient for the number of persons likely to use them at any one time.

66. Mess-rooms should be as close as practicable to the galley.

67. Where pantries are not accessible to mess-rooms, adequate lockers for mess utensils and proper facilities for washing them should be provided.

68. The tops of tables and seats should be of damp-resisting material without cracks and easily kept clean.

69. Wherever practicable mess-rooms should be planned, furnished and equipped to give recreational facilities.

SANITARY ACCOMMODATION [BASED ON C. 126, ART. 12]

70. Sufficient sanitary accommodation, including washbasins and tub or shower, should be provided in all vessels.

71. Sanitary facilities for all members of the crew who do not occupy rooms to which private facilities are attached should, wherever practicable, be provided for each department of the crew on the following scale:

- (a) one tub or shower for every eight persons or less;
- (b) one water closet for every eight persons or less;
- (c) one washbasin for every six persons or less.

72. Cold fresh water and hot fresh water or means of heating water should be available in all communal wash places. The competent authority, after consultation, might fix the minimum amount of fresh water which should be supplied per person per day.

73. Washbasins and tub baths should be of adequate size and constructed of approved material with a smooth surface not liable to crack, flake or corrode.

74. All water closets should have ventilation to the open air, independently of any other part of the accommodation.

75. The sanitary equipment to be placed in water closets should be of an approved pattern and provided with an ample flush of water, available at all times and independently controllable.

76. Soil pipes and waste pipes should be of adequate dimensions and should be constructed so as to minimize the risk of obstruction and to facilitate cleaning. They should not pass through fresh water or drinking water tanks; neither should they, if practicable, pass overhead in mess-rooms or sleeping accommodation.

77. Sanitary accommodation intended for the use of more than one person should comply with the following requirements:

- (a) floors should be of approved durable material, easily cleaned and impervious to damp and should be properly drained;
- (b) bulkheads should be of steel or other approved material and should be watertight up to at least 0.23 m above the level of the deck;
- (c) the accommodation should be sufficiently lighted, heated and ventilated.

78. Water closets should be situated convenient to, but separate from, sleeping rooms and washrooms, without direct access from the sleeping rooms or from a passage between sleeping rooms and water closets to which there is no other access, provided that this requirement should not apply where a water closet is located between two sleeping rooms having a total of not more than four persons. Where there is more than one water closet in a compartment they should be sufficiently screened to ensure privacy.

79. Facilities for washing and drying clothes should be provided on a scale appropriate to the size of the crew and the normal duration of the voyage.

80. The facilities for washing clothes should include suitable sinks equipped with drainage, which might be installed in washrooms if separate laundry accommodation is not reasonably practicable. The sinks should be provided with an adequate supply of cold fresh water and hot fresh water or means of heating water.

81. The facilities for drying clothes should be provided in a compartment separate from sleeping rooms, mess-rooms and water closets, adequately ventilated and heated and equipped with lines or other fittings for hanging clothes.

#### SICK BAY [BASED ON C. 126, ART. 13]

82. Whenever possible, an isolated cabin should be provided for a member of the crew who suffers from illness or injury. On vessels of 45.7 m or over in length, there should be a sick bay.

#### SPACE TO HANG OILSKINS [BASED ON C. 126, ART. 14]

83. Sufficient and adequately ventilated accommodation for the hanging of oilskins should be provided outside but convenient to the sleeping rooms.

## CLEAN AND HABITABLE CONDITION [BASED ON C. 126, ART. 15]

84. Crew accommodation should be maintained in a clean and decently habitable condition and should be kept free of goods and stores which are not the personal property of the occupants.

## COOKING EQUIPMENT AND GALLEY [BASED ON C. 126, ART. 16]

85. Satisfactory cooking equipment should be provided on board and should, wherever practicable, be fitted in a separate galley.

86. The galley should be of adequate dimensions for the purpose and should be well lit and ventilated.

87. The galley should be equipped with cooking utensils, the necessary number of cupboards and shelves, and sinks and dish racks of rust-proof material and with satisfactory drainage. Drinking water should be supplied to the galley by means of pipes. Where it is supplied under pressure, the system should contain protection against backflow. Where hot water is not supplied to the galley, an apparatus for heating water should be provided.

88. The galley should be provided with suitable facilities for the preparation of hot drinks for the crew at all times.

89. A provision storeroom of adequate capacity should be provided which can be kept dry, cool and well ventilated in order to avoid deterioration of the stores. Where necessary, refrigerators or other low-temperature storage space should be provided.

90. Where butane or propane gas is used for cooking purposes in the galley the gas containers should be kept on the open deck.

## PART IV. APPLICATION TO EXISTING SHIPS [BASED ON C. 126, ART. 17]

91. The requirements of this annex should apply to fishing vessels constructed subsequent to the coming into force of the proposed Convention for the Member concerned.]

## INTRODUCTION

The first discussion of an item concerning a comprehensive standard (a Convention supplemented by a Recommendation) on work in the fishing sector took place at the 92nd Session (2004) of the International Labour Conference. Following that discussion, and in accordance with article 39 of the Standing Orders of the Conference, the International Labour Office prepared and communicated to the governments of member States Report V (1) containing a proposed Convention and a proposed Recommendation, based on the conclusions adopted by the Conference at its 92nd Session.

Governments were invited to send any amendments or comments they might wish to make so as to reach the Office by 15 November 2004 at the latest, or to inform it, by the same date, whether they considered that the proposed texts constituted a satisfactory basis for discussion by the Conference at its 93rd Session (2005).

At the time of drawing up this report, the Office had received replies from the governments of the following 43 member States: Argentina, Australia, Belgium, Brazil, Canada, China, Cuba, Cyprus, Czech Republic, Denmark, Egypt, Estonia, Ethiopia, Finland, France, Greece, Guinea, Hungary, Iceland, India, Indonesia, Israel, Japan, Kuwait, Lebanon, Lithuania, Mauritius, Morocco, Netherlands, New Zealand, Norway, Poland, Portugal, Singapore, South Africa, Spain, Sweden, Switzerland, Thailand, Tunisia, Ukraine, United Arab Emirates, United Kingdom.

In accordance with article 39, paragraph 6, of the Standing Orders of the Conference, governments were requested to consult the most representative organizations of employers and workers before finalizing their replies and to indicate which organizations were consulted.

The governments of the following 36 member States stated that the most representative organizations of employers and workers had been consulted, and some included in their replies the opinions expressed on certain points by these organizations: Argentina, Australia, Belgium, Brazil, Canada, China, Cuba, Cyprus, Czech Republic, Denmark, Egypt, Estonia, Ethiopia, Finland, France, Greece, Guinea, Hungary, Iceland, Indonesia, Israel, Japan, Lebanon, Lithuania, Mauritius, Netherlands, New Zealand, Norway, Poland, Portugal, Singapore, Spain, Sweden, Switzerland, United Arab Emirates, United Kingdom.

The governments of the following member States sent separately the replies from employers', workers' or other organizations, and in some cases, replies were received directly at the Office: Belgium, Canada, Cyprus, France, Italy, New Zealand, Nicaragua, Spain, Switzerland, United States.

Replies have also been received from the European Union (EU) and the International Maritime Health Association (IMHA).

To ensure that the English and French texts of the proposed Convention and proposed Recommendation concerning work in the fishing sector are in the hands of the governments within the time limit laid down in article 39, paragraph 7, of the Standing

Orders of the Conference, these texts have been published in a separate volume, Report V (2B).

The present volume, Report V (2A), which has been drawn up on the basis of the replies received from governments, and employers' and workers' organizations, contains the essential points of their observations.

This report also reflects the outcome of the Tripartite Meeting of Experts on the Fishing Sector. It should be recalled that the Conference Committee on the Fishing Sector decided that consultations should be held on the issue of accommodation before the 93rd Session of the Conference in 2005 on the basis that the Office devise a mechanism to facilitate the process, the three parties commit to participate in consultations, and a working party be set up by the Conference Committee in 2005. The Conference Committee also agreed that the proposed Convention should include a new part to be developed by the Office providing additional requirements for larger vessels, and that the issue of social security should be left open pending the outcome of the Preparatory Technical Maritime Conference (September 2004) developing the draft consolidated maritime labour Convention aimed at seafarers. To obtain sufficient guidance to accomplish its task of preparing new provisions concerning large vessels and social security, the Office proposed at the 290th (June 2004) Session of the Governing Body that the mechanism envisaged by the Conference Committee take the form of a meeting of experts, which should deal with the question of accommodation as well as with the questions that had not been covered during the first discussion on work in the fishing sector. The Governing Body agreed to this proposal and convened the Tripartite Meeting of Experts on the Fishing Sector in Geneva from 13 to 17 December 2004.

Report V (2A) is divided into four sections: the first comprises general observations on the proposed texts, the second and third sections contain observations on the proposed Convention and proposed Recommendation, and the fourth section includes the Office commentary on these observations and the views expressed at the Tripartite Meeting of Experts on the Fishing Sector. The appendix reproduces the report of the Tripartite Meeting of Experts on the Fishing Sector (TMEFS/2004/4).

## **REPLIES RECEIVED**

The substance of the replies received on the proposed Convention and the proposed Recommendation concerning work in fishing is given below.

The governments of the following 21 member States stated that they had no observations to put forward at the moment or that they considered that the proposed texts constituted a satisfactory basis for discussion at the 93rd Session of the International Labour Conference: Cuba, Cyprus, Czech Republic, Denmark, Egypt, Estonia, Ethiopia, Greece, Hungary, India, Indonesia, Israel, Kuwait, Lithuania, Mauritius, Poland, Singapore, Spain, Sweden, Thailand, United Arab Emirates. Some of the countries (nine) that considered the texts to be a satisfactory basis for discussion also commented on the texts or replied to questions raised in the Office commentary in Report V (1).

Some governments reported on their national law and practice, others provided detailed information on their countries' situation concerning fishing. While this is most useful for the work of the Office, this information has not been reproduced unless it is necessary for the understanding of the reply.

### **General observations**

#### AUSTRALIA

The general thrust of the draft Convention, which creates an international framework similar to the IMO framework in respect of ship safety, is supported, particularly its focus on the human factor that is integral to safety at sea. In Australia, regulation of fishing vessels is largely the responsibility of the states and the Northern Territory. With regard to the scope, an option, which may assist widespread ratification, would be to limit the Convention to vessels of a size to which IMO safety Conventions apply, i.e. 500 gt and above. This would limit application to larger vessels where such conditions may be more relevant, and exclude the many smaller vessels, including traditional fishing craft. However, as there are large vessels that do not meet the tonnage limit but voyage internationally, the suggested application would be: 500 gt for domestically operating vessels and all fishing vessels on international/overseas voyages. The responsibilities of the national maritime authority are limited to fishing vessels engaged on overseas voyages, which generally would be larger vessels that fall within the IMO Convention tonnage limits. As the employment circumstances on these vessels are similar to those of seafarers on trading ships, the working conditions should parallel those of seafarers as developed under ILO Conventions. For many countries, application of the Convention to smaller domestic fishing vessels may prove too onerous, although the FAO estimates some 90 per cent of the world fishers work on vessels of 24 metres or less in length, and, ironically, the smallest owner-operated boats are most in need of regulation and education on safe working practices.

As regards the term “fishing vessels that undertake international voyages”, the proposed approach is consistent with national legislation and seems appropriate in conjunction with the provisions for vessels exceeding a certain length. Yet, the term “overseas” might usefully be substituted for “international”, which carries connotations of entry to foreign ports, whereas some vessels that the ILO wishes to regulate may only enter foreign waters. A definition of “international voyage” (or perhaps “overseas voyage”) is warranted, given that more stringent regulation will be imposed on vessels performing such voyages. The standardization of fishing crew conditions with conditions on trading vessels of similar size is supported. It should be noted, however, that the living and working conditions of a fisher remain harder and more dangerous than those of a commercial seafarer.

#### BELGIUM

CNT: The Council expresses support for the proposed Convention and Recommendation concerning work in the fishing sector and concurs with the reply submitted by the CCE.

#### BRAZIL

Given the scope of the Convention, the term “fishing vessels that undertake international voyages” seems appropriate.

#### CANADA

A Convention and Recommendation concerning work in the fishing sector should provide strong protection for fishers, and yet be flexible enough to accommodate the diverse operations, conditions and employment relationships prevailing in the industry. In revising and replacing the seven existing ILO instruments on the issue, the result should not be simply an amalgamation of existing provisions, but rather a new instrument with updated and practical provisions. The right balance must be struck between developing effective standards to safeguard fishers and avoiding overly prescriptive language that will prevent widespread ratification and implementation. The term “international voyages”, which is used in Articles 18, 25 and 32 of the Convention and in Paragraph 17 of the Recommendation, should be defined as follows: “‘fishing vessels that undertake international voyages’ means those vessels that remain at sea for more than a few days at one time, and that engage in fishing operations in the waters of other States or in international waters, or visit the ports of other States”. This definition should be included in Article 1, or alternatively, each reference to the term should be clarified in the text; otherwise, small vessels fishing in the waters of adjacent States or visiting nearby foreign ports could be considered to “undertake international voyages” even if they return to their home ports every day, while fishing vessels remaining at sea for long periods, but only fishing in international waters, would not be included.

CEC: Some provisions of the proposed Convention are intended to be applicable to larger fishing vessels that conduct “international voyages”. It seems that the perceived need for such provisions is not in relation to fishing within national jurisdic-

tions, but rather with OSH and accident prevention issues associated with the distant water fishing activity of some foreign fishing vessels. These concerns can be addressed without negatively impacting on the activity of responsible fleets that fish under the effective control of their flag State. Thus, the definition should be amended to “trips by larger vessels engaged in fishing for more than a few days on the high seas and landing in ports of other States”. Making reference to fishing outside national jurisdictions, i.e. “high seas”, and using the word “and” in relation to landing in ports of other States, would lead to the exclusion from the relevant part of the Convention of both fishing trips occurring in domestic waters but landing in a foreign port, and fishing trips occurring in international waters but landing in the flag state port.

#### CYPRUS

The Cyprus Workers Confederation and the Pancyprian Federation of Labour accept the proposed texts as a satisfactory basis for discussion by the Conference in June 2005.

#### DENMARK

It appears necessary to introduce a mandatory provision to protect fishers from noise and vibration on board fishing vessels. The requirement may, as a first step, be restricted to larger fishing vessels.

#### EGYPT

The Government upholds its comments given in Report V (2) *Conditions of work in the fishing sector: The constituents' views* (92nd Session, ILC, 2004).

#### FINLAND

The proposed instruments on work in fishing could improve conditions for fishers. However, the new Convention needs to be a comprehensive, clear and flexible instrument that can be generally ratified. It is recalled that companies operating in the fishing sector are often small, that their scope for applying special provisions is limited, and that regulations should be as simple as possible if entrepreneurship is to be furthered. The STTK and the SAK state that although general labour law is applied to fishers in Finland, it is not always clear whether the Seamen's Act or the Employment Contracts Act applies. Although points of convergence with the Conventions applying to seafarers have been taken into account, consideration should be given to the inclusion of a clause that would guarantee fishers at least the same level of protection as that for seafarers or other workers in an employment relationship.

#### GUINEA

The issues covered in the proposed texts are of relevance to the fishing sector and accommodate national concerns.

## ICELAND

The Convention should contain general provisions that could enable a wide range of countries to ratify the instrument and could be applied to all fishing vessels regardless of size. Otherwise, the outcome will be an instrument that will not serve its purpose and will not be ratified, especially by nations that have the vast majority of fishers on small fishing boats. Some countries like Iceland already have higher standards on their fishing fleets than are proposed in the draft Convention. However, that does not affect the need to set minimum standards that could cover all fishers, even those on the smallest fishing boats.

## INDIA

Communication systems on board fishing vessels should be improved, in order to ensure continuous communication from the vessel in operation to the shore base and vice versa, thus providing crew members who spend long periods at sea with information about the well-being of their families. The voyage schedules should be made available not only to the agencies involved in the regulation of maritime affairs but also to the local harbour officials, so as to monitor the welfare of the crew. In the event of losses due to the death/injury/sickness of crew members, the dependents/legal heirs should be well compensated and provided with suitable legal means to sue the fishing vessel owner. In addition to the precautionary approach to avoid sea disasters, fishers should be well trained in disaster management. The competent authority should inspect periodically or in the event of a grievance compliance with the provisions concerning OSH and take deterrent action in case of violation. New or modified legislation should be made known to all fishers continuously engaged in the fishing sector, in order to protect their rights and ensure social security. There is a need to safeguard the livelihood and interests of fishers engaged in subsistence and small-scale fishing, since many commercial fishing operations exploit fishery resources by mechanical power in zones earmarked for local fishers, thereby infringing laws and regulations.

## ISRAEL

In Israel, approximately 2,100 persons are involved in the fishing sector, and there are nearly 600 fishing boats with an average capacity of three persons. Fishing vessels do not leave territorial waters, and the majority are not at sea for more than 24 hours. Most fishing boats are 7 metres long, and there are about 50 boats of 14 metres and 30 of 20 metres in length. The Ministry of Transportation issues licences for boats and operators and specifies the equipment and preconditions necessary to obtain such licences.

## ITALY

UILA-PESCA: The content of the proposed Convention and Recommendation is considered as generally positive. Many provisions are already codified in national legislation and collective agreements between trade unions for employed workers and organizations of fishing vessel owners.

## JAPAN

The concept of substantial equivalence should be introduced in the proposed Convention for the purpose of widespread ratification. Thus, as in the draft consolidated maritime labour Convention, the following new provision should be inserted in Part II:

- (1) A Member which is not in a position to implement the principles and rights in the manner set out in this Convention may implement those principles and rights through provisions in its laws and regulations or other measures which are substantially equivalent to the provisions of this Convention.
- (2) For the sole purpose of paragraph (1), any law, regulation, collective agreement or other implementing measure shall be considered to be substantially equivalent, in the context of this Convention, if the Member satisfies itself that:
  - (a) it is conducive to the full achievement of the general object and purpose of the provisions of this Convention; and
  - (b) it gives effect to the provisions of the Convention concerned.

Furthermore, clarification is requested on the requirements for entry into force and amendment of the proposed Convention.

## KUWAIT

The proposed instruments address important issues and promote decent work in the fishing sector. They have been drafted in an adequate and flexible manner taking into account the various circumstances and legislations of member States and achieving an appropriate balance between mandatory and recommendatory provisions.

## LEBANON

The meaning of the term “fishing vessels that undertake international voyages” needs further clarification, especially in relation to the period of navigation and the places of fishing.

## MAURITIUS

The proposed Convention promotes decent working conditions and will establish landmarks for the introduction of a national regulatory framework related to work in fishing.

## MOROCCO

The proposed instruments should take the form of a Convention supplemented by a Recommendation. Bearing in mind that certain functions on board vessels are independent of navigation (fishing, trade or other functions), it would be desirable to include similar provisions in both the Convention concerning work in the fishing sector and the draft consolidated maritime labour Convention.

## NEW ZEALAND

Since the Convention attempts to cover all sizes, types and areas of operation of fishing vessels, it should be restricted to goal-based objectives, whereas technical details should be placed in the Recommendation.

NZCTU: There is a need for international standards providing a framework of minimum protection as regards workers' employment and working conditions, including conditions in the fishing sector. Hence, the development of this instrument is supported.

## NICARAGUA

CTN: Both proposed instruments contain important regulatory aspects that constitute tangible progress on the way to improving conditions of work in this key sector on a global scale and will have a beneficial impact on the workers concerned.

## NORWAY

The work on a new Convention on fishers' working and living conditions is of utmost importance, since the fishing industry is in equal need of international regulations as the maritime industry. However, the proposed text is too limited in its content and will only have the necessary impact for those who need it most if it is strengthened and proposals are moved from the Recommendation to the Convention. Also, since the text should be as clear and concise as possible, the term "international voyage" should be defined. It seems appropriate to include all vessels which intentionally arrive at a port in a country other than their country of register. However, difficulties may arise if vessels with no concrete plans to engage in international travel at present, do so in the future. Such a situation will lead to vessels travelling without meeting the requirements and unnecessary pressure being put on those responsible for compliance. Therefore, size and time at sea should continue to be the areas of limitation, but if "international voyage" is preferred, then a definition is necessary.

## PORTUGAL

The term "fishing vessels that undertake international voyages" seems to be sufficiently clear.

## SPAIN

At the next session of the ILC, account should be taken of the progress made in parallel on the draft consolidated maritime labour Convention, in order to place fishers, wherever possible, on the same footing as seafarers. As the term "international voyages" is not a widely used expression in strictly fishing terms, the term "trips" [*trayectos*] is proposed as an alternative to "voyages" [*viajes*].

OPPAO: Governments seem to pursue a categorization of vessels based on criteria such as length or tonnage, which is difficult to understand in the case of developed countries, as many of the standards in the proposed text are already covered by their

internal regulations, and is even less understandable in the case of developing countries, which will not be able to ratify overly prescriptive provisions. The draft text suffers from excessive classification of vessels, which will ultimately make it difficult to achieve a broadly ratifiable Convention, thus losing sight of an objective set at the outset.

#### SWEDEN

Since the sizes and applications of fishing vessels vary from small open wooden boats to ocean-going trawlers of considerable tonnage or floating fish factories, the achievement of a text embracing all kinds of conditions of service is not easy. Small-scale fishing, in which one or two families or family members jointly own and man the vessel and are remunerated with a share of the catch, is common. This makes it impossible to meet the requirements of Articles 13-16 relating to contracts of service, and Article 19 prescribing a monthly or regular salary. Whilst Article 16 makes an exception for an owner operating the fishing vessel single-handedly, the problem persists where two or more owners handle the boat.

#### SWITZERLAND

The scope of the proposed Convention encompasses commercial fishing in a broader sense – i.e. including fishing on rivers and inland waters. However, it should be noted that Article 3, paragraph 1, subparagraph (a), states that vessels engaged in fishing operations in rivers and inland waters may be excluded from the requirements of the Convention. It should be recalled that the fishing sector has only a marginal impact in Switzerland, where there are no high-sea fishing vessels and very few professional fishers. The position of fishers with regard to social security is no different from that of other workers. UPS states that it renounces to comment on the proposed instruments, given that Switzerland has practically no activity in the maritime fishing sector mainly addressed in Report V (1). USS indicates that it shares the position of the Swiss Government.

#### UKRAINE

New provisions should be introduced concerning compliance with sanitary standards during arrest or detention of a vessel and its fishers. The following text is proposed:

Members should take effective measures for the maintenance of sanitary standards in cases where a vessel and its fishers are under arrest or detained or the vessel has entered an armed conflict zone. The State in whose port the vessel is under arrest or detained should not prevent any measures for the upkeep of sanitary standards and should report the arrest or detention of the vessel to the State whose flag it flies.

#### UNITED STATES

USCIB: The following principles should guide elaboration of fishing instruments:  
(i) development of minimum labour standards for the protection of the majority of

fishers worldwide taking into account social and economic realities in developed and developing countries; (ii) development of an instrument with the flexibility to motivate widespread ratification and to address the vast majority of fishers working on smaller vessels who are at present afforded little if any protection with regard to OSH; (iii) protection against erosion of existing higher standards provided under national laws and practice for fishers employed in larger operations and/or in developed countries. The opportunity to improve conditions for the majority of the world's fishers would be lost if work towards creating a widely adoptable Convention became mired in rigid, dogmatic ideals that forestall ratification and implementation.

#### EUROPEAN UNION

Most EU Directives in the field of labour law and OSH are establishing minimum standards, and the same goes for ILO standards according to the ILO Constitution. Should the ILO minimum standards be lower than, but compatible with, EU standards, EU Member States could maintain or establish higher standards. However, the use of concepts and approaches that are totally different from EU standards should be avoided, as this could complicate or delay ratifications of an ILO Convention by EU Member States.

#### **Observations on the proposed Convention concerning work in the fishing sector**

The General Conference of the International Labour Organization,  
 Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its 93rd Session on 31 May 2005, and  
 Recognizing that globalization has had a profound impact on the fishing sector, and  
 Noting the ILO Declaration on Fundamental Principles and Rights at Work adopted by the International Labour Conference at its 86th Session (1998), and  
 Noting the relevant instruments of the International Labour Organization, in particular the Occupational Safety and Health Convention and Recommendation, 1981, and the Occupational Health Services Convention and Recommendation, 1985, and  
 Taking into account the need to revise the seven international standards adopted by the International Labour Conference specifically concerning the fishing sector, namely the Hours of Work (Fishing) Recommendation, 1920, the Minimum Age (Fishermen) Convention, 1959, the Medical Examination (Fishermen) Convention, 1959, the Fishermen's Articles of Agreement Convention, 1959, the Fishermen's Competency Certificates Convention, 1966, the Accommodation of Crews (Fishermen) Convention, 1966, and the Vocational Training (Fishermen) Recommendation, 1966, to bring these instruments up to date and to reach a greater portion of the world's fishers, particularly those working on board smaller vessels, and  
 Noting that the objective of these international standards is to help ensure that fishers have decent conditions for work on board fishing vessels with regard to: minimum requirements for work on board; conditions of service; accommodation and food; health protection, medical care and social security, and  
 Having decided upon the adoption of certain proposals with regard to work in the fishing sector, which is the fifth item on the agenda of the session, and

Having determined that these proposals shall take the form of an international Convention; adopts this            day of June of the year two thousand and five the following Convention, which may be cited as the Work in Fishing Convention, 2005:

### *Observations on the Preamble*

*Lebanon.* In the seventh paragraph of the Preamble, it is proposed to add the term “occupational safety” after “health protection”.

*South Africa.* Protection of fishers in terms of the core Conventions should be strengthened. It is proposed to include the following subparagraphs in the Preamble:

Taking into consideration the fundamental principles to be found in other international labour Conventions, in particular: the Forced Labour Convention, 1930, the Freedom of Association and Protection of the Right to Organise Convention, 1948, the Right to Organise and Collective Bargaining Convention, 1949, the Equal Remuneration Convention, 1951, the Discrimination (Employment and Occupation) Convention, 1958, the Abolition of Forced Labour Convention, 1957, the Minimum Age Convention, 1973, and the Worst Forms of Child Labour Convention, 1999; and

Mindful of the core mandate of the Organization, which is to promote decent conditions of work, and.

## PART I. DEFINITIONS AND SCOPE

### DEFINITIONS

#### *Article 1*

For the purposes of the Convention:

- (a) “commercial fishing” means all fishing operations, including fishing operations on rivers and inland waters, with the exception of subsistence fishing and recreational fishing;
- (b) “competent authority” means the minister, government department or other authority having power to issue and enforce regulations, orders or other instructions having the force of law in respect of the subject matter of the provision concerned;
- (c) “consultation” means consultation by the competent authority with the representative organizations of employers and workers concerned, and in particular the representative organizations of fishing vessel owners and fishers, where they exist, on the measures to be taken to give effect to the provisions of the Convention and with respect to any derogation, exemption or other flexible application of the Convention;
- (d) “fishing vessel owner” means the owner of the fishing vessel or any other organization or person who has assumed the responsibility for the operation of the vessel from the owner or other organization or person and who, on assuming such responsibility, has agreed to take over the duties and responsibilities imposed on fishing vessel owners in accordance with the Convention;
- (e) “fisher” means every person employed or engaged in any capacity or carrying out an occupation on board any fishing vessel, including persons working on board who are paid on the basis of a share of the catch; it excludes pilots, naval personnel, other persons in the

permanent service of a government [and shore-based persons carrying out work aboard a fishing vessel];

- (f) “fisher’s work agreement” means a contract of employment, articles of agreement or other similar arrangements and any other contract governing the terms of a fisher’s living conditions and work on board a vessel;
- (g) “fishing vessel” or “vessel” means any ship or boat, of any nature whatsoever, whether publicly or privately owned, used or intended to be used for the purposes of commercial fishing;
- (h) “new fishing vessel” means a fishing vessel for which:
  - (i) on or after the date of the entry into force of the Convention, the building or major conversion contract is placed; or
  - (ii) the building or major conversion contract has been placed before the date of the entry into force of the Convention, and which is delivered three years or more after that date; or
  - (iii) in the absence of a building contract, on or after the date of the entry into force of the Convention:
    - the keel is laid, or
    - construction identifiable with a specific vessel begins, or
    - assembly has commenced comprising at least [50 tonnes] or 1 per cent of the estimated mass of all structural material, whichever is less;
- (i) “existing vessel” is a vessel that is not a new fishing vessel;
- (j) “gross tonnage” means the gross tonnage calculated in accordance with the tonnage measurement regulations contained in Annex I to the International Convention on Tonnage Measurement of Ships, 1969, or any successor Convention;
- (k) “length” (L) shall be taken as 96 per cent of the total length on a waterline at 85 per cent of the least moulded depth measured from the keel line, or as the length from the foreside of the stern to the axis of the rudder stock on that waterline, if that be greater. In vessels designed with rake of keel the waterline on which this length is measured shall be parallel to the designed waterline;
- (l) “recruitment and placement service” means any person, company, institution, agency or other organization, in the public or the private sector, which is engaged in recruiting fishers on behalf of employers or placing fishers with employers;
- (m) “skipper” means the person having command of a fishing vessel.

### *Observations on Article 1*

*Argentina.* As regards subparagraph (e), the exclusion of “shore-based persons carrying out work aboard a fishing vessel” seems appropriate, since the provisions of the proposed Convention should only apply to the exercise of fishing activities or activities immediately related to it. Also, it is understood that references to naval personnel include persons in the permanent service of the Government who carry out duties in this sector of activity. CATT states that, if “shore-based persons carrying out work aboard a fishing vessel” were included, subparagraph (e) should explain that this covers persons performing work on a fishing vessel in port or in the vicinity of the port. ACPP considers it necessary to add in subparagraph (e) after “fishing vessel” the wording “duly qualified or authorized for that activity”.

*Australia.* Subparagraph (a): The use of the term “commercial” appears superfluous, given that the definition excludes subsistence and recreational fishing, and given the simple title of the Convention. Furthermore, the definition could be expanded to include aquaculture – a growth area consisting of fish farming rather than taking natural resources from the sea, although many aspects of its operations resemble traditional fishing. Finally, a definition of “fishing operations” would be useful to delimit the scope of the Convention. Subparagraph (b): The “competent authority” would generally be a relevant state authority, if the Convention was extended to all fishing vessels, and if Australia ratified the Convention. Subparagraph (e): Shore-based persons carrying out work aboard a fishing vessel should be covered by the Convention, if they remain aboard while the vessel is engaged in a voyage, in order to prevent genuine fisher employees being classified as shore-based to circumvent the Convention. However, shore-based workers temporarily carrying out work aboard a fishing vessel in port should be excluded from the definition of “fisher”. If such workers are required to live aboard while temporarily carrying out work in a port, they should be entitled to the same accommodation and living conditions as fishers. A definition of “shore-based personnel” would be useful. Subparagraph (g): The Convention sometimes refers to “vessel” which presumably means “fishing vessel”. The definition should include something along the lines of “a reference to a vessel means a fishing vessel unless specifically excluded”. Subparagraph (i): In the definition of “existing vessel”, the word “fishing” could be inserted for consistency before the next use of the term “vessel”. Subparagraph (k): The word “stern” should be “stem”. Furthermore, the proposed manner of length measurement seems unnecessarily complex for fishing vessels. A simpler approach would be to measure length from the inside of the stem, along the main deck to an intersection of a projection of the rudder stock with the main deck, or, simpler still, just measure the length of the main deck.

*Belgium.* Shore-based persons carrying out work aboard a fishing vessel should be excluded from the definition of “fisher” in subparagraph (e). Besides, the definition of the term “fisher” is so broad that there may be confusion as to the coverage. The Belgian Act of 3 May 2003 regulating articles of agreement and social status of maritime fishers could be of some use in finding more adequate wording. It establishes that a maritime fisher is any person employed as a crewmember of a fishing vessel, and that the contract between a maritime fisher and the owner constitutes an engagement to serve on board for the duration of a sea voyage.

CCE: Same as the above reply.

*Brazil.* With reference to subparagraph (e), it would be appropriate to include “shore-based persons carrying out work aboard a fishing vessel” in the definition of “fisher”, as long as it is specified that this work should be directly linked to the catching and handling of fish aboard the vessel, e.g. the work of persons involved in the processing of fish aboard factory ships. Thus, workers carrying out duties not directly related to fishing would be excluded, e.g. workers doing maintenance work or fishery observers.

*Canada.* Persons providing services to fishing vessels such as unloading, resupplying and maintenance, as well as shore-based workers who work on board a fishing vessel for a limited period of time while the vessel is docked and not engaged in fishing operations should be excluded from the definition of “fisher” in subparagraph (e).

CEC: Shore-based persons carrying out work aboard a fishing vessel should be excluded from the proposed Convention, as they are not defined or registered as fishers.

*China.* In subparagraph (a), the words “fishing for research and teaching purposes” should be added after “with the exception of subsistence fishing”. It would be to the detriment of research and teaching work if these fishing operations were brought under the obligations of an international Convention.

*Cyprus.* OEB: As regards the issue of “shore-based persons carrying out work aboard a fishing vessel” in subparagraph (e), the scope of the Convention should be limited to persons directly engaged in work in the sector, e.g. a shore-based electrician called to work on a fishing boat is not working in the fishing sector. The clarification is necessary so as to avoid confusion at national level. Independent owner-operators should also be excluded from the definition of “fisher”, since the new instrument should regulate the employment relationship, whereas persons operating their own vessels are not working within an employment relationship. The employers’ associations members of the IOE plan to further discuss the complicated issue of exclusion of self-employed fishers.

*Finland.* The definitions in this Article do not make clear how widely fishers and fishing vessels come within the compass of the Convention. As regards subparagraph (a), it is unclear how “subsistence fishing” is defined, “commercial fishing” being defined as all fishing operations apart from recreational and subsistence fishing. In view of the wide definition of “fishing vessel” in subparagraph (g), provisions would apply to both inland-water fishing and small-scale fishing, regardless of the form of company. However, in Finland, it is usual to find small boats operating off the coast with a small crew on short fishing trips, and professional fishing being practiced in inland waters. Legally binding international provisions should ensure that small-scale fishing as a livelihood remains economically viable.

*France.* The term “inland waters” could give rise to different interpretations, if not defined properly. It is thus necessary to determine the areas to be covered by this term and to provide for a precise and coherent definition involving other international instruments, if need be.

MEDEF: In the interest of a clear and coherent approach to the definition of the term “fisher”, shore-based persons carrying out work aboard a fishing vessel should be excluded. These technicians normally work on vessels in port and should, therefore, not appear on the crew list.

*Iceland.* The definition of “fisher” in subparagraph (e) should be restricted to persons carrying out work aboard a fishing vessel while at sea, i.e. persons participating in the operation of the vessel, preparing gear for fishing, catching, loading catch and processing it. Since persons who temporarily work on repairs or maintenance of the vessel do not fit this description, the exclusion of “shore-based persons carrying out work aboard a fishing vessel” is supported. Furthermore, the definition of a “fisher’s work agreement” in subparagraph (f) should only cover the employment relationship between employer (fishing vessel owner) and employee (fisher). The existing fishing standards did not include self-employed persons and there is no reason for such change. A “fisher’s work agreement” should be defined as a “contract of employment,

collective agreement or other similar arrangement governing the terms of a fisher's work and working conditions on board a vessel".

*Italy.* UILA-PESCA: It seems necessary to specify that the representative organizations of fishers mentioned in subparagraph (c) are trade unions for employed workers/wage earners. The definition of "fisher" in subparagraph (e) is too general in that it assimilates independent fishers, i.e. owners of vessels and/or members of cooperatives owning vessels, with workers employed by fishing vessel owners. It should be made explicit that the proposed Convention deals with employed workers, as it is the wage earners who are the true beneficiaries of its provisions.

*Lebanon.* In subparagraph (a), it is proposed to add after the term "inland waters" the words "lakes and channels" in inverted commas for the purpose of clarification. With respect to the term "occupation" in subparagraph (e), it should be clarified whether, for example, the person repairing the machinery of the fishing vessel would be considered as a fisher. As regards the bracketed text, if these shore-based persons are dockers rather than fishers, the Convention should not be applicable to them; otherwise, there is no objection to their being covered. Furthermore, the term "other persons in the permanent service of a government" does not make clear who would be excluded from the instrument. Finally, it is proposed to add at the end of subparagraph (l) the words "according to statutory provisions in force in every country".

*Mauritius.* The tripartite Advisory Council for Occupational Safety, Health and Welfare proposes to amend subparagraph (m) as follows: "'Skipper' means an appropriately qualified person having command of a fishing vessel."

*Morocco.* In subparagraph (e), given that shore-based persons carrying out work aboard a fishing vessel are covered by specific benefits, they should be excluded from the scope of this Convention.

*New Zealand.* It would be useful to clarify whether the term "commercial fishing" in subparagraph (a) includes aquaculture, whaling, seal hunting and factory processing ships. In New Zealand, a "commercial fishing ship" is registered under the Fisheries Act and does not perform the above types of operations. As the term "gross tonnage" is not utilized within the Convention, it is suggested to delete its definition in subparagraph (j). The term "major conversion" used in subparagraph (h)(i) could be defined as follows:

"Major conversion" means the alteration or modification of a ship, including the replacement, removal or addition of:

- (a) any part of a ship, that is likely to:
  - (i) significantly affect the structural integrity, tonnage, freeboard, cargo or passenger capacity, crew or passenger accommodation, conditions of assignment of load line, watertight subdivision, stability, structural fire protection; or
  - (ii) result in significant changes to the propulsion machinery, auxiliary machinery, steering or method of propulsion of the ship; and
- (b) any safety equipment of the ship.

*Nicaragua.* CTN: Subparagraph (h), clause (iii), third bullet point, should be replaced with: "assembly has commenced comprising at least 20 per cent of the structural material". The reason for this amendment is that there is a contradiction between

the figure of 50 tonnes of structural material, or 1 per cent, whichever is less; since 1 per cent in real terms could turn out to be an insignificant figure.

*Norway.* As for subparagraph (e), “shore-based persons carrying out work aboard a fishing vessel” should not be covered by this Convention. However, this category should also benefit from the measures taken in relation to OSH and accident prevention. It is thus proposed to include a new paragraph 3 in Article 3 or a new subparagraph (f) in Article 26 with the following wording: “The skipper is, in cooperation with shore-based owners and operators, responsible to ensure that shore-based persons carrying out work aboard a fishing vessel are included in the efforts to ensure occupational safety, health and accident prevention on board.”

*Portugal.* Shore-based persons carrying out work aboard a fishing vessel according to subparagraph (e) should be covered by the Convention, although they might be excluded from some of its provisions, such as those relating to accommodation, food and repatriation.

*Spain.* The term “fisher” should not include shore-based persons, even if they *exceptionally* carry out work aboard a fishing vessel. It should rather refer to persons whose main tasks are performed on board. Since the content of the Convention refers to conditions of work on board vessels, it would, in principle, not make sense to apply it to workers usually carrying out their activity on shore. Moreover, if fishers were deemed to be only those workers appearing on the crew list, i.e. crew members, this could result in the exclusion of fishers engaged in artisanal fishing on board small vessels. It would be more appropriate, therefore, to refine the definition of “fisher” to require that these be persons habitually working on board fishing vessels. Yet, when shore-based persons are sailing on board the vessel they should be treated no less favourably than the crew in regard to accommodation and maintenance. Also, the express reference to workers paid on the basis of a share of the catch seems ambiguous, given that the vast majority of fishers work under this system of remuneration. Instead of treating the system applying to the vast majority as an exception, and the system of wage payment as the general rule, it would be more appropriate to include a general reference to any system of remuneration. The subparagraph should thus read as follows:

“fisher” means any person employed or engaged in any capacity or habitually carrying out an occupation on board any fishing vessel, irrespective of the system of remuneration; it excludes pilots, naval personnel, other persons in the permanent service of a government and shore-based persons carrying out work aboard a fishing vessel, who shall be subject to special agreed conditions concerning accommodation and maintenance on board when the vessel is sailing; such conditions shall not be less favourable than those enjoyed by fishers on board.

OPPAO: As regards subparagraph (e), it should be made clear that the Convention is limited in scope to persons directly working in the fishing sector, i.e. solely to fishers on board fishing vessels, logically excluding persons belonging to other sectors who, in certain circumstances, perform work aboard a fishing vessel.

*Tunisia.* In subparagraph (e), shore-based persons carrying out work aboard fishing vessels should be excluded from the Convention, given that they are not part of the crew. The term “subsistence fishing” should be defined so as to provide an unequivocal distinction from “commercial fishing” in subparagraph (a). This would

also facilitate the job of the competent authority, which, in the event of doubt, has to determine after consultation whether or not a vessel is engaged in commercial fishing.

*Ukraine.* In subparagraph (g), the words “of any nature whatsoever, whether publicly or privately owned” should be replaced with “of any nature or form of ownership whatsoever”, since in Ukraine there are many collective fishing enterprises operating collectively owned fishing vessels, which cannot be defined as exclusively private or public. As for subparagraph (m), the term “command” should be refined, since the legal rights of a captain over vessel and crew while at sea need to be clearly separated from the economic command of the owner while the vessel is sailing. It is proposed that the words “onboard the vessel” should be inserted before the words “having command of the vessel”.

*United States.* USCIB: With respect to subparagraph (e), fisheries observers should also be excluded from the definition of “fishers”, as they are generally hired through private contractors (not by vessel owners) for the purpose of collecting scientific data or compliance monitoring for use by government agencies, without being in the permanent service of a government. Furthermore, as regards the bracketed language, persons such as shore-based electricians or mechanics doing periodic repair work are not working within the fishing sector. The Convention should be limited to fishers on fishing boats. Finally, subparagraph (e) should also exclude independent owner-operators, since they are not part of an employment relationship and work for themselves.

#### SCOPE

#### Article 2

1. Except as provided otherwise, the Convention applies to all fishers and all fishing vessels engaged in commercial fishing operations.
2. In the event of doubt as to whether a vessel is engaged in commercial fishing, the question shall be determined by the competent authority after consultation.

#### Observations on Article 2

*Finland.* According to this Article, the Convention would be applied not only to employed fishers but also to the self-employed and fishers paid on the basis of a share of the catch. The extension of the Convention to fishers operating independently or as entrepreneurs is problematic. National employment legislation applies only to those in an employment relationship, i.e. people who personally, under the management and supervision of an employer, have committed themselves to work for an employer in return for a wage or other consideration. In Finland, most fishers are self-employed.

*New Zealand.* As regards paragraph 1, see comment under Article 1, subparagraph (a).

*Tunisia.* Taking into account the particular nature of work on board small fishing vessels and the extent of traditional fishing activities in certain countries, it is

suggested to exclude vessels without motor and vessels of less than 5 t from the Convention.

### Article 3

1. The competent authority may, after consultation, exclude from the requirements of the Convention, or certain provisions thereof, where the application raises special and substantial problems in the light of particular conditions of service of the fishers or fishing vessels' operations:

- (a) fishing vessels engaged in fishing operations in rivers and inland waters; and
- (b) limited categories of fishers or fishing vessels.

2. In the case of exclusions under the preceding paragraph, and where practicable, the competent authority shall take measures, as appropriate, to progressively extend the protections under the Convention to those categories of fishers and fishing vessels.

### Observations on Article 3

*Argentina.* It is damaging for the strength of the generic exclusion in paragraph 1 to exist alongside the specific exclusion in Article 10, paragraph 2. This not only affects the coherence of the text, but, moreover, the parameters authorizing the exclusion in Article 10, paragraph 2, differ in wording from those in Article 3 and seem more restrictive. It would seem preferable to retain the wording of Article 3 and delete paragraph 2 of Article 10.

*Australia.* It is unclear whether this is intended to refer only to vessels of the flag State or to all fishing vessels.

*Finland.* Paragraph 1, subparagraph (b), authorizing under certain circumstances the exclusion of limited categories of fishers or fishing vessels, is strongly supported. The regulation of working conditions in the *entire* fishing sector, including the category of fisher entrepreneurs, would be unusual in terms of the national legislative tradition.

*France.* The provisions of this Article appear to be sufficiently flexible to strike a balance with the requirements of the Convention for the purpose of widespread ratification.

*Japan.* The Government enquires whether the notion “special and substantial problems” includes problems raised by the size of fishing vessels. If not, paragraph 1 should be revised to “... special and substantial problems in the light of the size of fishing vessels and particular conditions of service ...”.

*Norway.* See comment under Article 1, subparagraph (e).

*Tunisia.* It is suggested to replace the term “limited” in paragraph 1, subparagraph (b), with “established” [*déterminées*], since the former aims to restrict the categories of fishers or fishing vessels that may be excluded from the Convention, while the latter aims to determine the categories to be excluded.

---

*Article 4*

1. Each Member which ratifies the Convention shall, in the first report on the application of the Convention submitted under article 22 of the Constitution of the International Labour Organization:

- (a) list any categories of fishers or fishing vessels which may have been excluded in pursuance of Article 3, paragraph 1, above;
- (b) give the reasons for such exclusion, stating the respective positions of the representative organizations of employers and workers concerned, in particular the representative organizations of fishing vessel owners and fishers, where they exist; and
- (c) describe any measures taken to provide equivalent protection to the excluded categories.

2. Each Member shall describe in subsequent reports submitted under article 22 of the Constitution, the measures taken with a view to extending progressively the provisions of the Convention to the excluded fishers and fishing vessels.

*Observations on Article 4*

*Canada.* CEC: The concept that member States should be required to give reasons for exclusions and report on the positions of their constituents is not supported.

*Lebanon.* It is proposed to partly redraft paragraph 2 as follows: "... of the Constitution, any measures which might have been taken with a view to extending progressively ...".

*Article 5*

The competent authority may, after consultation, decide to use other units of measurement as defined in the Convention and shall, in the first report submitted under article 22 of the Constitution, communicate the reasons for the decision and any comments arising from the consultation.

*Observations on Article 5*

*Belgium.* It would be desirable to choose the criterion of vessel length, as defined in Article 1, subparagraph (k), rather than gross tonnage or any other unit of measurement. However, it should be noted that vessels might be of the same length and yet have a different engine power.

CCE: Same as the above reply.

*France.* The criterion of vessel length should be retained as the only unit of measurement. Gross tonnage should not also be used, since the introduction of a conversion formula – de facto a system of equivalence – would render the Convention difficult to understand and implement.

## PART II. GENERAL PRINCIPLES

## IMPLEMENTATION

*Article 6*

1. Each Member shall implement and enforce laws, regulations or other measures that it has adopted to fulfil its commitments under the Convention with respect to fishers and fishing vessels under its jurisdiction. Other measures may include collective agreements, court decisions, arbitration awards or other means consistent with national law and practice.

2. Nothing in this Convention shall affect any law, award, custom or any agreement between fishing vessel owners and fishers which ensures more favourable conditions or provisions than those provided for by the Convention.

*Observations on Article 6*

*China.* Emphasizing that implementing laws and regulations should be formulated in line with national conditions would avoid misunderstandings and contradictions between developed and developing countries. Paragraph 1 should, therefore, be amended as follows:

Each Member shall implement and enforce laws, regulations or other measures that it has adopted to fulfil its commitments under the Convention with respect to fishers and fishing vessels under its jurisdiction. Such laws and regulations shall be formulated in the light of national conditions so as to facilitate the implementation of the Convention. Other measures may include collective agreements, court decisions, arbitration awards or other means consistent with national law and practice.

*Italy.* UILA-PESCA: The “agreements between fishing vessel owners and fishers” referred to in paragraph 2 should explicitly include collective agreements between representative organizations of fishing vessel owners and trade unions for employed workers/wage earners.

*Lebanon.* For the purposes of clarity paragraph 1 should be redrafted to read: “... implement the provisions of the Convention by promulgating laws, regulations or any other measures that it has adopted to fulfil its commitments under the Convention ...”.

*New Zealand.* It would be helpful to clarify whether voluntary codes of practice would be considered as “other measures”.

## COMPETENT AUTHORITY AND COORDINATION

*Article 7*

Each Member shall:

- (a) designate the competent authority or authorities; and

- (b) establish mechanisms for coordination among relevant authorities for the fishing sector at the national and local level, as appropriate, and define their functions and responsibilities, taking into account their complementarities and national conditions and practice.

RESPONSIBILITIES OF FISHING VESSEL OWNERS, SKIPPERS AND FISHERS

*Article 8*

1. The fishing vessel owner has the overall responsibility to ensure that the skipper is provided with the necessary resources and facilities for the purpose of compliance with the obligations of the Convention.

2. The skipper has the responsibility for the safety of the fishers on board and the safe operation of the vessel, including but not limited to the following areas:

- (a) providing such supervision as will ensure that as far as possible fishers perform their work in the best conditions of safety and health;
- (b) managing the fishers on board in a manner which respects safety and health, including fatigue;
- (c) facilitating occupational safety and safety awareness training on board the vessel.

3. The skipper shall not be constrained by the fishing vessel owner from taking any decision which, in the professional judgement of the skipper, is necessary for the safety of the vessel and its safe navigation, safe operation or the safety of the fishers on board.

4. Fishers shall comply with established applicable safety and health measures.

*Observations on Article 8*

*Argentina.* With regard to the Spanish version of paragraph 1, the wording *patrón* should be inserted after *capitán*, as there is no reason for the words *capitán o patrón* to figure in paragraph 2 and not in paragraph 1.

*Australia.* This clarification of responsibilities is strongly supported. Given that many accidents in the maritime sector involve fishing vessels as a result of non-compliance with basic principles of seamanship on the part of crews/skippers, paragraph 2 could usefully include a new subparagraph: “(d) ensuring compliance with safety of navigation, watchkeeping and associated good seamanship standards.” As regards paragraph 4, the obligations of fishers should also comprise compliance “with lawful and reasonable directions of the skipper”.

*Canada.* CEC: The responsibility for safety should not rest solely with the vessel owner and skipper. The crew must also be held responsible for safe working practices at sea.

*China.* Paragraph 2, subparagraph (c), should be amended as follows: “facilitating training in occupational safety and health on board the vessel”.

*France.* The wording of this Article is very satisfactory, as it clearly shows the chain of responsibility and does not exclude any of the actors.

*Italy.* UILA-PESCA: In paragraph 2, subparagraph (a), the words “as far as possible” should be deleted.

*Lebanon.* In paragraph 1, it is proposed to replace “facilities” with “means”, because the term “facilities” is unclear in this context. Paragraph 2, subparagraph (c), should be amended to read: “... and safety and health awareness training ...”. The Arabic version of paragraph 3 should be redrafted as follows: “... which, from a professional point of view, in the judgment of the skipper, is necessary for the safety of the vessel ...”.

*Morocco.* Paragraph 3 should rather read:

The fishing vessel owner shall not constrain the skipper from taking any decision which, in the professional judgement of the skipper, is necessary for the safety of the fishers, or for the safety of the vessel and its safe navigation or operation.

*New Zealand.* It is suggested to redraft paragraph 2 as follows: “The owner and the skipper have the responsibility for ...”. Furthermore, it should be made clear that paragraph 4 refers to OSH measures as applied by member States.

### PART III. MINIMUM REQUIREMENTS FOR WORK ON BOARD FISHING VESSELS

#### MINIMUM AGE

##### *Article 9*

1. No person under the minimum age shall work on board a fishing vessel.
2. The minimum age at the time of the initial entry into force of the Convention is 16 years.
3. (a) The minimum age may be 15 years for persons who are no longer subject to compulsory schooling as imposed by national legislation, and who are engaged in maritime vocational training.  
(b) Persons of 15 years of age may also be authorized, in accordance with national law and practice, to perform light work during school holidays; in this case they shall be granted a rest of a duration equal to at least half of each holiday period.
4. The minimum age for assignment to activities on board fishing vessels, which by their nature or the circumstances in which they are carried out are likely to jeopardize the health and safety of young persons, shall not be less than 18 years.
5. The types of employment or work to which paragraph 4 above applies shall be determined after consultation, taking into account the risks concerned and the applicable international standards.
6. The competent authority may, after consultation, authorize the performance of work referred to in paragraph 4 above as from 16 years of age, on condition that the health and safety of the young persons concerned are fully protected and that the young persons concerned have completed basic pre-sea safety training.

*Observations on Article 9*

*Argentina.* As fishing is a hazardous activity per se, Argentina is actually in favour of a minimum age of 18 years. At the very least, the minimum age in the fishing sector should not be reduced to less than 16 years. Thus, paragraphs 3 and 6 should be deleted and a comprehensive reference to Convention No. 138 included. CATT states that the inclusion of some paragraphs of Convention No. 138 and not of others could damage compliance therewith, and that it would be preferable to explicitly refer to this Convention. It should also be remembered that, as established by the ILO, work in fishing is, as a whole, dangerous. Therefore, the minimum age of 18 should be adopted, as a minimum for vessels of 15 metres in length or over, while permitting exceptions following consultation. The Argentinian Naval Prefecture states that the minimum age in paragraph 3, i.e. 15 years, is contrary to national legislation, and that it would be advisable to at least change it to 16 years. The possibility to reduce the minimum age for hazardous work from 18 to 16 years (paragraph 6) is inappropriate, given that it entails a greater risk for fishers and for the safety of the vessel in general.

*Australia.* Given the dangerous nature and high injury rates of the fishing sector, the minimum age for working on fishing vessels should be 18 years for safety reasons. A lower age of 16 years for persons performing vocational training or light work during school holidays would seem appropriate to give exposure to the industry.

*Belgium.* Having ratified Convention No. 138 in 1988, Belgium could support the introduction of a cross reference in this Article. Furthermore, given the terminology employed in this provision (e.g. “work”, “worker”), clarification should be made as to whether persons under 15 years of age who are still subject to compulsory schooling would be allowed to undertake “observation voyages” during school holidays. Without actually carrying out any work aboard, these minors would travel on a fishing vessel and observe the activities on board for the purpose of information about the sector. If need be, it is suggested to adapt the provision to the effect that the possibility of such observation voyages for persons under 15 is retained by means of a permissive clause within Article 9 or the possibility of persons undertaking observation voyages is excluded from the definition of “fisher” in Article 1, subparagraph (e).

CCE: Same as the above reply.

*Brazil.* This provision should include a direct reference to Convention No. 138, ratified by Brazil, and prohibit persons under the age of 18 from working aboard fishing vessels. Special provisions should be laid down concerning the protection of minors working as apprentices, in particular as regards OSH or life on board.

*Canada.* Convention No. 138 is the general international labour standard on minimum age for employment, and any new language should be consistent with it. Moreover, only minimum age requirements specific to work in the fishing industry should be included in this Article. Paragraph 3, subparagraph (b), should be deleted, since Convention No. 138 stipulates the conditions under which light work may be carried out, and the introduction of a new requirement to restrict employment during school holidays could create a barrier to ratification.

*China.* Paragraph 3, subparagraph (a), should be amended as follows: “While the minimum age may ... training, it shall be approved by the competent authority in an

appropriate way.” The cases where the minimum age may be 15 years should be limited in number and necessitate approval from the competent authority.

*Finland.* National legislation provides that fishing work can only be performed by a male person of 16 or a female person of 17 years of age or more. The reduction to 15 years of age according to paragraph 3 would, thus, not be justified in terms of the protection of young persons. Also, an age limit of 18 for dangerous work is not provided for in national legislation.

*France.* The provisions of this Article and Convention No. 138 need to be better harmonized. Otherwise, its wording accommodates national concerns regarding the protection of young workers. The limited flexibility provided in paragraph 3 is essential to avoid an even greater exodus of young persons from the fishing industry.

*Guinea.* In the fishing sector of developing countries, there is a tendency to engage children of parents exercising the fishing profession. The proposed instruments should include provisions protecting these “child fishers” who are exposed to the inherent risks and hazards of the fishing activity.

*Iceland.* The minimum age in paragraph 2 should be 15 years instead of 16, and paragraph 3 should be deleted accordingly. Alternatively, in paragraph 3, the words “and who are engaged in maritime vocational training” (subparagraph (a)), as well as the phrase “in this case they shall be granted a rest of a duration equal to at least half of each holiday period” (subparagraph (b)) should be deleted.

*Indonesia.* The minimum age should be 18 years.

*Italy.* UILA-PESCA: Paragraph 3, subparagraph (b), authorizing persons of 15 years of age to perform light work during school holidays, should be removed.

*Lebanon.* New provisions on child labour should not be worded differently from the fundamental Convention No. 138. There is no objection to a minimum age of 16 years; however, under Convention No. 138 the minimum age is 15 years, and may, under certain circumstances, be limited to 14. To avoid adoption of different minimum ages in different countries, it should be clarified whether the meaning of “transport, storage and communication” provided for in Article 5, paragraph 3, of Convention No. 138 includes work in the fishing sector. Paragraph 3, subparagraph (a), should refer to Article 6 and Article 7, paragraphs 1 and 2, of Convention No. 138, and subparagraph (b) to Article 7, paragraph 1, of that Convention. It is proposed to redraft paragraph 4 for the purpose of consistency with Article 3, paragraph 1, of Convention No. 138: “... jeopardize the health and safety or morals of ...”. As for paragraph 6, it should be redrafted as follows: “... on condition that the health, safety and morals of the young persons concerned are fully protected and that the young persons concerned have received adequate specific instruction on sea or vocational training in the relevant branch of activity, including basic pre-sea safety training”. Otherwise training followed by young persons would only include the issue of safety, which would not be in accordance with Article 3, paragraph 3, of Convention No. 138.

*Norway.* The proposed Convention should be consistent with Convention No. 138, while the flexibility built into the present text should be retained.

*Portugal.* A cross reference to Convention No. 138 would better guarantee the application of its principles to the fishing sector. However, the inclusion of such reference into Article 9 would not seem to be very coherent.

*Spain.* Although the general minimum age for admission to employment is regulated in Convention No. 138, it would be justified for the minimum age in this Convention to be higher, given that conditions of work in the fishing sector are more hazardous than in other sectors. The minimum age for the fishing sector should be 16 years and should be raised to 18 in the case of work likely to jeopardize the health, safety or morals of young persons, as prescribed in Article 3, paragraph 1, of Convention No. 138. In paragraph 3, subparagraphs (a) and (b), should be consolidated to read: "The minimum age ... training; they may perform light work during school holidays; in this case ...". This would avoid confusion to the effect that only those young persons aged 15 years who have completed compulsory schooling and are engaged in maritime vocational training may perform work on board fishing vessels. According to national law, persons aged under 16 years cannot work in fishing activities under any circumstances; Spain is, however, aware of the feelings of countries such as France, which are keenly interested in this provision, in order to avoid possible loopholes of educational systems where compulsory education may be completed at the age of 15.

*Sweden.* Article 9 takes as a starting point Convention No. 112, which is outdated and has been revised through Convention No. 138. Of the 29 States that had ratified Convention No. 112, 21 have denounced it as a consequence of ratifying Convention No. 138, and four countries having ratified Convention No. 138 have accepted a lower age limit than that prescribed in Convention No. 112. Hence, paragraphs 3 and 6 should, as far as practicable, tie in with Articles 7 and 3 of Convention No. 138. Mere reference appears insufficient, since under Convention No. 138 the minimum age for light work is 13 years. It is recalled that the Tripartite Meeting on Safety and Health in the Fishing Industry (1999) established the hazardous nature of work aboard fishing vessels.

*Switzerland.* The establishment of a minimum age for employment of 16 years in paragraph 2 creates a problem of consistency with Conventions Nos. 138 and 182, which apply to all branches of activity, including the fishing sector. The fundamental Conventions set the minimum age at 15 years in general, less than 15 for light work and 18 for dangerous work. A minimum age of 16 for the fishing sector would give rise to more such exceptions, weakening Convention No. 138, and would ultimately result in the situation that led to the formulation of Convention No. 138, namely a plethora of different minimum ages set by sectoral Conventions. Paragraph 2 should, therefore, be deleted. Furthermore, since it is extremely hard to ascertain what activities in the fishing sector could be classed as light work, paragraph 3, subparagraph (b), should be removed. Lastly, for the sake of consistency, it should be taken into account that the fishing sector – at least the maritime one – has the characteristics of intrinsically dangerous work as defined in Article 3, subparagraph (d), of Convention No. 182, that are enumerated in Paragraph 3 of Recommendation No. 190: working in confined spaces (b), in an unhealthy environment (temperatures, noise levels, vibrations) (d), working with dangerous machinery, equipment and tools (c), manually handling or transporting heavy loads (c), working under particularly difficult

conditions (e.g. for long hours or during the night) (e), and with the potential for children to be exposed to physical, psychological or sexual abuse in such an environment (a). It should be recalled that the minimum age for employment in such cases is 18 years, using the wording of Article 3, subparagraph (d), of Convention No. 182. Accordingly, paragraph 5 should be deleted, and paragraph 6 should be redrafted along the lines of Paragraph 4 of Recommendation No. 190: “The competent authority could, after consultation, authorize the performance of work referred to in paragraph 4 above, on condition that the health, safety and morals of the children concerned are fully protected, and that the children have completed basic pre-sea safety training.”

*Tunisia.* It would be preferable to insert a reference to Convention No. 138 and thereby avoid weakening provisions laid down in fundamental Conventions.

*Ukraine.* It would be desirable to prohibit persons under 18 from working aboard fishing vessels, as provided in national legislation. See also comments under Article 26, subparagraph (c), and Paragraphs 1-3 of the proposed Recommendation.

*United States.* USCIB: With respect to paragraph 3, requiring a rest period of at least half of each holiday period for young persons 15 years of age is overly prescriptive and may prove impracticable given the nature of the work. Parents or legal guardians should make such decisions.

#### MEDICAL EXAMINATION

##### *Article 10*

1. No person shall work on board a fishing vessel unless they have a valid medical certificate attesting that they are medically fit to perform their duties.

2. The competent authority may, after consultation, grant exemptions from the application of the preceding paragraph, taking into account the health and safety of fishers, size of the vessel, availability of medical assistance and evacuation, duration of the voyage, area of operation, type of fishing operation and national traditions.

##### *Observations on Article 10*

*Argentina.* For the reasons given under Article 3, paragraph 2, should be deleted. The Argentinian Naval Prefecture states that it is not appropriate to authorize exceptions allowing fishers to work aboard fishing vessels without valid medical certificates attesting their medical fitness.

*Australia.* Whilst referring to medical examinations is sensible, it has a history of opposition, especially from owner-operators. Moreover, persons undergoing vocational training, which is of short duration and only intended to give school-leavers some exposure to the industry, should not be required to pass medical examinations.

*France.* There are two aspects to the fitness certified in paragraph 1, which should appear in the text, namely the fitness to navigate and the fitness to carry out the work. Strong reservations are expressed with regard to paragraph 2, which allows fishers to

exercise one of the most hazardous professions without attestation of their medical fitness.

*Iceland.* Paragraph 1 should read as follows: "... unless they are fit to perform their duties. If there is any doubt about their fitness, the fishers are obliged to have a medical examination if the skipper so requires."

*Lebanon.* Every person should hold a medical certificate before beginning work in any field, and some activities require certain additional health conditions. Since paragraph 2 allows for exemptions from the general obligation to have a medical certificate, it should be redrafted.

*New Zealand.* The word "person" should be replaced with the term "fishers" in paragraph 1 because the current wording is too all-inclusive.

*Norway.* Paragraph 6 of the proposed Recommendation should be moved to the Convention and become new paragraph 2 of Article 10. If the medical certificate was not signed by a medical practitioner approved by the competent authority, this document would not attest to much, and Norway would question its value. Also, the period of validity for medical certificates should not exceed two years.

*Spain.* Given that in paragraph 1, "medically fit" is rendered in Spanish as *aptitud física*, the words "physically and psychologically" should replace the word "medically". It is just as important for the security of the rest of the crew to verify and certify the worker's *psychological* health, especially if one considers that a vessel is a confined and isolated space on which people are forced to live together for months at a time.

*Ukraine.* A provision concerning compulsory inspection of fishing vessel crews should be included in the Convention.

*United States.* USCIB: The term "person" should be replaced with "fisher". Further, the requirement for medical certification should be limited to fishers who have direct responsibility for the safe operation of the vessel and safety of the crew, such as skippers, mates, navigators, watch standers, engineers, and fishers holding a mariner's document or licence issued under governmental authority.

IMHA: Paragraph 2 allows for too many subjective exemptions from the requirement of medical examination (e.g. national traditions) and should be more objective and restrictive. This preventive activity is crucial for *all* vessels, since emergency cases resulting from non-prevention rely on the quick availability of medical assistance regardless of vessel size. Non-compulsory medical examination would result in individual/public health and economic damages. Accordingly, Chapter IV of the ILO/WHO *Guidelines for conducting pre-sea and periodic medical fitness examinations for seafarers* only permits exemptions for *single* voyages.

### Article 11

Each Member shall adopt laws, regulations or other measures providing for:

- (a) the nature of medical examinations;
- (b) the form and content of medical certificates;

- (c) the medical certificate to be issued by a duly qualified medical practitioner or, in the case of a certificate solely concerning eyesight, by a person recognized by the competent authority as qualified to issue such a medical certificate; practitioners shall enjoy full professional independence in exercising their medical judgement in terms of the medical examination procedures;
- (d) the frequency of medical examinations and the period of validity of medical certificates;
- (e) the right to a further examination by another independent medical practitioner in the event that a person has been refused a certificate or has had limitations imposed on the work he or she may perform; and
- (f) other relevant requirements.

### *Observations on Article 11*

*France.* The appeal procedure envisaged in subparagraph (e) is essential.

*Lebanon.* In subparagraph (c), the phrase “or, in the case of a certificate solely concerning eyesight ... certificate;” should be deleted. A qualified medical practitioner recognized by the competent authority is the appropriate person to issue medical certificates, and there is no need for other bodies to deliver certificates concerning eyesight. It is also proposed to add a new clause to subparagraph (e) designating the authority empowered to determine which one of the two medical certificates for the same person and case is valid.

*New Zealand.* It is considered that the intent of this wording could already be achieved through Article 10, and that the prescriptive directions of this provision would be better placed in the Recommendation.

*Norway.* Paragraph 10 of the proposed Recommendation should be moved to the Convention and become new Article 12, since the right to administrative appeal is a fundamental right which should be guaranteed to all fishers.

*Spain.* Subparagraph (e), which reiterates the right to be examined by an independent medical practitioner, conflicts with subparagraph (c), which provides that medical certificates have to be issued by persons who “enjoy full professional independence”. The unhappy formulation of the provision leads to the question of which independence should prevail, the first or the second. It is recommended to use a text similar to that in Article 14, subparagraph (c), which refers to means of settling disputes in connection with work agreements and leaves it to national legislation to determine procedures. Subparagraph (e) should, thus, be redrafted as follows: “means of settling disputes concerning medical certification, in the event that a fisher has been refused a certificate or has had limitations imposed on the work he or she may perform, and does not agree; and”.

*Ukraine.* In Ukraine, panels of doctors at specially accredited institutions of preventive medicine carry out medical examinations, and their conclusions cannot be revised by an independent doctor. Thus, subparagraph (e) should be removed, and subparagraph (c) should refer to panel(s) of medical practitioners.

## PART IV. CONDITIONS OF SERVICE

## MANNING AND HOURS OF REST

*Article 12*

Each Member shall adopt laws, regulations or other measures requiring that owners of fishing vessels flying its flag ensure that:

- (a) their vessels are sufficiently and safely manned with a crew necessary for the safe navigation and operation of the vessel and under the control of a competent skipper; and
- (b) fishers are given rest periods of sufficient frequency and duration for the safe and healthy performance of their duties.

*Observations on Article 12*

*Argentina.* It would be appropriate for this Article to clearly provide that the crew should be sufficient in number to ensure both safe navigation and safe operation of fishing activities.

*Australia.* Manning and hours of rest is a core safety provision, which should also clearly apply to single-handed owner-operators.

*France.* It is, in practice, very difficult to apply working-hour restrictions to the fishing sector, given that, on board vessels, it is almost impossible to distinguish periods *other* than periods of rest. Thus, the concept of sufficient rest in subparagraph (b) is necessary.

*New Zealand.* This Article is supported. New Zealand is currently undertaking a study into fatigue on all commercial ships, which may result in a code of practice.

## FISHERS' WORK AGREEMENTS AND LIST OF PERSONS ON BOARD

*Article 13*

Each Member shall adopt laws, regulations or other measures:

- (a) requiring that fishers working on vessels flying its flag have a fisher's work agreement comprehensible to them that is consistent with the provisions of the Convention;
- (b) specifying the minimum particulars to be included in fishers' work agreements in accordance with the provisions contained in Annex I.

*Observations on Article 13*

*Australia.* Matters such as inclusion of work agreements, keeping agreements on board and frequency of payment are inconsistent with national practice and reflect outdated concepts of industrial relations that are no longer required in Australia's circumstances of awards and work contracts or catch-sharing arrangements. Such details

should be left out of the Convention for the purpose of widespread ratification. In its reply, Queensland also signals that it would have difficulty complying with this Article.

*Lebanon.* Subparagraph (a) should be partly redrafted as follows: "... comprehensible to them, simply drafted, and consistent with ...".

*New Zealand.* Subparagraph (b) and Annex I cover matters that are more properly included in a Recommendation than a Convention, which should have a principle-based approach. Moreover, it is cautioned that the definition of "fisher" includes self-employed persons, but that the terms of a genuine independent contracting arrangement are not subject to employment legislation (although OSH requirements apply).

*United Kingdom.* See comment under Annex I.

*United States.* USCIB: It is impracticable to impose upon vessel owners the duty to translate written fishers' work agreements in languages comprehensible to every fisher given the many multilingual regions and the diversity of workforces. Fishers' agreements are legally binding documents that must be clearly and accurately translated to avoid misinterpretation. In many countries such sophisticated, competent translation resources will be difficult to locate and prohibitively expensive. Therefore, Article 13 should be amended to read: "... have a written fisher's work agreement that is consistent with the provisions of the Convention drafted in the official language of the Member's country or, if practicable, in the predominant language of a region most represented by the majority of the crew."

#### Article 14

Each Member shall adopt laws, regulations or other measures regarding:

- (a) procedures for ensuring that a fisher has an opportunity to review and seek advice on the terms of the fisher's work agreement before it is concluded;
- (b) maintenance of records concerning the fisher's work under such an agreement; and
- (c) the means of settling disputes in connection with such an agreement.

#### Observations on Article 14

*Australia.* It is unclear whether this is intended to apply to all vessels or just those flying the flag of the Member. Furthermore, the concept of a service record book is inconsistent with national practice. Service should be able to be established by reference to an employer.

*France.* The wording of subparagraph (b) is imprecise. It should be made clear that records concerning the fisher's work under the agreement can be kept using any method, be it the traditional form of a service book or more up-to-date methods.

*New Zealand.* It would be helpful to clarify what "records" are intended to be covered under subparagraph (b).

*Norway.* The Norwegian Fishing Vessel Owners' Association criticizes the fact that fishers would be able to "detain" the vessel until they are "satisfied" with the content of the work agreement. The Government does not believe that this requirement would cause problems for the industry, although the "recruitment process" on board fishing vessels is more casual than that for seafarers.

*United States.* USCIB: In view of the comment under Article 13, this Article should be amended to read: "Each Member should adopt ... : (a) ... on the terms of the fisher's work agreement including language translation assistance before it is executed; ... (c) the means and venue of settling disputes ...".

#### *Article 15*

The fisher's work agreement, a copy of which shall be provided to the fisher, shall be carried on board and be available to the fisher and, in accordance with national law and practice, to other concerned parties on request.

#### *Observations on Article 15*

*Australia.* See comment under Article 13.

*Finland.* This Article is in harmony with national legislation, which requires that contracts be made in writing.

*France.* MEDEF: It appears redundant to carry the work agreement on board, if a copy has already been provided to the fisher; one of the two options should suffice. Furthermore, the term "concerned party" is too vague and needs to be clarified, since, in practice, not all third persons concerned have access to the fisher's work agreement.

*New Zealand.* It may be helpful to clarify who "other concerned parties" is intended to cover.

#### *Article 16*

Articles 13 to 15 inclusive, and Annex I, do not apply to a fishing vessel owner who is also single-handedly operating the vessel.

#### *Article 17*

Every fishing vessel shall carry a list of the fishers on board, a copy of which shall be provided to appropriate persons ashore prior to or shortly after departure of the vessel.

#### *Observations on Article 17*

*Argentina.* It is suggested to replace the words "appropriate persons on shore" with the term "the competent authority" and to delete the words "or shortly after".

*France.* The notion “appropriate persons ashore” should be more precise and should, at least, be amended to read “authorities and/or appropriate persons ashore”.

*Lebanon.* As it is crucial that the authority be provided with a list of the fishers on board *prior* to the departure of the vessel, the implications of the term “after” are unclear. The Government enquires whether this covers new fishers that may be taken on board from other ports after departure.

*New Zealand.* The intent of this Article is generally supported but the wording should be amended so that ships do not need to carry the list on board.

*Nicaragua.* CTN: The time limit for providing the list of fishers on board should be fixed. Hence, the provision should read as follows: “... provided to the appropriate authorized person ashore prior to departure of the vessel or within X hours after departure.”

*Tunisia.* It is suggested to exclude fishing vessels of less than 5 t from this requirement, because they usually carry out subsistence fishing, and it would be impracticable for them to carry, in all circumstances, a list of persons on board.

#### IDENTITY DOCUMENTS, REPATRIATION RIGHTS AND RECRUITMENT AND PLACEMENT SERVICES

#### *Article 18*

Fishers working on board fishing vessels that undertake international voyages shall enjoy treatment no less favourable than that provided to seafarers working on board vessels flying the flag of the Member and ordinarily engaged in commercial activities, with respect to:

- (a) identity documents;
- (b) repatriation conditions;
- (c) recruitment and placement services.

#### *Observations on Article 18*

*Argentina.* The square brackets in subparagraph (a) should be eliminated and the text retained. Furthermore, this provision should be extended to vessels undertaking national voyages. CATT states that, taking into account the entry into force of Convention No. 185 and other standards applicable to seafarers when in port or on foreign territory, it is essential that fishers on board vessels undertaking international voyages benefit, as far as identity documents are concerned, from conditions similar to those applying to seafarers.

*Australia.* Fishers on fishing vessels undertaking overseas voyages should have identity documents. Requirements for identity documentation on such vessels inevitably will have to be the same as for seafarers and should not be of a lesser standard.

*Belgium.* The idea that fishers on board vessels undertaking international voyages should have identity documents is supported. However, fishers’ identity documents

need not necessarily be the same as those required for seafarers. It would be preferable to delete the mention of identity documents in this Article and create a separate provision simply stating that these fishers should have “an identity document”.

*CCE:* Same as the above reply.

*Brazil.* Fishers’ identity documents, as provided in subparagraph (a), should comply with Convention No. 185, which allows for the application of its provisions to fishers following consultation. In Brazil, there are no fishing vessels that undertake international voyages and, even in case of foreign vessels fishing in the national EEZ, fishers must have a work permit in order to stay in the country. Brazil, therefore, understands that it would not need to issue fishers’ identity documents.

*Canada.* The reference to identity documents in subparagraph (a) should be deleted. Conventions Nos. 108 and 185 include provisions making it possible to apply these instruments to commercial maritime fishing. In addition, agreement was reached to remove the reference to identity documents from the draft consolidated maritime labour Convention.

*France.* Equivalent treatment of fishers on the above three points is supported. Repatriation rights, in particular, should apply to all fishers.

*Greece.* It would be advisable that subparagraph (a) be deleted, since it has already been agreed in the framework of the draft consolidated maritime labour Convention that there should be no reference to identity documents.

*Japan.* The “identity document” issued by each Member to its nationals would not always be based on Conventions Nos. 108 or 185, since these instruments are not included in the Preamble. Actual implementation of subparagraph (a) might, therefore, prove difficult, given the numerous nationalities on board fishing vessels and the various types of “identity documents” issued by Members to the fishers. Moreover, it has been decided that provisions concerning seafarers’ identity documents are not to be included in the draft consolidated maritime labour Convention. Thus, it would be appropriate to delete subparagraph (a). It would further be appropriate to either delete subparagraph (c) or to adjust it to the draft consolidated maritime labour Convention, according to which the control of recruitment and placement services is the responsibility of the State in which the services operate, and not a flag state responsibility.

*New Zealand.* The proposed wording is supported.

*Norway.* The brackets around subparagraph (a) should be removed, without, however, specifically referring to Convention No. 185. There would be no need for this Article if additional requirements for large vessels were developed. See comment under Article 30.

*Portugal.* As regards subparagraph (a), the provisions on identity documents applicable to seafarers should also apply to fishers, especially to those working on vessels that undertake international voyages.

*Spain.* Identity documents are already regulated in Convention No. 185 and, therefore, to ensure consistency with the wording of the draft consolidated maritime labour Convention, it is suggested to delete the bracketed text in subparagraph (a).

*Tunisia.* Fishers to whom this Article applies should have identity documents for the purpose of maritime security and, from a practical point of view, for the identification of persons working in the sector.

*United Kingdom.* It has already been agreed that there will be no reference to Seafarer IDs in the draft consolidated maritime labour Convention. Moreover, Convention No. 185 includes the option of extending its scope to the fishing sector. The reference in the proposed fishing sector Convention should, therefore, be deleted.

*United States.* USCIB: This Article should be deleted. The term “seafarer” broadly encompasses a vast array of occupations including barge operators, shippers, pilots, merchant mariners and others employed in government service, etc. Provisions relating to fishers’ identity documents, repatriation, and recruitment and placement should be specific to those engaged in commercial fishing as defined within the instrument.

#### PAYMENT OF FISHERS

##### *Article 19*

Each Member shall, after consultation, adopt laws, regulations or other measures providing that fishers are ensured a monthly or regular payment. The competent authority shall, after consultation, define the fishers to be covered by this provision.

##### *Observations on Article 19*

*Australia.* See comment under Article 13. It would be preferable to have a clause that guarantees fishers who are not on catch-sharing arrangements a minimum salary under the respective flag state legislation. Frequency of payment is best left to be arranged between the parties, possibly with participation of relevant industrial organizations.

*Canada.* CEC: Canadian fishing crews are usually paid at the conclusion of fishing trips based on the sale value of the catch. The timing of interim or final cash payments is not for the Government to dictate but a matter for discussion between the parties.

*France.* This Article should be supplemented to the effect that the principle of monthly or regular payment is affirmed, while allowing for flexibility in case of payments based on a share of the catch.

*Indonesia.* Fishers should be paid in the form of a standard salary with mandatory minimum wage.

*New Zealand.* It would be helpful to clarify what is intended by “regular payment” and what flexibility is envisaged under this Article in relation to self-employed fishers.

*Norway.* The Norwegian Fishing Vessel Owners’ Association feels that this Article could be strongly in contrast with the practice of payments based on a share of

the catch. Although the majority of seagoing vessels in Norway have introduced a monthly prepayment system, this is not the general rule in the international fleet.

*South Africa.* The national competent authority does not have the power to determine the wages of fishers. It is therefore proposed to broaden the provision and insert after “competent authority” the words “or any other government agency or agencies established in terms of national law”.

*Spain.* The general rule is that the workers in the fishing sector share the profits obtained from the catch and are not paid in the form of a wage. If the intention is to guarantee minimum remuneration for fishers, irrespective of the catch, the following alternative wording is suggested: “Each Member shall, after consultation, adopt laws, regulations or other measures providing that fishers receive minimum remuneration that is not below the minimum wage established for other workers. The competent authority shall, after consultation, define the fishers to be covered by this provision.”

*United States.* USCIB: Financial risks and rewards are inherent in the share-based compensation structure which is common practice in the industry. Typically, crew share earnings cannot be determined until the fish is sold and there is no guarantee that this will occur on a scheduled or monthly basis. However, advances against the settlement of anticipated estimated earnings should be made available to fishers for their protection and benefit. Therefore, Article 19 should be amended to read: “... fishers are paid in accordance with the terms expressly defined in their fisher’s agreement and agreed to by both parties prior to the commencement of the employment relationship. The competent authority should, after consultation, adopt measures to ensure that fishers may receive advance(s) against earnings when impacted by operational shut-downs, mechanical failure or other circumstances that may affect the well-being and welfare of fishers.”

## PART V. ACCOMMODATION AND FOOD

### *Article 20*

[Each Member shall adopt laws, regulations or other measures with respect to accommodation, food and potable water on board for fishing vessels that fly its flag.

#### *Observations on Article 20*

*Australia.* Queensland recognizes the importance of these matters to the health and safety of workers.

*Brazil.* See comment under Article 22.

*Canada.* The inclusion of proposed Article 20 in the Convention is supported.

*Cyprus.* OEB: The employers’ associations members of the IOE plan to further discuss the complicated issue of accommodation and food in the upcoming months.

*France.* The proposed Convention and Recommendation must contain provisions concerning accommodation. Moreover, many of the provisions in this area are fundamental provisions that should apply to *all* fishers, regardless of vessel size.

*Mauritius.* Supports the Articles relating to accommodation and food.

*New Zealand.* The proposed wording is supported.

*Spain.* The square brackets around Articles 20, 21 and 23 should be deleted, while retaining the content, which is roughly similar to the provisions of Conventions Nos. 68 and 126.

*Tunisia.* For practical reasons, it is proposed to exclude fishing vessels of less than 12 metres in length from Part V concerning accommodation and food.

*European Union.* Council Directive 1997/70/EC, as amended by Commission Directives 1999/19/EC and 2002/35/EC, sets up a maritime safety regime for fishing vessels of 24 metres and over (related to the SFV PROT 1993). This instrument is not only a minimum standard but rather establishes safety requirements for the construction and maintenance of fishing vessels, which should be applied in a consistent way in EU Member States. Should the draft provisions on accommodation affect the construction of the vessel in relation to safety, they ought to be compatible with the EU legislation.

#### *Article 21*

Each Member shall adopt laws, regulations or other measures requiring that accommodation on board fishing vessels that fly its flag shall be of sufficient size and quality and shall be appropriately equipped for the service of the vessel and the length of time fishers live on board. In particular, such measures shall address, as appropriate, the following issues:

- (a) approval of plans for the construction or modification of fishing vessels in respect of accommodation;
- (b) maintenance of accommodation and galley spaces with due regard to hygiene and overall safe, healthy and comfortable conditions;
- (c) ventilation, heating, cooling and lighting;
- (d) mitigation of excessive noise and vibration;
- (e) location, size, construction materials, furnishing and equipping of sleeping rooms, mess rooms and other accommodation spaces;
- (f) sanitary facilities, including water closets and washing facilities, and supply of sufficient hot and cold water; and
- (g) procedures for responding to complaints concerning substandard accommodation.

#### *Observations on Article 21*

*Brazil.* See comment under Article 22.

*Canada.* This Article is supported.

*Cyprus.* OEB. See comment under Article 20.

*New Zealand.* The proposed wording is supported.

*Spain.* See comment under Article 20.

*Tunisia.* See comment under Article 20.

#### Article 22

[Fishing vessels to which [Annex II] applies shall as a minimum comply with the standards contained therein.]

#### Observations on Article 22

*Argentina.* It would be preferable that not only the general provisions of Articles 20-23 but also Annex II be obligatory. The Argentinian Naval Prefecture adds that, while the country has not ratified Convention No. 126, Annex II is a modified version of that Convention, which lays down minimum accommodation requirements directly linked to safe navigation. CATT states that issues relating to accommodation, food and drinking water are among the principle aspects of fishing that call for special attention. Only a sufficiently detailed and compulsory standard would contribute to a practical amelioration of conditions.

*Brazil.* A reference to Annex II, within the body of the Convention, is supported. Furthermore, Brazil is in favour of the use of the word “should” in this annex. Having ratified Convention No. 126, Articles 20-23 are considered appropriate for discussion, as long as Annex II is linked to the proposed Convention. Moreover, it would be beneficial to establish a simplified amendment procedure for Annex II, which would render it more flexible and adaptable to changes within the fishing industry.

*Canada.* Some of the provisions in Annex II could be included in or attached to the Recommendation in order to provide guidelines for the implementation of Articles 20, 21 and 23.

*Cyprus.* OEB: See comment under Article 20.

*New Zealand.* The proposed wording is generally supported.

*Norway.* The initial Norwegian position was to strive for a Convention giving all fishers the same rights as regards working and living conditions and make Annex II mandatory for all vessels. As a secondary standpoint, it is supported that the requirements for larger fishing vessels may be stronger than for smaller vessels. Thus, the square brackets should be removed and the text of Article 22 kept to the effect that Annex II becomes mandatory for the vessels within its scope. The requirements of Annex II should be applied to vessels of 24 metres LOA and over, and might be applied to vessels between 15 and 24 metres LOA. Both vessel owners and fishers would benefit from these standards. The vessel owners’ asset, the vessel, would become more valuable because easier to sell, while the fishers would benefit from a decent workplace. If parts of Annex II should become non-mandatory, the whole annex should be incorporated into the Convention along the lines of the draft consolidated maritime labour Convention, the idea being to require Members to take the

provisions into consideration, since ILO Recommendations do not get the attention they deserve. In addition, a simplified amendment mechanism for Annex II should be adopted.

*Spain.* The square brackets in and around this Article should be deleted while retaining the content.

*United Kingdom.* The United Kingdom supports in principle the inclusion of additional provisions for larger vessels.

### Article 23

The food carried and served on board fishing vessels shall be of an appropriate quantity, nutritional value and quality for the service of the vessel and potable water shall be of sufficient quantity and quality.]

#### Observations on Article 23

*Brazil.* See comment under Article 22.

*Canada.* This Article is supported.

*Cyprus.* OEB. See comment under Article 20.

*New Zealand.* The proposed wording is supported.

*Spain.* See comment under Article 20.

*Tunisia.* See comment under Article 20.

*European Union.* This provision is not covered by EU Directives.

## PART VI. HEALTH PROTECTION, MEDICAL CARE AND SOCIAL SECURITY

### MEDICAL CARE

#### Article 24

Each Member shall adopt laws, regulations or other measures requiring that:

- (a) fishing vessels shall carry appropriate medical equipment and medical supplies for the service of the vessel, taking into account the number of fishers on board, the area of operation and the length of the voyage;
- (b) medical equipment and supplies carried on board shall be accompanied by instructions or other information in a language and format understood by the fishers concerned;
- (c) fishing vessels shall have at least one person on board who is qualified or trained in first aid and other forms of medical care, and has the necessary knowledge to use the medical equipment and supplies for the vessel concerned, taking into account the number of fishers on board, the area of operation and the length of the voyage;

- (d) fishing vessels shall be equipped for radio or satellite communication with persons or services ashore that can provide medical advice, taking into account the area of operation and the length of the voyage;
- (e) fishers shall have the right to medical treatment ashore and to be taken ashore in a timely manner for treatment in the event of serious injuries or illnesses.

#### *Observations on Article 24*

*Lebanon.* Subparagraph (b) should be amended as follows: "... in a language understood by the fishers concerned, and with simplified drafting". In subparagraph (d), it is proposed to add after "radio or satellite communication" the words "or other means of communication".

*Ukraine.* The term "medically" should be added after the words "at least one person who is", and the word "or" after "qualified" should be replaced with "and".

*United States.* USCIB: Subparagraph (b) should be amended to read: "medical equipment ... should be accompanied by instructions ... in the official language of the Member's country and the language understood by the skipper or other designated first-aid responders on board the vessel."

IMHA: In subparagraph (b), it should be specified that the instructions accompanying medical equipment and supplies should have the "format of a medical guide".

#### *Article 25*

The standards for medical care on board fishing vessels that undertake international voyages or remain away from land for a period prescribed by the competent authority shall be no less favourable than those provided to seafarers on vessels of a similar size ordinarily engaged in commercial activities.

#### *Observations on Article 25*

*Lebanon.* In the Arabic version, it is proposed to add the word "medical" in the second line after the word "care" for the purpose of clarification.

*United States.* USCIB: This Article should be deleted for the reason mentioned under Article 18. Standards for medical care on board fishing vessels undertaking international voyages or remaining away from land for a period prescribed by the competent authority should be applicable and specific to fishing vessels taking into account the size of the crew and area of operation.

#### *Article 26*

Each Member shall adopt laws, regulations or other measures concerning:

- (a) the prevention of occupational accidents, occupational diseases and work-related risks on board fishing vessels, including risk evaluation and management, training and on-board instruction of fishers;
- (b) training for fishers in the handling of types of fishing gear they will use and in the knowledge of the fishing operations in which they will be engaged;
- (c) the obligations of fishing vessel owners, fishers and others concerned, due account being taken of the safety and health of fishers under 18 years of age;
- (d) the reporting and investigation of accidents on board fishing vessels flying its flag;
- (e) the setting up of joint committees on occupational safety and health.

### *Observations on Article 26*

*Argentina.* The meeting places for the joint OSH committees envisaged in subparagraph (e) should be specified. It is preferable that these meetings take place on shore. CATT states that OSH committees should only work on shore, while committees to evaluate occupational risks should be established on board.

*Belgium.* In the context of the Act of 5 December 1968 on collective agreements and joint committees, the terms “joint committee” and “joint body” carry a specific meaning, which is very different from that in subparagraph (e). In order to avoid any confusion, it would be advisable to replace the term “joint committees” with some other concept, e.g. “bodies composed jointly”. Furthermore, it seems preferable and in keeping with Article 26, subparagraph (e), to establish a committee of this type at *sectoral* level, by making use, if need be, of existing bodies with similar competences. It would, therefore, not be desirable for the Convention to generally require these bodies to meet on board or ashore. Bodies created at sectoral level would obviously meet on land, while bodies established at enterprise level might, under certain circumstances, meet on board.

CCE: Same as the above reply.

*Brazil.* Joint OSH committees as provided in subparagraph (e) should meet regularly aboard vessels. The fishing vessel owner on shore should be made aware of the results of these meetings, should regularly send technicians aboard to assess the issues raised and measures proposed, and should provide the means for solving identified problems.

*Canada.* It is not supported to add prescriptive language in subparagraph (e) as to where OSH committees are to meet. Any necessary guidance on the implementation of Article 26 should be included in the Recommendation. Occupational health and safety issues can arise on board a vessel or on shore, so committees should meet in the location best addressing the issue.

CEC: As for subparagraph (b), it is not the Government’s role to require standards for the training of fishers in relation to handling fishing gear and fishing operations. This should remain within the purview of the owner/management of the vessel.

*Finland.* Subparagraph (a) requires member States to prevent occupational accidents, diseases and work-related risks by various measures, such as risk evaluation and management, training and on-board instruction of fishers. The fact that more precise, detailed guidelines have been included in the proposed Recommendation is

supported; the reason being that the Convention is to be applied to all vessels and to self-employed fishers.

*Lebanon.* Doubts are raised as to the possibility of really *preventing* occupational accidents, diseases and work-related risks on board fishing vessels or in any other sector. For this reason, subparagraph (a) and the title should be redrafted using the term “avoid”. Since it seems that subparagraph (c) is incomplete, the following wording is proposed: “the obligations of ..., to guarantee occupational safety and health, and to avoid accidents, due account being taken of ...;”. As regards subparagraph (e), these committees can meet on board fishing vessels or on land according to the needs and the nature of the issues to be discussed. The Government further enquires who would be members of these committees and whether the State would be represented.

*Mauritius.* The tripartite Advisory Council for Occupational Safety, Health and Welfare proposes that the joint OSH committees provided for in subparagraph (e) should be held both on board and ashore.

*Norway.* See comment under Article 1, subparagraph (e). As regards subparagraph (e), the joint committees should meet both on shore and on board, but a distinction could be made between small and large fishing vessels. Shore-based committees could be suitable for small vessels with a very limited sized crew, while large vessels should be required to have on-board committees. See also comment under Article 30. Furthermore, the Convention should be strengthened in the area of OSH, since this is a fundamental issue for all fishers. It is proposed to insert a new Article 27 with the following wording inspired from Paragraphs 20-22 of the proposed Recommendation:

In order to contribute to the continuous improvement of safety and health of fishers, member States shall have in place programmes for the prevention of accidents on board fishing vessels to ensure the reporting and dissemination of information regarding occupational accidents and illnesses and measures to ensure prevention. When establishing methods and programmes concerning safety and health in the fishing sector, competent authorities shall take into account any relevant international guidelines concerning occupational safety and health management systems. The skipper shall ensure risk evaluation and management, as appropriate with the participation of fishers or their representatives, and onboard instruction of fishers.

*Spain.* In subparagraph (c), the following wording should be added after “concerned”: “specifically, the obligations of the captain or master to discharge the obligations of the owner on board”. When dealing with OSH and accident prevention, it is important that national regulations make reference to the extremely important figure of the captain/master, who has the highest level of responsibility on board, represents the owner on the vessel and plays a key role in the safety of the crew. As for subparagraph (e), joint OSH committees should be set up on shore to carry out comprehensive studies on prevention and accident rates at the enterprise level and on board each vessel in order to apply comprehensive plans to the specific reality of each vessel.

*Tunisia.* For the purpose of greater flexibility, it is proposed to allow joint OSH committees to meet both on board fishing vessels and on shore.

*Ukraine.* Subparagraph (c) should be deleted, in order not to leave room for the employment of individuals under the age of 18 on fishing vessels (cf. comment under

Article 9). As for subparagraph (d), the following additions should be made: “the opportunity for accidents to be investigated by a panel headed by the captain of the vessel; presentation of all documents pertaining to the investigation of any accident in which they have been involved to fishers who are not citizens of the State whose flag the vessel flies; reporting of any accident to the competent authorities of the State of which fishers involved in it are citizens; if fishers die through accidental or natural causes, presentation of all documents pertaining to the investigation of accidents or events to the competent authorities of the State of which they were citizens.”

*United Kingdom.* Subparagraph (b) refers to training in the handling of fishing gear and is almost the only reference to training in the Convention itself. It would be appropriate to include a more general reference to training along the following lines: “Taking into account the provisions of the International Convention on Standards of Training, Certification and Watchkeeping for Fishing Vessel Personnel, 1995 (STCW-F), each Member should adopt measures to ensure that fishers are appropriately trained for the duties they have to perform.”

*United States.* USCIB: In some instances setting up a joint committee may be impractical. Thus, subparagraph (e) should be amended to read: “(e) the establishment of joint committees on occupational safety and health as may be practicable based on the size of the crew.”

IMHA: The wording “health promotion and” should be inserted at the beginning of subparagraph (a). This term would add value to the mere concept of “prevention”.

#### SOCIAL SECURITY

##### *Article 27*

[Each Member shall ensure that fishers are entitled to benefit from social security protection on conditions no less favourable than those applicable to other workers.]

##### *Observations on Article 27*

*Argentina.* It is supported to guarantee to fishers conditions that are no less favourable than those applied to other workers. In this sense, it is important to highlight the existence in Argentina of standards common to all maritime workers, whether they work on board fishing vessels or on any other commercial vessel. Moreover, bilateral social security agreements for the fishing sector have been concluded with other countries, such as Spain and Italy.

*Belgium.* Fishers in Belgium enjoy the same level of social security protection as salaried workers, while seafarers enjoy a more favourable status. To date, Belgium has signed no bilateral social security agreements with other countries.

CCE: Same as the above reply.

*Brazil.* In Brazil, fishers benefit from the same social security protection as seafarers and workers in other economic sectors. There is no information about bilateral social

security agreements covering the fishing sector between Brazil and any other country. The solution under the draft consolidated maritime labour Convention, according to which the country of nationality bears the main responsibility for the seafarer's social security, while the flag State has the subsidiary responsibility, is considered acceptable.

*Canada.* In general, Canadian fishers have the same social security protections as other workers. In addition, special regulations extend social security protections to self-employed fishers. Basic medical care is available to all. Canada has entered into bilateral agreements with approximately 45 countries in order to facilitate access to social security benefits by persons who have worked both in Canada and in one of the signatory countries.

*Finland.* Social security for self-employed fishers appears problematic because national OSH legislation is not applicable to them. Furthermore, the maritime safety requirements for vessels in Finland are aimed at all vessels in the marine register, i.e. vessels that must undergo inspection.

*France.* The broad diversity in national situations has to be taken into account in this area, as too burdensome or detailed provisions could impede widespread ratification. On the other hand, it seems necessary to affirm the responsibility of the flag State and, in particular, to lay down the principle that the flag State should provide social security coverage for fishers residing in its territory; however, a clause should permit exemptions, where regional integration systems are in place. With regard to countries with incomplete systems, the principle of progressive, stage-by-stage coverage should be retained.

*Japan.* In the draft consolidated maritime labour Convention, Members are to provide social security protection to all seafarers ordinarily resident in their territory, irrespective of their nationality. Thus, it would be appropriate to add the words "ordinarily resident in its territory" after "fishers" and the words "resident in its territory" after "workers".

*Netherlands.* Members should be obliged to protect fishers against all social security risks catalogued in Convention No. 102. Furthermore, it is necessary that the responsibilities of the flag State and the State of residence be stipulated explicitly, in case they do not coincide. Finally, during the drafting of Convention No. 102, it has been decided to exclude seafarers and fishers from the scope of application, on the ground that their conditions of work require a highly specialized system of protection. The latter has been inserted in a separate section of the current draft entitled "Protection in the case of work-related sickness, injury or death" (Article 29). However, social security as defined in Convention No. 102 includes "work-related sickness, injury or death", which in the terminology of Convention No. 102 is called "employment injury". Therefore, it is desirable to integrate the current Article 29 into the social security section. For the above reasons, Articles 27, 28 and 29 should be replaced with the following Articles:

#### *Article 27*

1. Members shall undertake steps, according to their national circumstances, to achieve progressively comprehensive social security protection for seafarers who reside in their territory.

2. The social security protection referred to in paragraph 1 shall include: medical care, sickness benefit, unemployment benefit, old-age benefit, family benefits, maternity benefits, invalidity benefits and survivors' benefit.

#### *Article 28*

1. Notwithstanding Article 27, the Member whose flag the vessel is flying shall take measures to provide fishers, irrespective of their place of residence, with protection for employment injury in accordance with national laws or regulations or practices.

#### *Article 29*

At the time of the ratification, the protection to be provided by the Member in accordance with Article 27, paragraph 1, shall include at least two of the eight branches listed in Article 27, paragraph 2.

*New Zealand.* The proposed wording is supported.

*Norway.* Clarification on the implications of this proposal would be necessary. The Norwegian social security system does treat fishers differently from "other workers" as unemployment, sickness and various other social security benefits are financed by the fishers themselves through a system of payment of a "product fee" based on the value of the catch. The level of the payment depends on this "product fee", and at present the system leaves fishers with an entitlement but not at the same rate as members of the National Security Scheme. The question of changing the fishers' status with regard to the social security system is being discussed, but a final conclusion has not yet been reached. Accordingly, the present Article is difficult to accept, but Norway would like to seek a solution based on the above.

*Portugal.* In Portugal, registered seafarers who work in the fishing sector, as is the case with seafarers who work in the commercial maritime sector, come under the general regime for employed workers. This regime also covers local and coastal fishers who are subject to a special contributions system: while fishers working in the industrial fishing sector pay 29 per cent tax on derived income, local and coastal fishers pay 10 per cent of the auction price of their catch. As for social coverage for the elderly, fishers come under a special regime, which brings forward the age of access to the respective benefits calculated according to the rules of the general regime. Beyond existing bilateral agreements with other countries, in order to ensure that national workers and their respective families who are not covered by those agreements and who work aboard vessels belonging to foreign companies do not fall through the social security net, Portuguese legislation allows them to make voluntary social security contributions and thus to be covered by the social security system, should they so desire.

*South Africa.* With respect to social security, it should be taken into consideration that member States are at different levels of development, and that the provision of social security assumes different norms in member States. The compulsion "Each

Member shall ensure that fishers are entitled to ... social security protection ...” places an undue burden on member States that do not have an extensive social security net.

*Spain.* It should be pointed out that in Spain the minimum level of social protection for fishers is the same as that for other maritime workers. The only difference relates to the unemployment benefit. Own-account workers engaged in fishing are not entitled to unemployment benefit, neither do they contribute to it. This exclusion does not only refer to fishers, but applies to all own-account workers, irrespective of the activity in which they are engaged. As regards bilateral agreements with other countries on social security, it should be mentioned that, in addition to the implementation of Council Regulations Nos. 1408/71 and 574/72, which are applicable to all countries in the European Economic Area and Switzerland, Spain has signed social security agreements applicable to fishers with Andorra, Argentina, Australia, Brazil, Bulgaria, Canada, Chile, Ecuador, Mexico, Morocco, Paraguay, Peru, Philippines, Russian Federation, Tunisia, Ukraine, United States, Uruguay and Venezuela. As for the wording of Article 27, it is desirable to provide for more extensive and detailed regulation on a subject of such crucial importance with regard to work on board vessels as social security benefits. This is the sector with the highest accident and injury rates, and it is unavoidable that international and national legislation protect fishers and their dependants so that they will no longer be third-class workers. They should at least be placed on an equal footing with other seafarers by providing them with regulations based on the principles laid down in the draft consolidated maritime labour Convention. For these reasons, the text in square brackets should be deleted and replaced by the following:

1. Members should ensure that all fishers and, to the extent provided in national legislation, their dependants, have access to social security protection in accordance with this Convention, without prejudice to any more favourable conditions referred to in paragraph 8 of article 19 of the Constitution of the International Labour Organisation.

2. Members commit themselves to adopting measures, in accordance with their national circumstances, individually and through international cooperation, to gradually achieve full social protection of fishers. Full social protection is understood to cover the following branches: medical care, sickness benefit, unemployment benefit, old-age benefit, occupational injury benefit, family benefit, maternity benefit, disability benefit and survivor's benefit.

3. Members shall ensure that fishers and their dependants are entitled to benefit from social security protection on conditions no less favourable than those applied to workers ashore.

*Tunisia.* In Tunisia, fishers working on fishing vessels of 30 t or more fall under the general social security system.

*Ukraine.* This provision strengthens the protection of fishers working outside of their own country for a foreign employer. These fishers should be able to receive social protection in their own country, irrespective of the social guarantees available in the country of the employer or the flag State (which are discussed in this Article). Such a mechanism could be implemented through the voluntary participation of fishers in State social insurance.

*United States.* USCIB: The following language consolidating Articles 27 and 28 is recommended: “Each Member shall adopt laws, regulations or other measures to

ensure that fishers are entitled to benefit from social security protection on conditions no less favourable than those applicable to other workers provided that fishers contribute to the Member's national social security fund on an equal basis to non-fishers."

*European Union.* The inclusion of social security provisions in a global instrument is regarded as positive. Council Regulation 1408/71 on the coordination of social security schemes is not a minimum standard, but provides for the applicable social security rules in case of mobility of EU workers or workers of third countries legally residing in an EU Member State. Its basic principle is the application of the social security provisions of the country of work (flag State). Any ILO text dealing directly or indirectly with the applicable social security legislation should be consistent with EU law or include wording similar to that in the draft consolidated maritime labour Convention (Standard A.4.5, paragraph 4), in order to ensure compatibility with EU legislation on the free movement of workers and social security.

#### Article 28

Each Member shall, with regard to the principles of equality of treatment and the maintenance of social security protection rights, adopt measures that take into account the situation of non-national fishers.

#### Observations on Article 28

*France.* The questions of coordination and continuity of acquisition of social security protection rights are vitally important. To this effect, a provision should be incorporated into the Convention promoting international cooperation, in particular by means of bilateral Conventions. On the same lines, the provisions of this Article should be supplemented to take into account the issue of non-national fishers' country of residence.

*Japan.* It would be appropriate to delete this Article, since the meaning of, in particular, the terms "principles of equality of treatment" and "take into account the situation of non-national fishers" is not clear.

*New Zealand.* It should be clarified what is meant by "adopt measures that take into account the situation of non-national fishers". It would not be appropriate to treat non-national fishers more favourably than other non-national workers for social security purposes. By way of clarification, it is suggested to add the following wording similar to Article 27 at the conclusion of this Article: "... the situation of non-national fishers, on conditions no less favourable than those applicable to other non-national workers".

*South Africa.* The Government endorses the principle of equality with respect to the social security net. However, this should be left to national laws and regulations.

*Spain.* In a globalized industry like the maritime sector in general and fishing in particular, it is increasingly frequent for workers to be employed on vessels flying different flags using crews from all over the world. Hence it is essential that legislation be adapted to these situations to avoid discriminatory treatment of fishers based on their nationality, through a twofold approach: (i) application of the same social

security benefits irrespective of the fisher's nationality; and (ii) maintenance of social security rights, whether acquired or in the course of acquisition, irrespective of the flag flown by the vessel on which the fisher works. Therefore, a second paragraph should be added to read as follows: "To the extent compatible with national legislation and practice, Members shall cooperate, through bilateral or multilateral agreements or other agreements, to ensure maintenance of social security rights granted through contributory or non-contributory systems, whether acquired or in the course of being acquired, of all fishers, irrespective of where they reside."

*United States.* USCIB: In view of the amendment suggested under Article 27, this Article should be deleted.

PROTECTION IN THE CASE OF WORK-RELATED SICKNESS, INJURY OR DEATH

*Article 29*

1. Each Member shall take measures to provide fishers with protection for work-related sickness, injury or death determined in accordance with national laws or regulations or practice.

2. In the event of injury due to occupational accident or disease, the fisher shall have access to:

- (a) appropriate medical attention; and
- (b) the corresponding compensation in accordance with national laws.

3. Taking into account the characteristics within the fishing sector, the protection referred to in paragraph 1 above may be ensured through:

- (a) a system for fishing vessel owners' liability; or
- (b) compulsory insurance, workers' compensation or other schemes.

*Observations on Article 29*

*France.* Protection in the case of work-related accident or sickness is an imperative of prime importance. The fishing profession, wherever it is exercised, is so dangerous that this protection must be put in place first. Hence, work-related accident and sickness protection must be compulsory as provided for in this Article.

PART VII. ADDITIONAL REQUIREMENTS FOR VESSELS OF [...] METRES IN LENGTH  
OR MORE

*Article 30*

[Taking into account the number of fishers on board, the area of operation and the length of the voyage, a Member may, after consultation, exclude additional requirements for the vessels concerned.]<sup>1</sup>

<sup>1</sup> Text to be developed by the Office with a view to being examined by the Conference.

*Observations on Article 30*

*Argentina.* The existence of a specific Part on large vessels is supported. In the case of Argentina, this is particularly important, as almost all the approximately 13,000 fishing employees work on board industrial fishing vessels. Moreover, CATT would like the additional requirements for large vessels to be applicable to vessels of 15 metres in length or over, envisaging an additional Part for vessels of 24 metres in length or over, i.e. vessels which carry out fishing activities in international waters, whether distant seas or areas near foreign ports. These two Parts should contain additional requirements concerning medical examination, training and qualifications, manning and hours of rest, accommodation, OSH, medical care and social security.

*Australia.* Further to the general comment, these provisions definitely should apply to any fishing vessel of over 500 gt, for instance over 50 metres, and to any factory vessels that carry non-fishing process workers. This lower boundary can be further guided by the size determined in the draft consolidated maritime labour Convention.

*Belgium.* Should the proposed texts differentiate between vessel sizes for the application of the provisions or set additional measures for large fishing vessels, it would be preferable to see classifications consisting of vessels of up to 15 metres in length, 15 metres and over, and 24 metres and over. These limits were put forward at the ILC in June 2004 and correspond to the relevant EU legislation. However, such differentiations only seem desirable in the application of provisions concerning accommodation and food, i.e. chiefly Annex II. All other provisions should be applied in the same way to all fishers, without distinction and whatever the size of the vessel on which they are employed.

CCE: Same as the above reply.

*Brazil.* The text of this provision should be retained and should establish additional requirements for vessels of more than 24.4 metres in length.

*Canada.* Additional requirements for accommodation and related provisions may be appropriate for larger vessels. Vessel length should not be used as a basis for additional requirements in the following areas: minimum age for employment, medical examination, manning and hours of rest, fishers' work agreement, repatriation rights, recruitment and placement, payment of wages, medical care, and occupational safety and health and accident prevention. Appropriate Convention and Recommendation provisions addressing these issues should be applicable to *all* vessels, regardless of size.

*Cyprus.* OEB: The employers' organization expresses its disappointment as to the wide acceptance by Governments of the Workers' request to include the principle of categorization of fishing vessels and therefore the application of different conditions to different vessels. It hopes that through pending discussions, more Governments will align themselves with the Employers' position to create a general instrument of broad application that deals with conditions of work in the fishing sector regardless of vessel size.

*France.* MEDEF: A categorization of fishing vessels according to size or other criteria would considerably diminish the impact of and interest in this international instrument. It seems vital for this Convention to retain a broad scope of application.

*New Zealand.* It is felt that this Article offers a possibility for “imposing” rather than “excluding” additional requirements for vessels concerned, after taking into account the number of crew, area of operation and length of the voyage. New Zealand has no suggestions for additional requirements and is therefore unable to recommend a vessel length.

*Norway.* The size of vessels for which additional requirements should be developed could be 15 metres and 24 metres. Article 18 should provide the basis for the additional requirements, and should be incorporated into Article 30, rather than maintaining a separate existence. For example, a provision on repatriation could read: “Fishers shall have the right to be repatriated at no cost to themselves to a destination specified in the fishers’ work agreements or collective bargaining agreements if their employment expires while they are abroad.” Identity documents should be issued to fishers, since the entry into force of the ISPS Code has had the effect that, although fishing vessels are not covered per se, fishers have to have IDs when entering ports covered by the ISPS Code; however, no reference should be made to any specific Convention. In addition, it is proposed to have a minimum age limit of 16 for large vessels, rather than letting Article 9 apply. As regards OSH, paragraph 24 on occupational safety and health management systems of the proposed Recommendation should be made mandatory for vessels undertaking international voyages/seagoing vessels of 24 metres and above. Also, large vessels should have onboard joint committees (see comment under Article 26).

*United Kingdom.* The UK supports in principle the inclusion of additional provisions for larger vessels.

*United States.* USCIB: This Article should be deleted. The objectives of this updated Convention are to address the yet unmet needs of the majority of the world’s fishers – decent working conditions, appropriate medical care, access to social benefits where they exist, safety and health protection with international oversight. The additional requirements for vessels of various lengths, tonnages or crew sizes, will only add complexity, which will create barriers to ratification rather than compel it. In many developed countries, the fishing industry is already highly regulated and the vessel categories by which it has defined its standards have been developed through historic and progressive advancement. The establishment of higher standards through arbitrary classification of vessels will not serve to improve safety or working conditions for fishers but will create a bureaucracy of juxtapositional standards that cannot be complied with.

*European Union.* It should be noted that most EU Directives on OSH are applicable to the fishing sector regardless of vessel size, e.g. 89/391/EEC “framework directive”, 89/655/EEC “work equipment”, 89/656/EEC “personal protective equipment”, 90/269/EEC “manual handling”, 92/58/EEC “safety signs”, 2003/10/EC “noise”, 2002/44/EC “vibrations” and Recommendation 2003/670/EC “list with occupational diseases”. Also, any new ILO text on this matter should be analysed in the context of possible implications for SFV PROT 1993, Council Directive 97/70/EC as amended and Council Directive 93/103/EC concerning the minimum safety and health requirements for work on board fishing vessels. Provisions concerning medical care not covered by Council Directive 92/29/EEC but compatible with it would not raise

problems. As regards OSH and accident prevention, it is advisable to clarify the responsibilities of actors on board and prevention aspects in line with Council Directive 93/103/EC, as it is important that the responsibility of the owner for OSH is not shifted to other persons. Major inconsistencies with Council Directive 2000/34/EC on working time and hours of rest, Council Directive 94/33/EC on minimum age or Council Directive 91/533/EC on information of the worker on the conditions applicable to the contract or employment relationship, should be avoided. Lastly, it should be recalled that the Charter of Fundamental Rights of the European Union could provide useful guidance on issues such as recruitment and placement and the access of jobseekers to these services – and possibly on other matters.

#### PART VIII. COMPLIANCE AND ENFORCEMENT

##### *Article 31*

Each Member shall exercise effective jurisdiction and control over vessels that fly its flag by establishing a system for ensuring compliance with the standards of the Convention including, as appropriate, inspections, reporting, monitoring, appropriate penalties and corrective measures, in accordance with national laws or regulations.

##### *Observations on Article 31*

*Canada.* CEC: There are high costs associated with the effort to develop and enforce new legislation, policies and standards; costs that an already overburdened public service simply cannot afford to embrace in the current climate of cost constraints. New requirements in any field should, thus, only be introduced where needed, and only if Governments intend to enforce compliance, since inconsistent enforcement creates instability and inequity at the national level. Poor regulation and enforcement by other States is an associated issue in that Canadian fishing vessels must not be placed at a competitive disadvantage by having to comply with questionable international requirements, while competitors flying foreign flags are not subjected to the same rigour of compliance by their Governments.

*New Zealand.* The proposed wording is supported but jurisdiction will need to be shared between two or three agencies in New Zealand.

##### *Article 32*

Fishing vessels that undertake international voyages shall be required to undergo a documented periodic inspection of living and working conditions on board.

##### *Observations on Article 32*

*Argentina.* It is proposed to insert the words “national and” prior to “international voyages”.

*Japan.* Contents and methods of “a documented periodic inspection”, which are to be determined by the flag States in due course, should be clarified in the proposed text.

*Norway.* The documented periodic inspections of living and working conditions on board should be carried out at intervals of no more than three years. Alternatively, inspection intervals could be aligned with the requirements of SFV 1977.

*Tunisia.* As proposed by the Office, the words “operate internationally” should be replaced with “undertake international voyages”, in order to provide more consistency with the other Articles of the Convention.

### Article 33

1. The competent authority shall appoint a sufficient number of qualified inspectors to fulfil its responsibilities under Article 31.

2. Each Member shall be responsible for inspection of the on-board living and working conditions of fishers on vessels that fly its flag, whether such inspections are carried out by public institutions or other competent bodies.

### Observations on Article 33

*Canada.* CEC: See comment under Article 31.

*China.* Paragraph 1 should be amended as follows: “The competent authority shall take appropriate measures so as to fulfil its responsibilities under Article 31.” Measures to carry out inspection should be taken by the competent authorities of various countries in the light of their respective national conditions.

### Article 34

1. If a Member which has ratified the Convention and in whose port a fishing vessel calls in the normal course of its business or for operational reasons receives a complaint or obtains evidence that the fishing vessel does not conform to the standards of the Convention, after it has come into force, it may prepare a report addressed to the government of the country in which the fishing vessel is registered, with a copy to the Director-General of the International Labour Office, and may take measures necessary to rectify any conditions on board which are clearly hazardous to safety or health.

2. In taking such measures, the Member shall forthwith notify the nearest representative of the flag State and shall, if possible, have such representative present. It shall not unreasonably detain or delay the vessel.

3. For the purpose of this Article, “complaint” means information submitted by a fisher, a professional body, an association, a trade union or, generally, any person with an interest in the safety of the vessel, including an interest in safety or health hazards to its fishers.

### Observations on Article 34

*Australia.* The questions of who will carry out the fishing equivalent port state control (PSC) function and who will pay are not addressed – possibly creating the

undesirable option of commercial cargo shipping paying for the fishing vessel regulatory function. Paragraph 1 could lead to the situation where a port State orders repairs to rectify the unseaworthiness of a fishing vessel and is liable to pay for the repairs. For fishing vessels that undertake international/overseas voyages, a PSC mechanism similar to that proposed in the draft consolidated maritime labour Convention would be a useful enforcement tool that should be added to the Convention.

*China.* The last phrase of paragraph 1 (“and may take measures necessary to rectify any conditions on board which are clearly hazardous to safety or health.”) and all of paragraph 2 should be deleted so that this Article can be accepted and implemented by the greatest number of countries possible. Inclusion of such compulsory Article(s) would render the implementation of this Convention problematic for many underdeveloped countries or countries with different standards.

*France.* The provisions on PSC should be limited to the mechanism described and not go beyond it. Indeed, in the fishing sector, PSC does not yet have structures and rules, and thus guarantees, comparable to those existing for commercial shipping.

*Japan.* As regards paragraph 1, the words “the standards of the Convention” should be replaced by “the standards of the Convention in respect of safety or health”.

*New Zealand.* The proposed wording is supported.

#### Article 35

Each Member shall apply the Convention in such a way as to ensure that the fishing vessels flying the flag of States that have not ratified the Convention do not receive more favourable treatment than the fishing vessels that fly the flag of Members that have ratified it.

#### Observations on Article 35

*Japan.* This provision to control vessels flying the flag of States that have not ratified the Convention is more severe than the corresponding provision of the draft consolidated maritime labour Convention. Since it is necessary to adjust it to the draft consolidated maritime labour Convention, this Article should read: “Each Member shall apply the Convention in such a way as to ensure that the fishing vessels flying the flag of States that have not ratified the Convention do not receive more favourable treatment than the fishing vessels that fly the flag of Members that have ratified it.”

### ANNEX I [TO THE CONVENTION]

#### FISHER’S WORK AGREEMENT

The fisher’s work agreement shall contain the following particulars, except in so far as the inclusion of one or more of them is rendered unnecessary by the fact that the matter is regulated in another manner by national laws or regulations:

- (a) the fisher’s family name and other names, date of birth or age and birthplace;

- (b) the place at which and date on which the agreement was concluded;
- (c) the name of the fishing vessel or vessels on board which the fisher undertakes to serve;
- (d) the voyage or voyages to be undertaken, if this can be determined at the time of making the agreement;
- (e) the capacity in which the fisher is to be employed or engaged;
- (f) if possible, the place at which and date on which the fisher is required to report on board for service;
- (g) the scale of provisions to be supplied to the fisher, unless some alternative system is provided for by national law;
- (h) the amount of wages, or the amount of the share and the method of calculating such share if remuneration is to be on a share basis, or the amount of the wage and share and the method of calculating the latter if remuneration is to be on a combined basis, and any agreed minimum wage;
- (i) the termination of the agreement and the conditions thereof, namely:
  - if the agreement has been made for a definite period, the date fixed for its expiry;
  - if the agreement has been made for a voyage, the port of destination and the time which has to expire after arrival before the fisher shall be discharged;
  - if the agreement has been made for an indefinite period, the conditions which shall entitle either party to rescind it, as well as the required period of notice for rescission; provided that such period shall not be less for the owner of the fishing vessel than for the fisher;
- (j) the insurance that will cover the fisher in the event of death, injury or illness in connection with their work on board the vessel; and
- (k) any other particulars which national law may require.

### *Observations on Annex I*

*Belgium.* Annex I, subparagraph (i), second bullet point, requires that, if the fishers' work agreement has been made for a voyage, the port of destination be stipulated in it. This provision is inconsistent with national legislation, according to which such agreements are concluded for the length of a "voyage at sea", defined as "the period of time elapsing between the moment at which the fishing vessel leaves a port and the moment at which it puts in at a port for reason of discharge of the catch or force majeure". This wording was employed because it has proved difficult to determine in advance at which port the voyage and, hence, the agreement will end, since the "port of destination" depends on the catch made during the voyage, the weather conditions, and so on. It is suggested that the provision should be amended to allow the recent national legislation on articles of agreement for maritime fishing, which has been implemented in collaboration with the sector, to be retained.

CCE: Same as the above reply .

*Brazil.* Annex I should figure in the body of the Convention.

*Lebanon.* The provisions of Annex I should be included in the proposed Recommendation.

*New Zealand.* See comment under Article 13.

*Norway.* The fisher's work agreement has only one party to it. The omission of the employer should be rectified.

*Spain.* The worker has the right to know for whom he or she is going to work and who is responsible for meeting his or her entitlements as the other party to the employment relationship. Hence, the following words should be added at the end of subparagraph (c): “, as well as the name of the fishing vessel owner for whom the fisher is to work”.

*United Kingdom.* It would be helpful to clarify who the parties to a work agreement are in circumstances where the crew is composed of self-employed share fishermen.

### **Observations on the proposed Recommendation concerning work in the fishing sector**

The General Conference of the International Labour Organization,  
 Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its 93rd Session on 31 May 2005, and  
 Taking into account the need to revise the Hours of Work (Fishing) Recommendation, 1920, and the Vocational Training (Fishermen) Recommendation, 1966, and  
 Having decided upon the adoption of certain proposals with regard to work in the fishing sector, which is the fifth item on the agenda of the session, and  
 Having determined that these proposals shall take the form of a Recommendation supplementing the Work in Fishing Convention, 2005 (hereinafter referred to as “the Convention”);

adopts this            day of June of the year two thousand and five the following Recommendation, which may be cited as the Work in Fishing Recommendation, 2005:

#### **PART I. CONDITIONS FOR WORK ON BOARD FISHING VESSELS**

##### **PROTECTION OF YOUNG PERSONS**

1. Members should establish the requirements for the prior training of persons between 16 and 18 years of age working on board fishing vessels, taking into account international instruments concerning training for work on board fishing vessels, including occupational safety and health issues such as: night work, hazardous tasks, work with dangerous machinery, manual handling and transport of heavy loads, work in high latitudes, work for excessive periods of time and other relevant issues identified after an assessment of the risks concerned.

#### *Observations on Paragraph 1*

*Australia.* The adequacy of arrangements recommended to Members which have ratified the Convention is determined by the availability of national training packages and their implementation through states and territories. The qualifications in the Maritime Training Package endorsed on 29 August 2001 reflect the competency requirements for the occupational pathways of persons working on board fishing and other

maritime vessels operating in international and Australian coastal and inshore waters. The qualifications and competency units have been carefully designed in conjunction with maritime sector advisors to align closely with the regulatory requirements and framework of the various international, national, state and territory marine authorities. A number of these qualifications have been declared as traineeships in Queensland, where the State Training Authority, through the Department of Employment and Training, regulates apprenticeships, traineeships and vocational education and training. The matters relating to protection of young people and competency and training are provided for within current systems.

*Canada.* There is a need to ensure consistency between the provisions of Article 9 and the relevant Paragraphs in the Recommendation, as well with the provisions of Convention No. 138.

*Lebanon.* Since only Conventions to which a State is party are binding for this country, Paragraph 1 should be amended as follows: "... taking into account international labour instruments ratified by each Member concerning issues related to training for work on board fishing vessels and occupational safety and health such as: ... and transport of heavy loads; principles of unratified international Conventions may be consulted."

*Mauritius.* Supports the Paragraphs relating to the protection of young persons.

*Ukraine.* With reference to Article 9, this Paragraph should be deleted, in order not to leave room for the employment of individuals under the age of 18 on fishing vessels.

2. The training of persons between 16 and 18 years of age might be provided through participation in an apprenticeship or approved training programme, which should operate under established rules and be monitored by the competent authority and should not interfere with the person's general education.

#### *Observations on Paragraph 2*

*Australia.* See comment under Paragraph 1.

*Canada.* See comment under Paragraph 1.

*Ukraine.* With reference to Article 9, this Paragraph should be deleted, in order not to leave room for the employment of individuals under the age of 18 on fishing vessels.

3. Members should take measures to ensure that the safety, lifesaving and survival equipment carried on board fishing vessels carrying persons under the age of 18 is appropriate for the young persons concerned.

#### *Observations on Paragraph 3*

*Lebanon.* It is proposed to add the following phrase at the end of this paragraph: "and that they have been trained to use such equipment".

*Ukraine.* With reference to Article 9, this Paragraph should be deleted, in order not to leave room for the employment of individuals under the age of 18 on fishing vessels.

#### MEDICAL EXAMINATION

##### *Nature of medical examination and content of medical certificate*

4. When prescribing the nature of the examination, Members should pay due regard to the age of the person to be examined and the nature of the duties to be performed.

5. In particular, the medical certificate should attest that the person is not suffering from any disease likely to be aggravated by or to render them unfit for service on board a fishing vessel or likely to endanger the health of other persons on board.

##### *Observations on Paragraph 5*

*South Africa.* Although implied, a new Paragraph should be inserted after Paragraph 5: “A medical certificate issued by a medical practitioner approved by the competent authority should not unduly prejudice work seekers from gaining employment if the condition stated on the medical certificate does not relate to or will not be aggravated by the work that a fisher is required to do.”

##### *Medical certificate*

6. The certificate should be signed by a medical practitioner approved by the competent authority.

##### *Observations on Paragraph 6*

*Norway.* See comment under Article 10.

##### *Period of validity of the medical certificate*

7. In the case of young persons of less than 21 years of age, the medical certificate should remain in force for a period not exceeding one year from the date on which it was granted.

##### *Observations on Paragraph 7*

*Canada.* The competent authority should, after consultation, determine the period of validity of a medical certificate in all cases.

CEC: The period of validity for medical certificates of persons less than 21 years should be addressed in the same fashion as for crew over 21 years, i.e. leaving it up to the competent authority to prescribe.

*France.* It would be desirable to replace the words “21 years of age” with “18 years of age”.

*Lebanon.* A new phrase should be added at the end reading: “In certain circumstances as provided for by national laws or regulations, medical examinations should be carried out in addition to the annual examination or at shorter intervals to ensure effective supervision of the health situation of young persons.”

*Norway.* The Norwegian Fishing Vessel Owners’ Association would like to harmonize the “age requirements” for medical certificates with the age limits under the provisions on minimum age.

*Spain.* If this provision concerning the period of validity of the medical certificate is intended to protect young persons as a high-risk group warranting special attention in regard to risk prevention, in order to maintain their health and physical integrity, the same argument should apply to workers who have reached a certain age and thus are incontestably in a high-risk group, which should also be taken into consideration from the standpoint of both the health of the individual concerned and that of the rest of the crew. Hence, the words “or persons over 55 years of age” should be added after “persons of less than 21 years of age”.

8. In the case of persons who have attained the age of 21 years, the competent authority should determine the period for which the medical certificate should remain in force.

9. If the period of validity of a certificate expires in the course of a voyage, the certificate should continue in force until the end of that voyage.

#### *Right to administrative appeal*

10. Arrangements should be made to enable a person who, after examination, is determined to be unfit for work on board fishing vessels, or on board certain types of vessels, or for certain types of work on board vessels, to apply for a further examination by a medical referee or referees who should be independent of any fishing vessel owner or of any organization of fishing vessel owners or fishers.

#### *Observations on Paragraph 10*

*Canada.* The competent authority should, after consultation, determine the appropriate administrative recourse method.

CEC: While a further examination might be sought from another independent medical doctor, the concept that there should be a medical “referee” is not accepted. Governments should dictate the process or content of appeals between crew and vessel owners/operators.

*Norway.* See comment under Article 11.

*Spain.* After the words “for certain types of work on board vessels” the rest of the provision should be replaced by the following: “and who disagrees with such

determination, to avail himself or herself of an objective and impartial dispute resolution procedure”. See comment under Article 11.

#### *International guidance*

11. Competent authorities should take into account international guidance on medical examination and certification of persons working at sea, such as the ILO/WHO Guidelines for Conducting Pre-sea and Periodic Medical Fitness Examinations for Seafarers.

#### *Special measures*

12. For fishers exempted from the application of the provisions concerning medical examination in the Convention, the competent authority should take alternative adequate measures to provide health surveillance for the purpose of occupational safety and health.

#### *Observations on Paragraph 12*

*Lebanon.* See comment under Article 10.

### COMPETENCY AND TRAINING

13. Members should:

- (a) ensure that competencies required for skippers, mates, engineers and other persons working on board fishing vessels take into account generally accepted international standards concerning training and competencies of fishers;
- (b) address, with regard to the vocational training of fishers, the issues of: national planning and administration, including coordination; financing and training standards; training programmes, including pre-vocational training and short courses for working fishers; methods of training; and international cooperation;
- (c) ensure that there is no discrimination with regard to access to training.

#### *Observations on Paragraph 13*

*Argentina.* This Paragraph establishes that the international standards concerning training and competencies of fishers should be taken into account. However, STCW-F has only been ratified by four countries; therefore not achieving the number of signatory members necessary for entry into force. Therefore, the provision should be made mandatory and complemented with text to the effect that, where there are no existing international standards on the issue, national regulations are to be taken into account. The appropriate place to include such obligatory provision would be after Article 11.

*Australia.* See comment under Paragraph 1.

*Lebanon.* The meaning of the term “national planning and administration” in clause (b) should be clarified. Furthermore, the content of this clause should be re-

examined in order to allow for training to be organized at different levels for different fisher functions.

## PART II. CONDITIONS OF SERVICE

### RECORD OF SERVICE

14. At the end of each voyage, a record of service in regard to that voyage should be available to the fisher concerned or entered in their service book.

#### *Observations on Paragraph 14*

*Canada.* CEC: While records of service could be provided in relation to payment for service, the industry should not be required to have a service book for fishers engaged on its vessels.

*France.* See comment under Article 14. This Paragraph employs the term “service book”. As the nature of such service book is not explained, it should either be defined or referred to as “their service book or other document”.

### SPECIAL MEASURES

15. For fishers excluded from the scope of the Convention, the competent authority should take measures to provide them with adequate protection with respect to their conditions of work and with means of dispute settlement.

## PART III. HEALTH PROTECTION, MEDICAL CARE AND SOCIAL SECURITY

### MEDICAL CARE ON BOARD

16. The competent authority should establish the list of medical supplies, including women’s sanitary protection and discreet environmentally friendly disposal units, and equipment to be carried on fishing vessels appropriate to the risks concerned.

#### *Observations on Paragraph 16*

IMHA: It should be added that the instructions accompanying the medical supplies and equipment should have the format of the ILO/IMO/WHO *International Medical Guide for Ships*, the third edition of which is in preparation.

17. Fishing vessels carrying 100 or more fishers and ordinarily engaged in international voyages of more than three days’ duration should carry a qualified medical doctor.

*Observations on Paragraph 17*

*Lebanon.* The number of fishers on board, over which the vessel is required to carry a doctor, should be smaller than 100, especially if the presence of a doctor is also conditional upon the voyages being international and of more than three days' duration.

*Mauritius.* At the level of the tripartite Labour Advisory Board, workers' representatives suggest that fishing vessels with 50 or more fishers should carry a qualified medical doctor.

*Nicaragua.* CTN: The text should be amended to read as follows: "Fishing vessels carrying 50 or more persons and ... shall carry a qualified medical doctor."

*South Africa.* The cost of acquiring medical attention when the vessel is three days away can outweigh the cost of employing a medical practitioner for the period. It is unacceptable that fishers have access to medical attention only if the vessel is away for more than three days. It is therefore proposed that this should be amended to be two days.

*United States.* USCIB: It would not be economically or practically feasible to employ a qualified medical doctor to serve aboard as a member of the crew. However, there should be a qualified medical officer onboard who has advanced shipboard medical training and whose primary duty it is to provide medical care and administer medicine in consultation with a licensed medical physician through radio or satellite communication on a 24-hour basis. The consulting physician must be knowledgeable of the conditions at sea, the physical requirements of the work performed and the medical supplies and equipment available.

18. Fishers should receive training in basic first aid in accordance with national laws and regulations, taking into account applicable international instruments.

*Observations on Paragraph 18*

*Lebanon.* This provision should be amended as follows: "... taking into account the international instruments ratified by the State."

19. There should be a standard medical report form specially designed to facilitate the confidential exchange of medical and related information concerning individual fishers between the fishing vessel and the shore in cases of illness or injury.

## OCCUPATIONAL SAFETY AND HEALTH

20. In order to contribute to the continuous improvement of safety and health of fishers, member States should have in place programmes for the prevention of accidents on board fishing vessels which should, inter alia, provide for the gathering and dissemination of occupational health and safety materials, research and analysis.

*Observations on Paragraph 20*

*Canada.* The wording should be amended to read: "... programmes for the prevention of workplace injuries and occupational illnesses."

*Lebanon.* The term "avoid" should be used instead of "prevention", as it is difficult to actually stop accidents in all activities.

21. Information concerning particular hazards should be brought to the attention of all fishers and other persons on board through official notices containing instructions or guidance on such hazards or other appropriate means.

22. When establishing methods and programmes concerning safety and health of fishers, the competent authority should take into consideration technological progress and knowledge in the field of occupational safety and health, as well as relevant international instruments.

*Observations on Paragraph 22*

*Lebanon.* It is proposed to amend the provision as follows: "... as well as relevant international instruments ratified by the State."

*Technical specifications*

23. Members should, to the extent practicable and as appropriate to the conditions in the fishing sector, address the following:

- (a) seaworthiness and stability of fishing vessels;
- (b) radio communications;
- (c) temperature, ventilation and lighting of working areas;
- (d) mitigation of the slipperiness of deck surfaces;
- (e) machinery safety, including guarding of machinery;
- (f) vessel familiarization for fishers or fisheries observers new to the vessel;
- (g) personal protective equipment;
- (h) fire-fighting and lifesaving;
- (i) loading and unloading of the vessel;
- (j) lifting gear;
- (k) anchoring and mooring equipment;
- (l) safety and health in living quarters;
- (m) noise and vibration in work areas;
- (n) ergonomics, including in relation to the layout of workstations and manual lifting and handling;
- (o) equipment and procedures for the catching, handling, storage and processing of fish and other marine resources;
- (p) vessel design, construction and modification relevant to occupational safety and health;
- (q) navigation and vessel handling;

- (r) hazardous materials used on board the vessel;
- (s) safe means of access to and exit from fishing vessels in port;
- (t) special safety and health requirements for young persons;
- (u) prevention of fatigue;
- (v) other issues related to safety and health.

### *Observations on Paragraph 23*

*Australia.* It would be useful if Members would also address navigational equipment (i.e. charts, compass, GPS, etc.) and radar reflectors, and the reference to lifesaving could be extended to refer to training and equipment, including EPIRBs.

#### *Occupational safety and health management systems*

24. (1) When establishing methods and programmes concerning safety and health in the fishing sector, competent authorities should take into account any relevant international guidelines concerning occupational safety and health management systems, including the *Guidelines on occupational safety and health management systems* of the International Labour Office.

(2) Risk evaluation in relation to fishing should be conducted as appropriate, with the participation of fishers or their representatives and should include:

- (a) risk evaluation and management;
- (b) training, taking into consideration the relevant provisions of Chapter III of the International Convention on Standards of Training, Certification and Watchkeeping for Fishing Vessel Personnel (STCW-F Convention);
- (c) on-board instruction of fishers.

(3) To give effect to the provision of subparagraph 2(a) above, Members should adopt, after consultation, laws, regulations or other measures requiring that:

- (a) all fishers are regularly actively involved in improving safety and health through continually identifying hazards, assessing risks and taking action to address the risks through safety management;
- (b) an occupational safety and health management system is established that may include an occupational safety and health policy, provisions for fisher participation and provisions concerning organizing, planning, implementing and evaluating the system and taking action to improve the system;
- (c) a system is established for the purpose of assisting in the implementation of the fishing vessel owner's or the organization's safety and health policy and programme and to provide fishers with a forum to influence safety and health matters.

(4) When developing the provisions referred to in subparagraph 2(a), Members should take into account the possible and relevant international instruments developed on risk assessment and management.

### *Observations on Paragraph 24*

*Lebanon.* This provision recommends to take into account any relevant international guidelines (subparagraph (1)), the relevant provisions of Chapter III of the

STCW-F Convention (subparagraph (2)), and the possible and relevant international instruments (subparagraph (4)). It is hoped that there is no obligation in this respect: the State should consult the relevant provisions but might take them into consideration according to its will.

*United Kingdom.* There should be reference to “occupational health and safety policies and programmes” rather than “management systems”. This would be in line with the requirements in the draft consolidated maritime labour Convention and would avoid the possible implication that specialized administrative systems were required.

25. Members should establish a list of diseases known to arise out of exposure to substances or dangerous conditions in the fishing sector.

#### SOCIAL SECURITY

26. (1) Members should take measures to extend social security protection progressively to all fishers.

(2) To this end, Members should maintain up-to-date information on the:

- (a) percentage of fishers covered;
- (b) range of contingencies covered; and
- (c) level of benefits.

#### *Observations on Paragraph 26*

*Mauritius.* Supports the Paragraphs relating to social security.

27. The benefits referred to in Article 29 of the Convention should be granted throughout the contingency.

#### *Common provisions*

28. Every claimant should have a right of appeal in the case of refusal of the benefit or complaint as to quality and quantity of the benefit.

29. Members should take steps to secure the protection of foreign fishers, including by entering into agreements to that effect.

#### *Observations on Paragraph 29*

*Lebanon.* This provision should be amended as follows: “Members should consider to take the necessary steps to secure the protection of foreign fishers according to national legislation.” The State should be given the choice whether or not to enter into agreements to that effect.

## PART IV. OTHER PROVISIONS

30. In its capacity as a coastal State, a Member might require, when it grants licences for fishing in its exclusive economic zone, that fishing vessels comply with the standards of the Convention.

*Observations on Paragraph 30*

*Indonesia.* Additional requirements should exist for vessels of 12 metres in length or more, except those engaged in subsistence and recreational fishing.

*Lebanon.* This provision seems to impose an obligation on fishing vessels of a country which has not ratified the Convention to comply with the standards stipulated in the Convention. This would go against the liberty of any State to ratify or not to ratify a Convention.

## [ANNEX II

[Not currently attached to either the Convention or Recommendation]

## ACCOMMODATION ON BOARD FISHING VESSELS

## PART I. GENERAL PROVISIONS

1. The provisions of this annex should apply to fishing vessels [of more than 24.4 metres in length].

2. This annex might be applied to vessels of [between 13.7 and 24.4 metres] in length where the competent authority determines, after consultation, that this is reasonable and practicable.

3. In respect of vessels which normally remain away from their home ports for periods of less than 36 hours and in which the crew does not live permanently on board when in port, the provisions concerning the following do not apply:

- (a) lighting in paragraph 35 below;
- (b) sleeping rooms;
- (c) mess rooms;
- (d) sanitary accommodation;
- (e) sick bay;
- (f) space to hang oilskins;
- (g) cooking equipment and galley.

4. In the case of vessels referred to in paragraph 3 above, adequate sanitary installations as well as messing and cooking facilities and accommodation for resting are provided.

5. The provisions of Part III of this annex might be varied in the case of any vessel if the competent authority is satisfied, after consultation, that the variations to be made provide corresponding advantages as a result of which the overall conditions are no less favourable than those that would result from the full application of the provisions of the annex.

---

PART II. PLANNING AND CONTROL OF CREW ACCOMMODATION

6. Before the construction of a fishing vessel is begun, and before the crew accommodation of an existing vessel is substantially altered or reconstructed, detailed plans of, and information concerning, the accommodation should be submitted to the competent authority for approval.

7. The competent authority should inspect the vessel and satisfy itself that the crew accommodation complies with the requirements of the laws or regulations or other measures, on every occasion when:

- (a) a fishing vessel is registered or re-registered;
- (b) the crew accommodation of a vessel has been substantially altered or reconstructed; or
- (c) a complaint that the crew accommodation is not in compliance with the terms of this annex has been made to the competent authority in the prescribed manner and in time to prevent any delay to the vessel, by a recognized fishers' organization representing all or part of the crew or by a prescribed number or proportion of the members of the crew of the vessel.

PART III. CREW ACCOMMODATION REQUIREMENTS

GENERAL ACCOMMODATION STANDARDS

8. The location, means of access, structure and arrangement of crew accommodation in relation to other spaces should be such as to ensure adequate security, protection against weather and sea and insulation from heat or cold, undue noise or effluvia from other spaces.

9. Emergency escapes should be provided from all crew accommodation spaces as necessary.

10. Every effort should be made to exclude direct openings into sleeping rooms from fish holds and fish meal rooms, from spaces for machinery, from galleys, lamp and paint rooms or from engine, deck and other bulk store rooms, drying rooms, communal wash places or water closets. That part of the bulkhead separating such places from sleeping rooms and external bulkheads should be efficiently constructed of steel or other approved substance and should be watertight and gastight.

11. External bulkheads of sleeping rooms and mess rooms should be adequately insulated. All machinery casings and all boundary bulkheads of galleys and other spaces in which heat is produced should be adequately insulated when there is a possibility of resulting heat effects in adjoining accommodation or passageways. Care should also be taken to provide protection from heat effects of steam and/or hot-water service pipes.

12. Internal bulkheads should be of approved material which is not likely to harbour vermin.

13. Sleeping rooms, mess rooms, recreation rooms and passageways in the crew accommodation space should be adequately insulated to prevent condensation or overheating.

14. Main steam and exhaust pipes for winches and similar gear should, whenever technically possible, not pass through crew accommodation or through passageways leading to crew accommodation; where they do pass through such accommodation or passageways they should be adequately insulated and encased.

15. Inside panelling or sheeting should be of material with a surface easily kept clean. Tongued and grooved boarding or any other form of construction likely to harbour vermin should not be used.

16. The competent authority should decide to what extent fire prevention or fire-retarding measures should be required to be taken in the construction of the accommodation.

17. The wall surface and deck heads in sleeping rooms and mess rooms should be easily kept clean and, if painted, should be light in colour; lime wash should not be used.

18. The wall surfaces should be renewed or restored as necessary.

19. The decks in all crew accommodation should be of approved material and construction and should provide a surface impervious to damp and easily kept clean.

20. Overhead exposed decks over crew accommodation should be sheathed with wood or equivalent insulation.

21. Where the floorings are of composition the joining with sides should be rounded to avoid crevices.

22. Sufficient drainage should be provided.

23. All practicable measures should be taken to protect crew accommodation against the admission of flies and other insects.

#### NOISE AND VIBRATION

24. Noise and vibration in accommodation spaces should not exceed limits established by the competent authority taking into account international instruments.

#### VENTILATION

25. Sleeping rooms and mess rooms should be adequately ventilated taking into account climatic conditions.

26. The system of ventilation should be controlled so as to maintain the air in a satisfactory condition and to ensure a sufficiency of air movement in all conditions of weather and climate.

27. Vessels regularly engaged on voyages in the tropics and other areas with similar climatic conditions should, as required by such conditions, be equipped both with mechanical means of ventilation and with electric fans, provided that one only of these means need be adopted in spaces where this ensures satisfactory ventilation.

28. Vessels engaged elsewhere should be equipped either with mechanical means of ventilation or with electric fans. The competent authority might exempt vessels normally employed in the cold waters of the northern or southern hemispheres from this requirement.

29. Power for the operation of the aids to ventilation required should, when practicable, be available at all times when the crew is living or working on board and conditions so require.

#### HEATING

30. An adequate system of heating the crew accommodation should be provided taking into account climatic conditions.

31. The heating system should, when practicable, be in operation at all times when the crew is living or working on board and conditions so require.

32. The heating system should be capable of maintaining the temperature in crew accommodation at a satisfactory level under normal conditions of weather and climate likely to be met with on service; the competent authority should prescribe the standard to be provided.

33. Radiators and other heating apparatus should be so placed and, where necessary, shielded and fitted with safety devices so as to avoid risk of fire or danger or discomfort to the occupants.

#### LIGHTING

34. All crew spaces should be adequately lighted. The minimum standard for natural lighting in living rooms should be such as to permit a person with normal vision to read on a clear day an ordinary newspaper in any part of the space available for free movement. When it is not possible to provide adequate natural lighting, artificial lighting of the above minimum standard should be provided.

35. In all vessels electric lights should, as far as practicable, be provided in the crew accommodation. If there are not two independent sources of electricity for lighting, additional lighting should be provided by properly constructed lamps or lighting apparatus for emergency use.

36. Artificial lighting should be so disposed as to give maximum benefit to the occupants of the room.

37. Adequate reading light should be provided for every berth in addition to the normal lighting of the cabin.

38. A permanent blue light should, in addition, be provided in the sleeping room during the night.

#### SLEEPING ROOMS

39. Sleeping rooms should be situated amidships or aft; the competent authority might, in particular cases, if the size, type or intended service of the vessel renders any other location unreasonable or impracticable, permit the location of sleeping rooms in the fore part of the vessel but in no case forward of the collision bulkhead.

40. The floor area per person of sleeping rooms, excluding space occupied by berths and lockers, should not be less than:

- (a) in vessels of [13.7] metres but below [19.8] metres in length: [0.5] square metre;
- (b) in vessels of [19.8] metres but below [26.8] metres in length: [0.75] square metre;
- (c) in vessels of [26.8] metres but below [35.1] metres in length: [0.9] square metre;
- (d) in vessels of [35.1] metres in length or over: [1.0] square metre.

41. The clear headroom in the crew sleeping room should, wherever possible, be not less than 1.90 metres.

42. There should be a sufficient number of sleeping rooms to provide a separate room or rooms for each department.

43. The number of persons allowed to occupy sleeping rooms should not exceed the following maxima:

- (a) officers: one person per room wherever possible, and in no case more than two;
- (b) ratings: two or three persons per room wherever possible, and in no case more than the following:
  - (i) in vessels of [35.1] metres in length and over, four persons;
  - (ii) in vessels under [35.1] metres in length, six persons.

44. The competent authority might permit exceptions to the requirements of the preceding two paragraphs in particular cases if the size, type or intended service of the vessel make these requirements unreasonable or impracticable.

45. The maximum number of persons to be accommodated in any sleeping room should be legibly and indelibly marked in some place in the room where it can conveniently be seen.

46. Members of the crew should be provided with individual berths of adequate dimensions. Berths should not be placed side by side in such a way that access to one berth can be obtained only over another.

47. Berths should not be arranged in tiers of more than two; in the case of berths placed along the vessel's side, there should be only a single tier where a sidelight is situated above a berth.

48. The lower berth in a double tier should not be less than [0.30] metres above the floor; the upper berth should be placed approximately midway between the bottom of the lower berth and the lower side of the deck head beams.

49. The minimum inside dimensions of a berth should, wherever practicable, be 1.90 metres by 0.68 metres.

50. The framework and the leeboard, if any, of a berth should be of approved material, hard, smooth and not likely to corrode or to harbour vermin.

51. If tubular frames are used for the construction of berths, they should be completely sealed and without perforations which would give access to vermin.

52. Each berth should be fitted with a spring mattress of approved material or with a spring bottom and a mattress of approved material. Stuffing of straw or other material likely to harbour vermin should not be used.

53. When one berth is placed over another, a dust-proof bottom of wood, canvas or other suitable material should be fitted beneath the upper berth.

54. Sleeping rooms should be so planned and equipped as to ensure reasonable comfort for the occupants and to facilitate tidiness.

55. The furniture should include a clothes locker for each occupant, fitted with a hasp for a padlock and a rod for holding clothes on hangers. The competent authority should ensure that the locker is as commodious as practicable.

56. Each sleeping room should be provided with a table or desk which might be of the fixed, drop-leaf or slide-out type, and with comfortable seating accommodation as necessary.

57. The furniture should be of smooth, hard material not liable to warp or corrode or to harbour vermin.

58. The furniture should include a drawer or equivalent space for each occupant which should, wherever practicable, be not less than 0.056 cubic metre.

59. Sleeping rooms should be fitted with curtains for the sidelights.

60. Sleeping rooms should be fitted with a mirror, small cabinets for toilet requisites, a book rack and a sufficient number of coat hooks.

61. As far as practicable, berthing of crew members should be so arranged that watches are separated and that no day worker share a room with watchkeepers.

#### MESS ROOMS

62. Mess-room accommodation separate from sleeping quarters should be provided in all vessels carrying a crew of more than ten persons. Wherever possible it should be provided also in vessels carrying a smaller crew. If, however, this is impracticable, the mess room might be combined with the sleeping accommodation.

63. In vessels engaged in fishing on the high seas and carrying a crew of more than 20, separate mess-room accommodation might be provided for the skipper and officers.

64. The dimensions and equipment of each mess room should be sufficient for the number of persons likely to use it at any one time.

65. Mess rooms should be equipped with tables and approved seats sufficient for the number of persons likely to use them at any one time.

66. Mess rooms should be as close as practicable to the galley.

67. Where pantries are not accessible to mess rooms, adequate lockers for mess utensils and proper facilities for washing them should be provided.

68. The tops of tables and seats should be of damp-resisting material without cracks and easily kept clean.

69. Wherever practicable mess rooms should be planned, furnished and equipped to give recreational facilities.

#### SANITARY ACCOMMODATION

70. Sufficient sanitary accommodation, including washbasins and tub or shower, should be provided in all vessels.

71. Sanitary facilities for all members of the crew who do not occupy rooms to which private facilities are attached should, wherever practicable, be provided for each department of the crew on the following scale:

- (a) one tub or shower for every eight persons or less;
- (b) one water closet for every eight persons or less;
- (c) one washbasin for every six persons or less.

72. Cold fresh water and hot fresh water or means of heating water should be available in all communal wash places. The competent authority, after consultation, might fix the minimum amount of fresh water which should be supplied per person per day.

73. Washbasins and tub baths should be of adequate size and constructed of approved material with a smooth surface not liable to crack, flake or corrode.

74. All water closets should have ventilation to the open air, independently of any other part of the accommodation.

75. The sanitary equipment to be placed in water closets should be of an approved pattern and provided with an ample flush of water, available at all times and independently controllable.

76. Soil pipes and waste pipes should be of adequate dimensions and should be constructed so as to minimize the risk of obstruction and to facilitate cleaning. They should not pass through fresh water or drinking water tanks; neither should they, if practicable, pass overhead in mess rooms or sleeping accommodation.

77. Sanitary accommodation intended for the use of more than one person should comply with the following requirements:

- (a) floors should be of approved durable material, easily cleaned and impervious to damp and should be properly drained;
- (b) bulkheads should be of steel or other approved material and should be watertight up to at least 0.23 metres above the level of the deck;
- (c) the accommodation should be sufficiently lighted, heated and ventilated.

78. Water closets should be situated convenient to, but separate from, sleeping rooms and washrooms, without direct access from the sleeping rooms or from a passage between sleeping rooms and water closets to which there is no other access, provided that this requirement should not apply where a water closet is located between two sleeping rooms having a total of not more than four persons. Where there is more than one water closet in a compartment they should be sufficiently screened to ensure privacy.

79. Facilities for washing and drying clothes should be provided on a scale appropriate to the size of the crew and the normal duration of the voyage.

80. The facilities for washing clothes should include suitable sinks equipped with drainage, which might be installed in washrooms if separate laundry accommodation is not reasonably practicable. The sinks should be provided with an adequate supply of cold fresh water and hot fresh water or means of heating water.

81. The facilities for drying clothes should be provided in a compartment separate from sleeping rooms, mess rooms and water closets, adequately ventilated and heated and equipped with lines or other fittings for hanging clothes.

#### SICKBAY

82. Whenever possible, an isolated cabin should be provided for a member of the crew who suffers from illness or injury. On vessels of 45.7 metres or over in length, there should be a sickbay.

#### SPACE TO HANG OILSKINS

83. Sufficient and adequately ventilated accommodation for the hanging of oilskins should be provided outside but convenient to the sleeping rooms.

## CLEAN AND HABITABLE CONDITION

84. Crew accommodation should be maintained in a clean and decently habitable condition and should be kept free of goods and stores which are not the personal property of the occupants.

## COOKING EQUIPMENT AND GALLEY

85. Satisfactory cooking equipment should be provided on board and should, wherever practicable, be fitted in a separate galley.

86. The galley should be of adequate dimensions for the purpose and should be well lit and ventilated.

87. The galley should be equipped with cooking utensils, the necessary number of cupboards and shelves, and sinks and dish racks of rust-proof material and with satisfactory drainage. Drinking water should be supplied to the galley by means of pipes. Where it is supplied under pressure, the system should contain protection against backflow. Where hot water is not supplied to the galley, an apparatus for heating water should be provided.

88. The galley should be provided with suitable facilities for the preparation of hot drinks for the crew at all times.

89. A provision storeroom of adequate capacity should be provided which can be kept dry, cool and well ventilated in order to avoid deterioration of the stores. Where necessary, refrigerators or other low-temperature storage space should be provided.

90. Where butane or propane gas is used for cooking purposes in the galley the gas containers should be kept on the open deck.

## PART IV. APPLICATION TO EXISTING SHIPS

91. The requirements of this annex should apply to fishing vessels constructed subsequent to the coming into force of the proposed Convention for the Member concerned.]

*Observations on Annex II*

*Argentina.* The length parameters in paragraphs 1 and 2 of the annex should be reduced. With regard to paragraph 1, a change from 24.4 metres to 15 metres in length is suggested, retaining in paragraph 2 the possibility of extending application to vessels between 13.7 metres and 15 metres in length. CATT agrees that Annex II should be applicable to vessels of 15 metres in length or over. ACPP wishes to retain the length limits in paragraphs 1 and 2 as is.

*Australia.* The crew accommodation standards derived from ILO Convention No. 126 are supported, since they address many direct and indirect human factors issues such as noise and vibration, ventilation, heating, lighting, sleeping facilities, cleanliness, feeding, and hot drinks at all times. Paragraph 4 is probably intended to end "are to be provided". Paragraph 63 perpetuates outdated concepts of separation of skippers, officers and crew, which are contrary to modern safety practices that

encourage greater interaction among crew members to break down social and cultural barriers that may obstruct communications, leading to failures in safety management and bridge resource management and, possibly, to safety incidents.

*Belgium.* See comment under Article 30.

CCE: Same as the above reply.

*Brazil.* See comment under Article 22.

*Canada.* See comment under Article 22. Provisions with respect to accommodation should apply to new fishing vessels.

*Cyprus.* OEB: See comment under Article 20.

*Japan.* Annex II, as a whole, should be moved to the Recommendation. Members should be able to apply its provisions flexibly, based on consultations with the representative organizations of employers and workers. Regarding the vessel sizes to which Annex II should apply, each Member should also be permitted to use other units of measurement than length. When converting the units of measurement, it should be taken into account that Japanese vessels are more slender than European vessels, i.e. that European vessels' gross tonnage is generally two or three times bigger than that of Japanese vessels of the same length.

*Lebanon.* The best place to put this annex would be in an appendix to the Recommendation. The Fishermen Trade Union in Beirut and Suburbs indicates that the general provisions of Convention No. 126 would be sound and practicable, but cannot be applied to national vessels, because Lebanese fishing boats do not exceed 13 metres in length.

*Nicaragua.* CTN: It is crucial that Annex II be part of the Convention.

*Norway.* It is proposed that the requirements in Annex II should be applied to vessels of 24 metres LOA and over, and might be applied to vessels between 15 and 24 metres LOA. See also comment under Article 22.

*Spain.* For the time being, it is not recommended to amend in Annex II the limits on vessel length (paragraphs 1 and 2) or minimum floor area per person for sleeping rooms (paragraph 40) or maximum number of persons per sleeping room (paragraph 43), which are currently set out in Convention No. 126, without having carried out in-depth studies on this subject, as this may have a substantial impact on the fleets.

FNCP: If the intention is to adjust the square-bracketed limits in paragraphs 1, 2, 40 and 43, it should be borne in mind that this could heavily affect the fishing fleets. It is not recommendable to amend them without having carried out adequate studies on the subject. Even if new structural regulations could lead to the participation of the Financial Instrument for Fisheries Guidance (FIGG), the investments required would not have the result of making the fishing vessel more productive (and if it was more productive, it would not receive subsidies), which will discourage the employer. Lastly, draft national legislation determines the safety and pollution prevention regulations to be met by fishing vessels under 24 metres in length and regulates crew accommodation, including lighting, sleeping rooms, mess rooms, sanitary facilities, galleys, etc., with special provisions for vessels remaining outside their home ports for less than 36 hours. Therefore, any amendments which might have an impact on this draft legislation should be communicated to the sector.

---

*United Kingdom.* The United Kingdom supports in principle the inclusion of additional provisions for larger vessels.

*European Union.* See general remarks under Article 30. Since the relevant EU Directives only impose minimum standards, provisions not covered by these Directives but compatible with them do not raise problems, as for example those regarding tropical areas (i.e. flies, electric fans), laundry facilities or space to hang oilskins. Also, even if the notion of “comfort” (e.g. paragraph 54) is not included in the relevant EU legislation, it does not contradict the pertinent Directives, as it could reflect the overall goal of well-being at work expressed in the Framework Directive on OSH. The discussion on noise and vibration is still pending under the draft consolidated maritime labour Convention, including debate on references to international standards, and Commission services understand the willingness of stakeholders not to cite figures. The ILO text on facilities for sick or injured fishers for all vessels is compatible with Directive 92/29/EEC. Problems arise only where the ILO text provides for an obligation to have a sick bay on vessels of 45.7 metres, since Directive 92/29/EEC does not relate this obligation to length but to cumulative elements: “more than 500 gross registered tonnes, with a crew of 15 or more workers and engaged on a voyage of more than three days.” Amendments should be envisaged to maintain coherence with what has already been established. The provisions on ventilation are more stringent than those of Directive 93/103/EC, which only refer to obligations, *if* mechanical ventilation is provided. The obligation contained in paragraph 27 is, however, compatible with the Directive and might reflect arrangements already enforced in Member States.

## OFFICE COMMENTARY

### General comments

This commentary takes into account replies received by the Office to Report V (1), *Work in the fishing sector*, as well as views expressed at the Tripartite Meeting of Experts on the Fishing Sector (Geneva, 13-17 December 2004).

To assist the Tripartite Meeting of Experts on the Fishing Sector, and to give it a basis for its discussions, the Office had prepared a document entitled *Proposed provisions for accommodation, large fishing vessels and social security*. The document provided text, and related commentary, for:

- Part V, Accommodation and food (provisions relating to all vessels, including large vessels);
- Part VII, Additional requirements for vessels of [...] metres in length or more;
- Social security.

The Report of the Tripartite Meeting of Experts on the Fishing Sector, attached in the Appendix, provides a summary of the discussions. Annex I to the Appendix contains a document, adopted by the Meeting, entitled *Provisions for accommodation, large fishing vessels and social security proposed by the Tripartite Meeting of Experts on the Fishing Sector*. This contains provisions on which there was consensus and provisions on which there was no consensus at the Tripartite Meeting of Experts on the Fishing Sector. The document should not be read on its own, as in many cases there was no agreement on the text, but should be read with the report of that meeting. This is particularly true with regard to the provisions relating to the proposed new Part VII concerning large vessels.

Following the Tripartite Meeting of Experts on the Fishing Sector, the Office prepared the texts of the proposed Convention concerning work in the fishing sector and the proposed Recommendation concerning work in the fishing sector. These texts are found in Report V (2B).

As concerns Part V, Accommodation and food, of the proposed Convention, as a result of the Tripartite Meeting of Experts on the Fishing Sector and of the replies to Report V (1), the Office prepared revised versions of the articles in that Part and of the provisions in the related annex (now Annex III of the proposed Convention). The provisions in Annex III, Fishing vessel accommodation, include provisions that are aimed at all new, decked fishing vessels, followed by provisions for vessels of “[24] metres in length and over which are not less than [100] gt” or, in some cases, to vessels of “[45] metres in length and over and not less than [500] gt”. Furthermore, the Meeting discussed and, in some cases, agreed to include certain provisions on fishing vessel accommodation in the proposed Recommendation. It may be noted that figures in the proposed Convention and the proposed Recommendation, i.e. “[24] metres” have often been left in square brackets, as no agreement had been reached on the figure to be used. The issue of accommodation is discussed in more detail in this Office commentary.

As concerns the request to develop proposals for a new Part VII concerning “Additional requirements for vessels of [...] metres in length or more”, instead of developing an entirely separate Part, the Office has placed the provisions, issue by issue, immediately after the related provisions concerning all vessels. For example, additional provisions concerning medical care on vessels of “[24] metres in length and over or those engaged on international voyages” are found immediately after provisions concerning medical care for all fishers. The Office has done this for several reasons. First, this structure will make the proposed Convention and the proposed Recommendation easier to understand. Second, it will allow for a more efficient debate at the International Labour Conference (ILC) (otherwise, each issue, e.g. medical care, would have to be dealt with twice during the discussion of the proposed Convention text). Third, it will allow the ILC greater flexibility in determining, for example, whether the provisions for large vessels should apply to large vessels (e.g. 24 metres in length and over), to vessels engaged on international voyages, to vessels at sea for a certain length of time or engaged on voyages taking them a certain distance from their home port, or to a combination of any or all of these criteria. The following table indicates where these new provisions have been inserted in the proposed Convention and the proposed Recommendation.

#### **Proposed Convention – new provisions concerning large vessels**

<b>Issue</b>	<b>Article</b>
Medical examination	Art. 10(3), Art. 12
Manning and hours of rest	Art. 14
Fisher’s work agreement	Art. 20, Annex II(2)
Payment of fishers	Art. 24
Medical care	Art. 30
Occupational safety and health and accident prevention	Art. 32
Compliance and enforcement	Art. 39
Accommodation	Annex III

#### **Proposed Recommendation – new provisions concerning large vessels**

<b>Issue</b>	<b>Paragraph</b>
Competency and training	Para. 12
Payment of fishers	Para. 15
Accommodation	Paras. 27 and 31
Medical care on board	Para. 37

In the proposed Convention, the Office has also included new provisions concerning repatriation (Article 21), recruitment and placement (Article 22) and social security (Articles 34 and 35) and, primarily as a result of replies received to Report V (1), has made substantial changes to the provisions concerning enforcement (Articles 39 and 41). A new annex has also been added (Annex I). There are also other additions, deletions and changes that are noted in this Office commentary.

---

## Commentary on the proposed Convention concerning work in the fishing sector

### *Office commentary on the Preamble*

At the 92nd Session of the ILC, the Committee on the Fishing Sector discussed, including in the Preamble, a reference not only to the Declaration on Fundamental Principles and Rights at Work but also to the fundamental Conventions themselves.<sup>1</sup> The Office has reflected this in the fifth preambular paragraph.

The Tripartite Meeting of Experts on the Fishing Sector discussed, in the context of the draft provisions concerning recruitment and placement, the desirability of including a paragraph in the Preamble concerning the need to protect and promote the “employment rights” of fishers. The Office has included such a paragraph (the eighth preambular paragraph); however, it has not included the word “employment”, taking into account the nature of the work relationship in much of the fishing sector.

At the 92nd Session of the ILC, the Committee on the Fishing Sector agreed to leave in square brackets Article 18, subparagraph (a) (referred to as point 28(a) in the discussion), which referred to identity documents.<sup>2</sup> Having deleted this text from the proposed Convention, the Office has placed a reference to the Seafarers’ Identity Documents Convention (Revised), 2003 (No. 185), in the sixth preambular paragraph.

As suggested by a member State in its reply to Report V (1), the Office has inserted the words “occupational safety and health” into the tenth preambular paragraph.

## PART I. DEFINITIONS AND SCOPE

### DEFINITIONS

#### *Article 1*

#### *Article 1(a)*

The expression “rivers and inland waters” used in Article 1(a) of the proposed Convention found in Report V (1) has been replaced by “rivers, lakes and canals”, in order to avoid any misunderstandings as to its meaning.

Certain replies to Report V (1) have called for a definition of “subsistence fishing”, which is used in the definition of “commercial fishing”. The Office has not included a definition of this term, but notes that the FAO Fisheries Glossary has defined “subsistence fishery” as “a fishery where the fish caught are shared and consumed directly by the families and kins of the fishers rather than being bought by middle-(wo)men and sold at the next larger market”.

---

<sup>1</sup> *Provisional Record* No. 21, ILC, 92nd Session, Geneva, 2004, paras. 267-279.

<sup>2</sup> *ibid*, para. 574.

*Article 1(e)*

In the definition of “fisher”, the Committee on the Fishing Sector had left the words “and shore-based persons carrying out work aboard a fishing vessel” in square brackets. Based on replies to Report V (1), the Office has removed the square brackets around these words and has added the words “and fisheries observers”.

*Article 1(h)(iii)*

The square brackets around “50 tonnes” have been removed. The term, which is used in the Torremolinos International Convention for the Safety of Fishing Vessels and its Protocol, refers to weight.

*Article 1(l)*

The Tripartite Meeting of Experts on the Fishing Sector agreed that the Convention should provide for the possibility that a Member could use length overall (LOA), as well as length (L), as a measurement unit, as this may be more cost-effective for competent authorities and fishing vessel owners. The Office has therefore included a definition of the term “length overall” in Article 1, subparagraph (l). The definition is a simplified version of the definition used in Article 2 of the European Union Council Regulation (EEC) No. 2930/86 of 22 September 1986 defining the characteristics for fishing vessels. The full text of Article 2 of that Regulation reads:

1. The length of a vessel shall be the length overall, defined as the distance in a straight line between the foremost point of the bow and the aftermost point of the stern.

For the purposes of this definition:

- (a) the bow shall be taken to include the watertight hull structure, forecastle, stem and forward bulwark, if fitted, but shall exclude bowsprits and safety rails;
- (b) the stern shall be taken to include the watertight hull structure, transom, poop, trawl ramp and bulwark, but shall exclude safety rails, bumkins, propulsion machinery, rudders and steering gear, and divers’ ladders and platforms.

The length overall shall be measured in metres with an accuracy of two decimals.

2. When the length between perpendiculars is mentioned in Community legislation, it shall be defined as the distance measured between the forward and the after perpendiculars as defined by the International Convention for the Safety of Fishing Vessels.

The length between perpendiculars shall be measured in metres with an accuracy of two decimals.

*Article 1(o)*

Several replies to Report V (1) called for a definition of the term “international voyage”. The Office has included such a definition, drawing inspiration, in part, from the legislation of certain member States. The definition it has provided in subparagraph (o) would not restrict the concept of international voyage to visiting the ports of another State, but would cover a voyage outside the waters under the jurisdiction of the State whose flag the vessel flies.

However, the Office draws the attention of the Committee to a reply by Canada to Report V (1) calling for the inclusion of the concept of duration of the voyage in the definition of “international voyage”. The Office has not included this concept in the definition as this might restrict the use of the term “international voyage” elsewhere in the Convention where, for example, it could be combined with the concept of duration in the form of the length of a voyage in nautical miles, or time, or the area where fishing operations take place. Should the ILC decide to change the definition in subparagraph (o), it may wish to bear in mind the potential impact this might have on several other new provisions.

The concept of “distant water fishing” was discussed at the Tripartite Meeting of Experts on the Fishing Sector. The Office considered using this term in conjunction with specific (usually more stringent) provisions concerning certain “large vessels”. The FAO has, in *The state of world fisheries and aquaculture, 1998*, defined “distant-water fisheries production” as “catches taken in FAO fishing areas that are non-adjacent to the flag state of the fishing vessel used”. However, the Office considers that the use of this term might be problematic, as, for example, it would require a definition of what is meant by “fishing areas”, as well as clarification of the term “non-adjacent”. The Office has therefore not used the term in the Convention.

#### SCOPE

##### *Article 2*

Paragraph 3 has been added to take into account views expressed at the Tripartite Meeting of Experts on the Fishing Sector concerning the possible voluntary extension, after consultation, of the protection provided in the Convention for fishers working on larger vessels (i.e. vessels of 24 metres in length and over) to fishers working on smaller vessels (i.e. vessels of less than 24 metres in length). This is also the first time the words “[24] metres in length and over” appear in the Convention. As may be recalled, at the 92nd Session of the ILC, the Committee on the Fishing Sector had decided, following a recorded vote, that the Office should develop a new Part VII concerning “Additional requirements for vessels of [...] metres in length or more”. The Office has changed the wording to “metres in length and over” to be consistent with the provisions of Convention No. 126 as well as wording in certain IMO Conventions. The meaning, however, remains unchanged.

##### *Article 5*

At the 92nd Session of the ILC, the Committee on the Fishing Sector had agreed to an amendment that would allow the competent authority, after consultation, to decide to use “other units of measurement defined in the Convention”. This was aimed at allowing a competent authority to use not only length (L) but also gross tonnage as a means of measurement. As noted above, the Tripartite Meeting of Experts on the Fishing Sector generally agreed to the idea of allowing the use of not only (L) but also length overall (LOA), at least as regards provisions concerning fishing vessel accommodation, as an alternative means of measurement. Because of this change, and to ensure that the flexibility provided through the use of “other units of measurement” is within

reasonable limits, the Office has created a new Annex I, which sets out proposed equivalent length overall (LOA) and gross tonnage (gt) figures to length (L), as used in the proposed Convention and its annexes, and the proposed Recommendation.

The figures for LOA used in Annex I are based on figures proposed to, and generally accepted as equivalents by, the Tripartite Meeting of Experts on the Fishing Sector. These figures had been drawn from information obtained from the United Kingdom. However, since the Meeting, the Office has made 26.5 metres LOA (as opposed to 27 metres LOA) the figure equivalent to 24 metres (L), based on a figure developed by the IMO from a larger sampling of vessels.<sup>3</sup>

The figures used for gross tonnage (gt) in Annex I are estimates made by the Office after reviewing IMO data and also data provided by Japan to the Tripartite Meeting of Experts on the Fishing Sector. However, the Office notes that the IMO Secretariat, after looking into the issue of L and gt equivalent figures, has recently written that "... it was determined not to be practical to have an acceptable figure of gt which could be deemed as equivalent to [a registered length of] 24 m".<sup>4</sup> This leaves open the question of whether it is practical for the international labour Convention to attempt to establish L to gt equivalences. However, this problem may have arisen because such figures were not included in IMO instruments (i.e. the Torremolinos Protocol of 1993) at the time the instruments were adopted.

The Office understands that for some member States gross tonnage as a unit of measurement is a better indicator of the size of the vessel. For example, in their countries, fishing vessels are generally slender compared to those of other countries, so that, for example, a vessel of 24 metres in length would have much less internal space (and thus a lower gross tonnage) than a fishing vessel of similar length in another country. The main impact of such a difference would appear to relate to the provisions concerning such matters as the size of sleeping rooms in accommodation spaces. However, the Office believes that this would be less essential for other matters not directly linked to the available internal space of a vessel. For this reason, the Office has also proposed, with regard to the application of certain requirements concerning internal accommodation space, both length and gross tonnage.<sup>5</sup> If this latter approach is accepted, there might not be a need to provide for the gross tonnage equivalent figures currently found in the proposed new Annex I.

---

<sup>3</sup> At the 93rd Session of the IMO Council (15-19 November 2004), document No. C 93/4/Add.2, entitled *Report of the status of Conventions and other multilateral instruments in respect of which the Organization performs functions, including the 1993 Torremolinos Protocol: Consideration of legal and practical implications of amending the entry-into-force provisions of the 1993 Torremolinos Protocol*. Annex 5 of that document notes, in paragraph 9, that 26.47 metres length overall corresponds to 24 metres length as registered, which is itself the length (L) as defined in the Torremolinos Protocol and the same as the length (L) set out in Article 1 of this proposed Convention.

<sup>4</sup> Annex 5 of IMO Council document No. C 93/4/Add.2, see above.

<sup>5</sup> See the Office commentary on Annex III concerning fishing vessel accommodation, under Part V, Accommodation and food.

---

PART II. GENERAL PRINCIPLES

IMPLEMENTATION

*Article 6*

In its reply to Report V (1), New Zealand asked whether voluntary codes of practice would be considered as “other measures”. If the Government of New Zealand is referring to codes of practice adopted by the competent authority, which would be at the national level, they would be considered as “other measures”. If these national codes of practice were not binding, they would appear to be insufficient to ensure application of the Convention.

RESPONSIBILITIES OF FISHING VESSEL OWNERS, SKIPPERS AND FISHERS

*Article 8*

In response to a reply to Report V (1) by Australia, the Office has included subparagraph (d) of paragraph 2, which reads “ensuring compliance with safety of navigation, watchkeeping and associated good seamanship standards”, and has redrafted paragraph 4 so that it reads: “Fishers shall comply with the lawful and reasonable orders of the skipper and applicable safety and health measures.”

PART III. MINIMUM REQUIREMENTS FOR WORK ON BOARD FISHING VESSELS

MINIMUM AGE

*Article 9*

This Article has been reformulated taking into account replies to Report V (1), particularly those calling for greater consistency between the proposed Convention and Convention No. 138. The wording of the provision concerning light work during school holidays by persons of 15 years of age has been slightly modified without affecting the substance.

The Office had made proposals to the Tripartite Meeting of Experts on the Fishing Sector concerning prohibition of night work for persons under 18 years of age working on large fishing vessels. However, the Meeting indicated that those provisions should apply to all fishers, regardless of vessel size, and such changes are now reflected in paragraph 6.

The Office has included a new paragraph 7 to make it clear that this Article shall not affect any more stringent obligations assumed by the Member arising from the ratification of other international labour standards, for example Conventions Nos. 138 and 182.

The Office draws attention to the difference between the proposed Convention and the draft consolidated maritime labour Convention: the latter does not provide for the possibility for persons below the age of 16 to work on board commercial ships.

## MEDICAL EXAMINATION

*Article 10*

In response to replies to Report V (1), the words “national traditions” have been deleted from paragraph 2, as these were considered too vague.

Paragraph 3 of this Article concerns vessels of more than 24 metres in length. Taking into account discussions at the Tripartite Meeting of Experts on the Fishing Sector, the paragraph provides that “the exemptions in paragraph 2 shall not apply to a person working on a fishing vessel of [24] metres in length and over or on an international voyage or normally remaining at sea for more than three days”. The Office understands, however, that there is not yet clear consensus on the inclusion of the provision in the Convention.

*Article 11*

In its reply to Report V (1), Spain raised several points concerning subparagraph (e), including the suggestion that the means of settling disputes should be left to national legislation. While the Office has not introduced such a change, if the suggestion by Spain were to be accepted, subparagraph (e) might be moved to the Recommendation.

*Article 12*

This new Article deals with fishing vessels above a length to be specified.

The Tripartite Meeting of Experts on the Fishing Sector did not reach a clear consensus on the inclusion of paragraph 1 in the proposed Convention or the proposed Recommendation.

With regard to the maximum period of validity of the medical certificate of a young person, in paragraph 2, the Office has harmonized the age (18 years) with the age used in Article 9, taking into account a reply to Report V (1) as concerns the proposed Recommendation.

## PART IV. CONDITIONS OF SERVICE

## MANNING AND HOURS OF REST

*Articles 13 and 14*

At the Tripartite Meeting of Experts on the Fishing Sector, the question was raised as to whether the IMO SOLAS Convention required States to establish safe manning for fishing vessels and whether States were to require that fishing vessels carry safe manning documents. The Office has sought to clarify this matter.

SOLAS, Chapter 1, *General provisions*, provides, in Regulation 3, *Exceptions*, that:

- (a) The present regulations, unless expressly provided otherwise, do not apply to:  
... (vi) Fishing vessels.

SOLAS Chapter V, *Safety of Navigation*, Regulation 1, *Application*, provides, generally, that it applies to “all ships on all voyages”. In paragraph 4, it provides that:

The Administration shall determine to what extent the provisions of regulations 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27 and 28 do not apply to the following categories of ships: ... 3 fishing vessels.

SOLAS, Chapter V, *Safety of Navigation*, Regulation 14, *Ships’ manning*, provides that:

1 Contracting Governments undertake, each for its national ships, to maintain, or, if it is necessary, to adopt, measures for the purpose of ensuring that, from the point of view of safety of life at sea, all ships shall be sufficiently and efficiently manned. [A footnote refers to the “Principles of safe manning”, adopted by the Organization by resolution A.890(21), as amended by resolution A.955(23).]

2 Every ship to which chapter I applies shall be provided with an appropriate minimum safe manning document or equivalent issued by the Administration as evidence of the minimum safe manning considered necessary to comply with the provisions of paragraph 1.

It would therefore appear that States party to SOLAS are to maintain or to adopt measures ensuring that fishing vessels are sufficiently and efficiently manned, but are not required to provide them with an appropriate safe manning document or equivalent issued by the Administration.

The new Article 14 has been included in response to the request that the Office develop proposals on a new Part VII concerning “Additional requirements for vessels of [...] metres in length or more”; these were submitted to the Tripartite Meeting of Experts on the Fishing Sector. At the Meeting, there was no strong opposition to paragraph 1(a), although the Employers suggested that consideration might be given to moving it, and the rest of the Office’s proposal, to the Recommendation. There was also inconclusive discussion of whether a proposed provision concerning safe manning documents should appear in the Convention or in the Recommendation. The provisions now seen in paragraph 1, subparagraph (b), and in paragraphs 2 and 3, were discussed but, as there was no agreement, the text was left as proposed by the Office. The Office has since reworded the provision to make it consistent with the provision of Convention No. 180, on which it is partly based.

#### CREW LIST

The section previously entitled “Fishers’ work agreements and list of persons on board” has been divided into two separate sections: “Crew list” and “Fisher’s work agreement”. The title “List of persons on board” was changed to “Crew list”, which is considered a “term of art” in the industry.

#### Article 15

The intent of this Article is to cover not only members of the crew but also fisheries observers and other persons on board the vessel when it departs on a voyage.

In response to a reply to Report V (1) requesting further clarification in this Article, the text has been modified to indicate that this information shall be provided

“prior to departure of the vessel, or communicated ashore immediately after departure of the vessel”. This could be done, for example, by radio.

A sentence has been added to provide that: “The competent authority shall determine to whom such information shall be provided.”

#### FISHER’S WORK AGREEMENT

##### *Article 16*

In its reply to Report V (1), an employers’ organization (USCIB) expressed concern that this Article could result in a requirement that all work agreements should be translated into the language of each fisher on board. The Office draws attention to this practical issue, but has not changed the provision.

Annex II, referred to in Article 16, now has two parts: Part 1, which concerns minimum particulars to be included in the fisher’s work agreement; and Part 2, which provides additional particulars to be included in fisher’s work agreement for fishers working on fishing vessels of [24] metres in length and over, or working on vessels engaged on international voyages.

In Part 1 of Annex II, the Office has included a new subparagraph (d) that provides that the fisher’s work agreement shall include “the name of the employer, or fishing vessel owner, or other party to the agreement with the fisher”. This had been requested in replies to Report V (1).

##### *Article 17*

In its reply to Report V (1), an employers’ organization (Norwegian Fishing Vessel Owners’ Association) expressed concerns that subparagraph (a) could be problematic for the fishing industry, as it might lead to delays in the departure of vessels. The Office draws attention to this practical issue, but has not changed the text.

In its reply to Report V (1), New Zealand requested clarification of what was intended by the “records” to be maintained in subparagraph (b). The Office notes that such records may be necessary, inter alia, for the fisher’s tax purposes or for providing evidence of time at sea for the purpose of upgrading his or her competency certificates. As suggested by France, the records could be kept using any method, whether it is a traditional form of service book or a more up-to-date method.

##### *Article 18*

The Office notes that a few replies to Report V (1) requested clarification of the term “concerned parties”. In this regard, the Office refers to the discussion of this issue in the Report of the Committee on the Fishing Sector.<sup>6</sup>

---

<sup>6</sup> *Provisional Record* No. 21, ILC, 92nd Session, Geneva, 2004, paras. 519-544.

*Article 20*

The new Article 20 has been included in response to the request that the Office develop proposals on a new Part VII concerning “Additional requirements for vessels of [...] metres in length or more”; these were submitted to the Tripartite Meeting of Experts on the Fishing Sector. The proposals have been modified as a result of views expressed at that Meeting and for other reasons, described as follows.

At the Tripartite Meeting of Experts on the Fishing Sector, an expert noted that it was not unusual for fishers to have agreements with parties other than the fishing vessel owner. During the Meeting, the provision was redrafted to make it the responsibility of the fishing vessel owner to ensure that each fisher had a written and signed work agreement, but not necessarily to sign the agreement, although the Office is not sure that that change was acceptable to all. To ensure that the fisher remains protected in the event of default by the recruitment and placement agency, the Office has, since the Meeting, included a new paragraph that provides that the fishing vessel owner retains overall responsibility even if the fisher’s work agreement may be between the fisher and a recruitment and placement agency.

As noted above, Annex II(2) sets out additional particulars to be included in the fisher’s work agreement for fishers working on fishing vessels of “[24] metres in length and over or working on a vessel engaged on an international voyage”. At the Meeting, during the discussion of the issue of manning and hours of rest, the Government expert from Japan noted that the best way of setting fixed hours of rest per day would be through social dialogue and the fisher’s work agreement. The Office has tried to take this suggestion into account by including a provision on this issue in subparagraph (e) in Annex II(2), which would seem the most appropriate place for it.

## REPATRIATION

The Office notes that the text of the proposed Convention in Report V (1) had included a section entitled “Identity documents, repatriation rights and recruitment and placement services”. The proposed Convention now provides separate sections for “Repatriation” and “Recruitment and placement”. There is no section entitled “Identity documents”, as provisions on this issue have been deleted, taking into account replies to Report V (1), and a reference to the Seafarers’ Identity Documents Convention (Revised), 2003 (No. 185), has been included in the Preamble.

*Article 21*

The new Article 21 has been included in response to the request that the Office develop proposals on a new Part VII concerning “Additional requirements for vessels of [...] metres in length or more”; these were submitted to the Tripartite Meeting of Experts on the Fishing Sector. Those proposals drew upon the main elements of the Repatriation of Seamen Convention, 1926 (No. 23), the Repatriation of Seafarers Convention (Revised), 1987 (No. 166), and the provisions of the draft consolidated maritime labour Convention (CMLC).

At the Tripartite Meeting of Experts on the Fishing Sector, there was inconclusive discussion as to whether the provisions should apply to large vessels (e.g. 24 metres in length or more), to vessels engaged on international voyages, to vessels on voyages

taking them a certain distance from their home port (bearing in mind that in some large countries a fisher could require repatriation from a port that, though in his or her home country, is far from the home of the fisher or the port of embarkation), or to a combination of any or all of these criteria. The Office could not find a reason to limit the protection in this Article to any particular category of fishers and, bearing in mind the possibility for exclusions provided in Article 3, has therefore not included any such limits in this Article.

Paragraph 2 provides that the cost of repatriation is to be borne by the fishing vessel owner. The Office notes that, as provided in the Articles concerning the fisher's work agreement, the fisher might have an agreement with a party other than the owner. This paragraph would, however, make it clear that the responsibility for repatriation would remain with the fishing vessel owner.

#### RECRUITMENT AND PLACEMENT

##### *Article 22*

The new Article 22 has been included in response to the request that the Office develop proposals on a new Part VII concerning "Additional requirements for vessels of [...] metres in length or more"; these were submitted to the Tripartite Meeting of Experts on the Fishing Sector, and drew upon the main concepts set out in Convention No. 179 and in the draft consolidated maritime labour Convention. However, the discussion at the Meeting on this matter was not conclusive.

When preparing the text of Article 22, the Office considered that such protection should not only apply to fishers working on large vessels or vessels engaged on international voyages, but to all fishers. It is, however, aware that some of the most serious problems concerning this issue involve fishers on "distant-water" vessels. It has, therefore, not limited the scope of this Article to a specific category of fishers. The Office has also included a new paragraph 3(c) and paragraph 4 concerning the regulation of recruitment and placement agencies, drawn from Article 4 of Convention No. 179. This was felt to be particularly important in light of the fact that, under proposed changes to the Articles concerning the fisher's work agreement, recruitment and placement agencies could be party to such agreements.

#### PAYMENT OF FISHERS

##### *Article 23*

The Office has made changes to Article 23 that are aimed at clarifying the text, but not changing its meaning. It notes that several replies to Report V (1) have questioned the practicability of guaranteeing a regular wage payment to fishers, bearing in mind the tradition of paying fishers in whole or in part on the basis of the catch. However, the Office has not changed the text, as it would appear that the words "fishers who are paid a wage are ensured a monthly or regular payment" already takes this concern into account.

*Article 24*

The new Article 24 has been included in response to the request that the Office develop proposals on a new Part VII concerning “Additional requirements for vessels of [...] metres in length or more”; these were submitted to the Tripartite Meeting of Experts on the Fishing Sector. The Office has drafted the Article so that it applies to “fishing vessels of [24] metres in length and over or engaged on international voyages”. It has used the words “payments received”, in order to include share fishers.

## PART V. ACCOMMODATION AND FOOD

As noted elsewhere in this report, at the 92nd Session of the ILC, the Committee on the Fishing Sector agreed that consultations should be held on the issue of accommodation before the 93rd Session of the ILC in 2005, and that the Office should devise a mechanism to facilitate the process. The Tripartite Meeting of Experts on the Fishing Sector also considered, *inter alia*, proposals on Part V, Accommodation and food, and the related Annex III, Fishing vessel accommodation.

When preparing the text for the Tripartite Meeting of Experts on the Fishing Sector, the Office had:

- sought to address the main concepts of Convention No. 126, as well as Annex II of the proposed Conclusions prepared by the Office for the 92nd Session of the International Labour Conference;
- taken into account provisions of the draft consolidated maritime labour Convention, so as not to provide text wholly incompatible with that instrument;
- simplified the text, where possible, to eliminate non-essential details that might hinder ratification;
- taken into account amendments on accommodation submitted in the ILC Committee on the Fishing Sector;
- drafted provisions for all vessels, with additional text requirements for large fishing vessels;
- sought to avoid, where possible, conflicts with guidance provided in relevant FAO/ILO/IMO instruments; and
- sought to propose requirements that would be cost-effective to implement.

The Tripartite Meeting of Experts on the Fishing Sector discussed the Office proposals, with consensus on some, but not all, of them. Following the Meeting, the Office made changes to what had been Article 22 in Report V (1) and is now Article 28 in Report V (2B). Article 28 provides that a Member “shall give full effect to Annex III concerning fishing vessel accommodation”. Article 28 also provides that “this annex may be amended in the manner provided for in Article 43”, the effect of which is to make amendments to the annex subject to a tacit acceptance procedure that is less time-consuming and costly to the ILO, and would make it much easier to keep the technical standards on fishing vessel accommodation current with the developments in, and the needs of, the sector.

Annex III draws upon both Convention No. 126 and Annex II of the proposed Convention found in Report V (1). It applies to “all new, decked fishing vessels, subject to any specific exemptions provided for in accordance with Article 3 of this Convention”. However, it also provides that the competent authority “shall also apply the requirements of this annex to existing vessels, when and in so far as it determines that this is reasonable and practicable”. The annex provides for the possibility of variations under certain conditions, but these are to be reported to the ILO in accordance with Article 4 of this Convention. The annex, after consultation, may also be applied to certain smaller vessels.

It is to be recalled that, at the 92nd Session of the ILC, an important and contentious issue had been whether certain higher requirements should apply to vessels of 24 metres or more in length or 15 metres or more in length. This issue has been addressed by including, in Annex III, paragraph 4, the following provision:

The requirements for vessels of [24] metres in length and over may be applied to vessels of [15] metres in length and over which are less than [24] metres in length where the competent authority determines, after consultation, that this is reasonable and practicable.

The remainder of Annex III is structured by issue (e.g. planning and control, design and construction, noise and vibration, etc.). Within each issue, there are provisions that apply to all vessels, followed by additional provisions that apply to larger vessels. For the larger vessel requirements, the Office has used the criteria of “for vessels of [24] metres in length and over which are not less than [100] gt”, for the reasons described earlier in the commentary. For additional requirements for even larger vessels, the Office has used “for vessels of [45] metres in length and over which are not less than [500] gt”. The figures remain in square brackets as they have been discussed, but have not yet been agreed upon. Other figures in the annex, such as those concerning the square metres of floor space per fisher in sleeping rooms, have also been left in square brackets because they have not yet been agreed upon.

## PART VI. HEALTH PROTECTION, MEDICAL CARE AND SOCIAL SECURITY

### MEDICAL CARE

#### *Article 30*

The new Article 30 has been included in response to the request that the Office develop proposals on a new Part VII concerning “Additional requirements for vessels of [...] metres in length or more”; these were submitted to the Tripartite Meeting of Experts on the Fishing Sector. The Article has been drafted so that it applies to “fishing vessels of [24] metres in length and over or those engaged on international voyages or normally remaining at sea for more than three days”.

The Office notes that the Worker experts made additional proposals during the Meeting concerning provisions for medical care on large fishing vessels. While the proposals were not agreed upon, the Meeting did agree to include those and related provisions on fishing vessel owner liability in its report in order for them to be considered prior to the 93rd Session of the ILC.

## OCCUPATIONAL SAFETY AND HEALTH AND ACCIDENT PREVENTION

*Article 31*

The Office has made no substantive changes to this text. However, in Paragraph 42 of the proposed Recommendation, it has proposed guidance concerning the joint committees envisaged in Article 31(e).

The Office draws attention to the comments by Denmark to Report V (1), which were also expressed at the Tripartite Meeting of Experts on the Fishing Sector: that the Convention should include a mandatory provision to protect fishers from noise and vibration on board fishing vessels, whether included as a provision for all vessels or, as a first step, for larger vessels (and thus under Article 32). In this regard, the Office has sought to determine where and how to include such a provision, bearing in mind that this is one of the many aspects of occupational safety and health that could be singled out. A list of technical specifications is contained in Paragraph 45 of the proposed Recommendation.

*Article 32*

The new Article 32 has been included in response to the request that the Office develop proposals on a new Part VII concerning “Additional requirements for vessels of [...] metres in length or more”; these were submitted to the Tripartite Meeting of Experts on the Fishing Sector. There was an inconclusive debate at the Meeting as to whether these provisions should be applied to all vessels or only to larger vessels. The Office has drafted the Article so that it applies to “fishing vessels of [24] metres in length and over or those engaged on international voyages”.

The Tripartite Meeting of Experts on the Fishing Sector also discussed the need to clarify the respective responsibilities of the fishing vessel owner and skipper with regard to risk assessment, a matter that has been partially addressed in Article 8, but may require further attention.

Article 32, paragraph 2(b), which was discussed by the Tripartite Meeting of Experts on the Fishing Sector, provides that the competent authority shall “require that fishing vessels owners, skippers, fishers and other relevant persons be provided with sufficient and suitable guidance, training material, or other appropriate information on how to assess and manage risks to safety and health on board fishing vessels”. The Office draws attention to the possible need to clarify who would be responsible for providing such guidance or information.

## SOCIAL SECURITY

*Article 33*

During the discussion of the social security provisions by the Committee on the Fishing Sector at the 92nd Session of the ILC, it was agreed to keep one of the provisions (Article 27 in the proposed Convention found in Report V (1)) in square brackets.<sup>7</sup> As a

<sup>7</sup> *Provisional Record* No. 21, ILC, 92nd Session, Geneva, 2004, paras. 678-694.

result of the views expressed at the Tripartite Meeting of Experts on the Fishing Sector, the Office has redrafted this Article, which now appears as Article 33, and has inserted the words “ordinarily resident in its territory” before “fishers”. The Office notes that “other workers” would be considered to be other comparable workers. For example, if there were a social security scheme for self-employed workers, self-employed fishers would not be excluded, and if there were a social security system for employees, fishers who are employees would not be excluded.

The Office also draws attention to certain replies to Report V (1), as well as views expressed by certain experts at the Tripartite Meeting of Experts on the Fishing Sector, concerning the need for more precise language on the social security contingencies to be covered and the possible merging of the provisions concerning social security and the provisions concerning protection in the case of work-related sickness, injury and death.

#### *Articles 34 and 35*

In its proposals to the Tripartite Meeting of Experts on the Fishing Sector, the Office took account of the text of the provisions concerning social security in the draft consolidated maritime labour Convention, and proposed an additional provision to read as follows: “Members shall undertake to take steps, according to national circumstances, individually and through international cooperation, to achieve progressively comprehensive social security protection for all fishers.”

The Office has redrafted the proposed provision based on comments received on Report V (1) and views expressed at the Tripartite Meeting of Experts on the Fishing Sector. It has now divided this into two separate Articles – Article 34 and Article 35. These distinguish between the social security protection to be provided by Members to all fishers who are ordinarily resident in the territory (Article 34) and the social security protection to be provided to fishers who are not ordinarily resident in the territory but work on fishing vessels which fly the flag of the Member (Article 35). In both Articles, the Member would have an obligation to “undertake to take steps, according to national circumstances, to achieve progressively comprehensive social security protection” for fishers. However, Article 35 provides that, for fishers who are not ordinarily resident in the country, Members could provide such protection “individually and through international cooperation, including through bilateral and multilateral social security arrangements”.

#### *Article 36*

As concerns what had been Article 28 in Report V (1), and is now Article 36 in the proposed Convention, the Office has reformulated the text following the introduction of Articles 34 and 35. This Article should be read in conjunction with Article 35.

#### PROTECTION IN THE CASE OF WORK-RELATED SICKNESS, INJURY OR DEATH

#### *Article 37*

In this Article, the words “medical attention” have been replaced with “medical care” to be consistent with the rest of the Convention.

As noted earlier, at the Tripartite Meeting of Experts on the Fishing Sector, the Worker experts proposed new provisions on fishing vessel owners' liability. While the proposals were not agreed upon, the Meeting did agree to include those and related provisions in its report in order for them to be considered prior to the 93rd Session of the ILC.

## PART VII. COMPLIANCE AND ENFORCEMENT

### *Article 39*

One reply to Report V (1) requested clarification of the contents and methods of a "documented periodic inspection". The Office has attempted to do this, at the same time bearing in mind that the requirements for larger vessels or vessels engaged on international voyages may be different from those for smaller vessels operating only in domestic waters. In doing so, it has provided that the document to be carried would be "issued by the competent authority stating that the vessel has been inspected by the competent authority or on its behalf, for compliance with the provisions of this Convention concerning living and working conditions". It has also provided that the document should be valid for a limited period, perhaps three years (as suggested by Norway). Finally, it has suggested that the validity period of the document could be harmonized with that of the International Fishing Vessel Safety Certificate.<sup>8</sup> The latter would lead to greater efficiency in the use of the competent authority's resources.

### *Article 40*

The Office has redrafted what had been Article 33 in Report V(1), and is now Article 40 in the proposed Convention, to provide for the possibility of the authorization of public institutions or other organizations to carry out inspections and issue documents. This new text takes into account the provisions of the draft CMLC. Furthermore, this concept is consistent with the delegation of authority provided in the definition of "inspector" in the Labour Inspection (Seafarers) Convention, 1996 (No. 178), Article 1, paragraph 7(b). In practice, this provision would make it clear that such organizations, e.g. classification societies, could carry out these inspections on behalf of the Member. Although it is not specifically stated, this provision would also allow a Member to authorize the public institutions or organizations of another Member that it recognizes as competent and independent to carry out inspections and issue documents on its behalf.

### *Article 41*

In Part VIII concerning compliance and enforcement of the text of the proposed Convention in Report V (1), there is no provision concerning complaint procedures. In its proposals submitted to the Tripartite Meeting of Experts on the Fishing Sector, the

---

<sup>8</sup> See the Torremolinos Protocol of 1993, Chapter I, Regulations 6 and 7.

Office indicated that, rather than including complaint procedures in the Annex concerning fishing vessel accommodation, which would have been consistent with Convention No. 126 and Annex II of the proposed Convention as found in Report V (1), it would move the issue of complaint procedures to the Part concerning compliance and enforcement. This it has done, creating a new Article. The Article addresses complaints to both flag state and port state authorities. Paragraph 5 was included to make it clear that complaints found to be “manifestly unfounded” would not require an investigation.

### PART VIII. AMENDMENT OF ANNEXES I AND III

#### *Article 43*

This new Article provides a tacit acceptance procedure for amendments to Annexes I and III. As noted in the discussion of Part V, this Article would provide for a more cost-effective means of amending these annexes to keep them current with the developments in, and the needs of, the fishing sector. The Conference may wish to consider whether this amendment procedure should be applied to these two annexes, Annex III only, or perhaps all three annexes of the Convention.

### **Commentary on the proposed Recommendation concerning work in the fishing sector**

#### PART I. CONDITIONS FOR WORK ON BOARD FISHING VESSELS

##### PROTECTION OF YOUNG PERSONS

#### *Paragraphs 1-5*

As requested, the Office had prepared proposals concerning “Additional requirements for vessels of [...] metres or more” for Paragraphs 4 and 5. However, at the Tripartite Meeting of Experts on the Fishing Sector, it was generally agreed that the two new provisions proposed should apply not only to large vessels but to all vessels.

##### MEDICAL EXAMINATION

#### *Paragraphs 6-10*

In light of the new provisions concerning medical examination in the proposed Convention, the provisions that were to be found in the proposed Recommendation in Report V (1), in Paragraph 5, concerning what the medical certificate should attest to, and in Paragraphs 7 and 8, concerning the period of validity of a medical certificate for young persons, have been deleted.

---

As concerns Paragraph 8, the Office draws attention to its comments on Article 11(e) of the proposed Convention.

#### COMPETENCY AND TRAINING

##### *Paragraphs 11 and 12*

As requested, the Office had prepared proposals concerning “Additional requirements for vessels of [...] metres in length or more” for Paragraph 12. The Office draws attention to its comments on Article 14 of the proposed Convention.

#### PART II. CONDITIONS OF SERVICE

##### RECORD OF SERVICE

##### *Paragraph 13*

The words “should be available” have been changed to “should be made available”.

##### PAYMENT OF FISHERS

##### *Paragraph 15*

As requested, the Office had prepared proposals concerning “Additional requirements for vessels of [...] metres in length or more”, which were submitted to the Tripartite Meeting of Experts on the Fishing Sector. This text is based on those proposals.

#### PART III. ACCOMMODATION

##### *Paragraphs 16-32*

This is a new Part. The Office refers to its comments on Part V concerning accommodation and food of the proposed Convention.

#### PART IV. HEALTH PROTECTION, MEDICAL CARE AND SOCIAL SECURITY

##### *Paragraph 37*

As requested, the Office had prepared proposals concerning “Additional requirements for vessels of [...] metres in length or more”, which were submitted to the

Tripartite Meeting of Experts on the Fishing Sector. Paragraph 37 is based on those proposals.

#### OCCUPATIONAL SAFETY AND HEALTH

##### *Paragraphs 38-47*

As requested, the Office had prepared proposals concerning “Additional requirements for vessels of [...] metres in length or more”, which were submitted to the Tripartite Meeting of Experts on the Fishing Sector. At the Meeting, a number of experts indicated that such provisions might be applicable to all vessels. For this reason, the Office has reorganized the Paragraphs concerning occupational safety and health along the lines seen in the proposed Recommendation, and has made this guidance applicable to all vessels. It has included, in Paragraph 42, additional guidance on the joint committees referred to in Article 31(e), and in Paragraph 46, a reference to the FAO/ILO/IMO *Code of safety for fishermen and fishing vessels*, Part A, Safety and health practice for skippers and crews.

#### SOCIAL SECURITY

##### *Paragraphs 48 and 49*

The Office has made changes to Paragraphs 48 and 49 to take into account changes made in Articles 33-36 of the proposed Convention.

##### *Paragraph 50*

The Office has changed the word “claimant” to “person protected”.

Bearing in mind the changes and additions to those articles concerning social security of the proposed Convention, what was originally Paragraph 29 of the proposed Recommendation in Report V (1) has been deleted.

#### PART V. OTHER PROVISIONS

##### *Paragraph 51*

The term “exclusive economic zone” is not defined in the proposed Convention or in the proposed Recommendation. The Office intends that the definition of the exclusive economic zone found in Article 55 of the United Nations Convention on the Law of the Sea would apply.

## **APPENDIX**

### **Report of the Tripartite Meeting of Experts on the Fishing Sector**

## REPORT OF THE DISCUSSION

### Introduction

1. At the 92nd Session of the International Labour Conference (ILC), the Committee on the Fishing Sector debated the issue of a new fishing standard. During its deliberations, the Committee agreed that the Office should ensure that consultation on Part V and Annex II of the Conclusions, both of which concerned accommodation on board fishing vessels, should take place, through an appropriate mechanism, between the end of the 92nd Session of the ILC and its subsequent session and that the Office should develop a new Part of the Convention concerning "Additional requirements for vessels of [...] metres in length or more" in order to address the specific needs of fishers working on larger vessels.

2. As a result of the abovementioned call for consultations, the Governing Body, at its 290th Session (June 2004), agreed that the ILO should hold a Tripartite Meeting of Experts on the Fishing Sector from 13 to 17 December 2004. The purpose of the Meeting would be to review and formulate provisions on accommodation and deal with any other pending issues identified by the Committee on the Fishing Sector of the 92nd Session of the ILC. To that effect, the Meeting of Experts reviewed a document entitled *Proposed provisions for accommodation, large fishing vessels and social security* (TMEFS/2004) prepared by the Office.

### Participants

3. The Governing Body, at its 290th Session, decided that the Meeting should comprise six Government, six Employer and six Worker experts and agreed that Governments on the reserve list could be invited to attend at no cost to the Office.

4. At its 291st Session it further agreed that, in addition to the Government experts (from Canada, Chile, Japan, Norway, South Africa and Spain), other Government experts (from Denmark, France, Germany, Namibia, Portugal, Thailand, the United Kingdom and the United States) could attend as observers, together with other invited observers from international governmental organizations and non-governmental international organizations.

5. A list of participants is annexed to this report (see Annex II).

### Opening address

6. The Secretary-General welcomed the participants and outlined the background to the Meeting and its purpose. The Meeting would provide important guidance to the Office, in the form of specific proposals, for the preparation of Report V (2) for the 93rd Session of the ILC, and thus facilitate the second discussion of the fishing standard in June 2005.

### Appointment of the Chairperson

7. The participants appointed Mr. Joseph O'Neill, Government expert from Canada, as Chairperson for the Meeting. Ms. Rose Karikari Anang, Employer expert from Ghana, and Mr. Peter Sand Mortensen, Worker expert from Denmark, were appointed as spokespersons for the Employer and Worker experts, respectively. Mr. Haakon Storhaug, Government expert from Norway, was appointed as Chairperson of the Government experts and observers.

### Presentation of the document for discussion

8. The Executive Secretary introduced TMEFS/2004. One of the issues identified for discussion was the definition of "large fishing vessels" to be used in the new Part VII. The Office was seeking guidance on whether it should use 24 metres in length or more, as used in several FAO and IMO Conventions concerning the fishing sector. Another important issue was the definition of an "international voyage", which could provide an alternative means to determining the new provisions' scope of application. To assist the Meeting in addressing the issues of accommodation and food, the Office had prepared the commentary, contained in TMEFS/2004, and the proposed provisions, contained in Appendix 1 of TMEFS/2004. It had taken into consideration the existing text of the Accommodation of Crews (Fishermen) Convention, 1966 (No. 126), the annex of the proposed Conclusions put before the 92nd Session of the Conference in June 2004, the amendments to the proposed Conclusions that were submitted to the Committee on the Fishing Sector at the Conference, and the latest available versions of the draft revised version of the FAO/ILO/IMO Code of Safety for Fishermen and Fishing Vessels and Voluntary Guidelines for the Design, Construction and Equipment of Small Fishing Vessels. The Office proposed in the first part of Appendix 1 of TMEFS/2004 that length overall (LOA) might be used as an alternative means of determining the size of a vessel to the definition of length (L) in Article 1(k) of the proposed Convention, to facilitate the application. Appendix 1 of TMEFS/2004 also included a provision based on a similar provision in Convention No. 126 allowing for variations of the Convention's requirements for certain vessels. An appended table featured suggested provisions that would apply to all vessels, additional provisions for large or specific vessels, and suggested text for a Recommendation. It included the essential elements of Convention No. 126 as well as additional issues, such as noise and vibration. Additional requirements for larger vessels were contained in Appendix 2, which included additional Convention and Recommendation provisions for vessels over a length yet to be determined. To assist the discussion on the issues of social security, compliance and enforcement, Appendices 3, 4 and 5 contained excerpts from *Provisional Record* No. 21, Report of the Committee on the Fishing Sector (ILC, 92nd Session, Geneva, 2004), as concerns the issues of accommodation and food, additional requirements for larger vessels, and social security.

### General discussion

9. The spokesperson for the Employer experts said that her group welcomed the proposal to continue discussion on issues which had not been resolved during the 92nd Session (June 2004) of the ILC. Only at the 291st (November 2004) Session of the Governing Body had the Employers learnt that the Office had extended the invitation to nine additional Governments. The Employer experts objected to that decision as a matter of principle. It ran counter to the principle of tripartism which required equal representation at all times, except in sectoral meetings. The Employer experts had understood that additional Government experts would only be present as observers and would not participate fully. The Employers had not been consulted on

that. Since the Meeting's purpose was to exchange views with the aim of protecting fishers, the Employer experts did not, however, oppose the participation of the Government observers and welcomed their expertise, which would enrich the debate. The spokesperson for the Employer experts reminded the participants to take into account the low ratification rate of existing fishing instruments. The Employer experts were interested in a Convention that would be widely ratifiable and wanted to create a basis for discussion during the next session of the ILC in 2005 that would lead to protection for the large number of fishers not covered. They were also interested in addressing issues such as social security protection for fishers working on foreign vessels.

10. The spokesperson for the Worker experts considered the Meeting important since it set out to secure the adoption of a fishing Convention. He suggested that discussions should proceed with a minimum of formalities. Fishing was a hazardous industry with a considerable decent work deficit. Provisions for suitable accommodation, equipment and welfare facilities were essential to attracting new entrants to the industry. The Worker experts accepted the need for different standards for smaller vessels, as well as flexibility for vessels operating close to the shore. The challenge was to reflect the diversity of the industry, while at the same time providing a meaningful standard that would not reduce the existing levels of protection currently enjoyed by many fishers. Particularly, the nature of larger vessels' operations required more prescriptive standards given that fishers regularly lived and worked on those vessels for a considerable time. Regarding the issue of social security protection, the Worker experts did not share the view voiced in earlier discussions that it should follow the draft consolidated maritime labour Convention, as the overwhelming majority of fishers worked on fishing vessels which flew the flag of the country in which they resided. The Worker experts were willing, however, to consider differing views and adopt a pragmatic approach.

11. The Chairperson announced that if no consensus was reached on changes to the text proposed by the Office, or to its placement, the text would remain as it was. New agreed text and agreed deletions would be indicated. Reasons for change or retention would be reflected in the report of the discussions.

## **Accommodation and food**

### *General discussion*

12. The Worker expert from Argentina, speaking on behalf of the Worker experts, said that the deplorable conditions which often prevailed on fishing vessels required developing precise provisions with the aim of improving working and living conditions. Convention No. 126 already dealt with those issues, as did the text discussed during the 92nd Session (June 2004) of the ILC. The Meeting needed to achieve consistency. The draft consolidated maritime labour Convention discussed during the Preparatory Technical Maritime Conference (PTMC) (September 2004) also needed to be examined. The Worker experts favoured more prescriptive provisions for large vessels and would like to examine issues such as ventilation, heating, lighting, sanitary facilities, noise and vibration. Provisions were also needed for design and construction, minimum height, noise and vibration, etc., of close workplaces of fishing vessels (e.g. processing in enclosed spaces). They requested the Office to take those matters into account.

13. The spokesperson for the Employer experts proposed to review the proposed text on accommodation and food found in TMEFS/2004 in parallel with the draft contained in Report V (1) for the 93rd Session of the ILC. That would allow the Meeting to arrive at minimum standards which would cover a large number of fishers and facilitate the adoption of a Convention in June 2005. Prescriptive provisions as demanded by the Workers would, however, only apply to larger vessels.

14. Speaking on behalf of the Government experts, the Government expert from Norway outlined their discussion on the definition of vessel sizes. Some Government experts felt that the choice of length as the only criterion was too restrictive and suggested that tonnage should also be considered, possibly by introducing a formula for conversion. Article 5 as suggested in Report V (1) for the 93rd Session of the ILC did not provide sufficient guidance for port state control. Convention No. 126 was rather old and referred to gross registered tonnage (grt). Agreement had not been reached on those matters. Certain clauses had been discussed and an attempt to define “waters” had been made, based on the definition of “exclusive economic zone” as used in the United Nations Convention on the Law of the Sea, 1982. One Government expert had considered 36 hours to be too restrictive.

15. The Government observer from the United Kingdom reminded those member States which already had high standards, and which were aiming to create a Convention that would reflect those, to bear in mind that the intention was to reach a global set of minimum standards. The ratification of a new Convention should by no means lead to a reduction of existing national standards. Convention No. 126 contained a large amount of detail and had only been ratified by a handful of member States. The aim was to bring the world up to a certain level and to avoid too many details, as those could constitute a barrier to ratification.

16. The Government expert from Japan observed that fishing vessels’ design differed considerably from country to country. To define the size of vessels only by “length” was not objective. He further stated that the Office should carry out research on the conversion between “length” and “tonnage”. Convention No. 126 had not been properly functioning as an international instrument since it had not been ratified by many countries because it was too detailed and not practicable for many countries. The aim was to improve accommodation and food where conditions were poor. Responsible member States recognized the need to improve working conditions on board ships and should be assisted in their efforts by offering a reasonable and practicable standard as a guideline to each country in establishing appropriate working conditions for its fishers.

17. The Government expert from South Africa supported the approach by the Office to simplify the provisions of Convention No. 126.

18. The Government expert from Norway declared that his Government had ratified all the international fishing instruments, including the Torremolinos International Convention for the Safety of Fishing Vessels, 1977, and Convention No. 126 and had not encountered implementation problems resulting from their level of detail. The question was how little detail an instrument could contain before it became meaningless. Both fishers and fishing vessel owners had an interest in detailed standards on accommodation. Only with clear international standards could fishing vessel owners internationally trade their vessels. To his delegation, only social security provisions presented a real problem, since Norwegian laws had provisions that were exclusive to fishers.

19. The Government experts from Canada, Chile and Spain, the Government observer from Denmark and the Employer expert from the United Kingdom supported the position of the Government observer from the United Kingdom. The Government expert from South Africa cautioned that maritime administrations in developing countries might introduce legislation for the first time as a result of the instrument, and would need a certain amount of detail for the purpose of implementation.

20. The Government observers from Denmark and France said that the Office proposal was a good basis for discussion. The Government expert from Spain requested that the minima in Convention No. 126 not be lowered, as that would be problematic for countries having ratified that instrument. The Employer expert from the Netherlands indicated that concerns of member States with higher standards were taken care of by Article 6, paragraph 2, of the pro-

posed Convention, which guaranteed that nothing in the Convention would affect more favourable conditions or provisions already applicable to the fishers concerned.

21. The Government expert from Spain and the Government observer from France believed that the figures for length (24 metres and 15 metres) used in the Office text were in line with international standards. The Government expert from Chile was concerned about the application of the Convention to vessels under 18 metres in length, because such vessels were used for artisanal fishing in his country, and about the reference to 36 hours because it did not take into consideration different realities in respect of fleet and coastline characteristics.

22. The observer from the Food and Agriculture Organization of the United Nations (FAO) said that, with regard to Appendix 1 concerning accommodation and food, the Office had taken the right approach to solving the existing problems. The Recommendation column on the issue of application made specific reference to the FAO/ILO/IMO Code of Safety for Fishermen and Fishing Vessels and the Voluntary Guidelines for the Design, Construction and Equipment of Small Fishing Vessels. Those references would not create an obligation upon member States but were a useful identification of relevant international guidance. The provisions on accommodation to be developed should not conflict with the revised Code and Guidelines.

23. The spokesperson for the Employer experts proposed that Articles 20, 21 and 23 of the text of the proposed Convention in Report V (1) for the 93rd Session of the ILC in 2005 should be used as a basis for the Convention, and the provisions proposed by the Office in Appendix 1, which were very detailed, should be included in the Recommendation. The Government expert from Japan shared that view.

24. The Worker expert from Argentina firmly rejected that suggestion. The Office proposal was a good basis for discussion. The issue at stake was which provisions should be mandatory and which recommendatory. The Government experts from Norway and Spain and the Government observers from Denmark, Germany and the United Kingdom agreed. The Government expert from Norway said that as many provisions as possible should be made mandatory, as Recommendations did not have a good track record of being followed or taken into consideration. The Employer experts, having remarked that higher existing standards would not be affected by the instrument, agreed to discuss Appendix 1.

25. The Worker expert from Argentina considered that the inclusion of length overall (LOA) equivalents was reasonable, but expressed concern about inconsistencies between length (L) and LOA. There was a need to be as precise as possible. The Executive Secretary explained that, when developing the LOA figures, the Office had drawn on the United Kingdom system, and had rounded them off for the purpose of simplicity. The Government observer from the United Kingdom stated that the figures had been determined by calculating an average length using the national database for registered fishing vessels. The Government observer from France said that the country's database had produced similar figures. The Meeting agreed on the LOA equivalents in Appendix 1.

26. Concerning variations of the provisions, the spokesperson for the Employer experts inquired as to the meaning of the term "waters of the Member". The Secretary-General indicated that the definition of that term would have to be in accordance with the United Nations Convention on the Law of the Sea, which provided for two possibilities, either territorial waters (12-mile limit) or the exclusive economic zone (EEZ) within 200 miles from the shoreline. Following a discussion, the Worker expert from Argentina proposed to remove the reference to a territorial limit. Some Members had smaller territorial waters than others. Moreover, in providing for variations where it would be difficult for the Convention to apply, the time limit was far more relevant. The spokesperson for the Employer experts, the Government experts from Canada, Norway and South Africa, and the Government observer from France supported that

position. The Meeting therefore agreed to delete the words “operating only within the [waters] of the Member and”.

27. The Government expert from Japan suggested that the reference to 36 hours in the same paragraph should be changed to 72 hours. The Government experts from Norway and South Africa strongly opposed that proposal. Although the time limit of 36 hours did not pose a problem in principle, the Government expert from Norway cautioned that many fishing vessels had a very brief turnaround time between voyages and that that could lead to fishers effectively spending much more than 36 hours at sea. The Worker expert from Argentina agreed and proposed that the time limit should be 24 hours. The Government experts from Norway and Spain, and the Government observers from Denmark and France supported that position. The spokesperson for the Employer experts agreed to 24 hours. The majority of the participants therefore agreed to a 24-hour limit.

28. The Meeting also decided to keep the phrase “Such variations shall be reported under [provision of the Convention],” which would allow for variations to be reported on according to standard ILO procedure.

29. The spokesperson for the Worker experts expressed concern about the use of terms such as “as reasonable and practicable” throughout the Convention text proposed by the Office. Those could result in de facto non-binding text. He sought a legal opinion on the use of such terminology instead of clear-cut prescriptions.

30. The Legal Adviser stated that the wording “as reasonable and practicable” aimed at introducing an element of flexibility in the implementation of a provision of the Convention. It enabled the establishment of proportionality or ratio between the measures to be adopted under the Convention and the available means, which would have to be reasonable and practicable from a technical, financial, etc. point of view. Firstly, the term had been used in different forms in several international labour Conventions, in order to resolve a problem due to a different approach of member States when implementing a Convention drafted in absolute terms. In some systems, a provision without a qualifying phrase such as “as reasonable and practicable” would be construed as an absolute requirement. In other systems, the same provision would be understood as implying an obligation of means of application but not of results. The qualifying phrase would be already implied and thus superfluous, whereas in the first system it would need to be specified. In continental law, the introduction of that term in a French text could be interpreted as reducing the level of protection, although that might not necessarily be the intention of the drafter. Thus, it would be important that the intention of the drafters be clearly established, e.g. in the report accompanying the Convention, as it would not be acceptable for the two authentic versions of an international labour Convention (English and French) to reveal such an important difference as the inclusion or suppression of several words. Secondly, the term “as reasonable and practicable” needed to be examined in its context and could not be defined irrespective of the relevant provision. Where a precise obligation existed, e.g. “The competent authority shall take measures to reduce noise and vibration”, the addition of the term at the beginning would make the provision void of substance, whereas its insertion after the obligation to “reduce” might only serve to lower the level of protection. Thus, the same term could have different effects according to its place in the provision. In the instance under discussion, the use of the term “as reasonable and practicable” could be justified in provisions applicable to *all* vessels, because the obligation might be difficult to respect in case of small vessels and, therefore, could not be applied in an absolute manner. If used, it should, however, be ensured that the insertion of the phrase would not void the provision of its content. Yet, in the part of the Convention applicable to *large and specific* vessels, it might well be possible to draft more precise provisions, thus avoiding such flexibility clauses in the initial Office text. If the instrument became difficult to apply, the Conference would still be able to take a stand and table amendments providing for the necessary flexibility. Another danger was the use of the term “as

far as possible”, which was much more vague than “as reasonable and practicable”. Good drafting practices required that such indistinct concepts be avoided. If indispensable, they should at least be consolidated, in order not to introduce multiple nuances into the instrument.

### *Application*

31. The Government expert from Japan drew the attention of the Meeting to the fact that, while Annex II in Report V (1) for the 93rd Session of the International Labour Conference 2005 dealt with the issue of application to new fishing vessels, the Office proposal did not contain such provision. The Government expert from Norway voiced the same concern and recommended the inclusion of a “grandfather clause”, since the term “new fishing vessel” was defined in Article 1 of the text of the proposed Convention, and the provisions of Appendix 1 should normally only be applicable to new vessels. The Government observer from the United Kingdom and the Worker expert from Argentina shared those views. In order for the clause to be adequately captured, the Secretary-General suggested the following wording for the column “Convention – All vessels”: “The provisions of this Part of the Convention should apply to new fishing vessels. Notwithstanding this application, the competent authority shall also apply the requirements of this Part to existing vessels, when and in so far as it determines that this is reasonable and practicable.”

32. The Government expert from Japan stated that it would be difficult to apply the Convention to small coastal fishing vessels. An exclusion clause similar to the one in Convention No. 126 should be included. The Government expert from Chile shared that view, stating that the provisions on accommodation should not be mandatory for vessels of less than 24 metres in length. The fact that the application of the provisions for large vessels to smaller vessels was optional did not accommodate their broader concerns. The Government expert from Norway found that the abovementioned concerns were adequately taken care of by Articles 2 and 3. He supported the length figures of 15 metres and 24 metres and wished to see the brackets removed. The Government expert from South Africa and the Government observers from Denmark and France agreed. The Worker expert from Argentina advised his intention to revert to the issue of length later on because it should be considered together with other issues.

33. The Worker expert from Argentina suggested to add at the end of the provision applying to large and specific vessels the words “as it is established in this Convention”, in order to ensure that all fishers, even those not considered as crew, should benefit from the standards provided in the Convention. Following queries, the Executive Secretary said that the intent had been to cover those fishers with canoes or pirogues who were not part of the main vessel, but operated alongside the large fishing vessel and slept on its deck. The Government observer from the United States suggested rewording the sentence so as to capture the meaning of the phrase and removing the word “small vessels”, in order not to create difficult categories.

34. The Government expert from Norway proposed that the reference to the FAO/ILO/IMO Code of Safety for Fishermen and Fishing Vessels and Voluntary Guidelines for the Design, Construction and Equipment of Small Fishing Vessels should be in the Convention itself, rather than in the Recommendation, since it would otherwise get lost. As it was a non-binding code of practice, due consideration would have to be given to using “should” instead of “shall” in order to avoid making the code mandatory. The Government expert from Canada and the Government observer from Denmark suggested leaving the reference in the Recommendation. The Government expert from South Africa wished to add the words “with revisions and additions” at the end.

35. The spokesperson for the Employer experts suggested removing “waters” from the second paragraph of the Preamble preceding the table in Appendix 1 and reducing the number

of hours from 36 to 24. Moreover, all provisions on large and specific vessels should be moved to the Recommendation. The Employer expert from France added that Articles 20, 21 and 23 were sufficient for the Convention. Provisions taken from Convention No. 126 created problems in implementation and put ratification at risk. While many developed countries had more rigorous regulations, the ability of countries with lower standards to ratify the proposed Convention had to be considered. The spokesperson for the Worker experts opposed the proposal to move further text to the Recommendation. The current text had the necessary balance between facilitating improvement and enabling maximum ratification and already aimed at a minimum level of obligatory standards.

36. The spokesperson for the Worker experts recalled their original proposal to use 15 metres as a limit for determining large vessels. After considering the views of the Government experts and in order to build consensus, the Workers would accept a 24-metre limit regarding accommodation, while keeping the possibility for States to extend the regulations for larger vessels to vessels over 15 metres. That was not supported by the spokesperson for the Employer experts who requested to keep the square brackets. The Government expert from Japan reiterated that the definition of vessel size by length needed further discussion, and that consideration should be given to providing a solution for the conversion from length to tonnage.

37. The spokesperson for the Employer experts was opposed to adding the wording “as established in this Convention” at the end of the Convention text on the issue of application for large vessels and specific vessels. The text referred to fishers carried on board for the sole purpose of operating from small vessels who were not part of the fishing vessel’s crew. Reference to suitable accommodation and sanitary facilities was sufficient, since those were temporary situations. The Government observer from the United Kingdom considered that there would not be sufficient space on the vessels to provide the same accommodation to all fishers, be they employed or temporarily carried on board. The real issue was to avoid people sleeping on decks. He commended the Worker experts’ proposal, but noted that the Convention aimed to protect a group which had previously had no protection as concerned accommodation. The Worker expert from Argentina had in mind the plight of fishers who were working and living on deck without access to any facilities. There was no doubt that those fishers were part of the crews of larger vessels, although they were considered to be on board only temporarily. They should not be subjected to conditions other than those of the mother ship. The Government observer from the United States remarked that the difference between the role of temporary workers coming on board and those who were part of the crew needed to be clarified. The Government observer from Denmark agreed that new text was needed, as did the Secretary of the Worker experts, who pointed to the lack of any distinction between various conditions. Temporary fishers could be on board vessels for months at a time, leading to unacceptable conditions and situations of exploitation. In other situations, fishers came on board only to sell their catch. New text was needed.

### *Planning and control*

38. Speaking on behalf of the Government experts, the Government expert from Norway explained that there had been general support for the Office text. The proposed wording should be amended by replacing “re-registered” by reference to “change of flag”. Paragraph 1 of the current text on large vessels and specific vessels should also be amended by replacing “an entity authorized by it” with “a recognized organization”. Clarification was also necessary in referring to only one competent authority. The Worker experts agreed. The spokesperson for the Employer experts proposed that the section under the heading “All vessels” be moved to the Recommendation.

39. The Government expert from Norway reported that the Government experts supported the current text as well as the Worker experts' suggestion concerning frequent inspections carried out by skippers for large vessels. The Government expert from South Africa confirmed that, but suggested that a different location for the text might be worth considering. The Employer experts did not accept the Worker experts' proposals regarding regular inspection. Public institutions that conducted inspections existed for that reason and skippers had enough authority to conduct inspections, even if a provision was not included in the Convention. The Employer expert from the Netherlands also reminded the Meeting that Article 8, adopted during the ILC in June 2004, had clarified the role of the skipper in providing supervision and ensuring that work was performed in the best conditions of safety and health. The complaint procedures would allow fishers to seek improvements if accommodations were not up to standard. The Worker expert from Argentina thanked the Government group for its support and explained that the Worker experts had proposed regular inspections by the skipper and crew because it was a practical and effective measure to improve conditions on board ship. Article 8 referred only to occupational safety and health. The Worker experts' proposal was taken from the proposed consolidated maritime labour Convention, and would complement the work of the competent authority. The spokesperson for the Employer experts observed that fishing and shipping were different, and it could be inappropriate to insert text from a maritime standard into one for fishing, unless it were critically assessed by the Meeting. The Government observer from the United Kingdom commented, as a co-author of Appendix 1, that the words included there were for convenience and to help keep track of important issues, rather than to prescribe solutions. The Executive Secretary noted that the idea of inspections had also already been introduced, under the heading "Clean and habitable conditions". The spokesperson for the Employer experts pointed out that the proposed text was too prescriptive and should be moved to the Recommendation.

#### *Design and construction*

40. The Government expert from Norway said that the Government experts supported the Worker experts' proposal to insert a new paragraph in the Convention under the part relating to all vessels. It was based on text proposed by the Office for paragraph 8 of Annex II in Report V (1) for the 93rd Session of the ILC and read: "The location, means of access, structure and arrangement of crew accommodation in relation to other spaces shall be such as to ensure adequate safety, protection against weather and sea and insulation from heat or cold, undue noise or effluvia from other spaces." The Worker expert from Argentina said that that text was important to the Worker experts, because it summed up the general principles on the design of boats. It was opposed by the Employer experts, since that text was already contained in Annex II.

41. The Government expert from Norway, on behalf of the Government experts, said that direct openings between sleeping accommodation and machinery or processing space should not be allowed in a modern instrument. The Executive Secretary recalled that two alternative texts had been discussed in the Government experts' meeting, one specifying that there should be no direct openings between sleeping rooms and machinery space or fish processing and storage areas, and another adding the proviso of "except for purpose of emergency escape". The latter suggestion was supported by the Government expert from Spain, the Government observer from Denmark and the spokesperson for the Employer experts, who remarked that the purpose of a fishing standard was to find a balance between protecting the workers and enabling ratifications. It was also supported by the Worker experts, who, however, asked for a legal opinion on the ramifications of the wording "reasonable and practicable" as used in that paragraph and elsewhere.

42. The Government expert from Norway reported that most Government experts preferred 198 cm, because a higher minimum might affect stability. One Government expert, however, had preferred the 190 cm stipulated in Article 10, paragraph 4, of Convention No. 126; another had suggested 203 cm, in line with the proposed consolidated maritime labour Convention.

43. The Worker expert from Argentina explained that the Worker experts would have preferred 208 cm, but could accept a lower minimum that would take into account that the average height of people was much greater now than 40 years ago when the 190 cm mark had been set. The question of the vessel's stability was not an issue, and could be solved by technical means. The spokesperson for the Employer experts preferred a minimum height of 198 cm, but would compromise if stability issues were sufficiently taken into account.

44. The Government observer from the United States suggested adding the text "to the satisfaction of the administration", to allow competent authorities to determine their national standards.

45. The observer from the Food and Agriculture Organization of the United Nations noted that revised Part B of the FAO/ILO/IMO Code of Safety for Fishermen and Fishing Vessels and the Voluntary Guidelines for the Design, Construction and Equipment of Small Fishing Vessels stipulated that the headroom in accommodation spaces should, wherever possible, be 200 cm. The Government observer from France agreed. That norm was accepted internationally and would not constrain ratification. He supported the proposal from the Government expert from South Africa to adopt a minimum height of 200 cm. The Government observer from the United Kingdom pointed out that there were no stability problems from increasing the minimum height in new designs. In light of the discussion, the Worker expert from Argentina and the spokesperson for the Employers agreed to the proposal for 200 cm.

46. The Government expert from Japan, reserving the right to maintain the basic idea set out in paragraph 16, pointed out that there could be a problem of stability for Japanese vessels, the sizes of which were limited by tonnage for the purpose of restricting fishing effort, if the minimum height were to be raised. He continued to prefer 190 cm as the standard, since even the current Convention No. 126, which had set a standard of 190 cm, had failed to attract many ratifications. The spokesperson for the Employer experts observed that that problem was addressed by the second sentence of the paragraph in discussion, which provided the necessary flexibility.

47. The suggestion by the Worker experts to include a provision requiring larger ships operating in mosquito-infested areas to be fitted with appropriate devices as required by the competent authority was supported by the Employer experts. The Government experts did not agree since that was not a problem specific to large vessels and was already sufficiently covered by the text proposed for all vessels.

48. The wording for the Recommendation on design and construction proposed by the Worker experts was supported by the Government experts and observers as well as the Employer experts.

#### *Noise and vibration*

49. The Government expert from Norway, speaking on behalf of the Government experts, signalled general support for the provisions proposed by the Office. There had been queries as to the kind of "standards for noise and vibration" to be adopted by the competent authority according to the proposed Office text of the Convention (large vessels and specific vessels). It had been agreed that the best source for guidance on standards regarding noise reduction would be IMO resolution A.468, to which a reference could be made in the Recommendation.

50. The Government expert from Japan suggested to move the provisions concerning noise and vibration to the Recommendation. The relevant provisions of the most recent draft of the consolidated maritime labour Convention were recommendatory, and the IMO resolution did not apply to vessels of less than 1,600 gt. The spokesperson for the Employer experts could accept the provision for all vessels, since the text of the proposed Convention in Report V (1) for the 93rd Session of the ILC, 2005, already mentioned the concept of mitigating excessive noise and vibration. However, the proposed provision for large vessels should be made recommendatory. The Government expert from Japan agreed. The Government observers from France and Germany and the Government expert from Norway disagreed, preferring the text as drafted.

51. The Chairperson acknowledged the lack of consensus on the text concerning large vessels of the proposed Convention. The Meeting accepted the following slightly modified Worker experts' proposal for the Recommendation: "The limits for noise levels for working and living spaces should be in conformity with the international guidelines of the International Labour Organization on exposure levels to ambient factors in the workplace and, where applicable, the specific protection recommended by the International Maritime Organization, and with any subsequent amending and supplementary instruments for acceptable noise levels on board ships."

#### *Ventilation*

52. The Government expert from Norway, speaking on behalf of the Government experts, supported the proposed Office text for the Convention (all vessels) and accepted the Worker experts' proposal for large vessels. The spokesperson for the Employer experts rejected both proposals tabled by the Workers, since there was no need explicitly to mention the two means of ventilation.

53. Following an exchange of views on different aspects of ventilation, it was agreed that a results-oriented way of redrafting the provision should be found. The Chairperson requested the Office to redraft the provision.

#### *Heating and air-conditioning*

54. The Government expert from Norway, speaking on behalf of the Government experts, did not support the recurring amendment proposed by the Worker experts to add "and safely". That had been rejected, since it was self-evident that the means of heating should be safe. The Worker experts' suggestion regarding the Convention text for large vessels was supported in order not to concentrate solely on tropical climates. The Government experts also agreed with the Workers' amendment for the Recommendation. The spokesperson for the Employer experts indicated that, although overly prescriptive, her group could go along with all three Worker proposals. The latter two were adopted.

#### *Lighting*

55. The Government expert from Norway, speaking on behalf of the Government experts, accepted the Office text. The Worker experts' proposal to add the words "and safety" to the Convention text was superfluous.

56. The observer from the Food and Agriculture Organization of the United Nations, referring to the fourth paragraph of the proposed Office text for the Convention (all vessels),

said that it was not necessary to make a reference to emergency lighting. He suggested a simpler text, taken from Part B of the FAO/ILO/IMO Code of Safety for Fishermen and Fishing Vessels, which read as follows: "A permanent night light should, in addition to the normal lighting, be provided in sleeping rooms during the night. Mess rooms and alleyways, that contain emergency escape facilities from the crew accommodation, should also be provided with a permanent night light during the night." That proposal was supported by the Worker experts.

57. The Government expert from Japan, the spokesperson for the Employer experts, the Government expert from Spain and the Government observers from France and the United Kingdom preferred the Office text, noting that a permanent night light in sleeping accommodations could be a nuisance.

58. The Chairperson found that there was consensus on preserving the Convention text as prepared by the Office. The Meeting accepted the text proposed by the Worker experts for the Recommendation.

59. The Government observer from France noted that the "minimum standard for lighting" in the Office text for the Convention (large vessels and specific vessels) referred to "a clear day". The strength of the lighting source was not the key issue, rather the amount of light available in a given space. It was important that those two concepts were not confused. In France, the amount had to equal at least 120 lux.

#### *Sleeping rooms*

60. The Government expert from Spain, referring to the first paragraph, preferred the alternative text, which seemed to have been taken from European Union Council Directive 93/103/EEC of 23 November 1993 concerning the minimum safety and health requirements for work on board fishing vessels. The Government expert from South Africa supported that position. The Government expert from Chile stated that, if the provisions for large vessels referred to vessels of 24-45 metres in length, then the range was too broad. It was unreasonable to demand the same conditions of space in the sleeping rooms of vessels of 24 and 45 metres in length.

#### *Location*

61. The Government expert from Norway said that the Governments preferred the alternative Office text with the addition of "but in no case forward of the collision bulkhead". The spokesperson for the Employer experts supported that proposal, which was also agreed to by the Worker experts. The remaining paragraphs on sleeping rooms for all vessels were agreed as drafted by the Office.

#### *Paragraphs 1 and 2*

62. The Government expert from Norway said that regarding floor space in large vessels and specific vessels, the majority of Government experts preferred the Office text. The majority of Government experts also preferred 45 metres to facilitate ratification, while there had been some support for 24 metres.

63. The Government expert from Spain said that the scale of 24-45 metres was very wide and suggested creating intermediate scales of 24-35 metres and 35-45 metres. While that suggestion addressed the concerns of the Government expert from Chile, the Government expert

from Norway opposed it. Another cut-off point would complicate matters and make the instrument less ratifiable. The Government expert from Japan stated that the floor area per person should be the same level as the current requirement in Convention No. 126 in order to promote ratification, i.e. 0.75 square metres and 1 square metre for vessels of [24]-[45] metres and [45] metres and over, respectively. The Government experts had therefore considered extending the application of paragraph 5, so that the competent authority could permit exceptions and the necessary flexibility would be achieved. However, no clear consensus had been reached.

64. The spokesperson for the Employer experts did not support the first or the second paragraphs, which were overly prescriptive and the matter should be addressed in a Recommendation.

#### *Paragraphs 3 and 4*

65. The Government expert from Norway explained that there had been majority support among the Government experts for paragraph 3 of the Office text. The Employer experts agreed, since they understood the provision to be a standard clause.

66. The Worker experts proposed to amend paragraphs 3 and 4 to read “For vessels of [24] metres in length or more and less than 45 metres the number of persons allowed to occupy each sleeping room shall be: (a) officers: one person per room wherever possible, and in no case more than two; (b) ratings: two persons per room wherever possible, and in no case more than four. For vessels of [45] metres in length or more, the number of persons allowed to occupy each sleeping room shall be: (a) officers: one person; (b) ratings: one person per room wherever possible and in no case more than two.” The Worker expert from Argentina said that it was a very sensitive issue. Moreover, when designing vessels there was not much difference in designing rooms to accommodate two or four persons. The Worker experts wanted a maximum of two per room on vessels of 24 metres and individual sleeping rooms or a maximum of two per room on vessels of 45 metres or larger. The Government expert from Norway, on behalf of the Government experts, said the Worker experts’ proposal was too prescriptive. They preferred the Office text. The spokesperson for the Employers’ group agreed.

#### *Paragraph 5*

67. Speaking on behalf of the Government experts, the Government expert from Norway supported the Office text. The Worker experts opposed the provision and sought its deletion. Since the Employer experts had opposed the paragraphs the provision was referring to, they suggested the issue be discussed during the next session of the ILC in June 2005. The Government expert from Japan stated that the exception explained in that paragraph should also be applied to paragraphs 1 and 2 in larger vessels as well as paragraph 3 in all vessels.

#### *Paragraph 6*

68. The Government expert from Norway, on behalf of the Government experts, supported the Office text on minimum inside dimensions of berths. The Government expert from Japan added that there had been some discussion as to whether to add the words “whenever practicable”. The spokesperson for the Employer experts opposed the suggestion by the workers to use 1.98 by 0.8 metres as minimum dimensions. The matter should be dealt with in the Recommendation.

*Paragraph 7*

69. The Government expert from Norway reported that paragraph 7 regarding the provision of a desk and chair was supported by the Government experts. Unlike the Worker experts, the Employer experts opposed the provisions.

*Paragraph 8*

70. The Government expert from Norway reported that the Government experts had raised a cost issue, but had no major objections to the paragraph on separate sleeping rooms. The spokesperson for the Employer experts said that the paragraph for all vessels on the provision of privacy also covered large vessels. The paragraph for large vessels was therefore redundant in its current form. The spokesperson for the Worker experts pointed out that, while provisions to ensure privacy applied to all vessels, sometimes, due to lack of resources, a curtain or blanket was used to separate sleeping spaces for men and women. To address the Employer experts' call for a clearer wording, the secretary of the Worker experts proposed to replace the Office text with the following: "The provision of separate sleeping rooms for men and women is desirable for all vessels and shall be provided on vessels of [24] metres or more in length". The spokesperson for the Employer experts and the Government experts supported that suggestion.

71. The Worker experts suggested to insert text on furniture for large and specific vessels, based on Standard A.3.1.5 of the draft consolidated maritime labour Convention. The Government expert from Norway said that the Government experts preferred wording contained in provision 11.3.11 in Part B of the revised FAO/ILO/IMO Code of Safety for Fishermen and Fishing Vessels. The spokesperson for the Employer experts did not support either proposal.

72. The spokesperson for the Employer experts and the Government expert from Norway, speaking on behalf of the Government experts, supported the inclusion of the text proposed by the Worker experts in the Recommendation.

*Mess rooms*

73. The Government experts and observers, as well as the Worker experts, supported all paragraphs of the Office text concerning all vessels. The spokesperson for the Employer experts disagreed and said that those provisions should be in the Recommendation. She reminded the Meeting of the initial and consistent position of the Employer experts that the provisions on accommodation should be dealt with in the Recommendation, so that the Convention would be as flexible as possible and encourage ratification. Her objections did not simply result from concerns about specific formulations, but came from her understanding that the Convention should not become overly prescriptive. In that respect, only Articles 20, 21 and 23 contained in Report V (1) for the 93rd Session of the ILC should remain in the Convention, while the whole of Appendix 1 should be moved to the Recommendation. The Employer expert from the Netherlands added that the Meeting should strive to formulate appropriate recommendations to help governments to write their own laws and regulations.

74. The Government expert from Norway, speaking on behalf of the Government experts, accepted the provision requiring mess rooms on large vessels to be separate from sleeping quarters. The spokesperson for the Employer experts reiterated that Article 21, paragraph (e), of the proposed Convention in Report V (1) for the 93rd Session of the ILC (2005) already required member States to adopt laws, regulations or other measures addressing the issue of mess rooms. Details on how the competent authority should implement that requirement

belonged in the Recommendation. The Worker experts strongly objected to the Employer experts' position on the basis that Article 21 was too general and could allow for fishers to eat in cabins or on deck, as opposed to having specific facilities.

75. The Government expert from Norway, speaking on behalf of the Government experts, said that the Governments wanted the provision referring to separate mess-room facilities for officers and ratings to be deleted. That decision should be a matter of company policy. The Employer experts supported the proposal, since in most fishing vessels mess rooms were combined. They argued that, nowadays, the industry tried to nurture cooperation and team spirit by avoiding divisions between officers and ratings. The Worker expert from Argentina opposed that position. If the decision were to be left to companies, and separate facilities for mess rooms were not foreseen during the construction of the vessel, the fishing vessel owners would not provide them afterwards. Their historical separation should be retained. Eating together would not necessarily increase team spirit. Finally, the Meeting agreed to keep the provision but to move it to the Recommendation.

76. The Government expert from Norway, speaking on behalf of the Government experts, suggested that the provision requiring a refrigerator and facilities for making hot and cold drinks in mess rooms should be moved to the Recommendation, since it was overly prescriptive for the Convention. However, Governments agreed that there should be some refrigeration on board and could accept the provision under the section "Galley" requiring food storerooms and refrigeration. The spokesperson for the Employer experts agreed. The spokesperson for the Worker experts disagreed, stating that access to a refrigerator and facilities for making hot and cold drinks in mess rooms was a minimum standard already existing in the industry. That was a fundamental condition, since many vessels making extended voyages did not possess such facilities in galleys. The provision could also be found in Convention No. 126 and should remain in the new Convention. He also suggested eliminating the words "in the mess-room or elsewhere". The Chairperson noted the lack of consensus on the issue and decided to leave the text as drafted.

77. As for the Worker experts' proposed text for the Recommendation, the Government expert from Norway, speaking on behalf of the Government experts, supported it. The spokesperson for the Employer experts rejected it, saying that it was too detailed for the Recommendation.

### *Sanitary accommodation*

#### *Paragraph 1*

78. The Government expert from Norway said that the Government experts had no major problems with the Office text concerning all vessels. The wording "reasonable standards of comfort" at the end of the paragraph was, however, imprecise and should be redrafted. The spokesperson for the Employer experts proposed the deletion of "toilets, washbasins, and tubs or showers" in the first sentence; it was too detailed. The second sentence should be amended to read: "These facilities shall at least meet minimum standards of health and hygiene." The Worker expert from Argentina supported the text proposed by the Office and agreed to the Government experts' suggestion of redrafting. The Employer expert from the Netherlands, speaking on behalf of the Employer experts, could not agree with the number of facilities to be provided on larger vessels because it would mean an increase of the standards given in Convention No. 126.

#### *Paragraph 2*

79. The Government expert from Norway, on behalf of the Government experts, supported the Office text and opposed the deletion of "as far as possible", as suggested by the

Worker experts. Contamination could technically not be eliminated under all circumstances. The Worker expert from Argentina suggested the Office should redraft the paragraph taking into account the Government experts' concerns and the Legal Adviser's opinion on certain formulations to achieve flexibility. The spokesperson for the Employer experts also preferred the Office text.

### *Paragraph 3*

80. The Meeting supported the Office text.

### *Paragraph 4*

81. In regard to the text in paragraph 4, the Government expert from Norway said that the Government experts supported the Office text, as well as the proposal of the Worker experts to add the words "after consultation". The Government observer from Denmark proposed that the word "fishers" be changed to the word "persons" so as to cover all people on board. The spokesperson for the Employer experts said that the differences between the terms "fishers" and "persons" had been discussed at the 92nd Session of the ILC, and that the paragraph should refer to "fishers". She said that the Employer experts supported the Worker experts' proposed changes. The secretary of the Worker experts said that the proposal of the Government observer from Denmark needed discussion, as on some vessels, non-fishers, such as fishery observers, were present for significant periods of time. He requested that the Office look into that matter.

### *Paragraph 5*

82. Speaking on behalf of the Government experts, the Government expert from Norway supported paragraph 5 and suggested that the text "water closets" be replaced by "sanitary facilities". The Employer and Worker experts agreed. Additionally, the spokesperson for the Employer experts proposed that the text "ventilation to the open air" be changed to "adequate ventilation". That was not supported by the Worker expert from Argentina as the reference to "open air" was most important. The Government observer from the United Kingdom agreed since for that type of ventilation to be efficient it needed to ventilate to open air.

### *Paragraph 6*

83. The Meeting supported the Office text.

84. The Government expert from Norway, on behalf of the Government experts, proposed to replace the Office text on large vessels and specific vessels with paragraph 71 of Annex II in Report V (1), since the proposed text was too ambitious. The Worker expert from Argentina did not support that proposal. The paragraph proposed by the Office dealt well with a crucial aspect and was a real improvement. It should be seriously considered.

85. Regarding the proposal by the Worker experts to append "Furthermore, separate sanitary facilities for women shall be provided", the Government expert from Norway said that most Government experts understood their intent, but since it would not be easy to implement, they did not support it. The spokesperson for the Employer experts agreed and suggested transferring it to the Recommendation. That view was opposed by the Government observer from

Denmark who reminded the Meeting of the need to consider further the conditions aboard ships at sea for several weeks.

86. The Government and Employer experts supported the text for the Recommendation proposed by the Worker experts.

#### *Laundry facilities*

87. The Meeting supported the Office text for all vessels on laundry facilities.

88. The Government expert from Norway, speaking on behalf of the Government experts, said that the first provision proposed by the Office for large vessels and specific vessels was acceptable. There had been some concern, however, that the provision contained too much detail. The spokesperson for the Employer experts and the Government expert from South Africa suggested that the provision for vessels of 24 metres in length or more was redundant, as the provision for all vessels already contained similar text. The Government expert from France disagreed since the provision for all vessels specified that laundry facilities would be made available “as appropriate to the service of the vessel”. That meant that certain vessels, for example those undertaking trips of under 24 hours, might not need to have laundry facilities. The provision for large vessels and specific vessels had been added to ensure that those vessels would always have laundry facilities, regardless of the service of the vessel. The Government expert from Japan stated that an “ironing facility” should not be obligatory.

89. The spokesperson for the Worker experts proposed to add more specific wording for large vessels so that the laundry facilities available would be on a scale appropriate to the number of fishers on board and the duration of the voyage. The wording “as appropriate” was too vague. Alternatively, the Office could propose additional text. The Worker experts’ proposals to add a reference to ironing, and to refer to drying clothes in the subsequent paragraph, were supported by the Government experts who wanted both paragraphs to be in the Recommendation.

90. Regarding the provision for vessels of 45 metres in length or more, the Government expert from Norway and the Government observer from France recalled the Government experts’ opinion that it should be moved to the Recommendation. The Government observer from the United Kingdom agreed, provided that the provision for vessels of 24-45 metres in length was kept in the Convention. Otherwise, both provisions could be falsely interpreted as recommendations for all vessels. That move was opposed by the spokesperson for the Worker experts.

#### *Facilities for sick or injured fishers*

91. The Government expert from Norway, speaking on behalf of the Government experts, accepted the text proposed by the Office for all vessels. However, the use of “isolated” might be a problem for smaller vessels. The observer from the International Maritime Health Association clarified that an isolated room was necessary for a person with an infectious disease, or other condition requiring isolation. The Convention could stipulate that an isolated cabin should be provided whenever needed. On smaller vessels, where there might not be a room dedicated for that purpose, it could mean a redistribution of rooms to allow for the creation of an isolated room when the need arose. The spokesperson for the Employer experts’ suggestion to substitute “Wherever possible” with “If necessary” was supported.

92. The Government expert from Norway, speaking on behalf of the Government experts, accepted the Office text for large vessels and specific vessels. The Worker expert from Argen-

tina agreed. The spokesperson for the Employer experts said that the formulation was acceptable but had not decided whether it belonged in the Convention or in the Recommendation.

#### *Other facilities*

93. Speaking on behalf of the Government experts, the Government expert from Norway accepted the Office text for all vessels and added that the decision between “oilskins” or “foul weather gear” could be left to the Office. That was agreed to by the spokesperson for the Worker experts.

94. The spokesperson for the Employer experts proposed altering the provision to read: “Wherever possible, adequate facilities for hanging [oilskins] [foul weather gear] shall be provided.” The Government observer from the United Kingdom said that that could mean such facilities being placed in sleeping accommodation. The original intent had been to avoid that, as it was important that foul weather gear could not contaminate sleeping accommodation. In response to that remark, the spokesperson for the Employer experts said that the phrase “outside but convenient to sleeping rooms” could be reinserted. The Government observer from France agreed with the comment of the Government observer from the United Kingdom and clarified that new vessels were under discussion. The spokesperson for the Employer experts agreed but small vessels could also be included; hence the proposal to specify a facility and not necessarily an accommodation. The Worker expert from Argentina also agreed with the explanation of the Government observer from the United Kingdom and said that the views voiced should be considered by the Office when drafting text.

#### *Bedding, mess utensils and miscellaneous provisions*

95. The Government expert from Norway and the Worker expert from Argentina supported the text as proposed by the Office. In response to a request for clarification by the spokesperson for the Employer experts on the meaning of “other linen”, the Executive Secretary stated that it referred to tablecloths, towels, washcloths and other linens of that nature. The text referred to articles that fishers would need but would not normally bring on board themselves. The Employer expert from the Netherlands said that articles such as towels and duvets had always been the private property of the fishers aboard. In response to the spokesperson for the Worker experts, who had said that the purpose of the provision was to avoid fishers having to bring their own linen on board, the spokesperson for the Employer experts suggested deleting the phrase “and other linen”.

#### *Recreational facilities*

96. The Government experts and observers and the Worker experts supported the text for large vessels proposed by the Office. The spokesperson for the Employer experts supported the wording, but suggested to move the first paragraph to the Recommendation.

97. Speaking on behalf of the Government experts, the Government expert from Norway said that the second paragraph should be moved to the Recommendation, as it was overly prescriptive. The Government expert from Canada added that the provision provided good guidance but had too much detail for the Convention.

98. The Worker expert from Argentina, speaking on behalf of the Worker experts, introduced his group’s text for a Recommendation, which linked with the Office text proposed for

large and specific vessels. The Government expert from Norway, speaking on behalf of the Government experts, explained that there had been discussion on the wording of the first sentence, but that his group supported the Worker experts' proposals for the Recommendation. The spokesperson for the Employer experts said the first two paragraphs of the proposal were acceptable, but the third paragraph was too ambitious and could not be accepted. The Meeting agreed that the first two sentences should be added to the Recommendation.

#### *Communication facilities*

99. The Government expert from Norway, speaking on behalf of the Government experts, and the Worker experts endorsed the Office text for all vessels on communication facilities. The Worker expert from Argentina explained that often the only method of communication on board was satellite telephone, which was very costly. The text proposed by the Office covered that eventuality, which was especially important given the number of crews with members from developing countries. The spokesperson for the Employer experts proposed to change the text to read: "All fishers on board shall be given reasonable access to communication facilities to the extent practicable and at cost." It was unnecessary to refer to "personal reasons" as that was implied, especially if the facilities were being provided "at cost". That wording was required, since it was impossible to determine what reasonable expense was. The Government observer from France suggested to amend the proposal to read "at cost price as a maximum", since some employers might also choose to provide communication facilities free of cost. Reflecting on the original text, the spokesperson for the Worker experts said that that was perhaps the only occasion where there had been flexibility in favour of fishers. "Reasonable expense" meant a cost that was accessible to fishers. Communication costs could be so high that the communication facilities would become practically inaccessible. The Government expert from Chile agreed and reminded the Meeting of the importance of home calls at sensitive times, despite their high costs, especially in developing countries. The participants agreed that the Office should redraft the text in line with the proposal by the Government observer from France.

100. The text proposed by the Worker experts to be included in the future Recommendation was not supported by the Government experts, being considered as unnecessary. The Worker expert from Argentina agreed to withdraw the text.

#### *Galley and food storage facilities*

101. The Government expert from Norway, speaking on behalf of the Government experts, and the Worker expert from Argentina, supported the first paragraph of the Office text for all vessels. The spokesperson for the Employer experts agreed with the provision but proposed to replace the words "satisfactory cooking equipment" with "appropriate cooking equipment". Following discussions as to which term was stronger or preferable, the Government expert from Norway suggested to delete the word "satisfactory" as it was superfluous. The Meeting agreed.

102. The Meeting accepted the second paragraph of the Office text for all vessels.

103. As for a proposal by the Worker experts requiring the storage of gas containers on the open deck, the Government expert from Norway, speaking on behalf of the Government experts, did not support it, in order to avoid duplication of provisions. That safety issue had already been addressed in the Torremolinos International Convention for the Safety of Fishing Vessels and the FAO/ILO/IMO Code of Safety for Fishermen and Fishing Vessels. The spokesperson for the Employer experts agreed with the Worker experts' proposal. The Government

expert from Spain agreed but suggested to add “and should be checked regularly”. It was essential for the safety of the crew regularly to check pressurized gas containers, not only at refill. While the Worker expert from Argentina and the Government experts from Norway and South Africa supported the Spanish proposal, the spokesperson for the Employer experts opposed it. The Government observer from the United Kingdom cautioned that some member States would not have the facilities to check and that fire protection issues were already covered by other international instruments. The Government observers from Denmark and France and an observer from the Food and Agriculture Organization of the United Nations endorsed that position. The Meeting accepted the Worker experts’ proposal without the addition.

104. The Government expert from Norway, speaking on behalf of the Government experts, and the Worker expert from Argentina supported the third paragraph of the Office text for all vessels. The spokesperson for the Employer experts said that the provision would be acceptable if the last sentence were deleted. It was superfluous, since it only advised that the best way to keep provisions dry and cool was by means of a refrigerator. The Government experts from Canada, Chile, Norway and Spain, and the Government observers from France and the United Kingdom, preferred the Office text. The spokesperson for the Employer experts agreed because of the qualifying phrase “where possible”. The Meeting so decided.

105. The Government expert from Norway, speaking on behalf of the Government experts, accepted the Worker experts’ proposal for large vessels requiring that vessels over 24 metres in length (as opposed to over 45 metres) had a separate galley. The spokesperson for the Employer experts suggested that the provision should be in a Recommendation.

106. The Government expert from Norway, speaking on behalf of the Government experts, supported the second paragraph applicable to large vessels as proposed by the Office. The Government expert from Norway also felt that large vessels should have a freezer and that that concern might be taken care of by replacing “refrigerator *or* other low-temperature storage” with “refrigerator *and* other low-temperature storage”. The Government experts and observers and the Worker expert from Argentina supported that position. The spokesperson for the Employer experts agreed with the wording but said that the provision should be in the Recommendation.

#### *Food and water*

107. The Government expert from Norway, speaking on behalf of the Government experts, agreed with the first paragraph applicable to all vessels as proposed by the Office. The Worker expert from Argentina also supported the provision but suggested to add the word “drinking” before “water”. The spokesperson for the Employer experts stated that they could accept the Office text as amended by the Workers, if the word “palatable” preceding “food and water” was deleted. The term was too subjective and the issue of quality was already addressed in the provision. The Worker expert from Argentina disagreed, since “palatable” could serve to take cultural, religious or gastronomic backgrounds into account, thus going beyond quality. The Government expert from South Africa and the Government observer from France expressed doubts about “palatable” being the right term to take care of the Worker experts’ concerns. The Meeting asked the Office to redraft the provision accordingly.

108. The Government expert from Norway, speaking on behalf of the Government experts, supported the Worker experts’ proposal to make it obligatory for the competent authority to establish requirements for the minimum standard and quantity of food and water on board (“shall”). However, the Government expert from Norway found the provision as amended too onerous, since the formulation could raise enforcement problems for his country where such operational issues were left to the vessel owners and the competent authority only got involved

when inspecting the vessels. The spokesperson for the Employer experts also disagreed with the amendment. Given that the guidelines of the World Health Organization could be used for port state control purposes, the Government observer from the United Kingdom suggested to leave the wording of the second paragraph applicable to all vessels as it was (“may”). The Worker experts and the Government experts from Canada and Spain shared that view. The Meeting so decided.

109. The Government expert from Norway, speaking on behalf of the Government experts, supported the Worker experts’ proposal for large vessels, which required the competent authority to ensure that vessels carried on board food and water meeting certain conditions. Whereas the provision applying to all vessels obliged the competent authority to establish requirements in that regard, that provision dealt with enforcement. The spokesperson for the Employer experts did not support the proposal. The Chairperson noted that there was no consensus.

110. The Worker experts’ proposal for the Recommendation, which dealt with training and qualification of ships’ cooks, was accepted by consensus.

#### *Clean and habitable conditions*

111. The Government expert from Norway, speaking on behalf of the Government experts, and the Worker expert from Argentina supported the wording in the first paragraph of the Office text for all vessels. Following queries from the spokesperson for the Employer experts as to who would be maintaining the accommodation in clean and habitable conditions, it was agreed that it would not be advisable to specify such details, since Article 8 clearly established that the owner had the overall responsibility to ensure that the skipper was provided with the necessary means to comply with the Convention. The provision for large vessels dealing with inspections by the skipper also indicated that the skipper was responsible for clean conditions on board. The Office text was accepted as it was.

112. The Meeting supported the wording in the second paragraph of the Office text for all vessels.

113. The Government expert from Chile proposed a new provision for all vessels on the issue of waste. It should read: “Waste should be kept in closed, well-sealed containers and should be removed from food-handling areas whenever necessary.” The Government expert from Norway, while agreeing in principle, inquired whether the issue came within the scope of the International Convention for the Prevention of Pollution from Ships (MARPOL), thus duplicating provisions. The Government expert from South Africa understood that the issue was the handling of waste on board, not its disposal. The Worker expert from Argentina, the Government expert from Spain, the Government observer from Germany and the spokesperson for the Employer experts agreed in principle with the Chilean proposal. The Meeting decided to insert such a provision.

114. The Government expert from Norway, speaking on behalf of the Government experts, and the Worker expert from Argentina accepted the provision for large vessels, as proposed by the Office. The spokesperson for the Employer experts requested the text to be moved to the Recommendation.

#### *Variations*

115. The Government expert from Norway, speaking on behalf of the Government experts, and the Worker expert from Argentina supported the Office text. The spokesperson for the Employer experts preferred to move the provision to the Recommendation.

**New Part VII. Additional requirements for vessels of [...] metres in length or more***General observations*

116. The Government expert from Norway observed that the Government experts believed that most of the issues addressed in the provisions of the new Part VII should be dealt with without regard to vessel size. Government experts and observers respected the decision of the ILC that standards should be developed for larger vessels. It was, however, difficult to arrive at more stringent standards that should only apply to larger vessels. This did not mean that they thought these were sufficiently dealt with in Report V (1) for the 93rd Session of the ILC. Governments were in favour of including more details and guidance.

117. The spokesperson for the Employer experts recalled that the Employers had stressed at the ILC in 2004 that they did not want to create two classes of fishers, and that the Convention should apply to all fishers. It appeared to her that the Government experts were of the same opinion. The Employer experts wanted a Convention with a Recommendation regardless of vessel size. Therefore, she suggested that the title should be amended to read: "Additional recommended requirements for vessels of [...] metres in length or more." Moreover, there should be an introductory text that read: "The additional requirements for vessels of [...] metres in length or more are listed in this Appendix as a Recommendation."

118. The secretary of the Worker experts questioned the Meeting's authority to revisit decisions reached by a formal vote during the ILC. The secretary of the Employer experts said that the purpose of the Meeting was not to make decisions, only recommendations for discussion at the next session of the ILC. While the Employer experts would like to recommend that the issue be reconsidered then, they were not intending to revisit decisions taken in the ILC. The Government expert of Norway expressed the view that the intention of the Meeting was to consider whether or not it was possible for the Office to arrive at more stringent standards with respect to operations on larger vessels. The Meeting had to identify areas which were suitable for further consideration in that regard. He did not support the Employer experts' proposal. He preferred to have more details in the Convention than in the text under discussion and was opposed to transferring all details to the Recommendation.

*Criteria for distinction*

119. The Government expert from Norway, on behalf of the Government experts, felt that vessel length as sole criterion for distinction was problematic and suggested that its time spent at sea was a more relevant parameter. That concept was preferred to the term "international voyage", since the Government experts had difficulty defining the term in a fishing context. The Government observer from Germany added that if a distinction based on vessel length was made, there was a danger of creating two classes of fishers. Fishers on vessels slightly smaller than the suggested 24 metres performed similar work but would have different protection. The duration of the voyage was a better criterion. The Government expert from Japan reminded the Meeting of his earlier concerns on vessel size defined by length as indicators.

120. The secretary of the Worker experts agreed that the term "international voyage" was difficult to define and suggested the use of the term "distant-water fishing" instead. A definition could be found by redrafting the definitions for "distant-waters fisheries production" used by the FAO and found at the end of the introduction in TMEFS/2004. That definition was especially important given that Article 32 in Report V (1) foresaw periodic inspections. There was a need to ensure that the Convention was compatible with other relevant international instruments. A Convention should cover developing countries without lowering existing standards.

However, special attention needed to be paid to large-vessel operations. Many of those vessels operated outside their flag States' waters and EEZs. In response to a request for clarification by the Employer expert from the Netherlands, he explained that the Worker experts were referring to vessels coming under international jurisdiction in distant waters, for instance under the jurisdiction of the port of another State. It was important to recognize that many situations prevailed and that fishing was often different from merchant transport.

121. The Government observer from Germany pointed out that the International Convention on Standards of Training, Certification and Watchkeeping for Fishing Vessel Personnel (STCW-F) used the terms "limited waters", which referred to waters under a member State's own jurisdiction, and "unlimited waters", which referred to waters outside its jurisdiction, and suggested that those might also be helpful in coining an appropriate definition. The Government observer from France preferred language based on the FAO definition, and reminded the Meeting to also consider difficulties arising from nations adjacent to overseas territories.

122. The Government observer from the United Kingdom said that while the length of ship was an appropriate criterion when discussing accommodation, it was not the case in other areas. He agreed with the Government expert from Norway and added that, during the first session of the Committee, the Office had been asked to develop additional provisions for larger fishing vessels since there had not been sufficient time to identify the required areas. The Office had complied with the request and had drafted such provisions. The Meeting under way could well decide that there should not be additional provisions relative to the length of the ship. Such conclusion would not conflict with the decisions taken in June 2004. The length of a ship could be considered for accommodation provisions, and time at sea as a criterion for other areas.

#### *Minimum age*

123. The Government experts felt that the provision should apply to all vessels. The Government expert from Norway said that a minimum age of 18 years for work at night was too stringent because some fishing operations could only take place at night. Moreover, those rules had safety implications, since they severely limited watchkeeping. It was important that young fishers received training. They should be allowed to perform night work as part of a structured and supervised training programme, making the exclusion of young fishers from any night work problematic. The text in paragraphs 4 and 5 of Article 9 in Report V (1) sufficiently addressed those concerns. Since the term "night" did not appear anywhere else in the Convention the definition was not necessary. Should recommendatory text refer to it, a definition should be inserted in the Recommendation. On the subject of whether different provisions on minimum age should be included in the Convention, the Government observer from the United Kingdom pointed out that certain technical requirements made it necessary to apply the length-of-ship criterion, since not all vessels could carry the same amount of equipment. However, as far as social provisions were concerned, all vessels needed to be equally treated. The spokesperson for the Employer experts said that the text on minimum age should be transferred to the Recommendation. The issue should be dealt with regardless of vessel size and the current text of Article 9 in Report V (1) was sufficient.

124. The Worker expert from Argentina supported the Office text and asked for the definition of "night" to be retained. He introduced text for an additional Recommendation as follows: "The working hours of young fishers should not exceed eight hours per day and 40 hours per week and overtime should be worked only where unavoidable for safety reasons; while sufficient time should be allowed for all meals, young fishers should be assured of a break of at least one hour for the main meal of the day." The spokesperson for the Employer experts agreed. The Government observer from the United Kingdom said that the Meeting

was not the appropriate forum to discuss the provision on minimum age, as there was agreement that it was a provision that should apply to all vessels and the Meeting was currently only discussing additional provisions for vessels of a certain length. The Government expert from South Africa agreed and added that the Workers should raise those issues as an amendment to Article 9 during the next session of the ILC, as the provision currently conflicted with Article 9.

125. The Secretary-General explained that no consensus had been reached. In keeping with the procedures established, text would remain as proposed by the Office and the discussion would be taken up again at the upcoming ILC. The Office would draw attention at that time to any possible conflicts between that provision and other parts of the Convention.

#### *Medical examination*

126. The Government expert from Norway, speaking on behalf of the Government experts, said that there should be a small provision on medical examinations. Some Government experts had preferred 18 years in paragraph 3, others had suggested moving the provision to the Recommendation. The Government observer from the United Kingdom could not agree to the first paragraph, as it limited the application of paragraph 2 of Article 10 in Report V (1), rendering the provisions incompatible with national legislation. The United Kingdom did not oppose medical examinations; Article 10 was sufficient and gave discretion to administrations to decide whether or not a medical examination was necessary. The observer from the International Maritime Health Association reminded the Meeting of the importance of medical examinations, especially for older fishers. Medical examinations were preventative and were designed to prevent harm to personal health, to protect public health and to avoid economic damage. If exemptions were granted from that requirement, they should be limited – for example, to a single voyage. The secretary of the Worker experts said that the provision on medical examinations should be retained in the Appendix in the form proposed by the Office, because if Article 10, paragraph 2, applied to larger vessels, then there would be a conflict with the STCW-F. By retaining the provision in Appendix 2, larger ships would be exempt from Article 10, paragraph 2. The bracketed text in paragraph 1 of the proposed provision should be deleted, as it was inconsistent with the STCW-F. This was opposed by the spokesperson for the Employer experts. The competent authority should retain discretion over exemptions to medical examinations. Accordingly, the Employer experts could not accept paragraph 1 of the provision in Appendix 2. The entire provision should be moved to the Recommendation, paragraph 2 in Appendix 2 deleted, and the first part of the subsequent paragraph amended to read: “The medical certificate shall state in particular that: (a) hearing and sight are satisfactory for fishers for whom acceptable levels of hearing or sight have a direct relationship to the safe and effective performance of the fishing duties; and ... .” The Government expert from Norway said that the provision on medical examination should remain mandatory for larger vessels, especially as it had been decided that the Convention would not have a general requirement regarding validity. Paragraph 2 of that provision was necessary to ensure harmonization of medical certificates on a global scale. The Government expert from Canada noted that the Meeting was in agreement as to the importance of the issue and suggested that discussion be continued during the next session of the ILC. The Employer expert from the Netherlands, noticing that several references had been made to the STCW-F during the Meeting, asked the Office for clarification on the status of that Convention. The Executive Secretary clarified that the STCW-F had not come into force due to an insufficient number of ratifications. The Employer expert from the Netherlands added that in its nine years of gathering dust the STCW-F had only received four ratifications, representing slightly over 3 per cent of the world’s fishing vessels’ tonnage, where 15 ratifications were required for the Convention to come into force.

*Manning and hours of rest*

127. The Government expert from Norway, speaking on behalf of the Government experts, said that paragraph 1 could form the basis of an Article for larger vessels. Minimum levels of manning for safe navigation was the only area that governments could regulate and they opposed the Worker experts' proposal to extend responsibility beyond that. The term "international voyages" might not be useful in the context of that provision. In paragraphs 2-4, the emphasis should be on hours of rest as there was no possibility of controlling hours of work. The last three paragraphs should be moved to the Recommendation. The Government expert from Japan noted that the best way of setting fixed hours of rest per day would be through social dialogue and the working agreement. Thus, account would be taken of the characteristics of different fisheries. The provision proposed by the Office should be moved to the Recommendation or deleted, as it was too prescriptive. The spokesperson for the Worker experts agreed with paragraph 1 of the proposed Office text. The spokesperson for the Employer experts wondered if, given the discussion, it might not be better to move the provision in its entirety to the Recommendation and revisit the issue during the next session of the ILC.

128. The Worker expert from Argentina suggested that the following text be inserted:

In addition, for vessels of [24] metres in length or more Members shall require that all fishing vessels that fly their flag have a sufficient number of adequately trained fishers on board to ensure that the vessel is operated safely, efficiently and with due regard to safety under all conditions, taking into account concerns about fatigue and the particular nature and conditions of the fishing operations and any processing of the catch. When determining, approving or revising manning levels, the competent authority shall take into account the principles in applicable international instruments on manning levels as well as the need to avoid or minimize excessive hours of work to ensure sufficient rest and to limit fatigue.

The Government observer from the United Kingdom pointed out that the reference to the processing of the catch was problematic. Unlike fishers and operators of vessels, the administration did not have the necessary expertise to set the number of persons processing the catch. The Government expert from Norway shared that view. If the provision began, for instance, with the words "Members shall require that all fishing vessel owners ensure", the paragraph could be supported for the Convention, since there was some measure of support for safe manning as a requirement. The spokesperson for the Employer experts said that they could only support the Worker experts' proposal in the Recommendation if the remainder of the first paragraph after "is operated safely" was deleted. The Worker expert from Argentina only agreed to delete the words "and any processing of the catch". The Government expert from Norway and the Government observer from the United Kingdom felt that the problem persisted with regard to "fishing operations". The Chairperson concluded that there was no consensus.

129. The Worker experts proposed to merge paragraph 1 in the Office text for the Convention with Paragraph 1 of the Recommendation, which related to a document specifying the minimum level of manning, into a new paragraph 1 for the Convention. The draft consolidated maritime labour Convention (CMLC) provided for a minimum safe manning document, and the IMO SOLAS Convention usually did not cover fishing vessels. The Government expert from South Africa supported the proposal, stating that there could not be port state control without a safe manning document to refer to. The Government expert from Norway disagreed, as the fishing Convention was not the right place for a safe manning document. Except for the Seafarers' Hours of Work and the Manning of Ships Convention, 1996 (No. 180), the ILO was not the right organization to deal with that matter. Safe manning documents for merchant vessels were regulated by the IMO SOLAS Convention. At present there was no safe manning document in force for fishing vessels. Should there be one, it would have to be built on the IMO document. The Government observer from Denmark

shared that view since, on fishing vessels, port state control would only take place in case of complaint; it could not constitute the reason to have such a document. The CMLC did not define the minimum safe manning document, which only existed through the SOLAS Convention. The Office should study the question in greater depth. The spokesperson for the Employer experts agreed. The Executive Secretary recalled that Article 34 of Report V (1) for the 93rd Session of the ILC in 2005 provided that an inspection could take place if there had been a complaint or if a vessel did not conform to the standards of the Convention. The Chairperson noted the absence of consensus.

130. The Chairperson asked for further comments on paragraphs 2, 3 and 4 of the Office text. The Government expert from Canada found that the bracketed part of paragraph 2 was drafted in collective agreement language. It was not the right place for that level of detail and would constitute a potential barrier to ratification. The Government experts from Chile and Norway, the Government observer from the United Kingdom and the spokesperson for the Employer experts supported that position and suggested either to delete the phrase or to move it to the Recommendation. The Government observer from France agreed with paragraphs 2-4. The Government expert from Spain found the reasons allowing for temporary exceptions in paragraph 3 too vague. The words "limited and specified reasons" should be replaced with "objective or technical reasons or for reasons solely related to the organization of labour and respecting the general principles for the protection of health and safety of workers". That proposal had been supported by the European Commission and was inspired from European Union Directive 2000/34/EC of the European Parliament and of the Council of 22 June 2000 amending Council Directive 93/104/EC concerning certain aspects of the organization of working time to cover sectors and activities excluded from that Directive. The Government observer from France disagreed because the proposal added constraints not encountered in Directive 2000/34/EC, nor in Convention No. 180, which contained the same provision but allowed for exceptions through collective agreements. The Worker experts shared that view. The Government expert from Norway agreed, noting that, even if the wording had been taken from Directive 2000/34/EC, it was important not to take it out of context. The Directive contained an essential provision allowing for derogations through collective bargaining, which made it viable for the fishing sector. The Worker expert from Argentina suggested removing the square brackets and keeping the entire paragraph 2. The Government expert from South Africa felt that, if the three paragraphs applied to vessels over 24 metres in length, they should be moved to the Recommendation, in which case the need for paragraph 3 would fall away. The period of voyage should be specified. The Chairperson concluded that as there was no consensus the text would be left as it was.

#### *Fishers' work agreement*

131. The Government expert from Norway, speaking on behalf of the Government experts, said that that item applied to fishers on all vessels, not just on large vessels. Even the requirement of a written work agreement was not more stringent for large vessels since, in view of the numerous items required in Report V (1) for the 93rd Session of the ILC in 2005, the work agreement would, de facto, have to be in written form. Although governments had not discussed the proposed wording of the Office text, in principle, paragraphs 1 and 2 of the Office text could be moved to the part of the Convention applying to all fishing vessels. Paragraph 3, which was between square brackets, should be retained as a recommendation for large vessels. The Government expert from Chile and the Worker experts disagreed, stating that paragraphs 1-3 should stay in the part of the Convention applicable to vessels over 24 metres in length. The spokesperson for the Employer experts could not support either of those positions expressed and suggested to move all paragraphs to the Recommendation.

132. The Employer expert from the Netherlands was concerned about requiring a written contract (paragraph 1) for all fishing vessels and inquired whether a non-written contract had implications for the labour relationship. A representative of the Office explained that, in most countries, a labour relationship was deemed to exist even without a written contract. The Employer expert from the Netherlands cautioned that the highest court for social security disputes in the Netherlands had ruled that a labour relationship did not exist without a written contract and had thus refused the seafarers/fishers concerned the social security benefits due to them, precisely because the Seamen's Articles of Agreement Convention, 1926 (No. 22) and the Fishermen's Articles of Agreement Convention, 1959 (No. 114), as implemented in the Dutch labour law for seafarers and fishers, prescribed a written contract for all seafarers and fishers. Thus, such a general requirement could have a negative impact on fishers, given that non-written contracts were often a reality in the fishing sector.

133. The Employer experts further questioned the inclusion of the term "fishing vessel owner" in paragraph 2, since the employer was often not the fishing vessel owner, but a contractor. The Executive Secretary clarified that Article 1, paragraph (d), of the proposed Convention in Report V (1) for the 93rd Session of the ILC in 2005 considered as "fishing vessel owner" the owner of the fishing vessel or any other organization or person who has assumed the responsibility for the operation of the vessel. Nevertheless, the Employer expert from the Netherlands felt that Article 1(d) did not completely solve the problem of employment services posting fishers on vessels. The Employer experts said that it was necessary clearly to identify the party contracting with the fisher. The Government expert from Norway indicated that the CMLC had solved the problem of workers being employed by multiple employers on a single vessel by establishing that it was the role of the shipowner to ensure that they had work agreements. The Government observers from France and the United Kingdom shared that view. The Office should redraft paragraph 2 to the effect that the employer and the fisher would sign the work agreement, while the owner would ensure that fishers had a work agreement. The Employer experts agreed but had concerns about self-employed fishers. The Government observer from Denmark pointed out that Article 16 of the proposed Convention accommodated those concerns.

### *Repatriation rights*

134. The Government expert from Norway, speaking on behalf of the Government experts, stated that the provisions concerning that item should apply to all vessels on an international voyage, not just those above a certain size. Although governments had not discussed the proposed wording of the Office text, in principle, paragraphs 1-4 could be moved to the part of the Convention applicable to all fishing vessels. The Government experts did not support the Worker experts' proposal for the Recommendation text, since the Office text already covered most of it. The Government observer from the United Kingdom believed that Article 18 of the proposed Convention adequately covered that issue, as different levels of protection for seafarers and fishers did not make sense. The fact that the Worker experts' proposal for the Recommendation was drawn from the CMLC only confirmed that. Moreover, if additional repatriation provisions for large vessels were created, there would be two different sets of repatriation rules, one for vessels over 24 metres, and one for vessels under 24 metres governed by Article 18. The Government expert from South Africa and the Government observer from Namibia shared that view. The Worker experts insisted on the need for repatriation provisions for vessels over 24 metres, as smaller vessels were less likely to venture into international waters. The question was not one of application but of degree of application. There had been proposals to delete Article 18, and the link with the CMLC would not work because the fishing Convention would be finalized before the CMLC. The Employer experts preferred repatriation provisions to apply to all vessels and found the Workers' proposal for the Recommendation unnecessary.

*Recruitment and placement*

135. The Government expert from Norway, speaking on behalf of the Government experts, said that length was not a relevant parameter for that provision. Applying those provisions only to large vessels risked having different systems for recruitment and placement for different fishers. Although governments had not discussed the proposed wording of the Office text, in principle, the provisions could be moved to the part of the Convention applicable to all fishing vessels. The spokesperson for the Employer experts proposed modifying the Office text by replacing “only after consultation” at the end of paragraph 1 with “in accordance with national law and practice”. The two provisions should apply to all vessels and should be moved to the Recommendation. The Worker experts said that the provisions belonged in the Convention and should apply to vessels of 24 metres in length or more. During the previous ILC, however, all parties desired flexibility for smaller vessels. It was in that spirit that those provisions had been placed in the section for large vessels. Moreover, size might not be the only factor determining whether or not more than the minimum standards should apply. The period the vessel remained at sea might also be a determining factor.

136. The Government observer from Denmark noted that the Government experts’ position that those provisions should apply to all vessels was born from the desire not to exclude certain groups of fishers from having fundamental rights. A compromise could be to adopt an additional provision: “Nothing in this Article shall be deemed to prevent Members from extending these provisions to all fishing vessels, after consultation.” That could also be used as a model for previous items. There was already a similar provision in the section on accommodation. The proposal would give governments the possibility to extend certain fundamental rights to all fishers. The secretary of the Worker experts, the Government expert from Norway and the Government observer from Namibia supported that position, as it preserved flexibility for smaller vessels while being promotional. The spokesperson for the Employer experts also indicated support but added that the provision should be moved to the Recommendation so that governments could apply it as they saw fit. The Chairperson noted that there were no Government experts’ objections to the proposal of the Government observer from Denmark. The proposal had been noted by the Office and the issue would be revisited at the next ILC.

137. The Worker experts also proposed to modify the first sentence of paragraph 1 to read: “... ensure that the service is operated in an orderly manner that protects and promotes fishers’ employment rights as provided in this Convention and in national laws.” The proposal dealt with the problems that existed in some countries regarding the operation of recruitment and placement services. Recruitment services for fishers should protect fishers and their rights and should promote, as part of the employment system, the retention of any public service operated by a member State, as well as the rights contained in those future provisions. That text had been taken from, and was practically identical to, Standard A1.3 of the CMLC. Several Government experts and observers had difficulties with the term “promote”, found in the Worker experts’ proposal. In particular, the Government observer from the United Kingdom wondered if the Meeting could not limit itself to Article 18, which met the same purpose. Assuming a member State already had implementing legislation, he asked whether promotion would then mean establishing additional services for fishers. The Government expert from Norway suggested that the text could be moved to the Preamble, as it applied to the entire Convention. But it was unclear how such a promotional provision might be implemented in national legislation. A representative of the Office explained that the implications of promotional language on national law varied depending on where that language appeared in a Convention. If such text appeared in an operational paragraph, governments would be required to provide concrete information. The Worker expert from Argentina conceded that the text could be moved to the Preamble. The Chairperson indicated that the placement of the text would be left to the Office.

138. The Government expert from South Africa expressed concern about the requirement of “a standardized system of licensing or certification”. He observed that the Private Employment Agencies Convention, 1997 (No. 181), did not require a country which ratified it to have a system of registration. The Government expert from Chile expressed a similar concern indicating that Chile did not have a public service for recruitment, relying solely on the services of recruitment agencies. The Government expert from Norway said that his country did not have a system of licensing and certification either, but relied on the last part of that phrase, which stated that those private agencies could operate in conformity with some “other form of regulation”.

#### *Payment of wages*

139. The Government expert from Norway, speaking on behalf of the Government experts, said that that provision should also apply to all fishers, possibly in an expanded Article 19. Some Government experts had felt that the duration of the voyage could be included in the provision to ensure that earnings were transmitted to fishers’ families. The Government expert from South Africa highlighted two separate concepts in the provision: wage payment and wage protection. An Employer expert from the Netherlands said that, while there were no major concerns with the text of the provision, it should be moved to the Recommendation. The Meeting agreed to change the wording “Members shall ensure” to “Members shall require”, as it was not clear how governments could “ensure” regular payment. The Government expert from Norway, speaking on behalf of the Government experts, and referring to the Recommendation text on payment of wages, stated that, given the discussion on international voyages, that text was probably superfluous. The Government expert from Chile and an Employer expert from the Netherlands supported the proposed text as drafted by the Office.

#### *Medical care*

140. The Government expert from Norway, speaking on behalf of the Government experts, said that those provisions also applied to all vessels. Some Government experts said that Article 24 was already sufficiently detailed. The spokesperson for the Employer experts said that medical care was applicable to all fishers, and that the provisions found in Report V (1) were sufficient.

141. The Worker experts had suggested expanding the title to read “Medical care and fishing vessel owners’ liability” and had also proposed the following Convention provisions for medical care, in addition to those proposed in the Office text, which should apply to vessels over 24 metres:

1. Each Member shall ensure that all fishers on vessels that fly its flag are covered by adequate measures for the protection of their health and that they have access to prompt and adequate medical care whilst working on board.
2. The protection and care under the above paragraph shall, in principle, be provided at no cost to the fisher.
3. Members shall ensure that measures providing for health protection and medical care (including essential dental care) for fishers working on board a vessel that flies their flag are adopted which:
  - (a) ensure the application to fishers of any general provisions on occupational health protection and medical care relevant to their duties, as well as of special provisions peculiar to work on board fishing vessels;
  - (b) ensure that fishers are given health protection and medical care as comparable as possible to that which is generally available to workers ashore, including prompt access to the necessary

medicines, medical equipment and facilities for diagnosis and treatment and to medical information and expertise;

- (c) give fishers the right to visit a qualified medical doctor or dentist without delay in ports of call, where practicable;
- (d) ensure that, to the extent consistent with the Member's national law and practice, medical care and health protection services while a fisher is on board ship or landed in a foreign port are provided free of charge to fishers; and
- (e) are not limited to treatment of sick or injured fishers but include measures of a preventive character including health promotion and health education programmes.

4. Members shall adopt laws and regulations establishing requirements for on-board hospital and medical care facilities and equipment and training on vessels that fly their flags. (CMLC, R.4.1.1-2, A4.1 and A4.3.)

142. The Workers had additionally proposed a new Convention section entitled "Fishing vessel owners' liability" with the following provisions:

1. Each Member shall adopt laws and regulations requiring that owners of fishing vessels that fly its flag are responsible for health protection and medical care of all fishers working on board the fishing vessels in accordance with the following minimum standards:

- (a) fishing vessel owners shall be liable to bear the costs for fishers working on their fishing vessels in respect of sickness and injury of the fishers;
- (b) fishing vessel owners may obtain insurance coverage to provide compensation in the event of the death or the long-term disability of fishers due to an occupational injury, illness or hazard;
- (c) fishing vessel owners shall be liable to defray the expense of medical care, including medical treatment and the supply of the necessary medicines and therapeutic appliances, and board and lodging away from home until the sick or injured fisher has recovered, or until the sickness or incapacity has been declared of a permanent character;
- (d) fishing vessel owners shall be liable to pay the cost of burial expenses in the case of death occurring on board or ashore during the period of engagement.

2. National laws or regulations may limit the liability of the fishing vessel owners to defray the expense of medical care and board and lodging to a period which shall not be less than 16 weeks from the day of the injury or the commencement of the sickness.

3. Where the sickness or injury results in incapacity for work the fishing vessel owners shall be liable:

- (a) to pay full wages as long as the sick or injured fishers remain on board or are left behind in the territory of a State other than the Member;
- (b) to pay wages in whole or in part as prescribed by national laws or regulations from the time when the fishers are repatriated or landed until their recovery or until they are entitled to cash benefits under the legislation of the Member concerned.

4. National laws or regulations may limit the liability of the fishing vessel owners to pay wages in whole or in part in respect of a fisher no longer on board to a period which shall not be less than 16 weeks from the day of the injury or the commencement of the sickness.

5. National laws or regulations may exclude the fishing vessel owners from liability in respect of:

- (a) injury incurred otherwise than in the service of the vessel;
- (b) injury or sickness due to the wilful act, default or misbehaviour of the sick, injured or deceased fisher;
- (c) sickness or infirmity intentionally concealed when the engagement is entered into.

6. In so far as such liability is assumed by the public authorities, national laws or regulations may exempt the fishing vessel owners from liability to defray the expense of medical care and board and lodging and burial expenses.

7. Fishing vessel owners or their representatives shall take measures for safeguarding property left on board by sick, injured or deceased fishers and for returning it to them or to their next of kin. (CMLC, A4.2.)

143. The Worker expert from Argentina affirmed that medical care and fishing vessel owners' liability concerning medical care were especially important in the case of large vessels. The importance of those issues was not limited to large vessels, but extended to vessels with complex machinery on board, which increased the potential for accidents. The areas of operation should also be considered in that context. The concerns of the Government experts could be addressed by the Government observer of Denmark's proposal on creating a provision to allow Governments to apply those provisions to all vessels. The secretary of the Worker experts indicated that a link had been made between those provisions and social security, in an attempt to link long-term social security benefits and longer term social security benefits and to address the problem of non-domiciled fishers. The references to social security were made in anticipation of a forthcoming complex discussion and were proposed as a possible solution to that issue. The spokesperson for the Employer experts believed that the proposed change to the heading of the section was not necessary. Owner liability could vary according to national law and practice and was adequately covered in the provisions of Report V (1). In view of the many references to social security, a complicated issue that had not yet been discussed, the Worker group's proposal was not acceptable. Several Government experts and observers objected to the discussion of social security in the context of medical care, and the Government observer from Denmark advocated separate consideration of fishing vessel owner liability. In any event, the amount of detail was too extensive for the scope of the Meeting. The Meeting decided to include the proposals into the report in order for them to be considered prior to the ILC in 2005.

144. The observer from the International Maritime Health Association also suggested that the Convention should provide that the medical guide to be carried on large vessels should be based on or equivalent to the International Medical Guide for Ships.

#### *Occupational health and safety and accident prevention*

145. The Government expert from Canada said that, due to the importance of safety and health, the provisions on occupational safety and health should apply to all vessels. The Government experts from Chile and Spain and the Government observer from France shared that view. The Government expert from South Africa said that, while in principle it was desirable that the same provisions regarding occupational safety and health applied to all vessels, in practice it was necessary to have different regimes for larger and smaller vessels. However, he did support the requirement in paragraph 4 for basic safety training for all fishers. The secretary of the Worker experts shared that view because of the differences among the world's fishing vessels. The more industrial a vessel became, the more extensive the applicable regime needed to be. The debate at the ILC and the calls for flexibility for smaller vessels pointed to a need for demarcation between larger and smaller vessels, even if later on the standards might be extended to the smaller vessels. The words in brackets "and engaged in international voyages" should be deleted so that the provisions applied to vessels over 24 metres. The Government expert from Norway agreed with the Worker experts and stressed the need for risk assessment, even if that meant that the requirements were only brought in for larger vessels and extended to others in time, as made possible by the Danish compromise proposal. Paragraph 6 should be moved to the section on medical care. In paragraph 4, the text in square brackets should be deleted, as there should be no exceptions to such a basic requirement. The Worker expert from

Argentina supported that position. The spokesperson for the Employer experts felt that Article 26 of the proposed Convention adequately dealt with occupational safety and health and accident prevention and risk assessment.

146. The Government expert from Spain said that it was unclear who had the responsibility to evaluate risks and manage health and safety. It should be emphasized that the overall responsibility for risk assessment fell to the fishing vessel owner. Thus, in the first paragraph, the words “an evaluation of the risks for health and safety on board fishing vessels” should be added after “establish”, and in the second paragraph, the wording “on how to assess and manage risks to safety and health” should be replaced with “on risks to safety and health on board fishing vessels”. The Employer expert from the United Kingdom said that the skipper was ultimately responsible for risk assessment whether he or she was the owner or not. The skippers – with the full involvement of their crews – were the only people with the intimate working knowledge of their vessels capable of compiling valid risk assessments. The Government observer from the United Kingdom said that it was the responsibility of governments to ensure that there was legislation that required the assessment to be carried out; it was the responsibility of the owner to ensure that the assessment was carried out; and that of the skipper to carry it out. The Government expert from Norway shared that view and requested that the Office text reflect the responsibilities more clearly. The Government observers from Denmark and Namibia felt that the issue was adequately covered in Article 8 of the proposed Convention. The Government expert from Chile supported the amendment proposed by Spain to paragraph 2, and the secretary of the Worker experts accepted both proposals by the Government expert from Spain.

#### *Social security*

147. The Government observer from the United Kingdom proposed an amendment to Article 27 of the proposed Convention: “Members shall ensure that fishers who are subject to their social security legislation and, to the extent provided in their national law, their dependants shall be entitled to benefit from social security protection no less favourable than that enjoyed by shore workers.” The new text was drawn from the CMLC. The Government observer from France supported that position. The Government expert from Japan said to add “ordinarily resident in its territory” after “fishers” and also to add “resident in its territory” after “workers”, since it was not the flag State but the State of residence that should be responsible for the provision of long-term benefits to fishers. He also stated that he would take the proposal by the United Kingdom back home to give it serious consideration. Furthermore, the Government observer from the United Kingdom could not support the written amendment submitted to the Office by the Government of the Netherlands as it seemed too complicated. In the Office proposal, the words “including bilateral or multilateral social security agreements” should be added after “cooperation”, in order to enable the extension to non-nationals. The Government observer from France shared that view.

148. An adviser to the Government observer from France shared the concern of the observer from the United Kingdom about specifying the draft text on the issue of social security. At the same time, he said that, as it was a delicate subject on which it was difficult to reach consensus given the huge diversity of situations existing in different countries, it was important not to end up with a proposal that was either too cumbersome or too detailed. Care should be taken to produce an instrument that would be ratifiable by as many States as possible. In that respect, he suggested that a number of approaches could be taken up, some of which were covered in the text proposal recently submitted by the Government of the Netherlands and broadly based on the draft consolidated maritime labour Convention. It would be necessary:

1. to clearly specify the responsibility incumbent on the flag States: on that point France shared the view of the Netherlands, which favoured the principle that the flag State should provide cover for the fishers resident in the territory of that State;
2. to stress the need, also contained in the Netherlands proposal, for a clause allowing a derogation from that principle when regional integration systems were in place;
3. to put in place a provision to promote international cooperation, in particular through bilateral agreements, in order to settle issues of coordination and of continuity in the acquisition of rights;
4. to know whether or not to specify, as the Netherlands proposal did, the branches comprising social security coverage, and above all to examine the relevance of requiring that at least two of them were covered by the member States when they ratified the Convention. In his view, a large number of countries might find that requirement excessive, given that the most important branch, the branch relating to occupational accidents and diseases, was the object of compulsory protection under Report V (1), Article 29. Given how dangerous the maritime fishing occupations were, it was clear that such coverage should be given priority;
5. lastly, for countries with only incomplete, or even non-existent, systems to consider the possibility of providing for progressive coverage on a step-by-step basis.

149. The Government observer from Denmark said that the text from the Government of the Netherlands was a good basis for discussion.

150. The Government expert from Japan supported the additional text suggested by the Office under the heading “Social security” on page 7 of TMEFS/2004. He pointed out that some wording in Article 28 such as “the principles of equality of treatment” and “take into account the situation of non-national fishers” was unclear and misleading. He proposed that Article 28 should be deleted and replaced by the Office’s suggested text.

151. The secretary of the Worker experts said that there were three fundamental issues which needed to be addressed. The first was to question the extent to which the problems faced in fishing were the same as the problems faced in maritime transport. The Worker experts believed that there was not much common ground as the overwhelming majority of fishers worked on vessels that flew the flag of the country they resided in and there were much fewer non-domiciled fishers than seafarers. The second issue was the situation of the European Union, which declared provision A.4.5.4 of the CMLC necessary for ratification by European Union members. That was more an issue for seafarers. The third issue was that the Social Security (Minimum Standards) Convention, 1952 (No. 102), was more relevant in the fishing sector. The Meeting should not be seeking to replicate the Conventions for seafarers on that issue.

152. The spokesperson for the Employer experts recalled that there was a fundamental issue that the Meeting needed to consider regarding social security, that being the difference between developed and developing countries.

153. The Government expert from Norway observed that the social security system for fishers in Norway differed from the main social security system, mainly because of the self-employed status of fishers.

154. The Chairperson said that the Office would take note of the views expressed in the brief discussion.

**Discussion of provisions for accommodation, large fishing vessels and social security discussed at the Tripartite Meeting of Experts on the Fishing Sector**

155. The Secretary-General introduced document TMEFS/2004/5 (at Annex I to this report), which contained provisions on which there had been consensus – both original and new text – as well as provisions on which there had been no consensus – the original Office text. As had been decided at the start of the Meeting, the Office text had been left untouched wherever consensus was not reached. Thus, the document needed to be read in conjunction with the report of the discussion (TMEFS/2004/4), which summarized the issues, the positions taken during the Meeting and the outcome of the consideration of the issues. Both the experts' points made during the Meeting and the comments received by the end of the year from constituents would be taken into account when the Office formulated the provisions to be included in Report V (2) for the 93rd Session of the ILC.

156. The Government expert from Norway reported that the Government experts and observers had only briefly looked through the document, focusing their discussions on the way forward. As a result of those discussions, and in the light of the explanations provided by the Secretary-General, at the next session of the Fishing Committee they favoured creating two working groups to concentrate on accommodation and social security.

157. The Secretary-General informed the Meeting that, following the Conference's decision in June 2004 to establish a working party to look at accommodation in June 2005, the Office had organized for interpretation to be made available if the Committee set up a working party during the next session of the ILC. Thus, a working party could meet in parallel with the Committee. Should additional working parties be required, they would have to be held within the existing resources, for example one after the other.

158. The spokesperson for the Worker experts said that the words "and other" had erroneously been deleted from paragraph 1 of the provisions for a Convention for all vessels on bedding, mess utensils and miscellaneous. Secondly, the Meeting had agreed to replace "water" with "drinking water". That should also be taken into account in the title of the section.

159. The spokesperson for the Employer experts regretted that the text made it difficult to distinguish where consensus had been reached, where modifications to text had been agreed upon, and where consensus had not been reached. The text should show where there had been no consensus. For instance, the title of the column "Convention – Large vessels and specific vessels" should have square brackets around the word "Convention" to indicate that there was no consensus. The Government expert from Japan noted earlier comments by the Secretary-General that it would be difficult to distinguish between the different degrees of consensus and agreed with the Office method, provided that there was a note stating that the text did not necessarily reflect the consensus of the Meeting. He also stated that there were problems with the use of the word "proposed" in the title of the new document. That might not reflect the outcome. The Government observer from the United Kingdom saw no need for text to be added to the document indicating experts' differing views. All the concerns that had been raised in the Meeting would be reflected in the report, which was the correct place, not in TMEFS/2004/5. That text would remain open for discussion and additions were unnecessary. However, he agreed with the Government expert from Japan that the title of the document was inappropriate. The spokesperson for the Worker experts opposed the proposal to insert square brackets as suggested by the Employer experts, and agreed with the Government observer from the United Kingdom. The Government expert from Canada agreed with the proposal made by the Government expert from Japan to change the title. The secretary of the Employer experts, in the light of what had been said, did not request a visual distinction of the various degrees of consensus in

the current text, provided that there was a note of the concern of the Employer experts relating to the title “Convention – Large vessels and specific vessels”.

160. The Secretary-General reiterated that the document should not be read on its own. In response to the proposal made by the Government expert from Japan, the title of the document could be changed to “Provisions for accommodation, large fishing vessels and social security discussed at the Tripartite Meeting of Experts on the Fishing Sector”. An asterisk after “Sector” with a footnote could explain that the text contained provisions on which there had been consensus and provisions on which there had been no consensus and refer to the report.

161. The Government observer from the United Kingdom fully agreed. The secretary of the Worker experts felt that the proposal made by the secretary of the Employer experts would be difficult and confusing. The Government expert from Chile underlined the importance of minority views in any discussion. He continued to support the establishment of requirements for larger vessels, since not all vessels could be governed by the same provisions.

162. The Legal Adviser informed the Meeting of proposed changes in the works of the Drafting Committee. The Legal Adviser said that it was proposed that the next session of the Conference should, on a trial basis, modify the drafting committee of the technical committee set up to examine work in the fishing sector. The drafting committees of Conference technical committees were in essence responsible for ensuring that texts were legally correct and for harmonizing the English and French language versions of proposed instruments. The work involved was complex, owing to the amendments and subamendments made to texts. Under the terms of article 59, paragraph 1, of the Standing Orders of the Conference, drafting committees had to be set up during the early sittings of the technical committees.

163. If the Officers of the technical committee noted that there was a consensus, the Committee could request its drafting committee to draft provisions which would then be submitted to the technical committee in the form of amendments, the provisions relating to time limits and support for amendments not being applicable in such cases. That “innovation” in no way affected the normal functions of the committee drafting committee or those of the Conference Drafting Committee.

164. The secretary of the Worker experts thanked the Legal Adviser for that helpful suggestion. The spokesperson of the Employer experts added that she had taken note and that the Employers’ group would take a decision on that suggestion at the next session of the ILC.

### **Closing remarks**

165. The Secretary-General pointed out that the Meeting had a number of positive developments and that it had given additional possibilities to the constituents to make inputs to the draft text of the instrument and substantially increase their ownership of the process. There had not been enough time to discuss all important issues during the last session of the ILC, and the Meeting had provided an opportunity to discuss accommodation, larger vessels and social security.

166. The spokesperson of the Worker experts said that, while some progress had been made, there were a large number of unresolved issues. However, a structure was now in place which would provide the flexibility required for fishers engaged in small-scale or artisanal fisheries, while preserving many of the existing standards. It would enable a balance between the flexibility and meaningful standards to be established and a large number of fishers who were not currently covered could be. At the same time, the Convention could promote the movement towards higher standards. The Workers considered that some issues were so

fundamental that there was a need to retain some of the detailed technical requirements found in existing instruments. That was particularly important in the case of accommodation and medical care, and everyone who had ever been on a fishing vessel would know why. The Workers were concerned that the issue of sleeping rooms had not been adequately addressed. He hoped that the Meeting had provided enough guidance to the Office and that they would be able to produce a high quality text, which would enable the discussions to be concluded the following year. He stressed that the Workers were not in the business of adopting meaningless standards or of increasing protection for some at the expense of others. The Workers very much hoped that it would be possible to adopt a balanced Convention, which provided protection for fishers involved in small-scale fisheries and artisanal fisheries while, at the same time, preserving the essential measures contained in existing ILO Conventions and promoting higher standards for all. There was a need to approach the negotiations in a positive manner and accept that some of the issues were very sensitive and very important to fishers. The Workers did not want to be put in the position where they would have to conclude that they would be better off with the existing standards and the various documents of guidance, which were being finalized. The Workers wished to move the process forward in a positive manner and were open to collaborate with other participants on outstanding matters before the next session of the Fishing Committee. He thanked the Chair for steering the Meeting through sometimes turbulent waters and choppy seas.

167. The spokesperson for the Employer experts thanked all experts and observers for their helpful and interesting contributions. Whenever experts met, diverse opinions would be voiced. The Meeting had shown that all participants were united in their passion for and commitment to the fishing sector. The discussions and, in particular, the Worker experts' paper would be of great use for the preparations for the next session of the Committee.

168. The Government member of Norway, speaking on behalf of the Government group, remarked that there had been some progress and that the group meetings especially had been of great help to his group. The discussions held were very constructive and very valuable contributions had been made, which reflected the diversity of views on those issues.

169. The Chairperson said that it had been a pleasure to chair the Meeting. The report of the discussions, as well as the revised versions of the proposed text, would be of great assistance to the Office in preparing the discussion documents for the next and final debate on the fishing standard. He thanked all participants, in particular the spokespersons, for their constructive and cooperative participation. Much had been accomplished by the Meeting, but the real challenge was to come.

170. After examining the text of the provisions discussed at the Meeting, the experts adopted it.

171. The draft report was sent to the experts and other participants for review. Changes received by February 2005 have been incorporated in the final version.

Geneva, February 2005.

*(Signed)* J. O'Neill,  
Chairperson.

ANNEX I

INTERNATIONAL LABOUR ORGANIZATION

Sectoral Activities Programme

**Provisions for accommodation, large fishing vessels  
and social security discussed at the Tripartite  
Meeting of Experts on the Fishing Sector**

Geneva, 13-17 December 2004

This text contains provisions on which there was consensus and provisions on which there was no consensus at the Tripartite Meeting of Experts on the Fishing Sector.

## Part V. Accommodation and food: Proposed provisions

[Elements on accommodation provisions for inclusion in a proposed new Annex II and possibly Part VII.]

1. The following shall apply to all decked fishing vessels. Where the length of the vessel as defined in the Convention is not known, the overall length may be used as the means of determining the size of the vessel with regard to the provisions of this Part of the Convention. In such cases, the equivalent overall lengths to lengths specified are:

- 15 metres length (L) – overall length equivalent: {16.5} metres;
- 24 metres length (L) – overall length equivalent: {27} metres;
- 45 metres length (L) – overall length equivalent: {50} metres.

2. The competent authority may, after consultation, permit variations of the provisions of this section for fishing vessels ~~operating only within the [waters] of the Member and~~ normally remaining at sea for less than 24 {36} hours where the fishers do not live on board in port. In the case of such vessels, the competent authority shall ensure that adequate facilities are provided so as to ensure that the fishers concerned have adequate facilities for resting, eating and sanitation purposes. ~~[Such variations shall be reported under [provision of the Convention].]~~

3. Any variations made by a Member under paragraph 2 above shall be indicated in its first report under article 22 of the Constitution of the International Labour Organization.

Issue	Convention <i>All vessels</i>	Convention	Recommendation <i>Large vessels and specific vessels</i>
Application	<u>The provisions of this Part shall apply to new fishing vessels. Notwithstanding the requirements of Articles 2 and 3 of this Convention,</u> <del>t</del> The competent authority shall also apply the requirements of this Part of the Convention to existing vessels, when and in so far as it determines that this is reasonable and practicable.	The requirement for vessels of [24] metres in length or more may, after consultation, be applied to vessels of [15 metres in length or more to less than 24] metres in length where the competent authority determines, as a result of consultation, that this is reasonable and practicable. <u>Fishers working on board feeder vessels which do not have appropriate accommodation and sanitary facilities shall be provided with such facilities on board the mother vessel.</u>	When establishing requirements or guidance, competent authorities should take into account relevant international guidance on accommodation, food, and health and hygiene relating to persons working or living on board vessels [including the FAO/ILO/IMO Code of Safety for Fishermen and Fishing Vessels and the Voluntary Guidelines for the Design, Construction and Equipment of Small Fishing Vessels]; <u>and any revisions thereof.</u>

Issue	Convention <i>All vessels</i>	Convention	Recommendation <i>Large vessels and specific vessels</i>
Planning and control	<p>The competent authority shall satisfy itself that, on every occasion when:</p> <ul style="list-style-type: none"> <li>– the vessel is newly constructed;</li> <li>– the crew accommodation of the vessel has been reconstructed or substantially altered; or</li> <li>– the vessel <del>changes its flag is registered or re-registered;</del></li> </ul> <p>such fishing vessel complies with the requirements of this Part of the Convention. <del>[Definition: the term “re-registered” means registered on the occasion of a change in the territory of registration of the vessel.]</del></p>	<p><del>When fishers are carried on board for the sole purpose of operating from small vessels and are not part of the fishing vessel’s crew, such fishers shall be provided with suitable accommodation and sanitary facilities.</del></p> <p>For vessels of [24] metres in length or more, on every occasion when:</p> <ul style="list-style-type: none"> <li>– the vessel is newly constructed; or</li> <li>– the crew accommodation of the vessel has been reconstructed or substantially altered;</li> </ul> <p>the competent authority shall require detailed plans of, and information concerning, accommodation to be submitted to the competent authority, or an entity authorized by it, for approval.</p> <p>For vessels of [24] metres in length or more, on every occasion when:</p> <ul style="list-style-type: none"> <li>– the vessel <del>changes its flag is registered or re-registered;</del> or</li> <li>– the crew accommodation of the vessel has been reconstructed or substantially altered;</li> </ul> <p>the competent authority shall inspect the accommodation for compliance with this Convention. In addition to the above inspections, the competent authority may carry out additional inspections of crew accommodation at its discretion.</p>	<p>Where the competent authority requires an initial or periodic survey or inspection for other purposes (e.g. safety survey) consideration should be given to carrying out an inspection of crew accommodation at the same time.</p> <p>The competent authority should work with relevant organizations and agencies to develop and disseminate educational material and on-board information and guidance concerning safe and healthy accommodation and food on board fishing vessels.</p>

Issue	Convention <i>All vessels</i>	Convention	Recommendation <i>Large vessels and specific vessels</i>
Design and construction	<p>There shall be adequate headroom in all accommodation. For spaces where fishers are expected to stand for prolonged periods, the minimum headroom shall be prescribed by the competent authority.</p> <p><u>There shall be no direct openings into sleeping rooms from fish rooms and machinery spaces, except for the purpose of emergency escape. Direct openings or from galleys, storerooms, drying rooms or communal sanitary areas shall be avoided where reasonable and practicable.</u></p> <p>The accommodation shall be adequately insulated; the materials used to construct internal bulkheads, panelling and sheeting, floors and joinings, shall be suitable for the purpose and shall be conducive to ensuring a healthy environment.</p> <p>Sufficient drainage shall be provided in all accommodation spaces.</p> <p>All practicable measures shall be taken to protect fishing vessels against the admission of flies and other insects, particularly when those vessels are operating in mosquito-infested areas.</p>	<p>The competent authority may authorize public institutions or <del>recognized other</del> organizations or individuals that <del>are it recognizes as</del> competent and independent to carry out the above inspections. [Complaint procedures to be moved to the enforcement section.]</p> <p>For vessels of [24] metres in length or more, the minimum permitted headroom in all accommodation where full and free movement is necessary shall not be less than <u>200</u> <del>{208}</del> <del>{198}</del> centimetres.</p> <p>The competent authority may permit some limited reduction in headroom in any space, or part of any space, in such accommodation where it is satisfied that such reduction: (i) is reasonable; and (ii) will not result in discomfort to the fishers.</p> <p>For vessels of [24] metres in length or more, there shall be no direct openings into sleeping rooms from fish rooms and machinery spaces or from galleys, storerooms, drying rooms or communal sanitary areas; that part of the bulkhead separating such places from sleeping rooms and external bulkheads shall be efficiently constructed of steel or another approved <del>material substance</del> and be watertight and gas-tight.</p>	<p><u>External bulkheads of sleeping rooms and mess rooms should be adequately insulated. All machinery casings and all boundary bulkheads of galleys and other spaces in which heat is produced should be adequately insulated when there is a possibility of resulting heat effects in adjoining accommodation or passageways. Care should also be taken to provide protection from heat effects of steam and/or hot water service pipes.</u></p> <p><u>Internal bulkheads should be of approved material which is not likely to harbour vermin. Sleeping rooms, mess rooms, recreation rooms and passageways in the crew accommodation space should be adequately insulated to prevent condensation or overheating.</u></p> <p><u>Main steam and exhaust pipes for winches and similar gear should, whenever technically possible, not pass through crew accommodation or through passageways leading to crew accommodation; where they do pass through such accommodation or passageways, they should be adequately insulated and encased.</u></p>

Issue	Convention <i>All vessels</i>	Convention	Recommendation <i>Large vessels and specific vessels</i>
	Emergency escapes shall be provided from all crew accommodation spaces as necessary.		<p><u>Inside panelling or sheeting should be of material with a surface easily kept clean. Tongued and grooved boarding or any other form of construction likely to harbour vermin should not be used.</u></p> <p><u>The competent authority should decide to what extent fire prevention or fire-retarding measures should be required to be taken in the construction of the accommodation.</u></p> <p><u>The wall surface and deck heads in sleeping rooms and mess rooms should be easily kept clean and, if painted, should be light in colour; lime wash should not be used.</u></p> <p><u>The wall surfaces should be renewed or restored as necessary.</u></p> <p><u>The decks in all crew accommodation should be of approved material and construction and should provide a surface impervious to damp and easily kept clean.</u></p> <p><u>Overhead exposed decks over crew accommodation should be sheathed with wood or equivalent insulation.</u></p> <p><u>Where the floorings are of composition, the joining with sides should be rounded to avoid crevices.</u></p>
Noise and vibration	The competent authority shall take measures to limit excessive noise and vibration in accommodation spaces.	For vessels of [24] metres in length or more, the competent authority shall adopt standards for noise and vibration in accommodation spaces which shall ensure adequate protection to fishers from the effects of such noise and	<u>The limits for noise levels for working and living spaces should be in conformity with the international guidelines of the International Labour Organization on exposure levels to ambient factors in the workplace and, where applicable, the specific protec</u>

Issue	Convention <i>All vessels</i>	Convention	Recommendation <i>Large vessels and specific vessels</i>
Ventilation	<p>Accommodation spaces shall be ventilated, taking into account climatic conditions. The system of ventilation shall provide air in a satisfactory condition in all conditions.</p> <p>Wherever practicable, ventilation arrangements shall be such as to protect non-smokers from tobacco smoke.</p>	<p>vibration, including the effects of noise- and vibration-induced fatigue.</p> <p>Vessels of [24] metres in length or more shall be equipped with <u>a system of ventilation for accommodation; it shall be controlled so as to maintain the air in a satisfactory condition and to ensure sufficiency of air movement in all conditions of weather and climate</u> <del>mechanical means of ventilation or electric fans.</del> <del>Vessels operating in tropical regions shall be equipped with both mechanical means of ventilation and electric fans.</del> When practicable, ventilation systems shall be in operation at all times when fishers are on board.</p>	<p><u>tion recommended by the International Maritime Organization, and with any subsequent amending and supplementary instruments for acceptable noise levels on board ships.</u></p>
Heating (and air conditioning)	<p>Accommodation spaces shall be adequately heated, taking into account climatic conditions.</p>	<p>For vessels of [24] metres in length or more, adequate heat, through an appropriate heating system, shall be provided, except in fishing vessels operating exclusively in tropical climates. The system of heating shall provide heat in all conditions, as necessary, and shall be in operation when fishers are living or working on board, and conditions so require.</p> <p>For vessels of [24] metres in length or more, <u>with the exception of those regularly engaged in areas where</u></p>	<p><u>The heating system should be capable of maintaining the temperature in crew accommodation at a satisfactory level under normal conditions of weather and climate likely to be met with on service; the competent authority should prescribe the standard to be provided.</u></p> <p><u>Facilities for heating should be designed so as not to endanger health or safety of the fishers or the safety of the vessel.</u></p> <p><u>Radiators and other heating apparatus should be so placed and, where necessary, shielded and fitted with safety devices so as to avoid</u></p>

Issue	Convention <i>All vessels</i>	Convention	Recommendation <i>Large vessels and specific vessels</i>
Lighting	<p>All accommodation spaces shall be adequately lighted.</p> <p>Wherever practicable, accommodation spaces shall be lit with natural light in addition to artificial light. Where natural light is provided in sleeping spaces, a means of blocking the light shall be provided.</p> <p>Adequate reading light shall be provided for every berth in addition to the normal lighting of the sleeping room.</p> <p>Where a vessel is not fitted with emergency lighting in sleeping rooms, mess rooms, passageways, and any spaces that are or may be used for emergency escape, permanent night lighting shall be provided in such spaces.</p>	<p><del>temperate climatic conditions do not require this</del> <u>operating in tropical climates</u>, air conditioning shall be provided in accommodation, the bridge, the radio room and any centralized machinery control room and shall be available in work areas, where practicable.</p> <p>For vessels of [24] metres in length or more, accommodation spaces shall be lighted to a standard established by the competent authority. The minimum standard for such lighting shall be such as to permit a person with normal vision to read on a clear day an ordinary newspaper in any part of the accommodation space available for free movement.</p>	<p><u>risk of fire or danger or discomfort to the occupants.</u></p> <p><u>Methods of lighting should not endanger the health or safety of the fishers or the safety of the vessel.</u></p>
Sleeping rooms	<p><del>Sleeping rooms shall be situated amidships or aft. The competent authority may, in particular cases, if the size, type or intended service of the vessel renders such locations unreasonable or impracticable, permit the</del></p>	<p>For vessels of [24] metres in length or more and less than [45] metres, the floor area per person of sleeping rooms, excluding space occupied by berths and lockers, shall not be less than [1] square metre.</p>	<p><u>Members of the crew should be provided with individual berths of adequate dimensions. Berths should not be placed side by side in such a way that access to one berth can be obtained only over another.</u></p>

Issue	Convention <i>All vessels</i>	Convention	Recommendation <i>Large vessels and specific vessels</i>
	<p><del>location of sleeping rooms in the fore part of the vessel but in no case forward of the collision bulkhead. [Alternative: Where the design, dimensions and/or purpose of the vessel allow, the sleeping accommodation shall be located so as to minimize the effects of motion and acceleration-], but in no case forward of the collision bulkhead.</del></p> <p>The floor area per person, excluding space occupied by berths and lockers, and the number of persons per sleeping room shall be such as to provide adequate space and comfort for the fishers on board, taking into account the service of the vessel.</p> <p>The number of persons allowed to occupy each sleeping room shall not be more than six persons.</p> <p>Wherever practicable, a separate sleeping room or sleeping rooms shall be provided for officers.</p> <p>The maximum number of persons to be accommodated in any sleeping room shall be legibly and indelibly marked in some place in the room where it can be conveniently seen.</p> <p>The members of the crew shall be provided with individual berths of appropriate dimensions. Mattresses shall be of a suitable material.</p> <p>The sleeping rooms shall be so planned and equipped as to ensure reasonable comfort for the occupants and to facilitate tidiness.</p>	<p>For vessels of [45] metres in length or more, the floor area per person of sleeping rooms, excluding space occupied by berths and lockers, shall not be less than [1.5] square metres.</p> <p>For vessels of [24] [45] metres in length or more the number of persons allowed to occupy each sleeping room shall not be more than four persons.</p> <p>For vessels of [24] metres in length or more, sleeping rooms for officers shall be for one person wherever possible and in no case shall the sleeping room contain more than two berths.</p> <p>The competent authority may permit exceptions to the requirements of the two preceding paragraphs in particular cases if the size, type or intended service of the vessel make the requirements unreasonable or impracticable.</p> <p>For vessels of [24] metres in length or more, the minimum inside dimensions of the berths shall not be less than [1.90 by 0.68 metres].</p> <p>For vessels of [24] metres in length or more a desk suitable for writing with a chair shall be provided.</p> <p><u>The provision of separate sleeping rooms for men and women is desirable for all vessels, and shall be provided on vessels of 24 metres or more in length.</u></p> <p><del>For vessels of [24] metres in length or</del></p>	<p><u>Berths should not be arranged in tiers of more than two; in the case of berths placed along the vessel's side, there should be only a single tier when a sidelight is situated above a berth.</u></p> <p><u>The lower berth in a double tier should not be less than [0.30] metres above the floor; the upper berth should be placed approximately midway between the bottom of the lower berth and the lower side of the deck head beams.</u></p> <p><u>The framework and the lee-board, if any, of a berth should be of approved material, hard, smooth and not likely to corrode or to harbour vermin.</u></p> <p><u>If tubular frames are used for the construction of berths, they should be completely sealed and without perforations which would give access to vermin.</u></p> <p><u>Each berth should be fitted with a spring mattress of approved material or with a spring bottom and a mattress of approved material. Stuffing of straw or other material likely to harbour vermin should not be used.</u></p> <p><u>When one berth is placed over another, a dust-proof bottom of wood, canvas or other suitable material should be fitted beneath the upper berth.</u></p> <p><u>The furniture should be of smooth, hard material not liable to warp or corrode or to harbour vermin.</u></p>

Laundry facilities	<p>The sanitary accommodation shall be such as to eliminate as far as practicable possible contamination of other spaces.</p> <p>The sanitary facilities used by women fishers shall allow for reasonable privacy.</p> <p>Cold fresh water and hot fresh water shall be available to all fishers and other persons on board, in sufficient quantities to allow for proper hygiene. The minimum amount of water to be provided may after consultation be established by the competent authority.</p> <p>Where sanitary facilities water closets are provided, they shall be fitted with ventilation to the open air, independent of any other part of the accommodation.</p> <p>All surfaces in sanitary accommodation shall be such as to facilitate easy and effective cleaning. Floors shall have a non-slip deck covering.</p>	<p>For vessels of [24] metres in length or more, facilities for washing, and drying and ironing clothes shall be provided.</p>	<p><u>should not pass through fresh water or drinking water tanks, neither should they, if practicable, pass overhead in mess rooms or sleeping accommodation.</u></p> <p><u>Sanitary accommodation intended for the use of more than one person should comply with the following requirements:</u></p> <p>(a) <u>floors should be of approved durable material, easily cleaned and impervious to damp and should be properly drained;</u></p> <p>(b) <u>bulkheads should be of steel or other approved material and should be watertight up to at least 0.23 m above the level of the deck;</u></p> <p>(c) <u>the accommodation should be sufficiently, lighted, heated and ventilated.</u></p> <p><u>Toilets should be situated convenient to, but separate from, sleeping rooms and wash-rooms, without direct access from the sleeping rooms or from a passage between sleeping rooms and toilets water closets to which there is no other access, provided that this requirement should not apply where a toilet is located between two sleeping rooms having a total of not more than four persons. Where there is more than one toilet in a compartment, they should be sufficiently screened to ensure privacy.</u></p>

Issue	Convention <i>All vessels</i>	Convention	Recommendation <i>Large vessels and specific vessels</i>
Facilities for sick or injured fishers	<del>Whenever necessary. Wherever possible,</del> an isolated cabin shall be <u>made available</u> <del>provided</del> for a fisher who suffers illness or injury.	For vessels of [45] metres in length or more, such facilities shall be provided in a compartment separate from sleeping rooms, mess rooms and <del>toilets-water closets,</del> adequately ventilated and heated and equipped with lines or other <u>means fittings</u> for <del>drying hanging</del> clothes.	For vessels of [45] metres in length or more, there shall be a separate sick bay. The space shall be properly equipped and shall be maintained in hygienic state.
Other facilities	<del>An Sufficient and adequate place accom-</del> modation for hanging <del>oilskins</del> <del>{foul weather gear}</del> shall be provided outside but convenient to sleeping rooms.		
Bedding, mess utensils and miscellaneous provisions	Appropriate eating utensils; and bedding and other linen shall be provided to all fishers on board.		
Recreational facilities		For vessels of [24] metres in length or more, appropriate recreational facilities, amenities and services shall be provided for all fishers on board. <del>For vessels of less than [45] metres in length, the recreational space may be combined with the mess room.</del>	For vessels of less than [45] metres in length, the recreational space <del>might</del> <u>may</u> be combined with the mess room. <u>Recreational facilities and services should be reviewed frequently to ensure that they are appropriate in the light of changes in the needs of fishers resulting from technical, operational and other developments in the fishing industry.</u> <u>Furnishings for recreational facilities should as a minimum include a bookcase and facilities for reading, writing and, where practicable, for games.</u>

Issue	Convention <i>All vessels</i>	Convention	Recommendation <i>Large vessels and specific vessels</i>
Communication facilities	<p>All fishers on board shall be given reasonable access to communication facilities <del>for personal reasons and at a reasonable expense</del>, to the extent practicable, <u>at a cost not exceeding the actual cost to the fishing vessel owner.</u></p>		
Galley and food storage facilities	<p><del>Satisfactory</del> Cooking equipment shall be provided on board and shall, where practicable, be fitted in a separate galley.</p> <p>The galley, or cooking area where a separate galley is not provided, shall be of adequate size for the purpose, shall be well lit and ventilated, and shall be properly equipped and maintained.</p> <p><u>Where butane or propane gas is used for cooking purposes in the galley, the gas containers shall be kept on the open deck.</u></p> <p>A suitable place for provisions, of adequate capacity, shall be provided which can be kept dry, cool and well ventilated in order to avoid deterioration of the stores. Where possible, refrigerators or other low-temperature storage shall be provided.</p>	<p>For vessels of [24] [45] metres in length or more, there shall be a separate galley.</p> <p>For vessels of [24] metres in length or more, a provisions storeroom and refrigerator <del>and</del> other low-temperature storage shall be provided.</p>	
Food and drinking water	<p><u>Food and drinking water shall be sufficient having regard to the number of fishers, their religious requirements and cultural practices as they pertain to food and the duration and nature of the voyage, and shall be suitable in respect of quantity, nutritive value, quality and variety.</u> <del>Palatable food and water of</del></p> <p><u>Fishers employed as cooks with responsibility for food preparation should be trained and qualified for their position on board.</u></p>		

Issue	Convention <i>All vessels</i>	Convention	Recommendation <i>Large vessels and specific vessels</i>
Clean and habitable conditions	<p><del>sufficient quantity, quality and nutritional value shall be provided to all fishers on board.</del></p> <p>The competent authority may establish requirements for the minimum standard and quantity of food and water to be carried on board.</p> <p>Accommodation shall be maintained in clean and habitable condition and shall be kept free of goods and stores which are not the personal property of the occupants.</p> <p>Galley and food storage facilities shall be maintained in a hygienic condition.</p> <p><u>Waste shall be kept in closed, well-sealed containers and removed from food-handling areas whenever necessary.</u></p>	<p>For vessels of [24] metres in length or more, the competent authority shall require frequent inspections, by or under the authority of the skipper, to be carried out, to ensure that accommodation is clean, decently habitable and safe, is maintained in a good state of repair, that food and water supplies are sufficient, and that galley and food storage spaces and equipment are hygienic and in a proper state of repair. The results of such inspections, and the actions taken to address any deficiencies found, shall be recorded and available for review.</p>	
Variations	<p>In the case of fishing vessels where there is a need to take into account, without discrimination, the interests of fishers having differing and distinctive religious and social practices, the competent authority may, after consultation, permit fairly applied variations in respect of this part on condition that such variations do not result in overall facilities less favourable than those which would result from the application of the provisions of this Part.</p>		

## New Part VII, Additional requirements for vessels of [...] metres in length or more

The provisions of the present Part apply to vessels of [24] metres in length or more [as well as to vessels engaged in distant-water fishing]. Any Member may, after consultation, extend the protection of this Part to fishers working on vessels of less than 24 metres in length.

---

Additional Convention provisions for vessels of [24] metres in length or more

### Minimum age

In addition, for fishing vessels of [24] metres in length or more, the engagement of fishers under 18 years of age for work at night shall be prohibited. [For the purpose of this [Article], “night” shall be defined in accordance with national law and practice. It shall cover a period of at least nine hours starting no later than midnight and ending no earlier than 5 a.m.]

### Medical examination

The following provisions shall apply to fishers working on fishing vessels of [24] metres in length or more [which normally remain at sea for a period of more than three days] [engaged on international voyages].

1. Article 10, paragraph 2, shall not be applicable [to this Part of the Convention].
2. The medical certificate shall state in particular that: (a) the hearing and sight of the persons concerned are satisfactory; and (b) they are not suffering from any medical condition likely to be aggravated by service at sea or to render them unfit for such service or to endanger the health of other persons on board.
3. A medical certificate shall be valid for a maximum period of [two] years unless the fisher is under [18] [21] years of age, in which case the maximum period of validity shall be one year.
4. If the period of validity of a certificate expires in the course of a voyage, the certificate shall continue in force until the end of that voyage.

---

Additional Recommendation provisions for vessels of [24] metres in length or more

### Minimum age

[\* The following text is the only Recommendation text in Part VII that applies to ALL VESSELS.]The working hours of young fishers should not exceed eight hours per day and 40 hours per week and overtime should be worked only where unavoidable for safety reasons. While sufficient time should be allowed for all meals, young fishers should be assured of a break of at least one hour for the main meal of the day.

### Medical examination

### **Manning and hours of rest**

In addition, for vessels of [24] metres in length or more [and engaged on international voyages].

1. The competent authority shall establish a minimum level of manning for the safe navigation of the vessel, specifying the number and qualifications of the fishers required;
2. The competent authority shall, after consultation, establish, for the purpose of limiting fatigue, the minimum amount of rest to be provided to fishers within a 24-hour period and within a seven-day period. [The minimum amount of rest established by the competent authority [shall] [should] be no less than ten hours of rest in any 24-hour period and 77 hours of rest in any seven-day period.]
3. With regard to paragraph 2, the competent authority may permit temporary exceptions, for limited and specified reasons, to the limits it establishes. However, it shall require that, in such circumstances, fishers shall receive compensatory periods of rest as soon as practicable.
4. The competent authority, may, after consultation, establish alternative requirements for ensuring that fishers are provided with sufficient rest. However, such alternatives shall provide a level of protection no less favourable than that provided in paragraph 2.

### **Fishers' work agreement**

In addition, the following provisions shall apply to fishers working on fishing vessels of [24] metres in length or more [and engaged in international voyages].

1. Every fisher to whom this Part applies shall have a clearly written work agreement setting out the terms and conditions of his or her work on board the vessel.
2. Fishing vessel owners shall ensure that fishers have a signed fishers' work agreement. The work agreement shall be signed by the fishing vessel owner or his or her authorized representative, and by the fisher.
- [3. In addition to the minimum particulars to be included in accordance with the provisions of Annex I, the fishers' work agreement shall contain the following:

### **Manning and hours of rest**

1. The competent authority should provide each vessel of [24] metres in length or more with a document specifying the minimum level of manning, including the number and qualifications of the fishers required.

### **Fishers' work agreement**

- (a) the amount of paid annual leave or the formula for calculating it where leave is calculated using a formula, where applicable;
- (b) the health and social security protection benefits to be provided to the fisher by the fishing vessel owner, where applicable;
- (c) the fisher's entitlement to repatriation;
- (d) a reference to the collective bargaining agreement, if applicable.]

### **Repatriation rights**

The following provisions shall apply to fishers working on fishing vessels of [24] metres in length or more [and engaged on an international voyage].

1. Members shall ensure that fishers on fishing vessels that fly their flag are entitled to repatriation in the event that the fishers' work agreement for a specific period or voyage expires abroad or is terminated by the fisher for justified reasons or by the fishing vessel owner; or the fishers are no longer able to carry out their duties under their work agreement or cannot be expected to carry them out in the specific circumstances.
2. The cost of repatriation shall be borne by the fishing vessel owner, except where the fisher has been found in accordance with national laws or regulations or other measures to be in serious default of his or her work agreement obligations.
3. Members shall, by means of laws and regulations or other measures, prescribe the precise circumstances entitling a fisher to repatriation, the maximum duration of service periods on board following which a fisher is entitled to repatriation, and the destinations to which fishers may be repatriated.
4. If a fishing vessel owner fails to provide for repatriation, the Member whose flag the vessel flies shall arrange for the repatriation of the fisher concerned and recover the cost from the fishing vessel owner.

### **Recruitment and placement**

The following provisions shall apply to fishers working on fishing vessels of [24] metres in length or more [and engaged on an international voyage].

### **Repatriation rights**

### **Recruitment and placement**

1. A Member that operates a public service providing recruitment and placement for fishers shall ensure that the service is operated in an orderly manner. If a Member has private services providing recruitment and placement for fishers operating in its territory, such services shall be operated in conformity with a standardized system of licensing or certification or other form of regulation, which shall be established, maintained, modified or changed only after consultation.
2. A Member shall, by means of laws and regulations or other measures:
  - (a) prohibit recruitment and placement services from using means, mechanisms or lists intended to prevent or deter fishers from engaging for work;
  - (b) require that no fees or other charges for recruitment and placement of fishers be borne directly or indirectly, in whole or in part, by the fisher; and
  - (c) ensure that the competent authority closely supervises all recruitment and placement services.

#### **Payment of wages**

Members shall ~~require ensure~~ that, in the case of fishers working on board fishing vessels of [24] metres in length or more [and engaged on international voyages], and who are paid a wage, payments to them be made on a monthly basis, or at some other regular interval as provided in national laws, regulations or collective bargaining agreements. Such fishers shall be given a means to transmit all or part of their wage earnings to their families at reasonable cost.

#### **Accommodation and food**

See Appendix 1.

#### **Medical care**

The following additional provisions shall apply to fishing vessels of [24] metres in length or more [and engaged on international voyages] [at sea for more than [three] days].

1. The competent authority shall prescribe the medical equipment and medical supplies to be carried on board.

#### **Payment of wages**

For vessels of [24] metres in length or more [and engaged on international voyages], all fishers should be entitled to a minimum wage in accordance with national laws, regulations or collective agreements.

#### **Accommodation and food**

#### **Medical care**

1. When prescribing the medical equipment and medical supplies to be carried, the competent authority should take into account international

- |  |  |
|--|--|
| <p>2. The medical equipment and medical supplies carried on board shall be properly maintained and inspected at regular intervals established by the competent authority by responsible persons [designated] [approved] by the competent authority.</p> <p>3. The vessels shall be required to carry a medical guide [adopted] [approved] by the competent authority.</p> <p>4. The vessel shall have access to a prearranged system of medical advice by radio or satellite communication to vessels at sea, including specialist advice, which shall be available at all times.</p> <p>5. The vessel shall carry on board a list of radio or satellite stations where the medical advice can be obtained.</p> <p>6. <u>To the extent consistent with the Members' national law and practice, medical care while the fisher is on board or landed in a foreign port shall be provided free of charge to the fisher.</u></p> | <p>recommendations in this field, such as the most recent edition of the ILO/IMO/WHO International Medical Guide for Ships and the Model List of Essential Medicines published by the World Health Organization, as well as advances in medical knowledge and approved methods of treatment.</p> <p>2. Inspections of medical equipment and supplies should take place at intervals of no less than 12 months. The inspector should ensure that: expiry dates and conditions of storage of all medicines are checked; contents of the medicine chest are listed and conform to the medical guide used nationally; and medical supplies are labelled with generic names, in addition to any brand names used, expiry dates and conditions of storage.</p> <p>3. The medical guide should explain how the contents of the medical equipment and medical supplies are to be used and should be designed to enable persons other than a medical doctor to care for the sick or injured on board both with and without medical advice by radio or satellite communication. The guide should be prepared taking into account international recommendations in this field, including the most recent edition of the ILO/IMO/WHO International Medical Guide for Ships and the Medical First Aid Guide for Use in Accidents Involving Dangerous Goods.</p> <p>4. Medical advice provided by radio or satellite communication should be available free of charge to all vessels irrespective of the flag they fly.</p> <p>5. The vessel should carry a standard medical report form adopted by the competent authority for use by the skipper and relevant onshore and on-board medical personnel. The form and its contents should be kept confidential and should be used for no other purpose than to facilitate the treatment of persons on board the vessel.</p> |
|--|--|

### **Occupational safety and health and accident prevention**

The following additional provisions shall apply to vessels of [24] metres in length or more [and engaged on international voyages].

1. The competent authority shall, after consultation, require that the fishing vessel owner establish, in accordance with national laws, regulations, collective bargaining agreements and practice, on-board procedures for the prevention of occupational accidents, injuries and diseases, taking into account the specific hazards and risks encountered on the fishing vessel concerned.
2. The competent authority shall require ~~take measures to ensure~~ that fishing vessel owners, skippers, fishers and other relevant persons be provided with sufficient and suitable guidance, training material, or other appropriate information on how to assess and manage risks to safety and health on board fishing vessels.
3. Fishing vessel owners shall have the obligation to provide fishers with appropriate protective clothing and equipment.
4. Fishing vessel owners shall ensure that every fisher on board has received basic safety training approved by the competent authority. [The competent authority may waive this requirement for fishers who have demonstrated equivalent knowledge and experience.]
5. Fishing vessel owners shall ensure that fishers are sufficiently and reasonably familiarized with equipment and its methods of operation, including relevant safety measures, prior to using the equipment or participating in the operations concerned.
6. To the extent consistent with the Member's national law and practice, medical care while the fisher is on board or landed in a foreign port shall be provided free of charge to the fisher.

### **Occupational safety and health and accident prevention**

1. The on-board prevention procedures should be so designed as to involve fishers on board in the identification of hazards and potential hazards and in the implementation of measures to reduce or eliminate such hazards.
2. When ensuring that fishing vessel owners, skippers and fishers and other relevant persons are provided with sufficient and suitable guidance, training material, or other appropriate information, the competent authority should take into account relevant existing international standards, codes, guidance and other information, and should keep abreast of and utilize international research and guidance concerning safety and health in the fishing sector, including relevant research in occupational safety and health in general which may be applicable to work on board fishing vessels.
3. Vessels engaged on international voyages should carry documentary evidence that fishers have received basic safety training or have been granted a waiver of the requirement.
4. The competent authority should take measures to ensure regular consultation on safety and health matters with the aim of ensuring that all concerned are kept reasonably informed of national, international and other developments in the field and on their possible application to fishing vessels flying the flag of the Member.

**Social security**

An additional provision after Article 27 in the draft Convention to read:

Members shall undertake to take steps, according to national circumstances, individually and through international cooperation, to achieve progressively comprehensive social security protection for all fishers.

The designations employed in ILO publications, which are in conformity with United Nations practice, and the presentation of material therein do not imply the expression of any opinion whatsoever on the part of the International Labour Office concerning the legal status of any country, area or territory or of its authorities, or concerning the delimitation of its frontiers.

Reference to names of firms and commercial products and processes does not imply their endorsement by the International Labour Office, and any failure to mention a particular firm, commercial product or process is not a sign of disapproval.

ILO publications can be obtained through major booksellers or ILO local offices in many countries, or direct from ILO Publications, International Labour Office, CH-1211 Geneva 22, Switzerland, or by email: [pubvente@ilo.org](mailto:pubvente@ilo.org) or at our web site: [www.ilo.org/pblns](http://www.ilo.org/pblns). Catalogues or lists of new publications are available free of charge.

---

Les désignations utilisées dans les publications du BIT, qui sont conformes à la pratique des Nations Unies, et la présentation des données qui y figurent n'impliquent de la part du Bureau international du Travail aucune prise de position quant au statut juridique de tel ou tel pays, zone ou territoire, ou de ses autorités, ni quant au tracé de ses frontières. La mention ou la non-mention de telle ou telle entreprise ou de tel ou tel produit ou procédé commercial n'implique de la part du Bureau international du Travail aucune appréciation favorable ou défavorable.

Les publications du Bureau international du Travail peuvent être obtenues dans les principales librairies ou auprès des bureaux locaux du BIT. On peut aussi se les procurer directement, de même qu'un catalogue ou une liste des nouvelles publications, à l'adresse suivante: Publications du BIT, Bureau international du Travail, CH-1211 Genève 22, Suisse, ou par e-mail: [pubvente@ilo.org](mailto:pubvente@ilo.org) ou par notre site web: [www.ilo.org/pblns](http://www.ilo.org/pblns).

B. Proposed Recommendation concerning work in the fishing sector. . . . .	55
B. Projet de recommandation concernant le travail dans le secteur de la pêche . . . . .	56

## INTRODUCTION

The first discussion of an item concerning a comprehensive standard (a Convention supplemented by a Recommendation) on work in the fishing sector took place at the 92nd Session (2004) of the International Labour Conference. Following that discussion, and in accordance with article 39 of the Standing Orders of the Conference, the International Labour Office prepared and communicated to the governments of member States Report V (1) containing a proposed Convention and a proposed Recommendation, based on the conclusions adopted by the Conference at its 92nd Session.<sup>1</sup>

Governments were invited to send any amendments or comments they might wish to make so as to reach the Office by 15 November 2004 at the latest, or to inform it, by the same date, whether they considered that the proposed texts constituted a satisfactory basis for discussion by the Conference at its 93rd Session (2005).

At the time of drawing up this report, the Office had received replies from the governments of the following 43 member States: Argentina, Australia, Belgium, Brazil, Canada, China, Cuba, Cyprus, Czech Republic, Denmark, Egypt, Estonia, Ethiopia, Finland, France, Greece, Guinea, Hungary, Iceland, India, Indonesia, Israel, Japan, Kuwait, Lebanon, Lithuania, Mauritius, Morocco, Netherlands, New Zealand, Norway, Poland, Portugal, Singapore, South Africa, Spain, Sweden, Switzerland, Thailand, Tunisia, Ukraine, United Arab Emirates, United Kingdom.

In accordance with article 39, paragraph 6, of the Standing Orders of the Conference, governments were requested to consult the most representative organizations of employers and workers before finalizing their replies and to indicate which organizations were consulted.

The governments of the following 36 member States stated that the most representative organizations of employers and workers had been consulted, and some included in their replies the opinions expressed on certain points by these organizations: Argentina, Australia, Belgium, Brazil, Canada, China, Cyprus, Cuba, Czech Republic, Denmark, Egypt, Estonia, Ethiopia, Finland, France, Greece, Guinea, Hungary, Iceland, Indonesia, Israel, Japan, Lebanon, Lithuania, Mauritius, Netherlands, New Zealand, Norway, Poland, Portugal, Singapore, Spain, Sweden, Switzerland, United Arab Emirates, United Kingdom.

The governments of the following member States sent separately the replies from employers', workers' or other organizations; and in some cases, replies were received directly at the Office: Belgium, Canada, Cyprus, France, Italy, New Zealand, Nicaragua, Spain, Switzerland, United States.

Replies were also received from the European Union (EU) and the International Maritime Health Association (IMHA).

Furthermore, at the 92nd Session of the Conference, the Committee on the Fishing Sector decided that consultations should be held on the issue of accommodation before the 93rd Session of the Conference in 2005 on the basis that the Office devise a mechanism

## INTRODUCTION

La question intitulée «Travail dans le secteur de la pêche» – discussion en vue de l'adoption d'une norme d'ensemble (une convention complétée par une recommandation)» a fait l'objet d'une première discussion à la 92<sup>e</sup> session (2004) de la Conférence internationale du Travail. A la suite de cette discussion, et conformément à l'article 39 du Règlement de la Conférence, le Bureau international du Travail a préparé le rapport V (1) contenant un projet de convention et un projet de recommandation fondés sur les conclusions adoptées par la Conférence à sa 92<sup>e</sup> session<sup>1</sup>.

Le Bureau a invité les gouvernements à lui faire parvenir leurs observations ou amendements éventuels avant le 15 novembre 2004 au plus tard ou à lui faire savoir, dans le même délai, s'ils considéraient que les textes proposés constituaient une base de discussion satisfaisante pour la Conférence à sa 93<sup>e</sup> session (2005).

Lorsque le présent rapport a été établi, le Bureau avait reçu les réponses des gouvernements des 43 Etats Membres suivants: Afrique du Sud, Argentine, Australie, Belgique, Brésil, Canada, Chine, Chypre, Cuba, Danemark, Egypte, Emirats arabes unis, Espagne, Estonie, Ethiopie, Finlande, France, Grèce, Guinée, Hongrie, Inde, Indonésie, Islande, Israël, Japon, Koweït, Liban, Lituanie, Maroc, Maurice, Norvège, Nouvelle-Zélande, Pays-Bas, Pologne, Portugal, Royaume-Uni, Singapour, Suède, Suisse, République tchèque, Thaïlande, Tunisie, Ukraine.

Conformément au paragraphe 6 de l'article 39 du Règlement de la Conférence, les gouvernements étaient priés de consulter les organisations d'employeurs et de travailleurs les plus représentatives avant d'établir le texte définitif de leurs réponses et de préciser quelles organisations avaient été consultées.

Les gouvernements des 36 Etats Membres suivants ont déclaré que les organisations d'employeurs et de travailleurs les plus représentatives avaient été consultées et certains d'entre eux ont inclus dans leur réponse les opinions exprimées sur certains points par ces organisations: Argentine, Australie, Belgique, Brésil, Canada, Chine, Chypre, Cuba, Danemark, Egypte, Emirats arabes unis, Espagne, Estonie, Ethiopie, Finlande, France, Grèce, Guinée, Hongrie, Indonésie, Islande, Israël, Japon, Liban, Lituanie, Maurice, Norvège, Nouvelle-Zélande, Pays-Bas, Pologne, Portugal, Royaume-Uni, Singapour, Suède, Suisse, République tchèque.

Les gouvernements des Etats Membres suivants ont envoyé sous pli séparé les réponses des organisations d'employeurs et de travailleurs ou d'autres organisations et dans certains cas des réponses ont été reçues directement par le Bureau: Belgique, Canada, Chypre, Espagne, Etats-Unis, France, Italie, Nicaragua, Nouvelle-Zélande, Suisse.

Des réponses ont également été reçues de l'Union européenne et de l'Association internationale de médecine maritime.

Par ailleurs, à la 92<sup>e</sup> session de la Conférence, la Commission du secteur de la pêche a décidé que des consultations devraient être tenues sur la question du logement avant la 93<sup>e</sup> session de la Conférence en 2005 à condition que le Bureau conçoive un mécanisme

<sup>1</sup> BIT: *Le travail dans le secteur de la pêche*, Conférence internationale du Travail, 93<sup>e</sup> session, Genève, 2005, rapport V (1).

to facilitate the process, the three parties commit to participate in consultations, and a working party be set up by the Conference Committee the following year. The Conference Committee also agreed that the Convention should include a new part providing additional requirements for larger vessels to be developed by the Office, and that the issue of social security should be left open pending the outcome of the Preparatory Technical Maritime Conference (September 2004) developing the draft consolidated maritime labour Convention concerning seafarers. To obtain sufficient guidance to accomplish its task of preparing new provisions concerning large vessels and social security, the Office proposed at the 290th (June 2004) Session of the Governing Body that the mechanism envisaged by the Conference Committee take the form of a meeting of experts, which should deal with the question of accommodation as well as with the questions that had not been covered during the first discussion on work in the fishing sector. The Governing Body agreed to that proposal and convened the Tripartite Meeting of Experts on the Fishing Sector in Geneva from 13 to 17 December 2004. The Meeting adopted a report that included, in an annex, "Provisions for accommodation, large fishing vessels and social security discussed at the Tripartite Meeting of Experts on the Fishing Sector".

To ensure that the English and French texts of the proposed Convention and proposed Recommendation concerning work in the fishing sector are in the hands of the governments within the time limit laid down in article 39, paragraph 7, of the Standing Orders of the Conference, Report V (2) has been published in two volumes.<sup>2</sup> The present bilingual volume (Report V (2B)) contains the English and French versions of the proposed texts, amended in the light of the observations made by governments and by employers' and workers' organizations, taking into account the reviews expressed at the Tripartite Meeting of Experts on the Fishing Sector, and for the reasons set out in the Office commentaries. In addition, some slight changes were made, where appropriate, in the wording of the texts, mainly to ensure full convergence between the two versions of the proposed instruments.

If the Conference so decides, these texts will serve as a basis for the second discussion, at the 93rd Session (2005) of the Conference, of the question of work in the fishing sector.

---

<sup>2</sup> Report V (2A) will be in the hands of governments approximately one month after the present volume and will contain summaries of the replies received, the report of the Tripartite Meeting of Experts on the Fishing Sector (13-17 December 2004) and the Office commentaries.

facilitant le processus, que les trois parties s'engagent à participer aux consultations et que la commission crée un groupe de travail l'année suivante. La commission est également convenue que la convention devrait comporter une nouvelle partie élaborée par le Bureau et contenant des prescriptions supplémentaires applicables aux grands navires et que la question de la sécurité sociale resterait ouverte en attendant le résultat de la Conférence technique maritime préparatoire (septembre 2004) chargée de l'élaboration du projet de la convention du travail maritime. Afin d'obtenir suffisamment d'orientations pour être en mesure d'élaborer de nouvelles dispositions concernant les grands navires et la sécurité sociale, le Bureau a proposé au Conseil d'administration, à sa 290<sup>e</sup> session (juin 2004), que le mécanisme envisagé par la commission prenne la forme d'une réunion d'experts chargée de traiter de la question du logement ainsi que des questions qui n'avaient pas été abordées lors de la première discussion sur le travail dans le secteur de la pêche. Le Conseil d'administration a accepté cette proposition et convoqué la Réunion tripartite d'experts sur le secteur de la pêche à Genève, du 13 au 17 décembre 2004. La réunion a adopté un rapport auquel sont annexées les «Dispositions relatives au logement, aux grands navires de pêche et à la sécurité sociale examinées par la Réunion tripartite d'experts sur le secteur de la pêche».

Afin que les versions française et anglaise du projet de convention et du projet de recommandation concernant le travail dans la pêche puissent parvenir aux gouvernements dans les délais prescrits au paragraphe 7 de l'article 39 du Règlement de la Conférence, le rapport V (2) a été publié en deux volumes<sup>2</sup>. Le présent volume bilingue (rapport V (2B)) contient les versions française et anglaise des textes proposés, modifiés à la lumière des observations faites par les gouvernements et les organisations d'employeurs et de travailleurs et en tenant compte des avis exprimés à la Réunion tripartite d'experts sur le secteur de la pêche et des raisons exposées dans les commentaires du Bureau. Par ailleurs, quelques légères modifications de forme qui paraissaient opportunes ont été apportées aux textes, en vue surtout d'assurer l'entière concordance des deux versions des instruments proposés.

Si la Conférence en décide ainsi, ces textes serviront de base à la deuxième discussion de la question intitulée «Travail dans le secteur de la pêche» lors de sa 93<sup>e</sup> session (2005).

---

<sup>2</sup> Le rapport V (2A) parviendra aux gouvernements un mois environ après le présent volume et contiendra le résumé des réponses reçues, le rapport de la Réunion tripartite d'experts sur le secteur de la pêche (13-17 décembre 2004) ainsi que les commentaires du Bureau.

## **PROPOSED TEXTS**

*(English version)*

The following are the English versions of (A) the proposed Convention concerning work in the fishing sector, and (B) the proposed Recommendation concerning work in the fishing sector, which are submitted as a basis for discussion of the fifth item on the agenda of the 93rd Session of the Conference.

### **A. Proposed Convention concerning work in the fishing sector**

The General Conference of the International Labour Organization,  
Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its 93rd Session on 31 May 2005, and  
Recognizing that globalization has a profound impact on the fishing sector, and  
Noting the ILO Declaration on Fundamental Principles and Rights at Work, 1998, and

Taking into consideration the fundamental rights to be found in the following international labour Conventions: the Forced Labour Convention, 1930, the Freedom of Association and Protection of the Right to Organise Convention, 1948, the Right to Organise and Collective Bargaining Convention, 1949, the Equal Remuneration Convention, 1951, the Abolition of Forced Labour Convention, 1957, the Discrimination (Employment and Occupation) Convention, 1958, the Minimum Age Convention, 1973, and the Worst Forms of Child Labour Convention, 1999, and

Noting the relevant instruments of the International Labour Organization, in particular the Occupational Safety and Health Convention and Recommendation, 1981, the Occupational Health Services Convention and Recommendation, 1985, and the Seafarers' Identity Documents Convention (Revised), 2003, and

Mindful of the core mandate of the Organization, which is to promote decent conditions of work, and

Mindful of the need to protect and promote the rights of fishers in this regard, and

Taking into account the need to revise the seven international instruments adopted by the International Labour Conference specifically concerning the fishing sector, namely the Hours of Work (Fishing) Recommendation, 1920, the Minimum Age (Fishermen) Convention, 1959, the Medical Examination (Fishermen) Convention, 1959, the Fishermen's Articles of Agreement Convention, 1959, the Fishermen's Competency Certificates Convention, 1966, the Accommodation of Crews (Fishermen) Convention, 1966, and the Vocational Training (Fishermen) Recommendation, 1966, to bring them up to date and to reach a greater number of the world's fishers, particularly those working on board smaller vessels, and

## TEXTES PROPOSÉS

*(Version française)*

On trouvera ci-après la version française: A) du projet de convention concernant le travail dans le secteur de la pêche; B) du projet de recommandation concernant le travail dans le secteur de la pêche. Ces textes sont soumis à la Conférence pour servir de base, lors de la 93<sup>e</sup> session, à la discussion de la cinquième question à l'ordre du jour.

### **A. Projet de convention concernant le travail dans le secteur de la pêche**

La Conférence générale de l'Organisation internationale du Travail,  
Convoquée à Genève par le Conseil d'administration du Bureau international du Travail,  
et s'y étant réunie le 31 mai 2005, en sa quatre-vingt-treizième session;

Reconnaissant que la mondialisation a un impact profond sur le secteur de la pêche;

Notant la Déclaration de l'OIT relative aux principes et droits fondamentaux au travail,  
1998;

Tenant compte des droits fondamentaux énoncés dans les conventions internationales  
du travail suivantes: la convention sur le travail forcé, 1930; la convention sur la  
liberté syndicale et la protection du droit syndical, 1948; la convention sur le droit  
d'organisation et de négociation collective, 1949; la convention sur l'égalité de  
rémunération, 1951; la convention sur l'abolition du travail forcé, 1957; la conven-  
tion concernant la discrimination (emploi et profession), 1958; la convention sur  
l'âge minimum, 1973; et la convention sur les pires formes de travail des enfants,  
1999;

Notant les instruments pertinents de l'Organisation internationale du Travail, en parti-  
culier la convention et la recommandation sur la sécurité et la santé des travailleurs,  
1981, la convention et la recommandation sur les services de santé au travail, 1985,  
et la convention sur les pièces d'identité des gens de mer, 2003;

Consciente que l'Organisation a pour mandat fondamental de promouvoir des condi-  
tions de travail décentes;

Consciente de la nécessité de protéger et de promouvoir les droits des pêcheurs en la  
matière;

Tenant compte de la nécessité de réviser les sept instruments internationaux adoptés  
par la Conférence internationale du Travail concernant spécifiquement le secteur  
de la pêche, à savoir la recommandation sur la durée du travail (pêche), 1920, la  
convention sur l'âge minimum (pêcheurs), 1959, la convention sur l'examen médi-  
cal des pêcheurs, 1959, la convention sur le contrat d'engagement des pêcheurs,  
1959, la convention sur les brevets de capacité des pêcheurs, 1966, la convention  
sur le logement à bord des bateaux de pêche, 1966, et la recommandation sur la  
formation professionnelle des pêcheurs, 1966, afin de mettre à jour ces instruments  
et d'atteindre un plus grand nombre de pêcheurs dans le monde, en particulier ceux  
travaillant à bord de navires plus petits;

Noting that the objective of this Convention is to ensure that fishers have decent conditions of work on board fishing vessels with regard to: minimum requirements for work on board, conditions of service, accommodation and food, occupational safety and health protection, medical care and social security, and

Having decided upon the adoption of certain proposals with regard to work in the fishing sector, which is the fifth item on the agenda of the session, and

Having determined that these proposals shall take the form of an international Convention;

adopts this                    day of June of the year two thousand and five the following Convention, which may be cited as the Work in Fishing Convention, 2005.

## PART I. DEFINITIONS AND SCOPE

### DEFINITIONS

#### *Article 1*

For the purposes of the Convention:

- (a) “commercial fishing” means all fishing operations, including fishing operations on rivers, lakes and canals, with the exception of subsistence fishing and recreational fishing;
- (b) “competent authority” means the minister, government department or other authority having power to issue and enforce regulations, orders or other instructions having the force of law in respect of the subject matter of the provision concerned;
- (c) “consultation” means consultation by the competent authority with the representative organizations of employers and workers concerned, and in particular the representative organizations of fishing vessel owners and fishers, where they exist, on the measures to be taken to give effect to the provisions of the Convention and with respect to any derogation, exemption or other flexible application as allowed under the Convention;
- (d) “fishing vessel owner” means the owner of the fishing vessel or any other organization or person who has assumed the responsibility for the operation of the vessel from the owner or other organization or person and who, on assuming such responsibility, has agreed to take over the duties and responsibilities imposed on fishing vessel owners in accordance with the Convention;
- (e) “fisher” means every person employed or engaged in any capacity or carrying out an occupation on board any fishing vessel, including persons working on board who are paid on the basis of a share of the catch but excluding pilots, naval personnel, other persons in the permanent service of a government and shore-based persons carrying out work aboard a fishing vessel and fisheries observers;
- (f) “fisher’s work agreement” means a contract of employment, articles of agreement or other similar arrangements or any other contract governing a fisher’s living and working conditions on board a vessel;
- (g) “fishing vessel” or “vessel” means any ship or boat, of any nature whatsoever, irrespective of the form of ownership, used or intended to be used for the purpose of commercial fishing;

Notant que l'objectif de la présente convention est d'assurer que les pêcheurs bénéficient de conditions décentes pour travailler à bord des navires de pêche en ce qui concerne les conditions minimales requises pour le travail à bord, les conditions de service, le logement et l'alimentation, la protection de la santé et de la sécurité au travail, les soins médicaux et la sécurité sociale;

Après avoir décidé d'adopter diverses propositions relatives au travail dans le secteur de la pêche, question qui constitue le cinquième point à l'ordre du jour de la session;

Après avoir décidé que ces propositions prendraient la forme d'une convention internationale,

adopte, ce jour de juin deux mille cinq, la convention ci-après, qui sera dénommée Convention sur le travail dans la pêche, 2005.

## PARTIE I. DÉFINITIONS ET CHAMP D'APPLICATION

### DÉFINITIONS

#### *Article 1*

Aux fins de la convention:

- a) les termes «pêche commerciale» désignent toutes les opérations de pêche, y compris les opérations de pêche dans les cours d'eau, les lacs et les canaux, à l'exception de la pêche de subsistance et de la pêche de loisir;
- b) les termes «autorité compétente» désignent le ministre, le service gouvernemental ou toute autre autorité habilités à édicter et à faire respecter les règlements, arrêtés ou autres instructions ayant force obligatoire dans le domaine visé par la disposition de la convention;
- c) le terme «consultation» désigne la consultation par l'autorité compétente des organisations représentatives d'employeurs et de travailleurs intéressés, et en particulier les organisations représentatives d'armateurs à la pêche et de pêcheurs, lorsqu'elles existent, sur les mesures à prendre pour donner effet aux dispositions de la convention et en ce qui concerne toute dérogation, exemption ou autre forme d'application souple qui est permise par la convention;
- d) les termes «armateur à la pêche» désignent le propriétaire du navire ou toute autre entité ou personne à laquelle la responsabilité de l'exploitation du navire a été confiée et qui, en assumant cette responsabilité, a accepté de s'acquitter des tâches et obligations qui incombent aux armateurs à la pêche aux termes de la convention;
- e) le terme «pêcheur» désigne toute personne employée ou engagée à quelque titre que ce soit ou exerçant une activité professionnelle à bord d'un navire de pêche, y compris les personnes travaillant à bord qui sont rémunérées à la part, mais à l'exclusion des pilotes, des équipages de la flotte de guerre, des autres personnes au service permanent du gouvernement, des personnes basées à terre chargées d'effectuer des travaux à bord d'un navire de pêche et des observateurs des pêches;
- f) les termes «accord d'engagement du pêcheur» désignent le contrat d'emploi, le contrat d'engagement ou autre accord similaire ainsi que tout autre contrat régissant les conditions de vie et de travail du pêcheur à bord du navire;
- g) les termes «navire de pêche» ou «navire» désignent tout bateau ou embarcation, quelles qu'en soient la nature et la forme de propriété, affecté ou destiné à être affecté à la pêche commerciale;

- (h) “new fishing vessel” means a fishing vessel for which:
  - (i) the building or major conversion contract is placed on or after the date of the entry into force of the Convention; or
  - (ii) the building or major conversion contract has been placed before the date of the entry into force of the Convention, and which is delivered three years or more after that date; or
  - (iii) in the absence of a building contract, on or after the date of the entry into force of the Convention:
    - the keel is laid, or
    - construction identifiable with a specific vessel begins, or
    - assembly has commenced comprising at least 50 tonnes or 1 per cent of the estimated mass of all structural material, whichever is less;
- (i) “existing vessel” means a vessel that is not a new fishing vessel;
- (j) “gross tonnage” means the gross tonnage calculated in accordance with the tonnage measurement regulations contained in Annex I to the International Convention on Tonnage Measurement of Ships, 1969, or any successor convention;
- (k) “length” (L) shall be taken as 96 per cent of the total length on a waterline at 85 per cent of the least moulded depth measured from the keel line, or as the length from the foreside of the stem to the axis of the rudder stock on that waterline, if that be greater. In vessels designed with rake of keel, the waterline on which this length is measured shall be parallel to the designed waterline;
- (l) “length overall” (LOA) shall be taken as the distance in a straight line between the foremost point of the bow and the aftermost point of the stern;
- (m) “recruitment and placement service” means any person, company, institution, agency or other organization, in the public or the private sector, which is engaged in recruiting fishers on behalf of employers or placing fishers with employers;
- (n) “skipper” means the person having command of a fishing vessel;
- (o) “international voyage” means any voyage outside the waters under the jurisdiction of the State whose flag the vessel flies, whether or not the vessel enters a foreign port.

#### SCOPE

#### *Article 2*

1. Except as provided otherwise, the Convention applies to all fishers and all fishing vessels engaged in commercial fishing operations.

2. In the event of doubt as to whether a vessel is engaged in commercial fishing, the question shall be determined by the competent authority after consultation.

3. Any Member, after consultation, may extend to fishers working on smaller vessels the protection provided in this Convention for fishers working on vessels 24 metres in length and over.

- h) les termes «navire de pêche neuf» désignent un navire pour lequel:
- i) le contrat de construction ou de transformation importante est passé à la date d'entrée en vigueur de la convention ou après cette date; ou
  - ii) le contrat de construction ou de transformation importante a été passé avant la date d'entrée en vigueur de la convention, et qui est livré trois ans ou plus après cette date; ou
  - iii) en l'absence d'un contrat de construction, à la date d'entrée en vigueur de la convention ou après cette date:
    - la quille est posée; ou
    - une construction identifiable à un navire particulier commence; ou
    - le montage a commencé, employant au moins 50 tonnes ou 1 pour cent de la masse estimée de tous les matériaux de structure, si cette dernière valeur est inférieure;
- i) les termes «navire existant» désignent un navire qui n'est pas un navire de pêche neuf;
- j) les termes «jauge brute» désignent le tonnage brut d'un navire évalué conformément aux dispositions de l'annexe I à la Convention internationale de 1969 sur le jaugeage des navires ou de toute autre convention la remplaçant;
- k) le terme «longueur» (L) désigne 96 pour cent de la longueur totale à la flottaison située à une distance de la ligne de quille égale à 85 pour cent du creux minimal sur quille, ou encore à la distance entre la face avant de l'étrave et l'axe de la mèche du gouvernail à cette flottaison, si cette valeur est supérieure. Pour les navires conçus pour naviguer avec une quille inclinée, la flottaison servant à mesurer cette longueur doit être parallèle à la flottaison en charge prévue;
- l) la longueur d'un navire correspond à la longueur hors tout (LHT), définie comme étant la distance mesurée en ligne droite de l'extrémité avant de la proue à l'extrémité arrière de la poupe;
- m) les termes «service de recrutement et de placement» désignent toute personne, société, institution, agence ou autre organisation du secteur public ou privé exerçant des activités relatives au recrutement des pêcheurs pour le compte d'employeurs ou au placement de pêcheurs auprès d'employeurs;
- n) le terme «patron» désigne la personne chargée du commandement d'un navire de pêche;
- o) les termes «voyage international» désignent un voyage hors des eaux territoriales de l'Etat dont le navire bat le pavillon, que ce navire entre ou non dans un port étranger.

#### CHAMP D'APPLICATION

##### *Article 2*

1. Sauf indication contraire, la convention s'applique à tous les pêcheurs et à tous les navires de pêche engagés dans des opérations de pêche commerciale.

2. En cas de doute sur l'affectation d'un navire à la pêche commerciale, il appartient à l'autorité compétente de déterminer son type d'affectation après consultation.

3. Tout Membre peut, après consultation, étendre la protection prévue par la convention pour les pêcheurs travaillant sur des navires d'une longueur égale ou supérieure à 24 mètres à ceux travaillant sur des navires plus petits.

*Article 3*

1. The competent authority, after consultation, may exclude from the requirements of the Convention, or certain provisions thereof, where the application raises special and substantial problems in the light of the particular conditions of service of the fishers or fishing vessels' operations:

- (a) fishing vessels engaged in fishing operations in rivers, lakes and canals; and
- (b) limited categories of fishers or fishing vessels.

2. In the case of exclusions under the preceding paragraph, and where practicable, the competent authority shall take measures, as appropriate, to extend progressively the requirements under the Convention to those categories of fishers and fishing vessels.

*Article 4*

1. Each Member which ratifies the Convention shall, in the first report on the application of the Convention submitted under article 22 of the Constitution of the International Labour Organisation:

- (a) list any categories of fishers or fishing vessels excluded under Article 3, paragraph 1;
- (b) give the reasons for such exclusion, stating the respective positions of the representative organizations of employers and workers concerned, in particular the representative organizations of fishing vessel owners and fishers, where they exist; and
- (c) describe any measures taken to provide equivalent protection to the excluded categories.

2. Each Member shall describe in subsequent reports submitted under article 22 of the Constitution the measures taken with a view to extending progressively the provisions of the Convention to the excluded fishers and fishing vessels.

*Article 5*

The competent authority, after consultation, may decide to use the units of measurement defined in the Convention other than length (L) and, in the first report submitted under article 22 of the Constitution, shall communicate the reasons for the decision and any comments arising from the consultation. For this purpose, units of measurement equivalent to length (L) are set out in Annex I to the Convention.

## PART II. GENERAL PRINCIPLES

## IMPLEMENTATION

*Article 6*

1. Each Member shall implement and enforce laws, regulations or other measures that it has adopted to fulfil its commitments under the Convention with respect to fishers and fishing vessels under its jurisdiction. Other measures may include collective agreements, court decisions, arbitration awards, or other means consistent with national law and practice.

*Article 3*

1. L'autorité compétente peut, après consultation, exclure des prescriptions de la convention, ou de certaines de ses dispositions, lorsque leur application soulèverait des difficultés particulières et importantes compte tenu des conditions spécifiques de service des pêcheurs ou des opérations des navires de pêche considérés:

- a) les navires de pêche engagés dans des opérations de pêche sur les cours d'eau, les lacs et les canaux;
- b) des catégories limitées de pêcheurs ou de navires de pêche.

2. En cas d'exclusion visée au paragraphe précédent, et lorsque cela est réalisable, l'autorité compétente prend, si besoin est, des mesures pour étendre progressivement les prescriptions prévues par la convention à ces catégories de pêcheurs ou de navires de pêche.

*Article 4*

1. Tout Membre qui ratifie la convention doit, dans le premier rapport sur l'application de celle-ci qu'il est tenu de présenter en vertu de l'article 22 de la Constitution de l'Organisation internationale du Travail:

- a) indiquer les catégories de pêcheurs ou de navires de pêche qui sont exclues en application du premier paragraphe de l'article 3;
- b) donner les motifs de ces exclusions en exposant les positions respectives des organisations représentatives d'employeurs et de travailleurs intéressées, en particulier des organisations représentatives d'armateurs à la pêche et de pêcheurs, s'il en existe;
- c) décrire toute mesure prise pour octroyer une protection équivalente aux catégories exclues.

2. Tout Membre décrira, dans ses rapports ultérieurs présentés en vertu de l'article 22 de la Constitution, les mesures prises en vue d'étendre progressivement les dispositions de la convention aux catégories de pêcheurs et de navires exclues.

*Article 5*

L'autorité compétente peut, après consultation, décider d'utiliser les unités de mesure définies dans la convention autres que la longueur (L) et communiquera, dans le premier rapport présenté en vertu de l'article 22 de la Constitution, les raisons de cette décision et les observations faites lors de la consultation. A cette fin, les unités de mesure équivalentes à la longueur (L) sont établies à l'annexe I de la convention.

## PARTIE II. PRINCIPES GÉNÉRAUX

## MISE EN ŒUVRE

*Article 6*

1. Tout Membre doit mettre en œuvre et faire respecter les lois, règlements ou autres mesures qu'il a adoptés afin de s'acquitter de ses obligations aux termes de la convention en ce qui concerne les pêcheurs et les navires de pêche relevant de sa compétence; les autres mesures peuvent comprendre des conventions collectives, des décisions judiciaires, des sentences arbitrales et autres moyens conformes à la législation et à la pratique nationales.

2. Nothing in this Convention shall affect any law, award or custom, or any agreement between fishing vessel owners and fishers, which ensures more favourable conditions than those provided for in the Convention.

COMPETENT AUTHORITY AND COORDINATION

*Article 7*

Each Member shall:

- (a) designate the competent authority or authorities; and
- (b) establish mechanisms for coordination among relevant authorities for the fishing sector at the national and local levels, as appropriate, and define their functions and responsibilities, taking into account their complementarities and national conditions and practice.

RESPONSIBILITIES OF FISHING VESSEL OWNERS, SKIPPERS AND FISHERS

*Article 8*

1. The fishing vessel owner has the overall responsibility to ensure that the skipper is provided with the necessary resources and facilities to comply with the obligations of the Convention.

2. The skipper has the responsibility for the safety of the fishers on board and the safe operation of the vessel, including, but not limited to, the following areas:

- (a) providing such supervision as will ensure that, as far as possible, fishers perform their work in the best conditions of safety and health;
- (b) managing the fishers in a manner which respects safety and health, including prevention of fatigue;
- (c) facilitating on-board awareness training in occupational safety and health;
- (d) ensuring compliance with safety of navigation, watchkeeping and associated good seamanship standards.

3. The skipper shall not be constrained by the fishing vessel owner from taking any decision which, in the professional judgement of the skipper, is necessary for the safety of the vessel and its safe navigation and safe operation, or the safety of the fishers on board.

4. Fishers shall comply with the lawful and reasonable orders of the skipper and applicable safety and health measures.

PART III. MINIMUM REQUIREMENTS FOR WORK  
ON BOARD FISHING VESSELS

MINIMUM AGE

*Article 9*

1. The minimum age for work on board a fishing vessel shall be 16 years. However, the competent authority may authorize a minimum age of 15 for persons who are no longer subject to compulsory schooling as provided by national legislation, and who are engaged in vocational training in fishing.

2. Aucune des dispositions de la présente convention n'aura d'incidence sur les lois, décisions, coutumes ou sur les accords entre armateurs à la pêche et pêcheurs qui garantissent des conditions plus favorables que celles prévues par la convention.

AUTORITÉ COMPÉTENTE ET COORDINATION

*Article 7*

Tout Membre doit:

- a) désigner l'autorité compétente ou les autorités compétentes;
- b) établir, s'il y a lieu, des mécanismes de coordination entre les autorités concernées pour le secteur de la pêche aux niveaux national et local, et définir leurs fonctions et responsabilités en tenant compte de leur complémentarité ainsi que des conditions et de la pratique nationales.

RESPONSABILITÉS DES ARMATEURS À LA PÊCHE, DES PATRONS ET DES PÊCHEURS

*Article 8*

1. L'armateur à la pêche a la responsabilité globale de veiller à ce que le patron dispose des ressources et moyens nécessaires pour s'acquitter des obligations de la convention.

2. La responsabilité de la sécurité des pêcheurs à bord et du fonctionnement sûr du navire incombe au patron, notamment, mais non exclusivement, dans les domaines suivants:

- a) la supervision, qui doit être réalisée de façon à ce que les pêcheurs puissent, dans la mesure du possible, exécuter leur travail dans les meilleures conditions de sécurité et de santé;
- b) l'organisation du travail des pêcheurs, qui doit se faire en respectant la sécurité et la santé, y compris la prévention de la fatigue;
- c) la sensibilisation à la sécurité et à la santé au travail par la formation à bord;
- d) le respect des normes de sécurité de la navigation, de veille et des normes associées de bon matelotage.

3. L'armateur à la pêche n'entravera pas la liberté du patron de prendre toute décision qui, de l'avis professionnel de ce dernier, est nécessaire pour la sécurité du navire, de ses déplacements et de son exploitation, ou pour la sécurité des pêcheurs qui sont à bord.

4. Les pêcheurs doivent respecter les ordres légaux et raisonnables de l'armateur à la pêche et les mesures de sécurité et de santé applicables.

PARTIE III. CONDITIONS MINIMALES REQUISES POUR LE TRAVAIL  
À BORD DES NAVIRES DE PÊCHE

ÂGE MINIMUM

*Article 9*

1. L'âge minimum pour le travail à bord d'un navire de pêche est de 16 ans. Toutefois, l'autorité compétente peut autoriser un âge minimum de 15 ans pour les personnes qui ne sont plus soumises à l'obligation de scolarité imposée par la législation nationale et suivent une formation professionnelle en matière de pêche.

2. The competent authority, in accordance with national laws and practice, may authorize persons of the age of 15 to perform light work during school holidays. In such cases, it shall determine, after consultation, the kinds of work permitted and shall prescribe the conditions in which such work shall be undertaken and the periods of rest required.

3. The minimum age for assignment to activities on board fishing vessels, which by their nature or the circumstances in which they are carried out are likely to jeopardize the health, safety or morals of young persons, shall not be less than 18 years.

4. The types of activities to which paragraph 3 applies shall be determined by national laws or regulations, or by the competent authority, after consultation, taking into account the risks concerned and the applicable international standards.

5. The performance of the activities referred to in paragraph 3 as from the age of 16 may be authorized by national laws or regulations, or by decision of the competent authority, after consultation, on condition that the health, safety or morals of the young persons concerned are fully protected and that the young persons concerned have received adequate specific instruction or vocational training and have completed basic pre-sea safety training.

6. The engagement of fishers under the age of 18 for work at night shall be prohibited. For the purpose of this Article, "night" shall be defined in accordance with national law and practice. It shall cover a period of at least nine hours starting no later than midnight and ending no earlier than 5 a.m. An exception to strict compliance with the night work restriction may be made by the competent authority when:

- (a) the effective training of the fishers concerned, in accordance with established programmes and schedules, would be impaired; or
- (b) the specific nature of the duty or a recognized training programme requires that fishers covered by the exception perform duties at night and the authority determines, after consultation, that the work will not have a detrimental impact on their health or well-being.

7. None of the provisions in this Article shall affect any obligations assumed by the Member arising from the ratification of any other international labour Convention.

#### MEDICAL EXAMINATION

##### *Article 10*

1. No fishers shall work on board a fishing vessel without a valid medical certificate attesting to fitness to perform their duties.

2. The competent authority, after consultation, may grant exemptions from the application of the preceding paragraph, taking into account the health and safety of fishers, size of the vessel, availability of medical assistance and evacuation, duration of the voyage, area of operation, and type of fishing operation.

3. The exemptions in paragraph 2 shall not apply to a person working on a fishing vessel of [24] metres in length and over or on an international voyage or normally remaining at sea for more than three days. In urgent cases, the competent authority may permit a person to work on such a vessel for a period of a limited and specified duration until a

2. L'autorité compétente peut, conformément à la législation et à la pratique nationales, autoriser des personnes de 15 ans à exécuter des travaux légers lors des vacances scolaires. Dans ces cas, elle déterminera, après consultation, les types de travail autorisés et prescrira les conditions dans lesquelles ce travail sera entrepris et les périodes de repos qui seront requises.

3. L'âge minimum d'affectation à des activités à bord d'un navire de pêche qui, par leur nature ou les conditions dans lesquelles elles s'exercent, sont susceptibles de compromettre la santé, la sécurité ou la moralité des jeunes travailleurs, ne doit pas être inférieur à 18 ans.

4. Les types d'activités visés au paragraphe 3 sont déterminés par la législation nationale ou l'autorité compétente, après consultation, en tenant compte des risques qu'ils comportent et des normes internationales applicables.

5. L'exécution des activités visées au paragraphe 3 dès l'âge de 16 ans peut être autorisée par la législation nationale ou par une décision de l'autorité compétente, après consultation, à condition que la santé, la sécurité ou la moralité des jeunes travailleurs soient pleinement garanties, qu'ils aient reçu une instruction spécifique et adéquate ou une formation professionnelle et qu'ils aient suivi intégralement une formation de base aux questions de sécurité préalable à l'embarquement.

6. Il est interdit d'engager un pêcheur de moins de 18 ans pour un travail de nuit. Aux fins du présent article, le terme «nuit» est défini conformément à la législation et à la pratique nationales. Il couvre une période de neuf heures consécutives au moins, commençant au plus tard à minuit et se terminant au plus tôt à 5 heures du matin. Une dérogation à la stricte observation de la restriction concernant le travail de nuit peut être décidée par l'autorité compétente quand:

- a) la formation effective des gens de mer concernés dans le cadre de programmes et plans d'études établis pourrait en être compromise; ou
- b) la nature particulière de la tâche ou un programme de formation agréé exige que les pêcheurs visés par la dérogation travaillent la nuit et l'autorité décide, après consultation, que ce travail ne portera pas préjudice à leur santé ou à leur bien-être.

7. Aucune des dispositions de cet article n'a d'incidence sur les obligations souscrites par le Membre en vertu de la ratification d'autres conventions internationales du travail.

#### EXAMEN MÉDICAL

##### *Article 10*

1. Aucun pêcheur ne doit travailler à bord d'un navire de pêche sans disposer d'un certificat médical valide attestant de son aptitude à exécuter ses tâches.

2. L'autorité compétente peut, après consultation, octroyer des dérogations à l'application du paragraphe précédent, compte tenu de la santé et de la sécurité des pêcheurs, de la taille du navire, de l'assistance médicale et des moyens d'évacuation disponibles, de la durée du voyage, de la zone d'opération et du type d'activité de pêche.

3. Les dérogations visées au paragraphe 2 ne s'appliqueront pas à une personne travaillant sur un navire de pêche d'une longueur égale ou supérieure à [24] mètres ou qui entreprend un voyage international ou passant normalement plus de trois jours en mer. Dans les cas urgents, l'autorité compétente peut autoriser une personne à travailler sur un tel

medical certificate can be obtained, provided that the person is in possession of an expired medical certificate of a recent date.

#### *Article 11*

Each Member shall adopt laws, regulations or other measures providing for:

- (a) the nature of medical examinations;
- (b) the form and content of medical certificates;
- (c) the medical certificate to be issued by a duly qualified medical practitioner or, in the case of a certificate solely concerning eyesight, by a person recognized by the competent authority as qualified to issue such a medical certificate, and who shall enjoy full professional independence in exercising their medical judgement in terms of the medical examination procedures;
- (d) the frequency of medical examinations and the period of validity of medical certificates;
- (e) the right to a further examination by another independent medical practitioner in the event that a person has been refused a certificate or has had limitations imposed on the work he or she may perform; and
- (f) other relevant requirements.

#### *Article 12*

On a fishing vessel of [24] metres in length and over or on an international voyage or on a vessel which normally remains at sea for more than three days:

1. The medical certificate of a fisher shall state, at a minimum, that:

- (a) the hearing and sight of the fisher concerned are satisfactory for the fisher's duties on the vessel; and
- (b) the fisher is not suffering from any medical condition likely to be aggravated by service at sea or to render the fisher unfit for such service or to endanger the health of other persons on board.

2. The medical certificate shall be valid for a maximum period of two years unless the fisher is under the age of 18, in which case the maximum period of validity shall be one year.

3. If the period of validity of a certificate expires in the course of a voyage, the certificate shall remain in force until the end of that voyage.

### PART IV. CONDITIONS OF SERVICE

#### MANNING AND HOURS OF REST

#### *Article 13*

Each Member shall adopt laws, regulations or other measures requiring that owners of fishing vessels flying its flag ensure that:

- (a) their vessels are sufficiently and safely manned with a crew necessary for the safe navigation and operation of the vessel and under the control of a competent skipper; and

navire pour une période d'une durée limitée et spécifiée en attendant qu'elle puisse obtenir un certificat médical, sous réserve qu'elle soit en possession d'un certificat médical expiré depuis peu.

#### *Article 11*

Tout Membre doit adopter des lois, règlements ou autres mesures concernant:

- a) la nature des examens médicaux;
- b) la forme et le contenu des certificats médicaux;
- c) le certificat médical qui doit être délivré par du personnel médical dûment qualifié ou, dans le cas d'un certificat concernant seulement la vue, par une personne habilitée par l'autorité compétente à délivrer un tel certificat et qui doivent jouir d'une totale indépendance professionnelle lorsqu'ils exercent leur jugement médical selon les pratiques prescrites pour les examens;
- d) la fréquence des examens médicaux et la durée de validité des certificats médicaux;
- e) le droit pour une personne d'être réexaminée par du personnel médical indépendant différent au cas où elle se verrait refuser un certificat ou imposer des limitations au travail qu'elle peut effectuer;
- f) les autres conditions requises.

#### *Article 12*

Sur un navire de pêche d'une longueur égale ou supérieure à [24] mètres ou entreprenant un voyage international ou passant normalement plus de trois jours en mer:

1. Le certificat médical du pêcheur doit au minimum indiquer:

- a) que l'ouïe et la vue de l'intéressé sont satisfaisantes compte tenu de ses tâches sur le navire; et
- b) que l'intéressé n'a aucun problème médical de nature à être aggravé par le service en mer ou qui le rend inapte à ce service ou qui comporterait des risques pour la santé d'autres personnes à bord.

2. Le certificat médical est valide pendant deux ans au maximum à moins que le pêcheur ait moins de 18 ans, auquel cas la durée maximale de validité sera d'un an.

3. Si la période de validité du certificat expire au cours d'un voyage, le certificat reste valide jusqu'à la fin du voyage.

### PARTIE IV. CONDITIONS DE SERVICE

#### ÉQUIPAGE ET DURÉE DU REPOS

#### *Article 13*

Tout Membre doit adopter des lois, règlements ou autres mesures prévoyant que les armateurs de navires de pêche battant son pavillon veillent à ce que:

- a) leurs navires soient dotés d'un équipage suffisant en nombre et en qualité pour assurer une navigation et un fonctionnement dans des conditions sûres et leur sécurité sous le contrôle d'un patron compétent;

- (b) fishers are given rest periods of sufficient frequency and duration for the safe and healthy performance of their duties.

*Article 14*

1. In addition to the requirements set out in Article 13, for vessels of [24] metres in length and over or those engaged on international voyages, the competent authority shall:

- (a) establish a minimum level of manning for the safe navigation of the vessel, specifying the number and the qualifications of the fishers required;
- (b) after consultation and for the purpose of limiting fatigue, establish the minimum hours of rest to be provided to fishers. Minimum hours of rest shall be no less than ten hours in any 24-hour period, and 77 hours in any seven-day period.

2. The competent authority may permit, for limited and specified reasons, temporary exceptions to the limits established in paragraph 1(b). However, in such circumstances, it shall require that fishers shall receive compensatory periods of rest as soon as practicable.

3. The competent authority, after consultation, may establish alternative requirements to those in paragraphs 1 and 2. However, such alternative requirements shall provide at least the same level of protection.

CREW LIST

*Article 15*

Every fishing vessel shall carry a crew list, a copy of which shall be provided to authorized persons ashore prior to departure of the vessel, or communicated ashore immediately after departure of the vessel. The competent authority shall determine to whom such information shall be provided.

FISHER'S WORK AGREEMENT

*Article 16*

Each Member shall adopt laws, regulations or other measures:

- (a) requiring that fishers working on vessels flying its flag have the protection of a fisher's work agreement that is consistent with the provisions of the Convention and comprehensible to them;
- (b) specifying the minimum particulars to be included in fishers' work agreements in accordance with the provisions contained in Annex II(1).

*Article 17*

Each Member shall adopt laws, regulations or other measures regarding:

- (a) procedures for ensuring that a fisher has an opportunity to review and seek advice on the terms of the fisher's work agreement before it is concluded;
- (b) maintenance of records concerning the fisher's work under such an agreement; and
- (c) the means of settling disputes in connection with such an agreement.

- b) des périodes de repos d'une fréquence et d'une durée suffisantes soient octroyées aux pêcheurs pour qu'ils puissent exécuter leurs tâches en préservant leur sécurité et leur santé.

*Article 14*

1. En outre, s'agissant des prescriptions de l'article 13, pour les navires d'une longueur égale ou supérieure à [24] mètres ou qui entreprennent des voyages internationaux, l'autorité compétente doit:

- a) fixer l'effectif minimal propre à garantir la sécurité de navigation du navire et préciser le nombre de pêcheurs requis et les qualifications qu'ils doivent posséder;
- b) fixer, après consultation, la durée de repos minimale qu'il convient d'assurer aux pêcheurs en vue de limiter leur fatigue. Cette durée ne doit pas être inférieure à dix heures par période de 24 heures, ni à 77 heures par période de sept jours.

2. L'autorité compétente peut, dans des cas limités et précis, autoriser qu'il soit dérogé temporairement aux durées de repos fixées au paragraphe 1 b). Dans ces cas, elle doit toutefois exiger que des périodes de repos compensatoires soient accordées aux pêcheurs dès que possible.

3. L'autorité compétente peut, après consultation, établir d'autres prescriptions que celles fixées aux paragraphes 1 et 2. Toutefois, le niveau de protection prévu par lesdites prescriptions ne doit pas être moindre.

RÔLE D'ÉQUIPAGE

*Article 15*

Tout navire de pêche doit avoir à bord un rôle d'équipage, dont un exemplaire est fourni aux personnes autorisées à terre avant le départ du navire ou communiqué à terre immédiatement après. L'autorité compétente doit déterminer à qui cette information doit être fournie.

ACCORD D'ENGAGEMENT DU PÊCHEUR

*Article 16*

Tout Membre doit adopter des lois, règlements ou autres mesures:

- a) prévoyant que les pêcheurs travaillant à bord des navires battant son pavillon soient protégés par un accord d'engagement qui soit conforme aux dispositions de la convention et qui leur soit compréhensible;
- b) indiquant les mentions minimales à inclure dans les accords d'engagement des pêcheurs, conformément aux dispositions de l'annexe II(1).

*Article 17*

Tout Membre doit adopter des lois, règlements ou autres mesures concernant:

- a) les procédures garantissant que le pêcheur a la possibilité d'examiner les clauses de son accord d'engagement et de demander conseil à ce sujet avant de le conclure;
- b) la tenue des états de service du pêcheur dans le cadre de cet accord;
- c) les moyens de régler les différends relatifs à cet accord.

*Article 18*

The fisher's work agreement, a copy of which shall be provided to the fisher, shall be carried on board and be available to the fisher and, in accordance with national law and practice, to other concerned parties on request.

*Article 19*

Articles 16-18 and Annex II do not apply to a fishing vessel owner who is also single-handedly operating the vessel.

*Article 20*

1. In addition to the requirements provided in Articles 16-19, each Member shall adopt national laws, regulations or other measures requiring that every fisher working on a fishing vessel of [24] metres in length and over or working on a vessel engaged on an international voyage has a written and signed work agreement clearly setting out the terms and conditions of his or her work on board the vessel. Along with the minimum particulars referred to in Article 16(b), the fisher's work agreement shall include the additional particulars listed in Annex II(2).

2. It shall be the responsibility of the fishing vessel owner to ensure that each fisher has a written and signed work agreement.

## REPATRIATION

*Article 21*

1. Members shall ensure that fishers on fishing vessels that fly their flag and are engaged on international voyages are entitled to repatriation in the event that the fisher's work agreement for a specific period or voyage expires abroad or is terminated for justified reasons by the fisher or by the fishing vessel owner, or the fisher is no longer able to carry out the duties required under the work agreement or cannot be expected to carry them out in the specific circumstances.

2. The cost of repatriation for fishers covered by paragraph 1 shall be borne by the fishing vessel owner, except where the fisher has been found, in accordance with national laws, regulations or other measures, to be in serious default of his or her work agreement obligations.

3. Members shall prescribe, by means of laws, regulations or other measures, the precise circumstances entitling a fisher covered by paragraph 1 to repatriation, the maximum duration of service periods on board following which a fisher is entitled to repatriation, and the destinations to which fishers may be repatriated.

4. If a fishing vessel owner fails to provide for repatriation as provided for in paragraph 1, the Member whose flag the vessel flies shall arrange for the repatriation of the fisher concerned and recover the cost from the fishing vessel owner.

*Article 18*

L'accord d'engagement du pêcheur, dont un exemplaire lui est remis, est disponible à bord, à la disposition du pêcheur et, conformément à la législation et à la pratique nationales, de toute autre partie concernée qui en fait la demande.

*Article 19*

Les articles 16 à 18 et l'annexe II ne s'appliquent pas au propriétaire de navire qui exploite celui-ci seul.

*Article 20*

1. Outre les prescriptions fixées aux articles 16 à 19, chaque Membre doit adopter des lois, règlements ou autres mesures prévoyant que tout pêcheur travaillant à bord d'un navire de pêche d'une longueur égale ou supérieure à [24] mètres ou entreprenant un voyage international est en possession d'un accord d'engagement écrit et signé qui énonce en termes clairs les conditions de son emploi à bord du navire. En sus des mentions minimales prévues à l'article 16 *b*), l'accord d'engagement du pêcheur doit également inclure les mentions complémentaires prévues à l'annexe II(2).

2. Il incombe à l'armateur à la pêche de veiller à ce que chaque pêcheur soit en possession d'un accord d'engagement écrit et signé.

RAPATRIEMENT

*Article 21*

1. Les Membres doivent veiller à ce que les pêcheurs embarqués sur des navires de pêche battant leur pavillon et entreprenant des voyages internationaux aient le droit d'être rapatriés lorsque l'accord d'engagement du pêcheur conclu pour une durée ou un voyage spécifique expire alors que l'intéressé se trouve à l'étranger, lorsque le pêcheur ou l'armateur à la pêche met fin à l'accord pour des raisons justifiées, ou lorsque le pêcheur n'est plus en mesure d'exécuter ses tâches telles que prévues par l'accord d'engagement ou qu'on ne peut attendre de lui qu'il les exécute compte tenu des circonstances.

2. Les frais de rapatriement pour des pêcheurs visés au paragraphe 1 doivent être pris en charge par l'armateur à la pêche, sauf si le pêcheur a été reconnu, conformément à la législation nationale ou à d'autres dispositions applicables, coupable d'un manquement grave aux obligations de son emploi.

3. Les Membres doivent déterminer, par voie de législation ou autre, les circonstances précises donnant droit à un rapatriement, la durée maximale des périodes d'embarquement au terme desquelles les pêcheurs visés au paragraphe 1 ont droit au rapatriement, et les destinations vers lesquelles ils peuvent être rapatriés.

4. Si l'armateur à la pêche omet de prendre les dispositions prévues au paragraphe 1 pour le rapatriement des pêcheurs, le Membre dont le navire bat pavillon doit organiser le rapatriement du pêcheur concerné et recouvrer les frais auprès de l'armateur à la pêche.

## RECRUITMENT AND PLACEMENT

*Article 22*

1. Each Member that operates a public service providing recruitment and placement for fishers shall ensure that the service forms part of, or is coordinated with, a public employment service for all workers and employers.

2. Any private service providing recruitment and placement for fishers operating in its territory shall be operated in conformity with a standardized system of licensing or certification or other form of regulation, which shall be established, maintained or modified only after consultation.

3. Each Member shall, by means of laws, regulations or other measures:

- (a) prohibit recruitment and placement services from using means, mechanisms or lists intended to prevent or deter fishers from engaging for work;
- (b) require that no fees or other charges for recruitment and placement of fishers be borne directly or indirectly, in whole or in part, by the fisher; and
- (c) determine the conditions under which the licence, certificate or similar authorization of a recruitment or placement service may be suspended or withdrawn in case of violation of relevant laws and regulations; and specify the conditions under which recruitment and placement services can operate.

4. Each Member shall ensure that a system of protection, by way of insurance or an equivalent appropriate measure, is established to compensate fishers for monetary loss that they may incur as a result of the failure of a recruitment and placement service to meet its obligations to them.

## PAYMENT OF FISHERS

*Article 23*

1. Each Member, after consultation, shall adopt laws, regulations or other measures providing that fishers who are paid a wage are ensured a monthly or regular payment. The competent authority, after consultation, shall define whether other fishers are to be so paid and, if so, which fishers.

2. Notwithstanding the provisions of Annex II(1), the competent authority, after consultation, shall adopt measures to ensure advances against earnings for fishers under prescribed conditions.

*Article 24*

Each Member shall require that all fishers working on board fishing vessels of [24] metres in length and over or engaged on international voyages shall be given a means to transmit all or part of their payments received, including advances, to their families at reasonable cost.

RECRUTEMENT ET PLACEMENT

*Article 22*

1. Tout Membre qui a mis en place un service public de recrutement et de placement de pêcheurs doit s'assurer que ce service fait partie du service public de l'emploi ouvert à l'ensemble des travailleurs et des employeurs ou qu'il agit en coordination avec celui-ci.

2. Les services privés de recrutement et de placement de pêcheurs établis sur le territoire d'un Membre doivent exercer leur activité en vertu d'un système de licence ou d'agrément normalisé ou d'une autre forme de réglementation, lesquels ne seront établis, maintenus ou modifiés qu'après consultation.

3. Tout Membre doit, par voie de législation ou autres mesures:

- a) interdire aux services de recrutement et de placement d'avoir recours à des moyens, mécanismes ou listes tendant à empêcher ou à dissuader les pêcheurs d'obtenir un emploi;
- b) interdire que des honoraires ou autres frais soient facturés aux pêcheurs, directement ou indirectement, en tout ou en partie, pour le recrutement et le placement;
- c) fixer les conditions dans lesquelles la licence, l'agrément ou toute autre autorisation d'un service de recrutement et de placement peuvent être suspendus ou retirés en cas d'infraction à la législation pertinente et préciser les conditions dans lesquelles lesdits services peuvent exercer leurs activités.

4. Tout Membre doit s'assurer qu'un système de protection, sous forme d'une assurance ou d'une mesure équivalente appropriée, est établi pour indemniser les pêcheurs ayant subi des pertes pécuniaires du fait que le service de recrutement et de placement n'a pas rempli ses obligations à leur égard.

PAIEMENT DES PÊCHEURS

*Article 23*

1. Tout Membre adopte, après consultation, une législation ou d'autres mesures prescivant que les pêcheurs qui perçoivent un salaire seront payés mensuellement ou à intervalles réguliers. L'autorité compétente détermine, après consultation, si d'autres pêcheurs doivent être payés mensuellement ou à intervalles réguliers et, le cas échéant, lesquels.

2. Nonobstant les dispositions de l'annexe II(1), l'autorité compétente adopte, après consultation, des mesures assurant aux pêcheurs des avances sur paiement dans des conditions prescrites.

*Article 24*

Tout Membre doit exiger que tous les pêcheurs travaillant à bord de navires de pêche d'une longueur égale ou supérieure à [24] mètres ou entreprenant des voyages internationaux puissent faire parvenir à leur famille et à moindres frais tout ou partie des paiements reçus, y compris les avances.

## PART V. ACCOMMODATION AND FOOD

*Article 25*

Each Member shall adopt laws, regulations or other measures with respect to accommodation, food and potable water on board for fishing vessels that fly its flag.

*Article 26*

Each Member shall adopt laws, regulations or other measures requiring that accommodation on board fishing vessels that fly its flag shall be of sufficient size and quality and appropriately equipped for the service of the vessel and the length of time fishers live on board. In particular, such measures shall address, as appropriate, the following issues:

- (a) approval of plans for the construction or modification of fishing vessels in respect of accommodation;
- (b) maintenance of accommodation and galley spaces with due regard to hygiene and overall safe, healthy and comfortable conditions;
- (c) ventilation, heating, cooling and lighting;
- (d) mitigation of excessive noise and vibration;
- (e) location, size, construction materials, furnishing and equipping of sleeping rooms, mess-rooms and other accommodation spaces;
- (f) sanitary facilities, including toilets and washing facilities, and supply of sufficient hot and cold water; and
- (g) procedures for responding to complaints concerning substandard accommodation.

*Article 27*

Each Member shall adopt laws, regulations or other measures requiring that:

- (a) the food carried and served on board be of a sufficient nutritional value, quality and quantity;
- (b) potable water be of sufficient quantity and quality.

*Article 28*

The laws, regulations or other measures to be adopted by the Member in accordance with Articles 25-27 shall give full effect to Annex III concerning fishing vessel accommodation. This annex may be amended in the manner provided for in Article 43.

## PART VI. HEALTH PROTECTION, MEDICAL CARE AND SOCIAL SECURITY

## MEDICAL CARE

*Article 29*

Each Member shall adopt laws, regulations or other measures requiring that:

- (a) fishing vessels carry appropriate medical equipment and medical supplies for the service of the vessel, taking into account the number of fishers on board, the area of operation and the length of the voyage;

PARTIE V. LOGEMENT ET ALIMENTATION

*Article 25*

Tout Membre doit adopter une législation ou d'autres mesures relatives au logement, à la nourriture et à l'eau potable à bord des navires de pêche battant son pavillon.

*Article 26*

Tout Membre doit adopter une législation ou d'autres mesures prévoyant que le logement à bord des navires de pêche battant son pavillon sera d'une qualité et d'une taille suffisantes et qu'il sera équipé de façon adaptée au service du navire et à la durée du séjour des pêcheurs à bord. En particulier, ces mesures régleront, s'il y a lieu, les questions suivantes:

- a) approbation des plans de construction ou de modification des navires de pêche en ce qui concerne le logement;
- b) maintien du logement et de la cuisine dans des conditions générales d'hygiène, de sécurité, de santé et de confort;
- c) ventilation, chauffage, refroidissement et éclairage;
- d) réduction des bruits et vibrations excessifs;
- e) emplacement, taille, matériaux de construction, fournitures et équipement des cabines, réfectoires et autres espaces de logement;
- f) installations sanitaires, comprenant des toilettes et des moyens de lavage, et fourniture d'eau chaude et froide en quantité suffisante;
- g) procédures d'examen des plaintes concernant des conditions de logement inférieures aux normes de la convention.

*Article 27*

Tout Membre doit adopter une législation ou d'autres mesures prévoyant que:

- a) la nourriture transportée et servie à bord doit être d'une valeur nutritionnelle, d'une quantité et d'une qualité suffisantes;
- b) l'eau potable doit être d'une quantité et d'une qualité suffisantes.

*Article 28*

La législation ou autres mesures adoptées par le Membre conformément aux articles 25 à 27 doivent donner pleinement effet à l'annexe III concernant le logement à bord des navires de pêche. Cette annexe peut être amendée de la façon prévue à l'article 43.

PARTIE VI. PROTECTION DE LA SANTÉ, SOINS MÉDICAUX ET SÉCURITÉ SOCIALE

SOINS MÉDICAUX

*Article 29*

Tout Membre doit adopter une législation ou d'autres mesures prévoyant que:

- a) les navires de pêche soient dotés de fournitures et d'un matériel médicaux adaptés au service du navire, compte tenu du nombre de pêcheurs à bord, de la zone d'opération et de la durée du voyage;

- (b) fishing vessels have at least one person on board who is qualified or trained in first aid and other forms of medical care, and has the necessary knowledge to use the medical equipment and supplies for the vessel concerned, taking into account the number of fishers on board, the area of operation and the length of the voyage;
- (c) medical equipment and supplies carried on board are accompanied by instructions or other information in a language and format understood by the person or persons referred to in subparagraph (b);
- (d) fishing vessels are equipped for radio or satellite communication with persons or services ashore that can provide medical advice, taking into account the area of operation and the length of the voyage;
- (e) fishers have the right to medical treatment ashore and the right to be taken ashore in a timely manner for treatment in the event of serious injuries or illnesses.

#### *Article 30*

For fishing vessels of [24] metres in length and over or those engaged on international voyages or normally remaining at sea for more than three days, each Member shall adopt laws, regulations or other measures requiring that:

- (a) the competent authority prescribe the medical equipment and medical supplies to be carried on board;
- (b) the medical equipment and medical supplies carried on board be properly maintained and inspected, at regular intervals established by the competent authority, by responsible persons designated or approved by the competent authority;
- (c) the vessels carry a medical guide adopted or approved by the competent authority;
- (d) the vessel have access to a prearranged system of medical advice to vessels at sea by radio or satellite communication, including specialist advice, which shall be available at all times;
- (e) the vessel carry on board a list of radio or satellite stations where medical advice can be obtained;
- (f) to the extent consistent with the Member's national law and practice, medical care while the fisher is on board or landed in a foreign port be provided free of charge to the fisher.

### OCCUPATIONAL SAFETY AND HEALTH AND ACCIDENT PREVENTION

#### *Article 31*

Each Member shall adopt laws, regulations or other measures concerning:

- (a) the prevention of occupational accidents, occupational diseases and work-related risks on board fishing vessels, including risk evaluation and management, training and on-board instruction of fishers;
- (b) training for fishers in the handling of types of fishing gear they will use and in the knowledge of the fishing operations in which they will be engaged;
- (c) the obligations of fishing vessel owners, fishers and others concerned, due account being taken of the safety and health of fishers under the age of 18;

- b) les navires de pêche aient à leur bord au moins une personne qualifiée ou formée pour donner les premiers secours et autres formes de soins médicaux, qui sache utiliser les fournitures et le matériel médicaux dont est doté le navire compte tenu du nombre de pêcheurs à bord, de la zone d'opération et de la durée du voyage;
- c) les fournitures et le matériel médicaux présents à bord soient accompagnés d'instructions ou d'autres informations dans une langue et une présentation compréhensibles à la personne ou aux personnes mentionnées à l'alinéa b);
- d) les navires de pêche soient équipés d'un système de communication par radio ou par satellite avec des personnes ou services à terre pouvant fournir des consultations médicales, compte tenu de la zone d'opération et de la durée du voyage;
- e) les pêcheurs aient le droit de bénéficier d'un traitement médical à terre et d'être débarqués à cet effet en temps voulu en cas de lésion ou de maladie grave.

### *Article 30*

Pour les navires de pêche d'une longueur égale ou supérieure à [24] mètres ou qui entreprennent des voyages internationaux ou passent normalement plus de trois jours en mer, tout Membre doit adopter une législation ou d'autres mesures prévoyant que:

- a) l'autorité compétente prescrive le matériel médical et les fournitures médicales à avoir à disposition à bord;
- b) le matériel médical et les fournitures médicales disponibles à bord soient entretenus de façon adéquate et inspectés à des intervalles réguliers, fixés par l'autorité compétente, par des responsables désignés ou agréés par celle-ci;
- c) les navires soient pourvus d'un guide médical de bord adopté ou approuvé par l'autorité compétente;
- d) les navires en mer aient accès, au moyen d'arrangements préalables, à des consultations médicales par radio ou par satellite, y compris à des conseils de spécialistes, à toute heure du jour ou de la nuit;
- e) les navires conservent à bord une liste des stations de radio ou de satellite par l'intermédiaire desquelles des consultations médicales peuvent être obtenues;
- f) dans une mesure conforme à la législation et à la pratique du Membre, les soins médicaux dispensés au pêcheur lorsqu'il est à bord ou débarqué dans un port étranger lui soient fournis gratuitement.

## SÉCURITÉ ET SANTÉ AU TRAVAIL ET PRÉVENTION DES ACCIDENTS DU TRAVAIL

### *Article 31*

Tout Membre doit adopter une législation ou d'autres mesures concernant:

- a) la prévention des accidents du travail, des maladies professionnelles et des risques liés au travail à bord des navires, notamment l'évaluation et la gestion des risques, la formation des pêcheurs et l'instruction à bord;
- b) la formation des pêcheurs à l'utilisation des engins de pêche dont ils se serviront et à la connaissance des opérations de pêche qu'ils auront à effectuer;
- c) les obligations des armateurs à la pêche, des pêcheurs et autres personnes intéressées, compte dûment tenu de la sécurité et de la santé des pêcheurs âgés de moins de 18 ans;

- (d) the reporting and investigation of accidents on board fishing vessels flying its flag;
- (e) the setting up of joint committees on occupational safety and health.

#### *Article 32*

1. The requirements of this Article shall apply to fishing vessels of [24] metres in length and over or those engaged on international voyages.

2. The competent authority shall:

- (a) after consultation, require that the fishing vessel owner and, in accordance with national laws, regulations, collective bargaining agreements and practice, establish on-board procedures for the prevention of occupational accidents, injuries and diseases, taking into account the specific hazards and risks on the fishing vessel concerned;
- (b) require that fishing vessel owners, skippers, fishers and other relevant persons be provided with sufficient and suitable guidance, training material, or other appropriate information on how to assess and manage risks to safety and health on board fishing vessels.

3. Fishing vessel owners shall:

- (a) provide fishers with appropriate protective clothing and equipment;
- (b) ensure that every fisher on board has received basic safety training approved by the competent authority; the competent authority may grant written exemptions from this requirement for fishers who have demonstrated equivalent knowledge and experience;
- (c) ensure that fishers are sufficiently and reasonably familiarized with equipment and its methods of operation, including relevant safety measures, prior to using the equipment or participating in the operations concerned.

### SOCIAL SECURITY

#### *Article 33*

Each Member shall ensure that fishers ordinarily resident in its territory, and their dependants to the extent provided in national law, are entitled to benefit from social security protection under conditions no less favourable than those applicable to other workers ordinarily resident in its territory.

#### *Article 34*

Each Member shall undertake to take steps, according to national circumstances, to achieve progressively comprehensive social security protection for all fishers who are ordinarily resident in its territory.

#### *Article 35*

Members shall undertake to take steps, according to national circumstances, individually and through international cooperation, including through bilateral and multilateral social security arrangements, to achieve progressively comprehensive social security protection for fishers who are not ordinarily resident in their territories.

- d) la déclaration des accidents survenant à bord des navires de pêche battant son pavillon et la réalisation d'enquêtes sur ces accidents;
- e) la constitution de comités paritaires de santé et de sécurité au travail.

*Article 32*

1. Les prescriptions de cet article s'appliquent aux navires d'une longueur égale ou supérieure à [24] mètres ou qui entreprennent des voyages internationaux.

2. L'autorité compétente doit:
